The new rules provide for only one form of action to be known as a civil action (2). Such action is commenced by filing a complaint in court (3). The complaint provided by the rules is a very simple matter. No knowledge of the technicalities of pleading is required. It must contain only three things: (a) a statement of the grounds of jurisdiction; (b) a short and plain statement of plaintiff's claim showing that he is entitled to relief; (c) a demand for relief, and this demand may be in the alternative and may ask relief of several different types (7 and 8). Rule 9 further simplifies the matter of pleading by specifically providing that it shall not be necessary to aver the capacity of a party to sue or be sued; that circumstances constituting fraud or mistake shall be stated with particularity; that malice, intent, knowledge, and other conditions of mind may be averred generally; that a general allegation of performance of conditions precedent is sufficient; that it is sufficient to aver that an official document was issued or an official act was done in compliance with law; that in pleading a judgment it is sufficient to aver the judgment without setting forth matter showing jurisdiction to render it; and that items of special damage shall be specifically stated.

All pleadings, including the complaint, must be signed by the party or his attorney. They need not be verified. The signature of the attorney is a certificate that he has read the pleading, that in his opinion there is ground to support it, and that it is not introduced for delay (11).

A pertinent matter for consideration in commencing suit is joinder of causes and parties, and as to joinder of causes the rules specifically provide that any claims against the opposing party may be joined in the complaint and remedies may be asked notwithstanding that under the prior practice one could have been prosecuted only after the other had been prosecuted to a conclusion. Particular provision is made for joining a claim for money and for setting aside a fraudulent conveyance in one action (18). As to joinder of parties, the ordinary rule is that persons having a joint interest in the subject of the controversy shall be joined. When a person who should join as a plaintiff refuses to do so, he may be made a defendant. When persons are not indispensable parties the court in its discretion may proceed without making them parties if its jurisdiction over them as to either service of process or venue can be acquired only by their consent or voluntary appearance or if their joinder would oust the jurisdiction of the court (19a and b). Persons may be joined as parties where right to relief is asserted by or against them jointly or severally or a common question of law or fact is involved (20). Misjoinder is no ground for dismissal (21). The matter is taken care of by liberal rule authorizing consolidation and separation for purposes of trial (42).

When the complaint is filed the summons issues (4). Service must be made by a marshal or deputy marshal or by any person specially appointed by the court (4c). Service is made by delivering copy of the summons and complaint (4d). The rules contain elaborate provisions with respect to service on infants, corporations, persons non compos mentis, etc.

BEGINNING DEFENSE OF SUIT

The defensive pleading is the answer. It must be filed within 20 days after service of the summons and complaint, except in cases against the Government, where 60 days is allowed (12). The time

for filing answer may, however, be enlarged by the court (6b). The answer must be signed by the defendant or his counsel and must state in short and plain terms the defense to each claim asserted and must admit or deny averments of the complaint. Averments not so denied are deemed admitted. Affirmative defenses must be specifically pleaded (8b, c, and d). Rule 8c sets forth the affirmative defenses which it is necessary to plead, as follows: "Accord and satisfaction, arbitration and award, assumption of risk, contributory negligence, discharge in bankruptcy, duress, estoppel, failure of consideration, fraud, illegality, injury by fellow servant, laches, license, payment, release, res judicata, statute of frauds, statute of limitations, waiver, and any other matter constituting an avoidance or affirmative defense."

Demurrers, pleas, and exceptions for insufficiency of pleadings are abolished (7c) and every defense, either of law or fact, must be asserted in the answer, except that six defenses specifically named in rule 12b may be presented by motion. They are: (1) Lack of jurisdiction over the subject matter, (2) lack of jurisdiction over the person, (3) improper venue, (4) insufficiency of process, (5) insufficiency of service of process, (6) failure to state a claim upon which relief can be granted. Before answering, the defendant may move for a bill of particulars, which, when filed, becomes a part of the pleadings (12c).

The next question which the attorney for the defendant must consider is the question of asserting counterclaims in the answer. The rules require that a counterclaim arising out of the same transaction or occurrence must be asserted in the answer (13a). The answer may set up as a counterclaim any claim against the opposite party, although it is not compulsory to set it up if it does not arise out of the transaction or occurrence that is the subject matter of the opposing claim (13b). When a pleader fails to set up a counterclaim through oversight, inadvertence or excusable neglect, he may by leave of court set it up by amendment (13f). There is provision that additional parties may be brought into the action for the granting of complete relief (13h).

An interesting and important provision of the rules which goes beyond most code provisions as to pleading counterclaims is the third party practice prescribed by rule 14. Under this practice a defendant may bring into an action instituted against him a third party who is or may be liable to him or to the plaintiff for all or part of the plaintiff's claim against him. Such a third party must be brought in by summons and complaint and has a right, of course, to file answer.

THE REPLY TO DEFENDANT'S PLEADING

The rules provide that there shall be a complaint and an answer and there shall be a reply if the answer contains a counterclaim denominated as such. I shall not go into detail as to the pleadings where there is a cross action or where the third party practice is followed. In the ordinary case of plaintiff and defendant it is sufficient to remember that a reply is required only when a counterclaim is asserted (7a). The court may, however, order a reply to be filed to an answer (7a); and the practice of ordering a reply would seem to be especially appropriate where affirmative defenses are asserted. Provision is made also that where a counterclaim is asserted in the answer the plaintiff may bring in a third party for the litigation of liability under such counterclaim (14b).

DEMAND OF JURY TRIAL

It is to be remembered that the practice prescribed by the new rules governs actions formerly triable in equity as well as those formerly triable at law. The parties to actions legal in character are entitled to a jury trial as a matter of right. Actions equitable in character are heard before the judge in accordance with the former practice. All confusion under the new rules is avoided by a provision that the right to jury trial is waived unless demanded (38d). It is preserved by demanding trial by jury, which is done by serving a demand in writing on the opposite party at any time after the commencement of the action and not later than 10 days after the service of the last pleading directed to the issue upon which the jury trial is demanded (38b). If one party demands a jury trial on only a part of the issues, any other party within 10 days may demand a jury trial as to the remainder (38c). Where jury trial is not demanded, the issues are tried by the court, except that the court in its discretion may order a trial by a jury of any or all issues (39b). In actions not triable of right by a jury, i. e., in actions which formerly would have been heard in equity, the court may try the case with an advisory jury as under the old practice (39c).

DEPOSITIONS AND DISCOVERY

The subject of preparing for trial by taking depositions or obtaining discovery is covered by rules 26 to 37, inclusive. After jurisdiction has been obtained over any defendant or over property which is the subject of the action, the testimony of any person, whether a party or not, may be taken on leave of court by deposition for the purpose of discovery or for use as evidence in the action, or for both purposes. After answer has been served the depositions may be taken without obtaining leave of court (26a). The witness may be examined with relation to any relevant matter (26b). Protection against abuse is provided by rule 30 b and d, to the effect that the court may, upon motion, make an order that a deposition shall not be taken or that it may be taken only at some designated place other than stated in the notice, or that it may be taken only on written interrogatories, or that certain matters shall not be inquired into, or that the scope of the examination shall be limited to certain matters, etc. The court is also authorized to terminate or limit the examination.

Depositions in the United States may be taken before any officer authorized to administer oaths (28a). Reasonable notice must be given (30a). When depositions are taken in foreign countries they must be taken under letters rogatory or before a consul, vice consul, etc. (28b). Depositions taken under the rules may be used, first, for contradicting or impeaching the testimony of the deponent as a witness; second, where the deposition is that of a party or an officer, etc., of a corporation, partnership, or association, it may be used by an adverse party for any purpose; third, when the witness is dead or is at a greater distance than 100 miles from the place of trial, and in certain other cases specified, it may be used by any party for any purpose. If only part of the deposition is offered by a party, the adverse party may require him to introduce all of it which is relevant to the part introduced, and any party may introduce other parts (26d). Objections as to the admissibility of the testimony may be made when the deposition is offered in evidence (26e). Irregularities in the taking of the deposition or in the return are waived unless objection is seasonably made (32). Depositions of parties or witnesses may be taken by means of written interrogatories (31). The court may order the production of documents or inspection of property (34). It may order the physical or mental examination of persons (35a). The admission of facts and of the genuineness of documents may be demanded and costs and reasonable attorney's fees may be imposed for failure to make such admission (36 and 37). Refusals to answer or to make disclosure after the court order may be punished by attachment for contempt, by striking the pleadings, imposing costs, and by the entry of such other orders as may be just in the premises (37).

OTHER MATTERS IN ADVANCE OF REGULAR TRIAL

The new rules contain a number of very important features for expediting the disposition of cases. One of the most important of these is rule 16, providing for pretrial procedure. Under this rule the court may direct the attorneys for parties to appear for a conference to consider simplification of issues, amendments of pleadings, possibility of obtaining admissions of fact and of documents, limitation of expert witnesses, preliminary references, etc. Upon such conference the court is to make an order reciting the action taken, the amendments allowed, the agreements made, etc., and such order when entered controls the subsequent course of the action unless modified at the trial to prevent manifest injustice (16). Default judgment for failure to answer may be obtained before the clerk where plaintiff's claim is for a sum certain; in other cases before the court (55). Where judgment is taken through mistake, inadvertence, surprise or excusable neglect, it may be set aside on motion made within a reasonable time, but in no case exceeding 6 months after such judgment (60). Summary judgment may be entered where it is made to appear that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law (56). At any time more than 10 days before trial begins, a party defending against a claim may serve upon the adverse party an offer to allow judgment to be taken against him as specified in the offer with costs then accrued. If the adverse party refuses to accept the offer and fails to obtain a more favorable judgment, he does not recover costs (68), but must himself pay them from the time of the offer. Declaratory judgments are provided for under the recent statute and the court may order a speedy hearing of a motion for a declaratory judgment and may advance it on the calendar. Jury trials may be had in an application for declaratory judgments upon demand where the matter is one in which a jury trial could be had as a matter of right (57). Reference to a master is provided for, but it is stated that the reference shall be the exception and not the rule (53b). In actions to be tried by a jury, reference shall be made only when the issues are complicated (53b). The report of the master in jury actions is admissible as evidence, but, in these actions, he does not report the evidence (53e3). In nonjury actions the evidence is reported together with the findings of fact and conclusions of law and is heard by the court upon objections. The court is required to accept the master's findings of fact unless clearly erroneous (53e2).

TRIAL

A number of matters affecting the trial of the case have been settled by the rules and are worth remembering. In the first place, the right of plaintiff to dismiss his case, at any time before verdict, has been modified. The rules provide that the case may be dismissed by a stipulation of all the parties at any time or may be dismissed by the plaintiff at any time before the service of answer; but otherwise it may not be dismissed save upon order of court and upon such terms and conditions as the court deems proper (41). Where plaintiff has previously dismissed in any court an action based on or including the same claim, his notice of dismissal the second time operates as an adjudication on the merits. It is also provided that after the plaintiff has completed his presentation of evidence, the defendant without waiving the right to offer evidence may move for dismissal on the ground that plaintiff has shown no right to relief; and a dismissal under this motion other than a dismissal for lack of jurisdiction or for improper venue operates as an adjudication upon the merits (41b). The court is given the widest sort of discretion in ordering the consolidation of cases involving a common question of law or fact or in ordering separate trials of any claim, cross claim, counter-claim, etc., when deemed to be in the interest of justice or in furtherance of convenience (42).

The court may examine jurors itself or may permit their examination by the parties (47a). One or two persons to serve as alternate jurors may be impaneled at the court's direction (47b). Parties may stipulate that a jury shall consist of less than 12 or that the finding of a stated majority may be taken as the finding of the jury (48). The court may submit special interrogatories to the jury and require a special verdict in the form of an answer to such interrogatories, or it may submit special interrogatories along with submission of the general issue, and in such case the special interrogatories control the answer to the general issue (49).

Testimony is to be taken orally in open court (43a). Unwilling or hostile witnesses may be interrogated by leading questions. Adverse parties or officers, etc., of the corporation which is an adverse party, may be called and interrogated by leading questions and contradicted and impeached. Adverse parties so called may be cross-examined only upon the subject matter of the examination in chief (43b). Formal exceptions to rulings or orders of court are unnecessary, but the objection must show the action which it was desired that the court take or the grounds of the objection (46). Where evidence is excluded the record should show an offer of proof, which the court may require to be made out of the hearing of the jury (43c). A motion for directed verdict at the close of the evidence of an opponent does not waive the right to offer evidence, and such a motion which is not granted is not a waiver of trial by jury even though all the parties to the action have moved for directed verdict. A motion for a directed verdict must state the specific grounds therefor (50a). When a motion for directed verdict made at the close of the evidence is denied, the court is deemed to have submitted the action to the jury subject to a determination of the questions raised by the motion, and within 10 days after verdict the party making such motion may move to set aside the verdict and for judgment as though such motion had been granted (50b).

The rules specifically provide for exceptions to instructions and for the time of charging the jury. Objections to instructions must be entered before the jury retires to consider its verdict, and such objections must state distinctly the matter to which objection is made and the grounds of the objection, but opportunity must be given by the court for the objection to be made out of the hearing of the jury. The instruction to the jury, i. e., the court's charge, must be given after the arguments are completed (51).

Where the court finds the facts the finding shall not be set aside upon appeal unless clearly wrong (52), but subject to this rule an appeal in cases where the findings are made by the judge brings up the facts as well as the law.

PROVISIONAL AND FINAL REMEDIES AND SPECIAL PROCEEDINGS

Arrest, attachment, garnishment, replevin, sequestration, etc., are governed by State law (64). Preliminary injunctions are issued only on notice to adverse parties. Temporary restraining orders issue for not more than 10 days and expire at the end of that time unless renewed. They may be dissolved upon 2 days' notice (65). Execution follows State practice. A judgment creditor, however, may examine any person, including the judgment debtor, either in accordance with the rules relating to deposition and discovery or in accordance with State practice (69).

APPEALS

Appeals to the Supreme Court of the United States follow the old practice with petition for appeal, assignment of errors, order allowing appeal, etc. (72). Appeals to the circuit court of appeals, however, are greatly simplified. The old practice of summons and severance is abolished (74). Appeal is taken merely by filing notice of appeal with the district court. This notice designates the judgment or part thereof appealed from and names the court to which appeal is taken. The clerk gives the notice to the parties, but failure to discharge this duty does not affect the appeal (73 a and b). Bond in the sum of $250 must be given for costs, except in the case of pauper appeals (73c). Supersedeas is allowed where appellant desires a stay pending apeal. In case of money judgment, bond shall be given in an amount sufficient to cover the judgment, interest, costs, and damages, unless the court for good cause shown fixes a different amount. In other cases the supersedeas bond shall be in such sum as shall cover use and detention of property, damages for delay, etc. (73d).

The rules greatly simplify the making of the record on appeal. Appellant simply serves on appellee a designation of the portions of the record to be contained in the record on appeal. Within 10 days thereafter any other party to the appeal may serve and file designation of additional portions (75a). If evidence is to be included which was stenographically reported, appellant shall file two copies of the reporter's transcript (75b). Testimony designated for inclusion in the transcript may be in question and answer form. A party may file with his designation a condensed narrative statement, but any other party may require testimony in question and answer form to be substituted (75c). If the complete record is not designated, appellant must serve with his designation a concise statement of the points relied on (75d). All matters not essential to the decision of the questions presented should be omitted (75e). The parties may stipulate as to the record (75f). And the appeal may be heard on an agreed statement (76). Ordinarily the record need not be approved by the judge, but in case of disagreement the difference is submitted to him (75h). The clerk of the district court transmits the transcript of record to the appellate court under the seal of his court and must send one additional copy with the transcript (75g).

By rule 75L the Supreme Court has given to the circuit court of appeals authority to control the printing of the record on appeal, and as our court already has the power to prescribe the form of briefs in our court, we have recently adopted a rule relating to the printing of the record and to the form and content of briefs, putting these matters together because they have come to be closely related in the practice of hearing appeals. Under our rule it is not necessary to print the record unless the court specifically orders it to be printed, and in the absence of such order the cost of printing the record will not be taxed as costs in the case. The parties, however, are required to print as appendixes to their briefs such parts of the record as they desire the court to read. This, together with the statement of facts contained in their briefs, will ordinarily present the facts of the case with sufficient fullness for the purposes of review in an appellate court. Of course the full transcript in typewritten form will be before the court for its consideration. The rule as adopted by our court is attached hereto.

You will note three important changes with respect to the briefs: (a) It is required that the questions relied on, together with the manner in which they are raised in the record, be stated at the beginning of the brief; (b) that the briefs contain in an appendix or by way of supplemental brief such parts of the record as it is desired that the court read, and that the appellant's brief contain in the appendix or supplemental brief the judgment, decree, or order which it is sought to review together with any opinion or charge of the court; and (c) that except as to appendix or supplemental brief the length of the brief is limited to 50 pages unless an order permitting a longer brief be obtained from the court. It will also be noted that for the first time the cost of printing briefs will be taxed as a part of the cost in the case.

We think that this new rule will accomplish three important purposes. In the first place, it will save a great deal of expense to litigants. In the second place, it will greatly reduce the labors of the court. In the third place, it will bring the minds of counsel to a focus on the important points in their case and will greatly improve the presentation of cases to our court.

Let me say in conclusion that what I have said is but a mere introduction to the study of the rules, but I trust that I have said enough to show you that the practice which they prescribe is simple and easy to understand. My own feeling is that any lawyer who really understands any other system of practice can obtain a good working knowledge of this practice in one afternoon's study. I am in hopes that it will be adopted by every State in the Union and will be the means of eliminating technicalities and delays, which are the chief reproach to our administration of justice.

Compulsory Registration of All Assets of German Corporations in the United States

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1939

STATEMENT OF HON. EMANUEL CELLER, OF NEW YORK, ISSUED JANUARY 16, 1939

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement issued by me under date of January 16, 1939, upon my introduction of H. R. 2638, a bill for the compulsory registration of all assets of German corporations in the United States:

The time has come when the Reich must be brought to book. President Roosevelt has pointed the remedy when he said there are many methods short of war to bring home to aggressor governments the aggregate sentiments of our people. We have powerful economic weapons with which to strike back at the Reich, particularly so because of her deliberate discrimination against American citizens who may hold German corporate bonds.

More than $1,000,000,000 of American money was invested in German bonds issued by German States, cities, and corporations. Suitably after the Nazis got control, they promulgated a decree whereby the service on virtually all dollar corporate bonds was stopped. Subsequently, arrangements were made to pay only a part of the stipulated rate. And now, nothing has been paid for more than 2 years.

But do the European countries receive the same treatment? No. The subjects of France, Sweden, Norway, and of other European countries have been paid regularly, without interruption, on all German corporate bonds which they may hold.

As to the Reich Government bonds, in contradistinction to the bonds of German corporations, permit me to quote from a statement of the Foreign Bondholders' Protective Council, Inc.:

"* * * the council very much regrets that despite the protests of the United States Government, of the paying agent of the Dawes and Young loans (Messrs. J. P. Morgan & Co.) and of the council, the German Government persists in its discrimination

against American holders of these bonds by making payments for the regular service of the interest on the British, Dutch, and French tranches of the Dawes and Young loans, while paying the American tranche at a reduced rate. The general bond securing these loans states 'all bonds issued by the German Government in respect of the loan shall rank pari passu irrespective of date of place of issue or otherwise.' The central banks of the Allied Governments used their good offices to facilitate the placing of the tranches of these loans in their respective countries. The American tranche was issued at the request of the Governments of Great Britain, France, and Belgium. The council regrets to have to record that when the German Government defaulted on these bonds, the British and French Governments, by either threatened or actual coercive measures, secured arrangements by which the coupons on the tranches of these loans held in those countries were paid in full, without heeding the request of the American fiscal agents to have those Governments which had requested the issuance of these bonds in the United States, live up to the provision in the general bond above quoted which was designed to prevent any discrimination in the service and treatment of the various tranches of the loan."

Discrimination upon discrimination has been practiced upon Americans by the Nazis. Until recently, for example, inheritances due German subjects out of American estates were freely paid. But vice versa, moneys due American subjects out of inheritances in Germany were blocked by Nazi decrees. A courageous judge in the court of common pleas in Philadelphia, Hon. Raymond MacNeille, last month refused to allow moneys from an estate to pass to a Nazi beneficiary. Fearing that other courts would follow the precedent thus set, and realizing that they have more to lose than to gain from such reciprocity of discrimination, the Nazis quailed and are now setting up sufficient foreign exchange to permit the transfer of inheritances from Germany to the United States.

Not so long ago, a very outstanding decision was made by a supreme court jurist of the State of New York, Hon. Alonzo G. McLaughlin. He stated that a holder of a Nazi corporate bond has a perfect right to seize whatever assets the Nazi corporation might have in the United States to pay that bond. Judge McLaughlin pointed out that a German decree of June 1933, which the Nazi company cited as a reason for the nonpayment of the debt in question, could not bind American citizens not subject to Germany's jurisdiction, and that this Nazi decree of June 1933 sought to suspend the payments of debts due Americans. The judge went on to say that every nation should protect its own citizens from injuries resulting from foreign laws prejudicial to its own interests and policies, and that the rights of American holders of German bonds are not controlled by the laws of the Reich.

Judge McLaughlin's decision points the way.

I have this day offered a bill which provides that for the purpose of protecting American citizens who are holders of Nazi corporate securities partially or completely in default, such Nazi corporation must register all its assets in the United States of every nature, name, and description which may be owned by it, directly or indirectly, with agents or agencies to be designated by our State Department, giving an itemized account of such assets as of the day on which the present measure would become law, and also as of June 1, 1933, together with details as to any transfer or disposition thereof, in the intervening period. Likewise, American financial institutions and kindred organizations, as well as agents or agencies directly or indirectly identified with or acting for such Nazi corporation in default, shall register all possible information as to such assets. Failure to comply with the provisions of the act will involve a fine of $1,000, 1 year's imprisonment, or both.

I believe such a bill will be a concrete remedy against the indefensible discrimination against American holders of Nazi corporate dollar bonds. I am of the opinion that at least $150,000,000 can be collected, in this way, by American holders of Nazi dollar bonds by attaching the assets of Nazi corporations. At the present time the whereabouts of such assets are hidden and secret. My bill will force disclosure. Frankly, however, I do not think there will be much need of forceful remedies like attachment. The mere passage of my bill, like the decision of Judge McLaughlin, would soon bring the Nazis to terms.

It is true that other countries are likewise in default on their dollar bonds. But they are not guilty of the discriminatory practices of the Nazis. Many of these foreign countries including Germany repatriated their obligations while defaulting on their American investments. Instead of paying interest, the money would be used to buy up the principal at greatly forced down prices. One nation in particular has been in continuous default but has nevertheless purchased almost six-sevenths of its indebtedness. Another nation owed some $800,000,000, has repatriated one-third of its obligation. It is estimated that 13 countries in default have repatriated 25 percent of their obligations. Refusal to pay the obligation, while at the same time professing inability to pay interest, is a highly indefensible practice and warrants condign criticism.

Logically, I could make my bill apply to all countries in default. That may not be necessary. I first seek out the worst offender of the lot—Germany.

My bill is herewith set forth in full.

H. R. 2638

A bill to require filing by certain persons of data concerning assets of foreign corporations and entities in default of payment of interest and/or principal on its securities held in the United States, and to require the registration of certain persons employed by agencies to disseminate propaganda in the United States, and for other purposes

Be it enacted, etc., That the act entitled "An act to require the registration of certain persons employed by agencies to disseminate propaganda in the United States, and for other purposes," approved June 8, 1938, is amended to read as follows:

"Whereas a decree has been or is about to be promulgated by the German Government providing that American citizens register with designated authorities in the Reich every type of property owned by them in Germany in excess of 5,000 reichmarks; and

"Whereas such decree is designed to enable the German Government eventually to deprive American citizens of such property as they may own in Germany by invoking either one of the numerous German laws already in existence or by creating new legislation to that end; and

"Whereas such decree is further designed to enable the German Government to penalize American citizens for wrongs of which they, in the opinion of the German Government, may become or prove guilty of at a later date; and

"Whereas there are outstanding in the American market with thousands of American investors, institutions as well as individuals, bonds of the German Government, German States, cities, and corporations aggregating about $600,000,000 face or par value; and

"Whereas, through the enactment of legislation under date of June 9, 1933, by the German Government, American investors of virtually all German bonds have received no interest and no amortization whatsoever since January 1, 1937, and only part of the interest due them prior to that date immediately following the advent to power of the National Socialist Government; and

"Whereas the withholding of interest from American investors, individuals, as well as institutions, constitutes a real hardship to such investors, tending also to impair appreciably America's economy; and

"Whereas it is incumbent upon us to avail ourselves for the benefit of American creditors of the Reich, its various political subdivisions, and corporations, of the apparent recognition by the Reich of the principle of reciprocity; and

"Whereas decisions have been handed down by prominent members of the American judiciary to the effect that the laws of Germany cannot bind American citizens who are not subject to Germany's jurisdiction; that the generally received rule for the interpretation of contracts between a German debtor and an American creditor is that these contracts are to be construed and interpreted according to the laws of the State in which they are made; that the lex loci contractus determines the nature, validity, obligation, and legal effect of the contract and gives the rule of construction and interpretation; and that effect will not be given by the courts of a State to foreign laws in derogation of the contracts or prejudicial to the rights of American citizens; and

"Whereas by virtue of decisions handed down and opinions rendered by prominent members of the American judiciary, it was possible for American holders of German bonds in partial or complete default to satisfy their claims against German corporations guilty of such partial or complete default by attachment of assets which such German corporations possessed in the United States; and

"Whereas American holders of bonds of German corporations which possess assets in the United States are unable to collect the interest and principal upon their obligations because of the refusal on the part of German corporations guilty of partial or complete default to divulge for the benefit of American creditors the precise nature and location of such assets as they may have in the United States; and

"Whereas American holders of bonds of German corporations which possess assets in the United States are unable to collect the interest and principal upon their obligations because of the unwillingness or refusal on the part of American agents or agencies or financial institutions acting for or directly or indirectly identified with German corporations guilty of partial or complete default, to divulge for the benefit of American creditors the precise nature and location of assets owned by them for the account of such German corporations; and

"Whereas American holders of German corporate bonds in partial or complete default would be in a position to collect what is rightfully due them if they were in a position to locate assets in the United States belonging to such defaulting German corporations with respect to debts owing to American investors, individuals, as well as institutions: Now, therefore,

"*Be it enacted, etc.*, That the act entitled 'An act to require the registration of certain persons employed by agencies to disseminate propaganda in the United States and for other purposes,' approved June 8, 1938, be amended by adding the following new sections:

"'SEC. 8. For the purpose of protecting, conserving, and advancing the interests of American citizens who are holders of German securities partially or completely in default, German corporations in default on bonds, as to interest or principal, or both, owned by American citizens, shall register all assets located in the United

States as may be owned by them directly or indirectly, and irrespective of the nature, name, or description of such assets, with the Secretary of State or such agent or agencies as the said Secretary of State may designate. The said German corporation shall give an itemized and detailed account of such assets as of the day on which the present measure becomes law and also as of June 1, 1933, together with details as to how the assets, in the intervening period, may have been sold, disposed of, or transferred, and the person or persons to whom such assets may have been thus sold, disposed of, or transferred; that American banks, financial institutions, and kindred organizations, as well as agents or agencies, directly or indirectly connected with or identified with or acting for such German corporations guilty of partial or complete default as to interest or principal, or both, in respect of their dollar obligations, shall also be required to register all their assets, irrespective of their nature, name, or description, owned, held, or possessed directly or indirectly by them for the account or benefit of German corporations which are in such default with respect to obligations held by American investors. Such statement by said American bank, financial institution, and kindred organization, its agent or agencies, shall contain an itemized account of assets as of the day on which the present measure becomes law, and also as of June 1, 1933, together with details as to how the assets have in the intervening period been disposed of or transferred.

" 'SEC. 9. Failure to comply with the provisions herewith set forth shall constitute a misdemeanor punishable by fine of $1,000, or imprisonment for 1 year, or both.

" 'SEC. 10. This act shall take effect on the thirtieth day after the date of its enactment.' "

New Departure in Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. HAMILTON FISH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1939

ADDRESS BY HON. HERBERT HOOVER, AT CHICAGO, ILL., FEBRUARY 1, 1939

Mr. FISH. Mr. Speaker, under leave granted to extend my remarks, I herewith submit a copy of an address delivered by Hon. Herbert Hoover, at Chicago, Ill., before the Council on Foreign Relations, on Wednesday evening, February 1, 1939. This eloquent and forceful address should be read by those Americans who want to keep our country out of foreign entanglements and wars.

The address is as follows:

I wish to talk on peace. We are deluged with talk of war. Our minds are being prepared to accept war as inevitable. We need to keep our heads.

And I say this as one who in positions of responsibility saw every stage in the development of the last war. And I have seen the bitterness of its failure to bring blessings to mankind.

I have no need to recite the malevolent forces rampant in the world. In 20 nations desperate peoples have surrendered personal liberty for some form of authoritarian government. They are placing their trust in dictatorship clothed in new ideologies of Utopia. Some of them are making war or are aggressively threatening other nations. The world is taut with fear. Five times more men are under arms than before the Great War.

We in America are indignant at the brutalities of these systems and their cruel wrongs to minorities. We are fearful of the penetration of their ideologies. We are alarmed at their military preparations and their aggressiveness.

Their neighboring democracies are consciously or unconsciously flooding us with propaganda that we, too, are in danger, that we will inevitably be drawn in.

QUESTIONS OF LIFE OR DEATH

We have need to strip emotion from these questions as much as we can. They are questions of life or death not only to men but also to nations.

We have need to appraise coolly these dangers. We have need of sober, analytical debate upon the policies of government toward them. We must do so without partisanship.

Amid these agitations President Roosevelt has now announced a new departure in foreign policies.

Beginning with his suggestion of 14 months ago of quarantining dictatorships, he now states: "We have learned that God-fearing democracies * * * cannot forever let pass without effective protests acts of aggression against sister nations. * * * There are many methods short of war, but stronger and more effective than mere words, of bringing home to aggressor governments the aggregate sentiments of our own people."

Mr. Roosevelt has also proposed to the country a huge increase in our already large armament. Under his plans we are on the way to become possibly the largest naval power and certainly the largest air power in the world.

Let me say at once that if our defense requires it every American will willingly bear that burden though it contributes to lower the standard of living of every American and though it plunges us further into debt.

It does mean an increase in our military expenditure from 650 millions of only 6 years ago to 1,400 or 1,500 millions next year.

MUST KNOW FOREIGN POLICIES

But the proper degree of our military preparedness depends, first, upon what our foreign policies are to be; and, second, upon where and from what our dangers come. When these are determined, then the size of our armament is for our Army and Navy experts to say. Without these determinations they can give no competent advice.

Our foreign policies in these major dimensions must be determined by the American people and the Congress, not by the President alone. The citizens can also in some degree appraise our dangers. After all, it is the people who are made poor and who sacrifice their lives and the lives of their sons.

For 130 years before the Great War and since we rejected the League of Nations our foreign policies have been simple and emphatic.

First. To keep out of foreign entanglements and other peoples' wars; not to interfere in the affairs of other nations.

Second. Our armament is for defense, not aggression.

Third. That defense to include the Western Hemisphere by enforcement of the Monroe Doctrine.

Fourth. To protect by force if necessary the lives of Americans who are of necessity abroad, but to depend upon the peaceful processes of negotiation to protect their rights and property.

Fifth. To cooperate in peaceful movements to promote peace and in economic movements to promote world prosperity. And to insist that neither by spirit nor action do we imply either military or economic force for these purposes.

CRITICIZES NEUTRALITY ACT

Sixth. Under the recent neutrality law we presumably prohibit the purchase of arms in the United States by other nations while actually at war, together with some restrictions upon credit and travel. Such purchases are without restrictions until we declare that a war exists. And let me say parenthetically that this arms provision needs immediate revision. In effect it compels us to take sides rather than be neutral.

I believe these are the full dimensions of American policies that have been approved by the American people up to now.

Mr. Roosevelt now proposes to expand these policies. The sum of his proposal is that we make effective protest at acts of aggression against sister nations. He says we must use methods stronger than words and short of war. He asks for armament to back his extensions. As Daniel Webster said in his reply to Hayne, "Let me run the honorable gentleman's doctrine a little into its practical application."

First. The only known effective methods short of war and more than words are that we either support one side with supplies of food, raw materials, finance, and munitions or that we deny these to the other side by embargoes, boycotts, or other economic sanctions.

Second. The aggressions against sister nations that Mr. Roosevelt is discussing are not alone in the Western Hemisphere. They are in reality aggressions across the Atlantic and the Pacific, in Europe and Asia.

Third. This new policy means that we are to determine who are the aggressors in the world.

HARD TO DEFINE AGGRESSOR

The determination of the who and when of aggression sounds easy. It sometimes is easy. But if one examines the history of the world, the distinction between legitimate expansion and wicked aggression becomes confused. The League of Nations, after some years of effort, failed to find even a definition of aggressor. We are to set ourselves up as the oracle of righteousness in age-old quarrels that began before our Nation was born. A large part of the United States was the result of aggression under any definition; likewise parts of the British Empire and France. The world will not remain static, for the pressures of populations, economic life, and defense are not static forces. In any event, it does not seem to be a job that America should undertake. More especially as each case must need be debated in Congress and divided by the emotions of our racial origins.

Fourth. These proposals to use some sort of coercion against nations are, of course, a complete departure from neutrality in other peoples' war. It is the method of coercion, not persuasion. It is in direct violation of Secretary Hull's reaffirmation, on which the ink is but 60 days dry, of an old American policy that "the intervention of any state in the internal and external affairs of another is inadmissible."

Fifth. Such measures are obviously futile unless undertaken in cooperation with other nations. Without joint action supplies of food or oil or cotton or munitions can be obtained elsewhere. And joint action means at least temporary alliances with countries in Europe or Asia.

Sixth. Such policies are provocative of reprisals and must be backed by armament far beyond that required for defense of the

Western Hemisphere. If we are to provoke, we must be prepared to enforce.

Seventh. Economic pressures inevitably run into pressures upon civil populations. Civil populations are mostly women and children. The morals of starvation by force rank no higher than killing from the air.

Eighth. Any nation which sets up such policies and builds an armament of dimensions to back them is sure to arouse fear. This idea of America sitting alone determining who and what in the world shall stop and go would make suspect of the whole world. It is certain that combinations of power will arise against a nation which does that, no matter how good neighborly its words may be.

COERCION IS "PATH TO WAR"

Let me say at once that any form of direct or indirect coercion of nations is force and is the straight path to war itself. No husky nation will stand such pressures without bloody resistance.

Those who think in terms of economic sanctions should also think in terms of war.

It will be said that these measures will preserve peace; that if nations know we will throw our weight into the balance they will not transgress on others. That is world-wide power politics. That is the exact theory of joining in the balance of power throughout the world. That setting has, in the long and tragic history of Europe, inevitably exploded in war.

All this becomes the most momentous change in American policies of peace and war since we entered the great war.

Moreover, the European democracies have accepted it as a complete change of national policy by the United States. If it is not a proposal to change radically our policies, then they are under a misapprehension.

But to determine the issue, let me propose some questions that the American people deserve to have answered.

1. Shall we reverse our traditional policies at this time?
2. Shall we set ourselves up to determine who the aggressor is in the world?
3. Shall we engage in embargoes, boycotts, economic sanctions against aggressor nations?
4. Shall we do this where the Western Hemisphere is not attacked?
5. Shall we provide an armament greater than that necessary to protect the Western Hemisphere from military invasion?
6. Shall we take collective action with other nations to make these more-than-words-and-short-of-war policies effective?
7. Are we to be the policemen of the world?

WANTS "ADVENTURE" CLARIFIED

Certainly it is due to Mr. Roosevelt, to the Congress, and to the American people that we know exactly what all this means. The Congress should have this adventure clarified before we go blindly into great increases in armament.

Before we answer these questions and before we venture into these paths of force and conflict, even short of war, we should realistically examine how serious the so-called imminent dangers are from aggressive nations.

Our dangers are obviously in two forms—the penetration of their ideologies, which would destroy democracies, and their military aggressiveness.

And their military aggressiveness has to be appraised in two aspects. First, the direct dangers to the Western Hemisphere, and, second, our further concern in the dangers to our sister democracies in Europe and Asia.

The first segment of this danger is the ideologies. The penetration of these ideologies, whether it be the communism of Russia, the national socialism of Germany, or the fascism of Italy, is an internal problem for each country where they penetrate. Ideas cannot be cured with battleships or airplanes. I say this, as I do not assume that we intend to attack dictators or extirpate ideologies in their home sources. That would lead the world to worse destruction than the religious wars of the Middle Ages.

WOULD WORK FROM WITHIN

Our job of defense against these un-American ideologies is to eliminate Communist, Socialist, and Fascist ideas and persons from our own institutions. It is to maintain the ideals of free men, which make this unprofitable soil for such alien seed.

I am confident that if the lamp of liberty can be kept alight, these ideologies will yet die of their own falsity. They spring not from moral and spiritual inspirations but from the cupidity of men. In any event no additional appropriations for arms will settle those problems.

The second segment of danger is that of military attack of the dictatorships upon democracies.

And we may first explore the imminent dangers of military attack upon the western democracies, and again we should consider it in the light of realism rather than the irritating words that emanate from world capitals.

Our people must realize that even if there were no dictators present the blunders in the peace treaties, the pressures of population, the impoverishment of peoples will create periodic European crises. That has been the history of Europe since long before America was born.

As terrifying as these crises look in the morning paper, there are more realistic pressures for peaceful adjustments than for war.

POSSIBLE COURSES WEIGHED

Since the Great War land fortifications for defense have increased in power faster than defensive land weapons. The dictatorships know that if they were to attack the western democracies they would probably find their land and sea defenses impregnable. Attack from the air offers hideous destruction, but it also brings sobering reprisals. It stiffens resolution and it does not capture capital cities. It is my belief that the western democracies of Europe can amply defend themselves against military attack.

And in this connection we must not close our eyes to one condition under which the American people, disregarding all other questions, might join in European war. We are a humane people and our humanity can be overstrained by brutality. That was one of the causes of our entry into the last war. For instance, if wholesale attack were made upon women and children by the deliberate destruction of cities from the air, then the indignation of the American people could not be restrained from action.

I do not believe officials of any nation have become so foolish or dare the depth of barbarism of such an undertaking. The indignation in the United States today at such killings in Spain and China, where it is excused as the accident of attempt to demoralize munitions supply, should be warning of the temper which would be raised.

There are other realistic forces which weigh against military attack by the dictatorships on the democracies. Despite various so-called "demands," the dictatorships are in reality mainly interested elsewhere. The face of Germany is turned more east than toward western Europe. The face of Japan is turned west into Asia. The Russians are amply engaged at home. The Italians claim grievances with England and France arising out of the treaties under which they came into the Great War, but these are not impossible of solution.

Beyond all this, every one of the totalitarian states has its own grave internal weakness.

COMMON PEOPLE WANT PEACE

Above all, the common people in no country in Europe want war. They are terrified of it.

Do not think I believe the situation is not dangerous in Europe. Far from it. But it is not so imminent as the speeches abroad might make it appear. And what is not imminent is often preventable.

Obviously, our dangers are much less than those of the overseas democracies. The Western Hemisphere is still protected by a moat of 3,000 miles of ocean on the east and 6,000 miles on the west. No airplane has yet been built that can come one-third the way across the Atlantic and one-fifth of the way across the Pacific with destructive bombs and fly home again. In any event, these dictatorships have nothing to gain by coming 3,000 or 6,000 miles to attack the Western Hemisphere. So long as our defenses are maintained they have everything to lose.

That any of these dictatorships, whether Japan, Germany, Italy, or Russia, or all of them together, have the remotest idea of military attack upon the Western Hemisphere is sheer hysteria.

It will be said that we must be prepared to go across the seas and enforce lawful rights for American trade by military action. I do not agree with that thesis. There always comes a time, with patience, when such ends can be accomplished by the processes of peace.

There are other factors that we need to consider also before we decide to use force beyond protection of the Western Hemisphere. We must not refuse to look at the possible ultimates before we start down these paths.

If we join with force in Europe or Asia, even though it be short of war, we must consider its consequences should it lead to war. For that is the most probable result. The call to join is based upon the preservation of human liberty in the world. Our first purpose is to maintain liberty in America. If civilization based on liberty fails in the United States it is gone from the earth We must safeguard that, not only in our own interest but in the interest of the world.

WAR MEANS REGIMENTATION

Personal liberty and free economic life are not built for modern war. A great war today is a mobilization of the whole people. That means democracy must temporarily surrender to dictatorship, no matter what one may call it, in order that we may bend our full energies to war.

It means that our country must be mobilized into practically a Fascist state. It would be so organized. It went some distance in the last great war, although we did not use that term at the time. It would have gone much further if the war had extended longer.

I speak of this not from hearsay but as one who participated in the economic organization of the great war. I saw the rise of opposition to demobilization of the interests which benefited. But we secured the immediate and courageous demobilization of this economic power over the daily lives of our people because of the backing of a real lover of human liberty—Woodrow Wilson.

Today the lowered vitality of free enterprise, the necessity to subordinate or repudiate our enormous peacetime national debt to make way for finance of a new war, together with the ideas of economic power which impregnate our Government, all drive to the improbability of after-war demobilization of centralized power.

If it were that or the loss of our national independence, it would not be too great a price. But let us at least recognize that a war to save liberty would probably destroy liberty. In my view another great war will make dictatorship universal.

Even if we escaped this result, yet the sacrifice of our sons and the moral and economic destruction are a bitter prospect to contemplate. Surely we learned this from the last war. As we look back over our participation in that war there is still another cup of bitterness. America can make war, but we cannot make permanent

peace in Europe or Asia. The peace after the Great War sowed the dragon's teeth whose growth confronts us today.

And now a word in conclusion. As a Nation we must weigh all these experiences, these forces, and factors as best we can. We may not agree upon the importance to lay upon any one of them. But from the total of them it is my belief that at this time the country should say an emphatic "no" to the questions of clarification which I have proposed above.

THREATS NO WAY TO PEACE

This world can never reach peace by threats and force. If this is to be the blind leadership of men, nothing can save the world from a catastrophe to civilization.

No nation has alone built this civilization. We all live by heritages which have been enriched by every Nation and every century. And to save this civilization there must be a changed attitude of men. Our country, standing apart, can make a contribution of transcendent service in holding aloft the banner of moral relationships.

If we are to hold that banner of morals aloft, the people of America should express unhesitatingly their indignation against wrong and persecution. They should extend aid to the suffering.

We should not be isolationists in promoting peace by the methods of peace. We should not be isolationists in proposals to join in the most healing of all processes of peace—economic cooperation to restore prosperity.

But surely all reason, all history, all our own experience show that wrongs cannot be righted and durable peace cannot be imposed on nations by force, threats, economic pressures, or war. I want America to stand against that principle if it is the last nation under that banner. I want it to stand there because it is the only hope of preserving liberty on this continent.

That is America's greatest service to mankind.

On Dedicating a Church

EXTENSION OF REMARKS
OF
HON. LUTHER PATRICK
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1939

ADDRESS BY HON. LYLE H. BOREN, OF OKLAHOMA, AT DEDICATION OF POTOMAC HEIGHTS CHURCH, WASHINGTON, D. C., JANUARY 29, 1939

Mr. PATRICK. Mr. Speaker and Members of this Congress, this is my first time to arise in this body to present a church speech, but with these times and exchanges, a few things said in this direction should do no harm. I wish to insert into the RECORD a speech made here in Washington by the Honorable LYLE BOREN, Member of this Congress from Oklahoma. It was not our pleasure to hear the speech, but those who heard it gave such an excellent account that we read it, and found it to be charged and filled with such splendid Americanism we decided to bring it here.

This is a country wherein church and state are two separate and distinct functions. It is my opinion that nothing in our national political life is more fundamental than this. There has been in the political upswing of our country's thought, within the past few years, a trend toward a decided liberalism. This has apparently given rise to a feeling among a number—we hope how few—that this is the signal for hope among groups who are distinctly nonchurch and nonreligious, in this sense. We feel that this should be discouraged at every reasonable opportunity. We have no compromise in this land with communism, nazi-ism, or any form of group thought that tends to detract from, deflect, or darken the light of our religious faith, whatever its nature.

I do not know whether the church dedicated—Potomac Heights Church—is Baptist, Episcopal, or whatever. That is not important, but some of the things of which Mr. BOREN spoke are important.

This is the speech:

Permit me a word of appreciation to the Reverend Randall and you other good people of Potomac Heights for this privilege of participating in the dedication of this fine new church.

"NEW TEMPLES

"I think God loves new temples built to Him
And watches as each stone is laid on stone,
And smiles to see them laid so straight and true,
Lifting the strong wide walls to heaven's blue.
And when the carpenters have done with them,
And each new church stands finished and alone,
When dusk sifts violet shadows through the glass
Of painted windows, I think that God must pass
Between the new dim aisles, and stopping where
The last light falls across His shining hair,
He kneels and holds the first communion there."

—*Lexie Dean Robertson.*

The streets that lead to the door of this church will become the pathway for the footsteps from childhood to age, and may also the footprints of Jesus make these pathways glow. It is my hope that the pathway here will be the open beckoning road to all who in their hearts are moved to turn from prodigality and say, "I will arise and go to my Father."

(The congregation sang I Will Arise and Go to Jesus.)

We cannot know what is foregathered in the God-kept store of time. Though searching be our gaze, we cannot penetrate the future. We do know, however, that the fixed stars remain in the sky; that truth does not die with the dying day. And from this pulpit, the great eloquence of the plain simplicity of the truth will, throughout the many years ahead, plant in our hearts the seeds of soul blossoms that will flower into the duty, the purpose, and the power of life. We have reconstructed here a cornerstone of American life; a cornerstone of American freedom that the seasons cannot crumble, the storms cannot destroy, and the unguessed ages can never harm.

It is well that we consider here what this church means to America (and the converse, what America means to this church). The United States of America alone has offered from its very beginning the secure blessing of religious freedom. It is here only in all the world that throughout our history we have breathed the pure air of religious liberty. The most striking contribution to the science of modern government has been America's complete separation of church and state. The precious treasury of religious liberty is secure in America against the ravages of persecution and at the same time the great philosophy of equality which is the central theme of American Government goes far beyond religious toleration and removes the implication of concession in that word. We have realized that the right to concede religious freedom implies the right to deny it. There is liberty in neither, but America has given the world more than religious toleration; it has given the world religious liberty. All civil power has been separated from religious preference. Man's conscience in America owes allegiance to God alone, and so, we have realized for the first time in the history of man, the ideal of a free church and a free state.

With every privilege there rests a concurrent responsibility and in this responsibility lies the peculiar meaning of the church to America. We are not so far removed from Europe as to be deluded into the false philosophy that "it cannot happen here." There are quicksands that could unbalance and destroy religious liberty in America. Religious liberty, political liberty, and all the other liberties of American life have been dearly bought and should these liberties come in for attack there can be no compromise. Liberty and slavery cannot abide in the same house. As representative government can have no concord with dictatorship, neither can the forces of liberty have any compromise with communism, fascism, or nazi-ism, for civil and religious liberty do not exist under any of these three "isms," which we might well refer to as one "ism" because of their fundamental similarity.

The freedom which conscience demands in the realm of religion inspires the human mind to assert its inalienable rights, and to suffer and endure as in no other cause. So the church then means to America a great fortress against the invasion of any or all forces which threaten to restrain, weaken, or destroy any liberty which belongs to the American philosophy. Just as we must not permit any experimentation involving the separation of church and state, neither must we permit any experimentation involving any of the liberties fundamental to the American system.

This church must mean to America a militant voice against the evasion of any American liberty. As we would stand together tonight to defend this institution against any cataclysmic blow, or against any attempt to destroy this structure by removing a part of it at a time, we must also stand as an army of "minute men" to guard against the destruction of any of the liberties defined in Americanism.

This church stands like a clearing in the jungle, wherein flourishes strong character, happiness, and security; but just as neglect and inattention would permit the jungle to creep in with slow but terrible relentlessness to cover the clearing, so with equal stealth and relentlessness the anti-American forces would destroy the liberty which by the painful and self-sacrificing labor of our ancestors has been made to grow and flourish in all the institutions known to American life. In the church, as everywhere, eternal vigilance is the price of safety. Upon security of the church rests the security of individual liberty and individual character and, in fact, the security of America. And the converse is also true that upon the security of America and Americanism rests the security of truth and justice and, in fact, the security of the church.

This church means to America strong character, a wall against which the blandishness of error fall harmless and ineffectual. This church means to America truth as pure and as true as the temper of a Damascus blade.

Permit me a moment of personal reminiscence to say that I come from a home of strong religious convictions; that throughout my life the church and its teachings have formed an equal part of my preparation with the school and its teachings. As I go about the tasks that are burdened with the great and grave responsibilities of defending the rights and serving the welfare of 400,000 people in a great congressional district I carry in my heart always the constant prayer that a divine guidance will help me to discern the right through all the winding ways of greed, malfeasance, and deceit. The birth of each new day brings me to my knees with a prayer that the day will bring the guidance sought in the sixteenth chapter and the eleventh verse of Psalms, that the Almighty God "will show me the path." I have no shame in confession that on a great number of vexing problems that confront me as a Member of the United States Congress that I find a need for aid beyond the power of man, and that I in humility seek such aid in the recourse of prayer.

I hope that this new church will mean an expression of a new determination for religious strength and religious liberty. I hope that this church will serve as a hospital to heal and to strengthen all who, weak and wayward, follow the footprints of the Master here. I hope that this church will mean to America great strength in the preservation of liberty.

In building this church:

"We have stormed the black bastions of night,
We will tread where our vision has trod,
We have set in the darkness a light,
We will find in the vastness, God."

Let us dedicate this building with the prayer:

"As the angels and archangels bow down to Thee, casting their crowns at Thy feet and crying, 'Holy, thrice Holy, art Thou, Lord God Almighty, so have we come this evening to show our desire to live in accordance with Thy divine will. May this church stand as a monument before Thee of our desire. May we learn here that action is eloquence and that the eyes of the ignorant are more learned than the ears of the wise. May we serve in deed and thought as well as words, and may this institution serve as a fountain for deeds that will stand before the world as evidence of the purpose builded here. Bless, O God, the tie that binds these hearts in Christian fellowship. May this church be a source of unalterable faith. May this church be a fortress for liberty which will grow no less as generations yet unborn rise up to share its blessing. May we dedicate this church for today and tomorrow in the realization that today and tomorrow are one, even as the morning wind and the evening breeze are one, and in this united thought we dedicate this building to the glory of God and the service of America."

On Continuing the Committee on Un-American Activities

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1939

Mr. SABATH. Mr. Speaker, during the last session of the Congress, I was led to believe that the resolution which I supported, and for which I voted, to create a special committee to investigate un-American activities, would result in a fair, impartial, and judicial investigation and study of the problem and all its ramifications. I have always been opposed, and more vigorously so each succeeding year, to any activities that would in any way undermine or injure our great form of democratic government or its institutions. But when I voted to help create this special committee, I did so under the impression that such a committee would conduct itself in a manner not only worthy of this great legislative body, but one worthy of the great Democratic Party, which is in control of this Government through the support of the American people, and in control of the special committee by its majority membership.

Unfortunately, and to my sincere regret, and to the disappointment of thousands of fine American citizens of all parties, the special committee has permitted itself to be used as a sounding board and publicity agency by elements and people in this country who are inveterate enemies, not only of organized labor, but of liberal, progressive government, the President, and all those who support him in his efforts to give this country a New Deal and a "square deal." Such conduct on the part of this committee has done more to encourage "un-American" activities than anything else that I can think of, and many outstanding men in this House have not only been disappointed at the committee's actions, but would be fearful of serving on it lest they be held accountable for the committee's grievious mistakes of procedure and conduct in the past.

The evidence which has been presented to the Rules Committee during the past 3 days of hearings shows beyond any doubt that the investigation of Nazi, Fascist, Silver Shirt, Black Shirt, and other subversive organizations was entirely lost sight of, and that 75 percent of the investigation was a Communist "witch hunt" directed against labor organizations, candidates for public office, and the departments and bureaus of the Federal Government—in fact, any place and any group where there appeared to be anyone who had ever been liberal, progressive, or friendly to our Democratic administration. Of course, here and there, to make things look good, an actual Communist or Communist organization was "investigated," but if you will read the record of the hearings closely as I did, you will find this was few and far between and there was not much space devoted to it.

It was also most unfortunate that certain investigators and witnesses purporting to represent patriotic organizations, took advantage of the committee's hearings to besmirch the names, patriotism, and characters of honest, upright, and loyal American men and women by trying to attach to them the stigma of communism. Although I have been forced to hurriedly peruse the hearings of the committee—and some of them have not yet been printed and available to me, because of the anxiety on the part of others to get this measure reported to and acted on by the House—I found much about the activities of a professional, mud-slinging artist who was employed by the committee as an investigator. This person, Sullivan by name, after he had been permitted to injure the fair names and reputations of many decent people and after he had unloaded his filth and dirt into the record of the hearings, was discharged by the special committee. Apparently, his doubtful past and his record as a labor spy had finally caught up with him or had come to the committee's attention, which record should have been looked into before he was permitted to inflict himself on the Congress.

There were instances of witnesses, Mr. Speaker, like one Walter Steele, who blandly stated he represented 114 patriotic organizations, a list of which he was allowed to insert in the record. Never once was he cross-examined as to how or why he represented these so-called groups, but his bombastic statements were accepted apparently by our trusting special committee. In Mr. Steele's list appears the name of the American Coalition, which he heads, and then the American Vigilant Intelligence Federation, the Junior American Vigilant Intelligence Federation, and the Junior Order, United American Mechanics, of New Jersey. No man of standing will claim that these organizations can be rightfully or truthfully called "patriotic" organizations. If anything, they are organizations which should be investigated themselves as to their Americanism. There may be many similar instances among the 114 organizations Mr. Steele claims to represent. How did he obtain such representation? What compensation does he receive, and what does his representation consist of? These are questions that I cannot find answered in the hearings. Some of these organizations, I am sure, have little knowledge of Mr. Steele and his activities, and many of them, I fear, exist only on paper. I am further informed that this Mr. Steele—and I do not mean to unduly emphasize his name—is the publisher of a certain magazine whose paid circulation appears to be a secret between himself and the Lord, and whose advertising space is conspicuous by its absence from the pages of his publication. Standard Rate and Data, which lists the circulation of magazines, says about this gentleman's "valuable" publication—and I quote:

After three requests, publisher has failed to furnish recent sworn circulation statement in accordance with S. R. D. S. requirements.

I wonder from what source he obtains the money to publish his magazine? And I wonder why the special committee made no effort to find out what kind of "money" backs up his propaganda and "big business" activities?

Within the 427 pages comprising Mr. Steele's statements in the hearings of the special committee, he designates scores of labor organizations and other groups as being communistic. I have in my possession telegrams from countless numbers of these organizations denying his wild and unfounded charges. On pages 385, 386, 387, and 388 of the printed hearings appears a long list of organizations that Mr. Steele maintains are contributors to communistic campaigns. Among them are named such organizations as the Austrian Fighters of Fascism, German Workers of Brooklyn, Brooklyn and City College Alumni, German-American Workers' Club, Minnesota Junior Farmer-Labor Party, the Freiheit Organization, and other organizations which on their face make such charges look ridiculous. If this man Steele had charged these people as contributing to Nazi or Fascist groups there might be some semblance of reason in his remarks and doubts as to his mental soundness would not confuse readers of his long and rambling attempt at self-advertising in the committee record.

But even the above ridiculous statements I would be willing to ignore if Mr. Steele had not gone on with the permission and acquiescence of the special committee, to designate some of the most outstanding men and women in the United States as communistic sympathizers. He charges such men as Federal Judge William H. Holly, Prof. Malcolm Sharp, Rev. Norman Barr, Prof. Percy H. Boynton, Prof. S. P. Breckenridge, Prof. Paul H. Douglas, Rabbi Louis L. Mann, and many other well-known men, active in public life, religious and educational circles in Chicago, as well as scores of others throughout the country, as being members of Communist front organizations. This imputation and this attempt to besmirch such people by innuendo is not only unjustifiable but a sample of the type of conduct by irresponsible persons that the special committee lent itself to and which is condemned by hundreds of thousands of fair-minded Americans of all parties who have protested the continuing of the committee because of the way it has carried on in the past.

I have received thousands of telegrams and letters of protest against the continuation of the committee from every section of the country, and from universities and colleges, labor organizations and unions, teachers, doctors, lawyers, Army officers, civic associations, and public men and women who have been libeled and vilified by the unjustified inclusion of their names in the so-called public hearings of the committee. I have protests from elected officers of cities and States in various parts of the country demanding the right to be heard and to be allowed to face their detractors before the Rules Committee, people who resent the vicious imputation that they are members of or sympathizers with any communistic organizations. I urge the membership of this House to read just a few of these letters and telegrams which have been inserted in the hearings of the Rules Committee and judge for themselves whether or not these people are sincere and if they have not been grossly and unfairly libeled and held up to scorn and defamation by charlatans and character assassins who have used the special committee as an arena to destroy the reputations of American men and women who disagree with their reactionary ideas.

The gentleman from Texas [Mr. DIES], chairman of the Special Committee on Un-American Activities, stated that he had over 100 offers from persons who would contribute up to $5,000 each to continue the work of the committee, and that many persons had sent in checks for smaller contributions. Those who sent in the smaller amounts out of their enthusiasm and patriotism I can understand, because they have believed the reactionary press in its reports of the findings and work of the committee. But of those who offered $5,000 I am suspicious that they had a selfish motive and a good reason for so doing and always favor an investigation that will help to destroy organized labor and wreck, impede, or discredit progressive and liberal government.

I here and now urge the chairman of the special committee to acquaint the House and the country with the names of these bounteous and generous volunteer contributors. He believes in full publicity, and surely we should learn who are these great "paytriots." The hearings give us thousands of names of Americans who are accused of being Communists, some of them right here in the employ of our Federal Government, according to the witnesses who had their expenses paid to testify against candidates for public office just before the elections, when such testimony would do the most harm to their election campaign. Why not list also the names of Mr. Steele's "American Coalition"?

Mr. Speaker, I can well appreciate the difficulties of an investigating committee, so I am pleased that today the chairman of the special committee admitted that mistakes had been made. It was pleasing likewise for me to hear him give his personal assurance to the Rules Committee that he has benefited by his mistakes and that his committee will endeavor to be fair in any future hearings. I also wish to congratulate him upon his statement that, if a sufficient amount of money, $100,000, is given him, the special committee will investigate the Nazi, Fascist, and other subversive organizations and persons responsible for creating and spreading religious bigotry, prejudice, and hatred in our country. I am immensely pleased by this, because all my life I have been a strong believer in that old saying, "Better late than never."

Mr. Speaker, during the hearings before the Rules Committee, the gentleman from Texas complained that he had been hampered, attacked, and harassed in his investigation by members of the executive branch of the Government. It is not my intention to defend any official of our administration. They need no defense of mine, because I think they are all well able to take care of themselves as the past record seems to have indicated. If some have criticized the special committee, they have undoubtedly done so because they believed an injustice was being done to many reputable and honorable people. In their criticism of the conduct of the special committee they seem to have had plenty of company, if the thousands upon thousands of letters and telegrams of protest I have received from almost every State in the Union is any indication. Of course, I have a few letters loud in their praise of the committee's conduct, some I remember being from Republican clubs and chambers of commerce. I trust, however, that the chairman of the special committee in carrying on the hearings in the future will not permit himself to be influenced by the enemies and detractors of our great Democratic Party, of which he is a member and the voters of which have made it possible for him to serve in this great legislative body. He comes from a section of the Nation where real Democratic Party spirit and principle is a personal and precious thing and where I always thought Democrats were able to protect themselves against being used by the enemies of our party for selfish and partisan purposes. Thus I feel that the conduct of the special committee in the future will be such as to not only prevent anyone from criticizing its fairness but also prevent any political groups antagonistic to democratic principles from using the committee to their political advantage.

Mr. Speaker, in conclusion, let me say that I, for one, have been vigorously in favor of exposing and putting an end to all subversive and un-American activities. Notwithstanding certain temporary economic imperfections and problems that face us today, we live in and enjoy the benefits of the greatest country on the face of the earth. I believe in, respect, and honor the traditions of our Nation and am as ready as anyone to give my life for the preservation and protection of its institutions. I know, Mr. Speaker, that many of those who have been assailed and attacked as Communist sympathizers before this special committee have just as great love and respect for our democratic form of government as does the gentleman from Texas. I know that thousands who have been so unfairly charged and assailed are just as loyal and

patriotic as the gentleman from Texas, the gentleman from Georgia, the gentleman from Virginia, or myself. Naturally, these good people have resented not only the libelous and unfair statements against themselves but those made against any President or public men of this great Union of ours.

Under the leave granted me, I am including with my remarks only a few samples of the thousands of letters and telegrams received in protest against the conduct of the Special Committee on Un-American Activities. All of the many thousands of communications are available in the Rules Committee for Members of the House to see and read.

Now, Mr. Speaker, just one more word. In view of statements made by the gentleman from Texas during the course of the hearings before the Rules Committee that a great deal of work remains undone, it was suggested that the membership of the special committee be increased through the naming of from two to four additional members. Personally, I am of the opinion that such increase in membership would be extremely helpful to the committee and expedite its work. Notwithstanding the fact that many of us were willing to use our influence to endeavor to obtain increased membership for the special committee, the gentleman from Texas, for reasons unknown to me, refused to accept such increase. This refusal I regret, and I trust the gentleman from Texas will make known his reasons for not wanting to increase the membership, if not to me, at least to the Members of the House.

For the information of the hundreds who asked for a hearing before the Rules Committee, I regret to state that I was precluded from granting their request by reason of the fact that the rules and precedents of the committee allow for the appearance before it only of Members of the House. It was likewise the decision of a majority of the Rules Committee to strictly adhere to these established rules and precedents on this occasion, as in the past.

FEBRUARY 2, 1939.

Congressman A. J. SABATH,
Chairman Illinois Delegation,
House of Representatives:

We urge you to speak out against bill which would continue the nefarious Dies committee in the debate tomorrow. In the name of American liberty and democracy DIES should be stopped. After reading the transcript of worthless testimony taken by DIES, and reading the publicity releases, we condemn the so-called investigation as a mere political smear campaign, which is both un-American and as much a threat to our democracy as the Nazi Bund, Communist Party, or Silver Shirts Legion. We favor a bona fide investigation of subversive activities within the United States by the Department of Justice, and the publication of a complete and accurate report on this subject. Mr. DIES and his committee would find this task impossible even with a million dollars if their first three volumes are a criteria.

William E. Rodriguez, chairman, Council of United States Veterans, Chicago District, also member Veterans of Foreign Wars; George C. Danfield, secretary and past commander, Union Labor Post, American Legion, and member Veterans of Foreign Wars, 160 North La Salle Street.

BEAUMONT, TEX., *February 1, 1939.*

Representative SABATH,
Chairman, Rules Committee,
House of Representatives, Washington, D. C.:

Oil Workers' International Union, Local No. 229, request that persons accused of communism be permitted to deny accusations.

B. J. STEWART,
President, Local No. 229.

WASHINGTON, *D. C., February 1, 1939.*

Representative SABATH,
House Office Building:

Urge every possible step be taken to delay appropriation for Dies committee to secure full discussion of the appropriation on the floor of the House and, if possible, to abandon the committee entirely. As an American of Colonial descent deeply resent and unalterably oppose un-American activities of this committee.

FRANCES ADAMS, *Peconic, N. Y.*

CONRAD PRESBYTERIAN CHURCH,
Conrad, Mont., January 26, 1939.

Hon. A. J. SABATH,
Chairman, Rules Committee,
House of Representatives, Washington, D. C.

DEAR SIR: Most people out here are nauseated by the way Mr. DIES has handled his House Committee on Un-American Activities. He has not sought to ascertain truth. Instead he has attacked our worthy President, Mr. Roosevelt, and his official family. We respect Mr. Roosevelt; we loathe Mr. DIES and his calumnies.

Your committee will render a service to decency by bringing in a report asking that Mr. DIES' committee be discontinued.

I myself, when Mr. DIES' committee was first created, hoped it would render a service to good government. Instead, it has maliciously attacked Mr. Roosevelt, whose devotion to public welfare makes him our Nation's foremost citizen.

Yours truly,

DANIEL S. MCCORKLE.

ST. LOUIS, MO., *January 31, 1939.*

ADOLPH J. SABATH,
Chairman, Rules Committee,
House of Representatives:

As one who has been falsely accused without being given a chance to refute the statements made against me, I wish to appeal to the Rules Committee to hold public hearings so that all interested persons shall be given an opportunity to be heard on procedure and findings of the Dies committee.

RICHARD BRAZIER,
Business Agent, St. Louis Joint Board,
Amalgamated Clothing Workers of America.

FIRST UNITED BRETHREN CHURCH,
Westerville, Ohio, January 20, 1939.

Hon. ADOLPH J. SABATH,
House Office Building, Washington, D. C.

MY DEAR SIR: I understand there is a resolution before the Rules Committee, of which you are chairman, for continuing the Committee on Un-American Activities. May I respectfully urge that the committee be discontinued. Its methods have been such as to reflect adversely upon congressional investigations. It has indeed been quite un-American itself in its procedure.

Incidentally, one wonders how the committee has been able to carry on so long with so small an appropriation. Would not an investigation of its expenditures be in order? The Government might discover fruitful methods of economy from a cross-examination of Chairman DIES.

Very truly yours,

J. STUART INNEREST.

WHEELING, W. VA., *January 31, 1939.*

A. J. SABATH,
Chairman, House of Representatives Rules Committee:

The 6,000 members of the United Mine Workers of America of the northern Panhandle district of West Virginia join me in requesting that open hearings be held to give all interested people opportunity to be heard on procedure and findings of Dies committee before voting on present pending resolution.

ADOLPH PACIFICO,
District Representative of United Mine Workers of America.

NEW YORK, N. Y., *February 2, 1939.*

ADOLPH J. SABATH,
House Office Building:

Dies committee permitted witnesses to utter false and libelous statements that New Republic was Communist organ. Gave editors no opportunity appear in reply. Feel before House votes on extending committee editors New Republic and other Americans who were shamefully misrepresented should have right be heard.

EDITORS THE NEW REPUBLIC.

PORT NECHES, TEX., *February 1, 1939.*

ADOLPH J. SABATH,
Chairman, Rules Committee,
Washington, D. C.:

I was directed by the membership of local 228, Oil Workers International Union, to request you to permit people who have been charged with communism by witnesses testifying before your committee to be given the opportunity to appear before your committee and clear their names.

F. A. PEVETO,
Secretary, Local 228.

PITTSBURGH, PA., *February 2, 1939.*

Hon. A. J. SABATH,
Member of Congress; Chairman, House Rules Committee:

Ask you oppose continuation Dies committee. With my record of 30 years' service in labor and progressive movement, 18 years elective public service, I ask you to place in record public denial that I am or ever was member of Communist Party or paid C. I. O. organizer. This brutal attempt to smear my public record and that of others justified denial of committees continuation. Refer you to Congressman MATTHEW A. DUNN, who is familiar with my record of service.

RICHARD H. LAWRY,
Former Burgess (Mayor) West Homestead, Pa.

ST. STEPHENS CHURCH,
Houston, Tex., January 26, 1939.

Representative A. J. SABATH,
Chairman of the Rules Committee,
House Office Building, Washington, D. C.

DEAR MR. SABATH: I am writing to urge adverse action on the Dies resolution. I feel a great deal of prejudice and unfairness has been revealed in the committee's action.

Thank you sincerely for your consideration of this letter.

Very sincerely yours,

THOS. W. SUMNERS.

GLENDALE, CALIF., *January 30, 1939.*

Hon. A. J. SABATH,
Chairman, Rules Committee, Washington, D. C.:

I desire to protest further appropriation for the Dies committee. It appears to have fully accomplished its purpose of besmirching the character of outstanding Democratic candidates and the supporters of our President, but the elections are now over. The committee conduct was un-American, undemocratic, and grossly unfair. I personally was falsely accused of being a Communist and have never received any opportunity to refute the baseless charges. It is apparent this charge was made only because I'm the chairman of the Democratic Central Committee of California, which was actively engaged in supporting Senator SHERIDAN DOWNEY, Gov. Culbert Olson, and the other Democratic candidates. My private and public life is an open book; and if your committee so desires, I will welcome the opportunity to personally appear before it without expense to the committee. Please send reply to State capitol, Sacramento, Calif.

JOHN GEE CLARK,
Chairman, Democratic State Central Committee, California.

CHICAGO, ILL., *February 1, 1939.*

Hon. ADOLPH J. SABATH,
Chairman, House Rules Committee,
House of Representatives, Washington, D. C.:

Whereas the last year the infamous Dies committee used Government funds under pretext of investigating un-American activities, and whereas Dies committee has made numerous irresponsible accusations, we demand that House Committee on Rules holds open hearing affording all people accused by Dies committee time and ample opportunity to answer, refute, and give testimony in their own behalf.

Henry Johnson, assistant national director of Packing House Workers' Organizing Committee, Brennan Local 335; Peter Brown, president, and Charles Balskus, financial secretary, Agar Local 336; Kenneth Collins, president, and Clifton Johnson, financial secretary, Wilson Local 337; Louis Karlak, president, and Lillian Shaw, secretary, Hammond Local 338; Bruno Norbut, president, and John Wojciechowski, secretary, Miller and Hart Local 339; Samuel Clemmons, president, and J. E. Thomas, secretary, Livestock Handlers, 567; Ben Brown, president, and Frank Monaghan, secretary, three casing houses, Local 908; Hurie Lee, president, William Chroszy, financial secretary, Biersdorf, 335; Sam Baker, president, Illinois Meat, 762; Henry Short, president, Kate Eiler, secretary.

UNITARIAN SOCIETY OF WELLESLEY HILLS,
Wellesley Hills, Mass., January 19, 1939.

Representative ADOLPH J. SABATH,
Chairman, the Rules Committee,
House Office Building, Washington, D. C.

MY DEAR REPRESENTATIVE SABATH: I am writing you to say that I consider the Dies investigation a disgrace and that I hope that there will be an adverse report on the resolution continuing the House Committee on Un-American Activities.

Respectfully yours,

WAITSTILL H. SHARP, *Minister.*

THE BAPTIST UNIVERSITY PASTORATE
AT THE UNIVERSITY OF WISCONSIN,
Madison, Wis., January 20, 1939.

Representative A. J. SABATH.

DEAR SIR: I would like to urge strongly an adverse report on the Dies resolution. The activities of that committee have done more harm to democracy than the movements they have been investigating. I am amazed at the scandalously loose procedure of the committee as it took all sorts of hearsay reports without checking upon them. I hope very much that the Dies committee will be discontinued.

Sincerely yours,

G. L. COLLINS.

PITTSBURGH, PA., *February 1, 1939.*

Hon. ADOLPH J. SABATH,
Chairman, Committee on Rules, House Office Building:

As all fair-minded citizens must we condemn Dies committee's biased approach in its investigation into un-American activities. Committee's arbitrary and undemocratic methods thus become themselves un-American. We protest closed hearings of Rules Committee on continuation of appropriation without giving fair hearing to those accused by DIES. We urge you to delay action on Dies appropriation until all the committee reports are published.

KATHERINE M. RUTTENBERG,
Executive Secretary, Pittsburgh League of Women Shoppers.

DETROIT, MICH., *February 1, 1939.*

Hon. ADOLPH J. SABATH,
Chairman, House Rules Committee, House of Representatives:

Past hearings conducted by the Dies committee in every respect were vile and scandalous. They disregard every principle of democracy. In the name of Labor's Non-Partisan League of Wayne County 200,000 voters demand that in the future the Dies committee hold open hearings and give those accused an opportunity to appear and submit testimony in their own behalf.

JOHN W. GIBSON,
Secretary and Treasurer, Labor's
Non-Partisan League of Wayne County.

THE COMMUNITY CHURCH,
Ephrata, Wash., January 25, 1939.

Representative A. J. SABATH,
Chairman, Rules Committee,
House Office Building, Washington, D. C.

DEAR SIR: May I strongly urge an adverse report of your committee on the resolution which would continue the House Committee on Un-American Activities, the so-called Dies committee?

I do not recall any congressional committee which has done more to tear down the American concept of fair play than this committee. Its own conduct was most decidedly an "un-American activity." It offered itself as a sounding board for all the disgruntled who wanted to give vent to their animus against the present administration. All in all, it was about the sorriest spectacle that could happen in a democracy.

So, in the interests of decency, fair play, and truth, I hope your committee will recommend that the Dies committee be discharged from further duty.

Very truly yours,

ROBERT B. SHAW, *Pastor.*

JELLICO, TENN., *January 30, 1939.*

Hon. A. J. SABATH,
Chairman, House Rules Committee,
House Office Building, Washington, D. C.:

Following telegram has been sent to Congressman J. WILL TAYLOR. All these local unions are in his congressional district: "Local unions at Newcomb, Oswego, Wooldridge, Morley, Anthras, Habersham, Westbourne, Cotula, Peabody, LaFollette, Sun Mine, Highpoint Mines, Caryville, Redash, Block, Hickey, Turley, Clinchmore, Moore Mines, Fork Mountain, Buffalo, Petros, Windrock, Coal Creek, Briceville, Cameron Mine, Bradens Gap all authorize me long-distance telephone to wire you requesting public hearing be held by Rules Committee before action is taken by your committee in continuing Dies committee. They ask your aid, assistance, and vote in bringing this about."

WM. TURNBLAZER,
President, Union Mine Workers of America, District 19.

WASHINGTON, D. C., *January 20, 1939.*

Congressman ADOLPH J. SABATH,
Chairman, Rules Committee, House Office Building,
Washington, D. C.:

The National Negro Congress was named by the Dies committee as an un-American Communist organization, the evidence on which this charge was based was introduced into the record privately so that we had no opportunity to know that we were being investigated and no opportunity to answer the charges. We have definite proof that the committee has deliberately distorted speeches of our officers and has deliberately published falsehoods of the grossest character against us. We deny that we are in any sense un-American or Communists; we ask that you give us an appointment to furnish documental proof that the Dies committee has deliberately slandered our organization. Please wire reply. We further wish to go on record as opposed to any continuation of this committee, and we will consider its continuation a deliberate attack upon the Negro people to be answered at the polls.

JOHN P. DAVIS,
National Secretary.

THE TULANE UNIVERSITY OF LOUISIANA,
New Orleans, January 23, 1939.

The Honorable A. J. SABATH,
Chairman of the Rules Committee,
House Office Building, Washington, D. C.

DEAR SIR: As the proceedings of the House Committee on Un-American Activities, of which Representative DIES, of Texas, is chairman, have been characterized by lack of intelligent plan, lack of judgment and fairness, and have stirred up ill will throughout the country, accomplishing no constructive results, I wish as a voter to urge that your Rules Committee do not approve Mr. DIES' request for further appropriation.

Very truly yours,

JOHN M. MCBRYDE,
Professor Emeritus.

THE MENNINGER CLINIC,
Topeka, Kans., January 23, 1939.

Representative ADOLPH J. SABATH,
Chairman of the Rules Committee,
House Office Building, Washington, D. C.

DEAR SIR: I wish to voice my hope that your committee will report adversely on the continuation of the work of the Dies committee. It is the most un-American piece of investigation the country has seen for over a decade.

Sincerely,
NORMAN REIDER.

STATE TEACHERS COLLEGE,
Milwaukee, Wis., January 7, 1939.

Hon. ADOLPH J. SABATH,
Chairman, Rules Committee,
House of Representatives Office Building,
Washington, D. C.

MY DEAR MR. SABATH: I am writing to express my very deep opposition for continuing the Dies committee. I have followed the work of this committee rather closely, and I am convinced that its whole procedure tends to spread fear which inevitably results in the suppression of freedom of speech and freedom of thought.

For example, I am a member of the Civil Liberties Union. I know every member in the State of Wisconsin and to my certain knowledge not a single one is a Communist or is friendly to communism. They are all ardent believers in American democracy and enthusiastic defenders of it. The report of the Dies committee in branding the Civil Liberties Union as communistic is a form of name calling that is one of the worst types of suppression, and the suppression of liberals is the first step in the growth of fascism.

I urge the committee to recommend adversely on this resolution.

Very truly yours,
FRANK E. BAKER, *President.*

BROWN MEMORIAL CHURCH,
Baltimore, January 20, 1939.

Representative ARNOLD J. SABATH,
House Office Building, Washington, D. C.

MY DEAR MR. SABATH: Many of my acquaintances feel as I do, that the way in which the investigations of the Committee on Un-American Activities were carried on under the leadership of Representative DIES, were not calculated to give the American people a fair, unprejudiced, and accurate estimate of such activities. If every sincere effort toward social progress for the majority of our citizens is to be labeled radical or communistic by such a committee, then it seems to me we are throwing the power into the hands of reactionary forces in this country, and by that much preparing the way for fascism. I sincerely hope that the bill introduced by Representative DIES for continuing the present House Committee on Un-American Activities will not be passed.

Yours very sincerely,
T. GUTHRIE SPEERS.

HUMBOLDT PARK COMMUNITY METHODIST EPISCOPAL CHURCH,
Chicago, Ill., January 22, 1939.

Hon. A. J. SABATH,
Washington, D. C.

DEAR SIR: May I protest vigorously the work of the Dies committee. I consider it un-American and uncalled for. Please do all you can to have it abolished.

Sincerely,
Rev. W. B. WALTMIRE.

NEW ORLEANS, LA., *January 30, 1939.*

Congressman A. J. SABATH,
Chairman, House Rules Committee,
Congress Building, Washington, D. C.:

NEW YORK, N. Y., *January 30, 1939.*

Representative ADOLPH J. SABATH,
Chairman, Rules Committee, House of Representatives:

Undemocratic conduct of Dies committee in past commands Rules Committee hold hearings to permit persons accused before Dies committee to offer contradictory testimony. No such opportunity offered by DIES.

MICHAEL QUILL,
President, Transport Workers Union of America.

THE UNIVERSITY OF KANSAS,
Lawrence, January 7, 1939.

Hon. ADOLPH J. SABATH,
Chairman, Rules Committee,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN SABATH: May I express my opposition to the continuation of the Dies House committee and its alleged investigation of so-called un-American activities, and the hope that your committee will take a like position. The committee has conducted no real investigation, but has, on the contrary, served as a medium for propaganda of the most vicious and misleading sort. A case in point is its condemnation of the American Civil Liberties Union as an instrument of the Communist Party, whatever that may mean. I have had an opportunity of observing the work of the Union from the time of its inception in 1917 (before there was a Communist Party of any importance), and its record amply demonstrates that it has been consistently concerned in the protection of political and religious liberties supposedly guaranteed by the Bill of Rights. One must conclude that the Dies committee is opposed to the unrestricted exercise of such rights, particularly by groups critical of social and economic conditions.

I, for one, would welcome a genuine investigation of Fascist and Communist movements and organizations, along with the conditions responsible therefor; but the Dies committee has shown that it is not capable of such inquiry. If your committee favors an inquiry designed to get at the facts, why not set up a committee qualified by interest and ability to conduct an investigation of this nature?

Yours very truly,
SEBA ELDRIDGE.

ST. JAMES' CHURCH,
Elmhurst, Long Island, N. Y., January 19, 1939.

The Honorable ADOLPH J. SABATH,
Chairman of the Rules Committee,
House Office Building, Washington, D. C.

HONORABLE AND DEAR SIR: As an American citizen and a veteran of the World War, as well as a Christian clergyman, I am keenly interested in the Dies committee. I am convinced, as I earnestly hope you are, that its report indicated that nothing has been accomplished, except to waste in the lowest form of political "shysterism" a deal of the people's money. I sincerely hope your report on the Dies resolution to continue its work(?) will be an emphatic "no."

To grant DIES and his outfit $150,000 of the people's money is not only a complete waste but is serving to stir up a great deal of bitterness throughout our country, based upon pure prejudice and ignorance.

Thank you for giving this matter your careful consideration.

Respectfully yours,
C. LAWSON WILLARD, Jr., *Rector.*

WOMEN'S INTERNATIONAL LEAGUE FOR PEACE AND FREEDOM,
Detroit, January 19, 1939.

A. J. SABATH,
House Office Building, Washington, D. C.

DEAR SIR: Enclosed please find a copy of a letter sent to the President expressing the attitude of our organization toward the activities of the Dies committee.

As chairman of the House Rules Committee it was our thought that this letter might be of some interest to you.

Sincerely yours,
T. W. SCHUMAN,
Chairman, Civil Liberties Committee.

JANUARY 19, 1939.

President FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: Inasmuch as the Dies committee did not produce legal evidence concerning the people accused of subversive activities or give the accused full opportunity to refute the very damaging personal charges, the Detroit Branch of the Women's International League for Peace and Freedom wishes to express opposition to any further appropriation for the continuation of the work of the Dies committee under its present leadership. In our State the investigations were obviously used to damage the cause of organized labor and the nonviolent settlement of industrial disputes.

It is our hope that should a new committee be organized that it will fulfill its function under a more just and impartial leadership and that it will investigate nazi-ism and fascism and other subversive elements as was originally the intention of the congressional resolution which authorized the committee.

Sincerely yours,
_____ _____,
Chairman, Civil Liberties Committee.

KEENE, N. H., *January 19, 1939.*

Hon. A. J. SABATH,
House Office Building, Washington, D. C.

DEAR MR. SABATH: Our hope is for an adverse report on the Dies committee resolution and a discontinuance of said committee.

Sincerely yours,
GEORGE LAWRENCE PARKER.

CENTRAL METHODIST EPISCOPAL CHURCH,
Superior, Wis., January 23, 1939.

Hon. A. J. SABATH,
The Rules Committee, House Office Building,
Washington, D. C.

DEAR CONGRESSMAN SABATH: Because of the prejudice, unjudicial conduct, and irresponsibility of the so-called Dies committee, I sincerely hope that your committee will report against its continuance.

Sincerely yours,

J. PIERCE NEWELL.

GUILFORD COLLEGE,
Guilford College, N. C., January 27, 1939.

Hon. ADOLPH J. SABATH,
Chairman, Rules Committee, House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: May I urge upon you that you use your influence in the direction of bringing an adverse report on the Dies movement continuing the House Committee on Un-American Activities. The slipshod methods pursued by this committee and the manner in which they attempted to make investigations are so un-American that I believe the committee should not be continued.

Sincerely yours,

A. D. BEITTEL, *Dean.*

THE UNITED CHURCH OF HYDE PARK,
Chicago, January 21, 1939.

Re: Against continuance of Dies committee.

The Honorable ADOLPH J. SABATH,
Chairman of the Rules Committee,
House Office Building, Washington, D. C.

DEAR SIR: I wish to register my opposition, as a public-minded citizen, to the continuance of the Dies committee.

Its investigations thus far have served only to obscure the facts which the committee was named to discover and expose. The real situation concerning possible subversive activities of Communists and Fascists in our midst is hidden behind excessive vituperations directed toward the mildest liberal activities.

Further, the methods employed by this committee indicate a wilful departure from anything like the judicious attitude the American public might expect in a committee from its House of Representatives.

I urge that the request for continuance with increased funds be not granted.

Sincerely,

GEORGE M. GIBSON.

SOUTH ST. PAUL, MINN., *January 22, 1939.*

Hon. A. J. SABATH,
Chairman, Rules Committee, Washington, D. C.

DEAR MR. SABATH: We desire herewith to file a protest against any additional appropriation to be granted the so-called Dies committee. Certainly nothing constructive has come out of this committee. Its work has consisted only of mud slinging against progressive interests in this country whose views didn't exactly coincide with the reactionary views of Mr. DIES.

Respectfully yours,

FARMERS UNION LIVE STOCK COMMISSION,
CHAS. D. EGLEY, *Manager.*

NEW YORK, N. Y., *January 30, 1939.*

Chairman SABATH,
Rules Committee:

In the name of 15,000 fur workers we urge immediate hearings to permit persons accused by the Dies committee to appear and testify.

IRVING POTASH,
Manager, Furriers' Joint Council of New York, 15,000.

TOLEDO, OHIO, *February 2, 1939.*

ADOLPH J. SABATH,
Chairman, Rules Committee, House Office Building:

In the name of Local Union No. 14, United Auto Workers of America, we demand that the Dies committee conduct hearings allowing persons accused of communism to appear and offer testimony contradicting such accusations.

JOS. DITZEL, *President.*

NEW YORK UNIVERSITY,
New York, January 19, 1939.

Hon. ADOLPH J. SABATH,
House Office Building, Washington, D. C.

DEAR MR. SABATH: Permit me to add my voice to the rising protest against the Dies resolution. The work of committee has already furnished an amazing example of the possibility of publicizing lies and half truths, with no adequate opportunity for either refutation or denial. The net result of such activity can only be to intensify class feeling, to no good end. The sooner this kind if irresponsible meddling is stopped the better it will be for the dignity of the United States.

Very truly yours,

H. P. FAIRCHILD.

FIRST UNITARIAN CHURCH,
Alton, Ill., January 24, 1939.

Representative ADOLPH J. SABATH,
Chairman of Rules Committee, House Office Building,
Washington, D. C.

HONORABLE SIR: The manner in which the Dies committee has carried on its investigation is a travesty of unintelligence and political opportunism. It should not be allowed to continue. I call upon you to exert your personal and official influence for its discontinuance.

Sincerely yours,

RANDALL S. HILTON.

THE OHIO STATE UNIVERSITY,
Columbus, January 26, 1939.

Hon. ADOLPH J. SABATH,
Chairman of the Rules Committee,
House Office Building, Washington, D. C.

DEAR SIR: On account of the prejudice, unjudicial conduct, and general irresponsibility of the House Committee on Un-American Activities headed by Representative DIES, of Texas, I would respectfully urge an adverse report on the resolution proposing to continue the activities of the committee.

Very truly yours,

H. G. KENESTRICK,
Associate Professor of Agricultural Education.

NEW YORK, N. Y., *January 30, 1939.*

Hon. ADOLPH J. SABATH,
Chairman, Rules Committee, House of Representatives:

In behalf of the 175,000 members of the United Electrical, Radio, and Machine Workers of America, I respectfully petition your committee to give opportunity to those charged with communism by the Dies committee to appear before the Rules Committee to give testimony repudiating such charges if they so desire. Those who feel they have been attacked unfairly by the Dies committee should be given this opportunity before considering any legislation concerning the future of the Dies committee.

JAMES B. CAREY,
President, United Electrical, Radio, and Machine Workers of America, 1133 Broadway, New York, N. Y.

NEW YORK, N. Y., *January 31, 1939.*

Congressman SABATH:

Urge no decision and no appropriation for Dies committee until full opportunity is given to organization and individuals attacked by such committee.

UNITED OPTICAL WORKERS UNION.

CHURCH OF THE HOLY TRINITY,
Brooklyn, N. Y., January 19, 1939.

Hon. ARNOLD J. SABATH,
House Office Building, Washington, D. C.

DEAR REPRESENTATIVE SABATH: Please permit me to express my hope that the Dies committee will either be abolished or drastically reformed under a new chairman. The present chairman and committee have discredited themselves by their failure to do a real job of critical investigation.

Faithfully yours,

BRADFORD YOUNG, *Associate Minister.*

SOUTHEASTERN MICHIGAN ASSOCIATED TEACHERS CLUBS,
Highland Park, January 30, 1939.

The Honorable A. J. SABATH,
Chairman, Rules Committee, House of Representatives,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN SABATH: We wish you to know that we are strongly opposed to the continuance of the un-American activities of the Dies committee, that we condemn strongly the proposal to make an appropriation for that committee.

Sincerely yours,

JEAN ARMOUR MACKAY, *President.*

HAZARD, KY., *January 31, 1939.*

ADOLPH J. SABATH,
Chairman, Rules Committee, Capitol Building:

The United Mine Workers of America, District 30, State of Kentucky, we request that public hearing be held before final action is taken on report of the Dies committee.

EDGAR REYNOLDS,
International Representative.

NEW HAVEN, CONN., *January 30, 1939.*

ADOLPH J. SABATH,
Chairman, House Rules Committee,
House Office Building, Washington, D. C.:

Urge public hearing on Dies committee before cutting appropriation. Look with disfavor on continuance of this partisan investigation.

Rev. GEORGE BUTLER,
Summerfield Methodist Episcopal Church.

NEWARK, N. J., *January 30, 1939.*

Congressman SABATH,
Rules Committee, Washington, D. C.:
Newark Newspaper Guild protest Dies committee appropriation unless accused may testify.

E. B. BERLINRUT, *Secretary.*

NEW HAVEN, CONN., *January 30, 1939.*

ADOLPH J. SABATH,
Chairman of the House Rules Committee,
House Office Building, Washington, D. C.:
We desire that public hearing be held so that all interested may testify against the procedure of the Dies committee.

THE NEW HAVEN GROUP COUNCIL OF METHODIST YOUTH.

SALT LAKE CITY, UTAH, *January 31, 1939.*

Congressman ADOLPH J. SABATH,
Washington, D. C.:
Please hold public hearings giving all interested people opportunity to be heard on procedure and findings of Dies committee. Sentiment Utah unions numbering 10,000.

E. M. ROYLE, *Secretary.*

The True Facts Regarding the Lumber Tariff and Foreign-Trade Imports—Echoes of the 1938 Campaigns in the State of Washington

---

EXTENSION OF REMARKS
OF
HON. MARTIN F. SMITH
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, February 3, 1939

Mr. SMITH of Washington. Mr. Speaker, the 1938 political campaigns in the State of Washington waged against the present incumbents in Congress, including myself, were characterized by vituperation and falsehoods to a degree never before witnessed in the history of the State. In my own case I followed my unbroken policy and practice of conducting a clean canvass, never once mentioned my opponent, and, as usual, confined myself solely to a constructive discussion of issues and principles, and refrained from indulging in personalities. I treated with contempt the falsehoods circulated and published by the opposition.

The population in my district is both industrial and agricultural and consequently the opposition circulated the rankest falsehoods relating to the lumber tariff in an effort to poison the minds of the industrial workers in the cities and towns and circulated falsehoods equally as contemptible in regard to foreign-trade imports of agricultural products in a feverish endeavor to prejudice the farmers in the rural communities. My present purpose is to point out very briefly how brazenly false and absolutely unfounded these statements were and leave it to the citizens of southwest Washington to judge for themselves whether those responsible for their circulation are worthy of belief in the future.

THE LUMBER TARIFF—THE FALSEHOODS

The members of the Washington congressional delegation in both House and Senate were falsely accused of having voted to reduce the tariff on Canadian lumber and of having betrayed and "sold the workers in the lumber industry down the river." In my district my opponent rode around on a lumber carrier used in the sawmills and prominently displayed a placard alleging that my vote had closed the sawmills, which, of course, was as false as it was fantastic and ridiculous. Nevertheless, this falsehood was reiterated in news stories, editorials, handbills, and paid advertisements published and circulated day after day for weeks before the general election. Undoubtedly some good people finally believed the falsehood and were misled by it.

THE LUMBER TARIFF—THE TRUE FACTS

Neither I nor any other member of the congressional delegation from our State ever voted to reduce the tariff on Canadian lumber, and no such legislation ever came before Congress, and no such vote was ever cast. The sawmills and lumber firms of southwest Washington are members of the West Coast Lumbermen's Association, and for years their secretary-manager and legislative representative has been, and still is, Col. W. B. Greeley, former Chief Forester of the United States. In the following letter, written December 12, 1938, Colonel Greeley correctly sets forth the facts regarding my record and that of my colleagues in Congress in regard to the lumber tariff. It speaks for itself and completely disproves once and for all time the contemptible campaign lies relating to this matter.

WEST COAST LUMBERMEN'S ASSOCIATION,
Seattle, Wash., December 12, 1938.

Mr. WILLIAM APPEL,
President, Aberdeen Chamber of Commerce,
Aberdeen, Wash.

DEAR MR. APPEL: I appreciate the opportunity which the Aberdeen chamber afforded me last Wednesday to discuss the British and Canadian trade agreements.

I regret that some newspaper reports of this discussion gave it a political twist derogatory to Congressman MARTIN F. SMITH. I know that the Aberdeen chamber has no part whatsoever in this unexpected angle of the matter, but in fairness to Mr. SMITH I want to say the following:

The Foreign Trade Agreements Act was proposed to Congress in 1934 as a general policy to promote foreign trade. No one knew at that time whether or not it would apply to lumber; and, if it did apply to lumber, it might have been handled in a very beneficial manner to our industry. The Pacific Northwest has long been anxious to recover its former export markets; and this act could have been made an important instrumentality to that end.

The west coast lumber industry has had the effective and loyal support of Mr. SMITH on every occasion when we have been asking for his help. He has voted for renewal of the excise tax on imported lumber on every occasion when the matter has been before Congress. He has supported our efforts to have lumber properly defined for taxing purposes, as in the classification of large timbers and the withdrawal of allowances for planing and milling. He has helped us in every question arising for the clarification and administration of the excise tax; and was particularly helpful in the legislation last year for requiring the marking of imported lumber with country of origin.

The West Coast Lumbermen's Association keeps wholly out of politics. I just want, as a matter of fairness, to point out that Mr. SMITH has been a very loyal and conscientious supporter of the interests of the lumber industry since he entered Congress. I feel it only square that this fact be made known.

Sincerely yours,

W. B. GREELEY, *Secretary-Manager.*

After the original Reciprocal Trade Agreements Act of 1934 had been in effect for 3 years and the matter of its extension or discontinuance came before Congress in 1937, Wilson Compton, secretary and manager, National Lumber Manufacturers' Association, and national legislative representative at Washington, D. C., speaking for the West Coast Lumbermen's Association and the lumber industry of the State of Washington and the Pacific Northwest, stated to the Ways and Means Committee of the United States House of Representatives:

The lumber industry favors the continuance of the Reciprocal Trade Agreements Act. Action to that effect by resolution was taken by the governing board of the National Lumber Manufacturers' Association, representing the entire organized lumber-manufacturing industry.

My efforts in support of the quota on shingles, my bill—which became law—for census of the shingle industry to render the quota effective, and other activities in behalf of the workers and manufacturers in the shingle industry have received frequent endorsement from shingle weavers' unions, and I quote from one of several letters received from the United States Red Cedar Shingle Bureau, Inc.:

At the annual membership meeting of this association, held in Tacoma, February 1, 1938, a resolution was unanimously approved instructing the secretary to write you expressing the gratitude of this association for your faithful services in our behalf in connection with the import limitations on red-cedar shingles.

Furthermore, the present national administration has rendered considerable aid to the lumber industry through the Federal housing legislation which has improved the domestic market for lumber and all forest products. I have also been a staunch supporter of this type of beneficial legislation as shown by the following letters:

NATIONAL RETAIL LUMBER DEALERS ASSOCIATION,
Washington, D. C., August 4, 1937.

Hon. MARTIN F. SMITH,
House of Representatives, Washington, D. C.

DEAR MR. SMITH: Permit me to acknowledge and thank you most cordially for your letter of August 3, asking our opinion on the proposed Wagner-Steagall housing bill.

I am attaching hereto a copy of a letter which has been sent to members of the House Banking and Currency Committee. We are now attempting to arrange a time to appear at the hearing before the House Banking and Currency Committee, so that we may express our thoughts on the matter.

From our experience in the past, with the exception of the Federal Housing Act, the attempts in Federal housing have been a complete failure and an expensive experiment to the Government. They have caused confusion in the building industry and uncertainty in the minds of prospects that we have had for homes. If we must have a slum-clearance bill, it should be strictly a slum-clearance bill, confined through mandatory provisions to the lowest-income group.

I thank you very much for inviting my opinion on this legislation, and I assure you that we will remember the wonderful assistance you gave us at the time the National Housing Act was under consideration, and also your subsequent assistance on all matters pertaining to housing. You have always been in full accord with the views of the building industry, and we want you to know that we appreciate it.

Yours very truly,

SPENCER D. BALDWIN,
Chairman, Legislative Committee.

NATIONAL RETAIL LUMBER DEALERS' ASSOCIATION,
Washington, D. C., June 18, 1934.

MY DEAR CONGRESSMAN SMITH: On behalf of this organization and the Western Retail Lumbermen's Association, we desire to thank you for the excellent and effective work you did in cooperation with these and other national organizations, including the American Federation of Labor, in the early stages and through to the finish to secure the enactment of the National Housing Act.

Your assistance in promoting a congressional delegation to call upon the President of the United States and the manner in which the problems of the building industry and labor were presented was instrumental in securing his active interest. It is significant that on the day you called upon him, March 20, he issued the Executive order to prepare a complete program for legislative action.

Your willingness at all times and the unselfish manner with which you cooperated certainly merits the approval and support of all who are affected by this legislation.

With kindest personal regards and best wishes for your continued success, I remain,

Very sincerely yours,

SPENCER D. BALDWIN, *President.*

FOREIGN-TRADE IMPORTS—THE FALSEHOODS

There was also circulated in my district what purported to be a list of imports of agricultural products, comparing the figures for 1932, the last year of President Hoover, when they were lowest, due to the tremendous loss of our foreign trade resulting from the Hawley-Smoot tariff law, and the figures for 1937, when they were highest due to the drought. However, the most contemptible feature of the circular was the willful and deliberate omission of the figures showing the exports or the products and goods shipped out of this country. Apparently the opposition had such a poor opinion of the intelligence of the farming population that they felt confident that the farmers would never stop to ask or give any thought to what the exports amounted to, which, of course, were essential to show whether we were gaining or losing in our foreign trade. In other words, to serve their purpose, which was to mislead and deceive the citizens, the opposition presented only one side of the picture.

THE TRUTH ABOUT OUR FOREIGN TRADE

We have gradually succeeded in the extremely difficult task from year to year since 1932 in recapturing our lost foreign export trade until, according to the official report for 1938 recently released by the Department of Commerce, our exports of our products to foreign nations exceeded our imports from those nations to the extent of $1,133,567,000, which is the largest favorable trade balance in favor of the farmers and laborers of the United States since 1921. All agricultural products exported showed an increase excepting cotton, and our exports of dairy products and meats increased. The citrus-fruit industry had a record year in exports. This showing is remarkable in view of the fact that we have become a creditor nation and are compelled to a large extent to accept the products and goods of foreign nations in payment and exchange for the surplus which we sell and export to them. Notwithstanding that fact, we have gradually built up the largest favorable trade balance we have had in 17 years. Yet the opposition had the supreme audacity by their one-sided statement to try to make the people believe, and undoubtedly did deceive some of our good people into believing, that we had traded our home market away to foreign nations and that our country was being flooded with foreign products, and that we had a big unfavorable trade balance against us. As we have noted, the exact opposite is true. How much credence should then be given to their campaign statements in the future?

CONCLUSION

I have never as yet in any political campaign in which I have participated intentionally or knowingly made a single false statement of fact nor withheld nor suppressed any fact which the people were entitled to have disclosed. I have steadfastly refused to swerve from my course of adhering strictly to facts derived from official and governmental sources and subject to verification at all times. I consider any other course to be unworthy of a candidate for the high office of Representative in the Congress of the United States. I have too high a regard for the citizens of southwest Washington to ever do otherwise. If the time should ever come when circumstances would appear to dictate any other course I shall cease to appeal to the citizens of southwest Washington for their suffrage.

The Dies Committee

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 3, 1939

Mr. HAVENNER. Mr. Speaker, I do not believe that any Member of this House, or any true American anywhere, will oppose a proper investigation by the Congress of un-American activities in the United States. A proper investigation by the Congress presupposes a fair and impartial inquiry, with carefully conducted hearings, scrupulous regard for the constitutional rights of accused persons, and thorough examination into the credibility of witnesses.

Believing that such a fair and impartial investigation of this vitally important subject ought to be conducted, I did not oppose in the Seventy-fifth Congress the creation of the committee now commonly known as the Dies committee.

After watching the proceedings of that committee for a period of 4 months last year, I reached the conclusion that it had betrayed the high purpose for which it was created. Its hearings were conducted without regard for the most elemental rules of fair investigation. Reputable American citizens from all walks of life were subjected to false and vicious accusations of un-American conduct and associations by witnesses of doubtful integrity, without being afforded an opportunity to confront their accusers or even to make subsequent statements in their own behalf. The witnesses who made these wholesale assaults on the reputations of American citizens were permitted to indulge in surmise, hearsay, unsupported opinions, and reckless conclusions, with no attempt to confine their testimony to facts and legal evidence.

The committee has misused the prestige of Congress by employing Nation-wide agencies of publicity, to which it would not otherwise have had access, for the dissemination of false and misleading political propaganda in State elections. This was done repeatedly, and in such an obvious manner that its deliberate purpose was unmistakable.

The committee has apparently made little or no effort to investigate some of the most menacing un-American activities in this country today—activities of organizations and individuals inspired and financed from abroad and deliberately designed to influence our foreign policy and involve this Nation in war.

I would be willing to vote today, as I did last year, for a proper investigation of un-American activities, but the record

of this committee has destroyed the confidence of a large part of the American people in its fairness and impartiality. I suggest that the House submit the report of this committee to the Department of Justice, with instructions that all evidence of un-American activities contained therein be thoroughly investigated, and that if such evidence constitutes violation of existing law it be presented to a grand jury and offenders be vigorously prosecuted. If the evidence should disclose subversive activities not covered by existing law the Department of Justice should be directed to report the facts to Congress for legislative action.

In the meantime, if it be deemed advisable to proceed with a congressional inquiry into un-American and subversive activities which the Dies committee has neglected to investigate, I suggest the appointment of a new committee with definite instructions to carry out this important work in a manner which will command the support of all loyal Americans.

No Comeback With Guffey

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1939

EDITORIAL FROM THE PITTSBURGH (PA.) PRESS OF FEBRUARY 2, 1939

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial from the Pittsburgh Press of February 1, 1939, containing pertinent and undeniable facts which are of the highest importance to the people of Pennsylvania:

[From the Pittsburgh (Pa.) Press of February 1, 1939]

NO COMEBACK WITH GUFFEY

Pennsylvania Democrats are starting desperate efforts to organize their scattered forces and make a comeback.

On the basis of their early efforts we can give them two valuable tips:

1. So long as they persist in condoning and practicing politics in relief they will meet with overwhelming public opposition.

2. They can never come back under the leadership of Senator JOSEPH F. GUFFEY, who is primarily responsible for their troubles.

Within the last few days the Democrats have been guilty of blundering on both these counts.

A sharply worded telegram which Mayor Scully sent to Senator JAMES J. DAVIS, scolding him for voting in behalf of a reduced W. P. A. appropriation, was, of course, merely a political maneuver. The mayor was playing politics with relief by making a bid for W. P. A. votes.

Incidentally, it will occur to many people that Mr. Scully has plenty to do at city hall without extending his territory. The consent verdict scandal, the dangerous financial situation, and the mayor's differences with council all indicate that he could well devote full time to his own job without trying to run that of a Senator who recently has been overwhelmingly reelected.

Over the week end Democrats held a conference at which Senator GUFFEY appealed to them to bury the hatchet and restore party peace.

It was Senator GUFFEY who first took up the hatchet. His idea of party peace is for the Democrats to accept without question his personal dictation.

Not only outside of the Democratic Party but also within its own ranks opposition to Mr. GUFFEY is tremendous. He tried to turn Pennsylvania over to the C. I. O., and when the party refused to follow him, he split it wide open. He encouraged and contributed to the charges against the Earle administration which led to the "Harrisburg scandal." He openly played politics with W. P. A. His name was signed to appeals for campaign contributions sent to Federal job holders and W. P. A. clients, in violation of Federal law. The situation for which he was chiefly responsible became so bad that a committee of his own colleagues from his own party publicly denounced him in the Senate. It was Senator GUFFEY who delivered the first appeal for a purge of Senators who had opposed the court-packing bill—a purge which later failed dismally.

Because of these and other things, Senator GUFFEY is thoroughly discredited as a party leader, and the first job confronting the Democrats in their effort to regain power is to get rid of his influence.

Un-American Activities

EXTENSION OF REMARKS
OF
HON. LELAND M. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 3, 1939

RESOLUTION OF NATIONAL CONVENTION OF UNITED SPANISH WAR VETERANS

Mr. LELAND M. FORD. Mr. Speaker, at this time, when we are considering the Dies committee report, I should like to read a strong resolution adopted by the last national convention of the United Spanish War Veterans, declaring this organization's support of the committee from the House of Representatives on un-American activities, presided over by Congressman MARTIN L. DIES. The resolution is as follows:

Whereas the veterans of the Spanish-American War, the Philippine Insurrection, and the Boxer Rebellion, organized under the banner of the United Spanish War Veterans, are pledged "to carry the same spirit of sacrifice and service exercised in time of war into the less spectacular walks of daily life; to battle increasingly for the right in civil affairs; to prepare for any service which we can render to our country in time of need; to loyalty to our country, reverence for its institutions, obedience to its laws, and respect for its magistrates; to encourage honor and purity in public affairs and to discountenance whatever tends to weaken these sentiments among our people"—

To these principles our organization has ever stood steadfast.

We sounded the call for a substantial and adequate national defense to protect and defend our country against the enemy from without.

We have cried out to our Government and our people against the enemy in our midst.

We have seen the organization of subversive groups on our soil; have listened to their traitorous "isms" tearing at the heart of our form of government; and have had paraded before us the fact that millions of aliens unlawfully in our country are devoted to the teachings of the enemies of democracy; are bleeding the financial resources of American citizens through the relief rolls and made relief jobs; all leading to the destruction of the American way of life, the precious true liberty of the individual citizen, and that pursuit of happiness and prosperity which has placed all American citizens on a standard of living not equaled by any other people in the history of the world.

We are tired of the whines of the destructive radicals that the objections to their nefarious propaganda and acts are "red baiting."

That is the only defense they present, and have, to their efforts to destroy our form of government.

It is not even equal to the usual cry of the criminal when caught in the act of committing his crime—that he is innocent.

We resent the sympathetic protection given these enemies of America by public officials who are prostituting their citizenship and contributing to the prospective destruction of the American home, church, and school by such protection.

That type of public officials prove themselves unworthy of public trust and citizenship in our United States.

We have witnessed the attempts made by some public officials and non-American groups to discredit the splendid work of the congressional committee investigating un-American activities in this country.

Therefore:

1. We demand that this committee be not hampered in any way in its efforts to secure and present to the Nation the truth relative to such attempts to sabotage our form of government.

2. We pledge to Congressman MARTIN DIES, the chairman of that committee, and to those of its members who are honestly trying to carry out the purposes for which the committee was organized, our full support, and urge them to fearlessly and impartially carry on as patriotic citizens would.

3. We continue our demand that Government officials charged with the duty of keeping America free from the cancer of undesirable aliens unlawfully living in our country and on its bounty, securing employment and holding jobs while thousands of our citizens are suffering from unemployment, enforce our laws or be removed from office.

4. We demand the passage of legislation providing for the deportation of all aliens in this country who do not become naturalized after a minimum fixed time of residence here, and also all aliens on W. P. A. or relief rolls.

5. America must not be made the dumping ground for the undesirables of the world.

6. America must ever be the home of a patriotic, industrious, intelligent, and honest people determined to perpetuate and protect our form of government and secure for our posterity a life of peace, happiness, and prosperity beyond that which we have enjoyed.

Roosevelt Aims to Keep Out of War

EXTENSION OF REMARKS
OF
HON. JOHN M. HOUSTON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 3, 1939

ARTICLE BY DAVID LAWRENCE

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD I include an article by Mr. David Lawrence containing statements which in this period of war hysteria should be well considered by all American citizens:

ROOSEVELT AIMS TO KEEP OUT OF WAR—RIGHT TO SECRECY IN FOREIGN POLICY ESTABLISHED

(By David Lawrence)

Nobody in America is more anxious to avoid war than President Roosevelt. And nobody in the Senate who criticizes the President's recent conversations on military policy wants war, either. Yet if one were to judge by headlines, there is at the moment some sort of crisis involving "secret" talk and action looking toward involvement of the United States in a war on the side of the democracies versus the totalitarian states.

The truth may readily be established by eschewing politics and the usual demagoguery which attends the outcry from Capitol Hill about "gag" meetings and secrecy whenever the Chief Executive assumes that Members of Congress can be trusted to discuss frankly and confidentially with him the delicate questions of foreign policy, which under the Constitution are his to execute. It somehow seems popular to some Members of the United States Senate to oppose anything and everything the President may be trying to do. Maybe Mr. Roosevelt deserves a bit of heckling, because he has been none too careful about treading on the toes of others heretofore, but it is going to redound distinctly to the President's benefit with public opinion if his carping critics think for one moment that they can embarrass the foreign relations of the United States at the expense of a President's prestige.

HAS RIGHT TO SECRECY

From time immemorial the President has had the right to conduct the foreign relations of the United States in secret. This has been recognized by precedent and custom under the Constitution. If a President keeps mum, he is promptly accused of ignoring the members of the Senate Foreign Relations Committee. If he takes a Senate committee into his confidence and asks them to keep confidential what he has said in order not to create misunderstandings abroad which might produce more danger instead of less danger of American involvement in war, he is accused in public interviews of "secrecy" and imposing a "gag."

There isn't a government in the world which conducts its diplomacy in the public square, and there never was a delicate situation in international affairs in which a President was not given a certain leeway by both political parties to steer the Government's course without petty political embarrassments or partisan interference. It will be a sorry day for America when those who "hate Roosevelt" are more interested in doing damage to his personal and political standing with the country than they are in protecting the best interests of the American people.

DEEPLY OPPOSED TO WAR

Mr. Roosevelt, despite the unworthy comments of extremists here and there who accuse him of starting the whole armament controversy to divert attention from domestic failures, is deeply and fundamentally opposed to war. He did not create the situation inside Germany and, so far as is known, he doesn't write the Hitler speeches which have put the whole world on edge. It is because the President is convinced that the policy he has adopted will avoid war for the American people that he is pursuing it, and anybody in Congress who thinks he can underwrite world peace any other way, should be urged to offer his plan now.

For the thesis back of the President's program is that France and Britain are today the bulwarks of democracy. He alone knows from information derived from the best available sources abroad how weak is the position of the European democracies and what Hitler has done to bolster up Fascist groups in England and France, as well as in South America. If France goes Nazi, England will be endangered. If France and England are attacked and lose, what will America's position be? These are the practical questions which push themselves forward for answer whenever the practicalities of the world situation today are realistically surveyed. Mr. Roosevelt thinks it is far better to sell planes and even munitions to France and Britain now, and perhaps prevent a world war, than to be confronted in the next 2 or 3 years with the necessity of making a decision as to what the United States should do when England and France have come under the subjection of the Fascist states and democratic liberty as we have known it stands in immediate peril.

NAZIS WANT DISSENSION

What is the other side of the controversy? It is that Mr. Roosevelt, who has access to secret reports from every foreign capital, doesn't know the situation abroad or is purposely exaggerating it. This is an incredible supposition, which the American people would hardly venture to rely on as a safe reason to sabotage a national defense policy. For if by chance the President were right, the critics would not be held responsible for the failure adequately to protect the American people against ultimate involvement or weakened defenses. Nazi Germany today wants dissension in America. Her press compaign, and especially Hitler's speech this very week, is an adroit attempt to befog the issue and stay the hand of the most powerful nation in the world.

What the critics on Capitol Hill need is more information instead of less. They should be given all the truth in confidence about what is going on inside Germany and Italy, and the long list of insults to the United States, presented through American deplomatic representatives abroad by the Fascist powers in the last 2 years which, if Mr. Roosevelt had really wanted to inflame public opinion, be needed only to have made public. The administration is handling a difficult and delicate situation with forbearance, and what would help most to prevent ultimate war would be a nonpartisan expression of support from the leaders of all groups and factions behind the President of the United States.

EDITORIAL FROM SPRINGFIELD (MASS.) DAILY NEWS OF JANUARY 17, 1939

Mr. McGRANERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Springfield Daily News of Springfield, Mass:

[From the Springfield (Mass.) Daily News of January 17, 1939]

FALSE AND SILLY, SAYS CONGRESSMAN CASEY

Congressman JOSEPH E. CASEY, of Clinton, has scored a telling point in his assertion that the problem of flood control, particularly in respect to navigable streams, is essentially a Federal project rather than one for the individual States. While not taking issue with the advocates of States' rights in matters of government within their borders he points out that where streams flow through several States the problem is necessarily one of more general concern. He sees no way in which the Federal program of flood control can be carried out on a basis in which the various States will have full authority.

He criticizes especially the position taken by Governor Aiken, of Vermont, and the concurrence in that position by the other five Republican Governors in New England. He says the flood-control plan was drawn up as a measure of essential justice for New England in giving this section the same rights as were carried by the flood-control systems in the South and West. He knows of no way by which the Federal Government can expend a huge sum of money for flood control on the basis proposed by the Vermont Governor. Criticizing the stand taken by the six Governors, he says:

"They seem to forget that if the consent of every State were made a condition precedent to a flood-control program it would be possible for one State, by withholding its consent, to block flood control on any given river. For example, one State might, by refusing to consent, block a flood-control program efficiently functioning on the Mississippi River. It will be little comfort to the people whose homes and property are floating down the river in some future flood to hear Governor Aiken, of Vermont, shouting, 'Hurrah for States' rights.'

"It would seem to me that if the six Governors believe that the people of their States would rather finance their own flood control along the theories as expounded by the Governor of Vermont, then they are acting well within their rights. This seems to be the only alternative to the flood-control program for this section, if a successful stalemate based on false and silly objections is accomplished by the six New England Governors."

Widespread accord will be found with this position taken by Congressman CASEY by anyone who seeks to find what the public mind is upon the question of States' rights as applied to flood control. It is very apparent that the Federal Government will insist upon control after spending many millions of dollars to safeguard lives and property here.

Extension to Puerto Rico of the Benefits of the Social Security and the Bankhead-Jones Acts

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1939

MEMORANDA FROM THE COMMISSIONER OF HEALTH AND THE COMMISSIONER OF AGRICULTURE OF PUERTO RICO

Mr. IGLESIAS. Mr. Speaker, the commissioner of health of Puerto Rico has prepared the following memorandum on the extension to Puerto Rico of the benefits of the Social Security Act:

The Social Security Act passed by the Seventy-fourth Congress and approved by the President on August 14, 1935, sets forth the purposes of the act as follows:

To provide for the general welfare by establishing a system of Federal old-age benefits and by enabling the several States to make more adequate provision for aged persons, dependent and crippled children, maternal and child welfare, public health, and the administration of their unemployment compensation laws; to establish a Social Security Board; to raise revenue; and for other purposes.

In general, these purposes are to be carried out by grants from the Federal Government to the States and Territories for cooperative service. Puerto Rico was not included as one of the governmental units to participate in the program for which this act is the foundation. It is the purpose of this memorandum to call attention to the fact that the Department of Health of Puerto Rico has been doing effective work on some of the problems which are to be attacked by the social-security program; that the present appropriations and standards of work of this department would justify participation in those parts of the program; and that no changes in governmental organization are necessary to make possible the extension of the existing program in any of its phases. The activities in the social-security program for which provision has already been made in the insular department of health are as follows: Public health service, maternal and child-health work, child welfare, including aid to dependent children and aid to the blind.

The department of health consists of two sections—the public-health section, directed by a medical officer who is a specialist in public health; and the public-welfare section, directed by a physician, a specialist in institutional administration.

Among the duties of the public-health section is the direction of local health work, including maternal and child health, through public-health units.

Engaged in these activities are 28 full-time health officers, a specialist in charge of the bureau of maternal and infant hygiene, 14 clinic physicians, 132 public-health nurses paid by the insular government, and 50 additional public-health nurses paid from Federal relief funds. The standards for the employment of personnel are equal to those required by the United States Public Health Service. The methods and the results will compare favorably with those of any similar organization in the continental United States.

The maternal and child-health program includes the supervision of prenatal and postnatal teaching, the supervision of midwives, and the operation of 167 milk stations for teaching the care of infants. These activities are supported by insular funds, local funds, and relief funds. The relief funds devoted to these purposes amount to approximately $240,000 annually, but will not be available after June 30, 1936. The insular funds available for the general public-health activities and the maternal and child-health activities of the public-health section are as follows:

For public-health units	$376,574.75
For bureau of infant hygiene	11,996.75
Fund for milk stations, approximately	12,000.00

These funds do not include local appropriations which are made for public-health units and milk stations.

Among the duties of the public-welfare section of the insular department of health are included the care, education, and vocational training of dependent and of the blind. In this work the section has the assistance of the board of child welfare, which supervises the social investigations of dependent children and aids in finding homes for dependent children who can be cared for outside of institutions. The insular funds assigned to this work in the current budget are as follows:

Division of social service	$8,870.00
Boys' charity school	72,175.70
Girls' charity school	58,099.75
Child-welfare board	2,370.00
Asylum for the blind	28,603.25
Institute for the blind	19,842.50

The Social Security Act provides for aid to a comprehensive Nation-wide public-health program through an annual appropriation of not more than $8,000,000. This appropriation is to be allotted to the several States and Territories by the Surgeon General of the United States Public Health Service. In order to participate in the plan it is understood that State or Territorial organizations must have a health department which provides as a minimum on a full-time basis the services listed below: (a) A qualified full-time State or Territorial health officer; (b) adequate provision for the administrative guidance of local health service; (c) an acceptable vital-statistics service; (d) an acceptable State public-health laboratory service; (e) adequate services for study, promotion, and supervision of maternal and child health; (f) special service for the study, promotion, and guidance of local activities for the control of preventable diseases and for health promotion; (g) services for study, promotion, and supervision of environmental sanitation.

The following are understood to be the conditions required for participation of a local health service through the State or Territorial organization: (1) The public-health services of the city, county, or district should be under the direction of a full-time health officer; (2) the personnel of the city, county, or district health department should include, in addition to the full-time health officer, such medical assistants, public-health nurses, sanitation officers, and clerks as will insure at least a minimum of effective health service commensurate with the population and health problem of the area concerned.

The public-health section of the insular department of health and public-health units under its direction comply with all of these requirements.

The objectives for participation in the general public-health program of the Social Security Act would be—

1. To extend the service of public-health units to the parts of the island which are not now served.

2. To strengthen the services now rendered by the addition of new trained personnel.

3. To provide additional specialized training for existing personnel.

Under title V of the Social Security Act the Secretary of Labor, through the Children's Bureau, is authorized to administer an annual appropriation for grants to the States of $8,150,000. This includes $3,800,000 for maternal and child-birth service and $1,500,000 for child-welfare service. Miss Katherine F. Lenroot, Chief of the Children's Bureau, states the purposes of the maternal and child-health appropriation in the following paragraph:

"The primary purpose of these portions of the act is to extend and strengthen services for mothers and children in rural areas, in areas suffering from severe economic distress, and among groups in special need. These are the people who have been hitherto, for the most part, outside the reach of health and welfare services that have been more generally available in cities."

Miss Lenroot also states that a uniform allotment of $20,000 is to be made to each State, and that this sum is to be supplemented in accordance with the number of births in the State and in accordance with the financial need of the State. The insular Department of Health of Puerto Rico, through its bureau of infant hygiene and its public-health units, is able and ready to extend and improve its maternal and child-health services as intended in this portion of the Social Security Act. The previous work of these dependencies of the department of health meets the standards of the Children's Bureau and it can comply with anticipated future requirements.

With reference to that portion of the social-security program which is related to child welfare, Miss Lenroot has the following to say:

"The appropriation of $1,500,000 for child welfare, to be allotted $10,000 to each State and the remainder on the basis of rural population, is to be available for cooperation with State public-welfare agencies in establishing, extending, and strengthening, especially in predominantly rural areas, public-welfare services for the protection and care of homeless, dependent, and neglected children, and children in danger of becoming delinquent. They are to be used for payment of part of the cost of district, county, or other local child-welfare services in areas predominantly rural, and for developing State services for the encouragement and assistance of adequate methods of community child-welfare organizations in areas predominantly rural and other areas of special need."

Work of this type is already in progress in the public-welfare section of the insular department of health, and without changing the present organization it can be greatly extended. The principal change which would be required would be the addition of field personnel to aid the specialists now in charge of child-welfare work. The expenditure on child welfare, given in detail above, provides ample justification for a Federal allotment of $10,000 for this purpose under the terms of the social-security program.

The Social Security Act also provides for aid to the States and Territories for care of the blind. For many years the insular department of health has done carefully planned work in the treatment and education of the blind. The annual expenditures for this purpose, as shown above, total more than $48,000, but there is much more work which could be done if additional funds could be obtained.

It is not the purpose of this brief memorandum to outline all of the work of the insular department of health. Only those activities have been mentioned which have a definite relationship to the social-security program. It has been shown that the two sections of the insular department of health can provide a sufficient amount

of skilled supervision to administer such additional resources as might be available under the terms of the Social Security Act, and the fact that work of a high quality is being done now is sufficient guaranty of the continuation of high standards if additional resources were available. No one questions the need of Puerto Rico for the type of work covered by the Social Security Act. Even the amounts available to individual services could be extended to many persons who are not reached.

The law is being further studied and considered to extend to Puerto Rico the voluntary clauses extended to the States of the Union embodied in the title IV and others into the law.

AGRICULTURAL EXTENSION

The commissioner of agriculture, Hon. F. A. Lopez Dominguez, has prepared the following memorandum:

In accordance with section 2 of Public Act 407, the following sums of money were authorized to be appropriated for the further development of cooperative agricultural extension work in Puerto Rico: "For the fiscal year beginning after the date of the enactment of this act, $88,000; for the first fiscal year following the first fiscal year for which an appropriation is made in pursuance of the foregoing authorization, the additional sum of $40,000; and for each succeeding fiscal year thereafter an additional sum of $40,000 until the total appropriation authorized by this section shall amount to $408,000 annually, the authorization to continue in that amount for each succeeding fiscal year."

Last year the administration recommended to Congress the $88,000 as specified by Act 407; and Congress, after omitting the entire sum, reinstated $45,000 upon careful examination of the needs for such appropriation. I personally presented the case before the Senate Committee on Appropriations.

When the bill was drafted in 1937 it had the recommendation of the Department of Agriculture and the Department of the Interior, as you may see by a copy of the letter written by Secretary Wallace to Speaker BANKHEAD, which I am enclosing herewith. A letter from Acting Secretary of the Interior at that time accompanied Secretary Wallace's letter to the Speaker recognizing the importance of agricultural extension work in Puerto Rico and expressing their interest. Copy of this letter may be found in the files of your Department.

The reasons for supporting this appropriation are well stated in Secretary Wallace's letter to Hon. WILLIAM B. BANKHEAD, and I shall not discuss these facts again.

The Agricultural Extension Service of this island is doing the type of work which the administration emphasizes in its program by bringing to all rural people, and especially to the small farmers, who comprise 80 percent of our farm population, according to the agricultural census of 1935, the latest information regarding agriculture and home economics and to help them adopt improved methods and practices in production and marketing of crops and livestock, the growing of gardens and other home food supplies; the preservation of food by canning, adequate diets for health, improved sanitation, the development of community activities to promote higher standards of living. Extension work with rural boys and girls teaches the best principles and methods of modern agriculture, cooperation, teamwork, and leadership. All this work brings the true rehabilitation of our farm population for a diversified agriculture and betterment of their social and economic conditions.

The Extension Service not only has the responsibility of their own program, but its director has been appointed consultant for the Puerto Rico Reconstruction Administration in order to establish the same type of program in the resettlement areas by utilizing the extension specialists and field personnel and to coordinate their program. This type of cooperation is well exemplified by the canning project of the Puerto Rico Reconstruction Administration under the Extension Service supervision, in which resettlers were taught how to can, and 153,525 cans and 1,735 jars of food were preserved from March 5, 1935, to November 30, 1938. I am sure that Mr. Miles H. Fairbank will acknowledge the importance of this cooperation. Also the Extension Service is in charge of the program of the Farm Security Administration to promote more secure occupancy of farms and farm homes, and to correct the economic instability resulting from some present forms of farm tenancy. Besides, the entire educational campaign for the Agricultural Adjustment Administration, crop referendums and soil-conservation practices to farmers are under its supervision.

The benefits of this fundamental program cannot be received at present by all our farm people unless the field personnel of the Extension Service is increased. The Extension Service should have an office in each municipality with a county agent, a home-demonstration agent, an assistant county agent, and a clerk; and the funds appropriated by Public Act No. 407 are for this purpose. At present the Extension Service only has 32 county agents and 16 home-demonstration agents to take care of 76 municipalities and an average of 4,000 farms per agent. Consideration must be given to the fact that a large portion of this farm population is found in the interior municipalities of very mountainous topography, where communication facilities are very scarce, having no telephone or mail, and personal contact is the only way of conveying all the information which the Extension Service is responsible for.

Now more than ever before are these funds needed if consideration is given to the economic outlook for 1939. Since the pressure of population has compelled the island to specialize in those commodities which render the highest yield per acre and value, and to depend on the United States to exchange our produce for commodities that cannot be produced economically, we must utilize every inch of our soil in order to feed our population, thus needing an intensive educational campaign in the production, preservation, and marketing of agricultural products for subsistence; and the Extension Service is the one agency to direct, supervise, and to do this work.

I wish also to call your attention to the fact that the States and the Territory of Hawaii are receiving $1,000,000 increase, according to the original Bankhead-Jones Act of 1935, distributed in proportion to their farm population. The funds appropriated by Act 407, extending the benefits of this act to Puerto Rico, does not in any way affect the appropriations of the States or Territory of Hawaii.

I, therefore, in view of the importance of agricultural extension work to Puerto Rico, respectfully request that the matter be brought to the attention of the administration in order to obtain the reinstatement of the $128,000 appropriated by Act No. 407 for the fiscal year 1939–40.

The law to which this memorandum is referring is as follows:

[Public, No. 407, 75th Cong.; ch. 878, 1st sess.]

An act to extend the benefits of section 21 of the Bankhead-Jones Act to Puerto Rico

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the provisions of section 21 of the act entitled "An act to provide for research into basic laws and principles relating to agriculture and to provide for the further development of cooperative agricultural extension work and the more complete endowment and support of land-grant colleges," approved June 29, 1935, and known as the Bankhead-Jones Act, be, and the same are hereby, extended to Puerto Rico in such amounts as are hereinafter authorized without diminution of the amounts authorized for payment to the States and the Territory of Hawaii, as provided in section 21 of that act.

SEC. 2. To carry into effect the above provisions for extending to Puerto Rico, to the extent herein provided, the benefits of the said Bankhead-Jones Act, the following sums are hereby authorized to be appropriated: For the fiscal year beginning after the date of the enactment of this act, $88,000; for the fiscal year following the first fiscal year for which an appropriation is made in pursuance of the foregoing authorization, the additional sum of $40,000; and for each succeeding fiscal year thereafter an additional sum of $40,000 until the total appropriations authorized by this section shall amount to $408,000 annually, the authorization to continue in that amount for each succeeding fiscal year.

Approved, August 28, 1937.

Promotion of Industrial Peace

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, February 3, 1939

Mr. VOORHIS of California. Mr. Speaker, in view of the fact that a great deal of criticism has been made from time to time of the work of the National Labor Relations Board, it seems to me only fair that the constructive work of the Board likewise be emphasized from time to time. In this connection I am pleased to quote the following excerpt from the information service of the Federal Council of Churches of Christ in America:

PROMOTING INDUSTRIAL PEACE

Reporting on the 37 months' work of the regional board of the National Labor Relations Board which serves the industrial centers in New York, New Jersey, and Connecticut, Mrs. Elinore M. Herrick, director, on December 6 pointed out that the board is now receiving cooperation from employers to an extent which the board had "never dared to hope for 37 months ago."

She said that many employers who a year ago were fighting the law have now accepted the principle of collective bargaining, have renewed their agreements with their employees, and declare they are "getting along swell" under this regime. A number of companies have established classes for their foremen and supervisors to educate them in dealing with labor and to acquaint them with their responsibilities under union agreements. "When management," she said, "recognizes its own responsibilities in this way and seeks to train its own personnel to meet labor organization on a basis of intelligent understanding and mutual good will, we of the Labor Board can honestly feel that the fundamental purpose of the National Labor Relations Act in bringing about industrial peace is being achieved."

The regional board handled 14,065 cases, or 18 percent of all cases filed in the United States. In 7,450 cases, or 53 percent of the total, settlements by agreement were made, covering 1,450,736 workers. In 751 cases involving 240,277 workers the employers complied with the decisions of the board or the intermediate reports of trial examiners. Only 1 in 20 reaches the point of a formal hearing by the board, Mrs. Herrick said.

The regional board handled 1,886 strikes during the 37 months, comprising over 12 percent of the total and involving 320,201 workers. Of these strikes 79 percent were settled amicably. Also, 647 threatened strikes were averted by the board's intervention. Reinstatement of 16,520 workers was obtained following strikes and lockouts and of 2,387 workers in instances of discrimination. The board held 360 elections to determine the employees' choice of representatives.

The Social Security Reserve Swindle

EXTENSION OF REMARKS

OF

HON. GEORGE J. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 3, 1939

ARTICLE BY JOHN T. FLYNN IN FEBRUARY ISSUE OF HARPER'S MAGAZINE

Mr. BATES of Massachusetts. Mr. Speaker, at this time, when the entire Nation is thinking about amendments to the Social Security Act and while the whole question is before the Ways and Means Committee, I desire to bring to the attention of the House the following article on the operations of the old-age pension system to date. The article is by Mr. John T. Flynn, a celebrated economist and a widely recognized commentator upon current economic trends. Mr. Flynn calls the existing social-security scheme a bald fraud, and he cites shocking figures to sustain his broad conclusions. The article in question appears in the February issue of Harper's magazine, and is earnestly recommended to the studious attention of all Members who want to see this urgent problem of national solvency attacked at its roots. Our first step must be to eliminate the existing elements of fiction and fraud from the social-security arrangement.

THE SOCIAL SECURITY RESERVE SWINDLE

[By John T. Flynn]

In January 1942 a long, angry howl of disappointment will be heard rumbling throughout the length and breadth of the land. In that month, the first pensions under the Federal contributory old-age insurance system will be paid to the first batch of beneficiaries reaching the retirement age. This is the old-age insurance plan which is supposed to end the tribulations of the aged with dignity and decency.

Their neighbors and fellow townsmen who get benefits of the public-charity description from the States may be getting as much as $30 a month. But under this system of purchased insurance, a man earning a hundred dollars a month will, in 1942, be obliged to give up his job and pauperize himself in order to draw the $17 a month old-age insurance he has bought from the Government. The charity pensioners who get almost twice as much will give him a horse laugh as he sinks back into the dignity and decency of retirement on $17 a month.

The reader will probably be surprised to learn how small these first pensions will be. But he will doubtless surmise at once that this is because the Government is not collecting enough money in premiums to pay more. The guess will be wrong. The reason is a little shocking. The Government is collecting and will continue to collect in pay-roll taxes for a generation enough money to pay benefits many times this sum. But it will not pay adequate pensions—and this is the point I aim at—because all the time it will be spending the old-age insurance premium taxes for other things—paying the ordinary expenses of the Government.

If the reader is a little surprised at this, let me add three very serious statements.

First, the Government will in the years up to 1980 collect in taxes for old-age pensions about $111,000,000,000.

Second, of this 111,000,000,000 some 43 percent, or 47,000,000,000, will never be spent for old-age pensions at all but for every sort of Government expense including, perhaps, building battleships.

And third, the Government will never return this $47,000,000,000 to the Social Security Board.

Behind these facts is one of the weirdest and most fantastic episodes in public finance. Unfortunately all this is cloaked under a collection of seemingly just and prudent arrangements—arrangements which are mere fictions, however, and must be examined narrowly to be seen in their true relations.

II

It is very necessary that we have clearly in mind that under our Social Security Act two sorts of benefits are provided for the aged. The Government set out to establish an old-age retirement system which would provide a decent annuity for workers and for which the workers would pay. It was to be organized as an insurance system but operated by the Government. The members of this system were to be taxed on their wages monthly and when 65 years of age would be entitled to the benefits provided in the act.

But obviously people already past the retirement age could not get such insurance any more than a man who is dead can get life insurance. Therefore to provide some protection for those already arrived at retirement age an entirely separate system was established.

Thus there are two plans. One is called the old-age assistance plan for people already past 65. The other is called the old-age benefit plan for those not yet arrived at retirement age.

The first is entrusted to the States to organize, manage, and support, save that the Federal Government will make grants directly to the States to aid in supporting the plan.

The second is organized and operated by the National Government through the Social Security Board. It is of this latter plan that we propose to speak here. But we shall concern ourselves with only one feature of this plan—the incredible scheme, as chimerical as Dr. Townsend's wildest inventions or California's famous "ham and egg" device for $30 every Thursday—the scheme to create a vast reserve fund of $47,000,000,000.

As the Government was setting up an insurance plan, what was more plausible than to do it as a private company would do it—to create a great reserve fund to insure the financial soundness of the plan? In other words, the Government decided to charge the members at a rate large enough to pay all benefits for many years and also to accumulate in the course of time a reserve fund, called the old-age account, of $47,000,000,000.

The theory is plausible. The Government will "save" for the fund a large sum each year and invest it in Government bonds—the soundest securities in the world. Back of the great plan, therefore, will always be this huge reserve with its constantly accumulating interest.

But there is another reason for the reserve, also touched with the fatal vice of plausibility. This insurance plan is going to cost a great deal of money. It is to be paid for by a tax on the workers and their employers, and these taxes will be sufficient to pay the bills for many years. But there will come a time when the number retiring will be so large that the old-age taxes will be insufficient to pay the benefits. Then the Government will have to supplement the old-age taxes with other taxes. But by that time the reserve fund will have risen to many billions of dollars. It will be invested in Government bonds. The interest on this investment will be sufficient to meet the deficits and thus save the Government from imposing further taxation.

To put this concretely, here is the way it will work. Every employee who is a member of the insurance plan will be taxed 1 percent of his wages and his employer will be taxed 1 percent. The employer must deduct 1 percent from the pay envelope and add 1 percent to it and send it to the Treasury. It will be 1 percent during 1937, 1938, 1939. After that it will increase half a percent every 3 years until it reaches 3 percent for employee and 3 percent for employer, or a total of 6 percent. This tax will be paid on the salaries of 26,000,000 persons and hence will yield enormous sums. The taxes paid will rise with the years. To give some idea of this, the following table gives the sums which will be collected and the benefits which will be paid in the years selected.

Year	Receipts	Benefits
1937	$278,800,000	[1]$1,900,000
1942	873,000,000	52,800,000
1950	1,877,200,000	505,500,000
1960	2,041,200,000	1,379,900,000
1970	2,205,100,000	2,303,500,000
1980	2,295,300,000	3,511,300,000

[1] The benefit payments begin in 1942. Before that only small refunds will be made to beneficiaries who die before benefits are payable.

A glance at this table will show that the receipts will be sufficient to pay the benefits until 1970, when they will fall $100,000,000 short. In 1980 they will be $1,200,000,000 too small. But by 1980 this reserve accumulation will have grown to $47,000,000,000, and the interest on that will be $1,406,000,000 a year, or enough to cover the deficit.

On the face of things, if you are one of those people given to the bad habit of tossing off decisions on grave problems without reflection, you will say nothing could be juster and sounder than this. That's the way it looked to the President. That's the way it still looks to him. But let us take a second look and see what we can see.

III

Now, in order to follow this you must see how the reserve is now working in actual practice. The plan began in 1936, with the 1-percent tax for boss and workers. Up to October 31, 1938, the collections amounted to $910,165,940.84.

Now, what has become of this money? It has gone into the Treasury. As no pensions are payable until 1942, no pensions have been paid—only some refunds on account of death and the

expenses of administration. The balance—some $817,000,000—has been transferred to the reserve, called the old-age account. That is just an account in the Treasury. From there it has been transferred to the general funds of the Treasury. That is, the Treasury "borrowed" it and transferred to the account its own bonds. Having borrowed the money, the Treasury is at liberty to use it as it chooses. It has spent the money on the general expenses of the Government. Thus, as matters stand, the money is gone—spent. The old-age account or reserve has $817,000,000 of Government I O U's and the Government owes the account $817,000,000.

The explanation of this, of course, is that when needed the Government will pay this money back to the old-age account. Meantime, it will pay interest at 3 percent each year. Each year the amount in the reserve will be greater. And each year the Government will pay 3 percent interest on that reserve. All the money will be loaned to the Government. Hence all of it will bear interest at the rate of 3 percent. The Government will collect taxes to pay the interest. But it will promptly borrow the interest just as it borrows the principal. And so by 1980 the Government will have collected in old-age taxes and in interest $111,000,000,000. By that time it will have paid out in benefits $64,000,000,000. There will be forty-seven billion remaining in the reserve. Of course, there will be no money there—but just forty-seven billion of Government paper. But why should anyone worry about this? What could be better than United States Government I O U's? Let us see.

To understand this we have to be clear about the true character of savings. We are in the habit of speaking of savings rather loosely. One may save a thousand dollars. But one's savings do not continue to be a thousand dollars. There is only one way to save a thing, and that is to save it. You save a thousand bushels of wheat by putting it into your bin or into a warehouse. You save a thousand dollars by putting it into a tin box or a bank vault. If you use your thousand dollars to buy a New York City bond or a Santa Fe Railroad bond, your savings are no longer a thousand dollars. They are now in the form of a claim on the city of New York or the Santa Fe Railroad. You no longer have dollars but claims—perfectly good claims, to be sure. But the distinction is important, as you will see. The investment is a claim to interest each year at a fixed rate and to the payment of $1,000 when the bond falls due. If I lend $1,000 in money to the United States Government on a bond, my money is gone; but I have something just as good, perhaps better, because it draws yearly interest of 3 percent, which the money can never do. But I no longer have the thousand dollars. Speaking casually, I may say my savings are $1,000, but what I have is a claim for $1,000 and interest against the United States Government.

The distinction may seem a fine one, but you will see at once the seriousness of it if you will consider that the value of the claim must depend on the person on whom the claim is established.

Consider for a moment the following performance and please do not think it irrelevant. Each week you save $10. You put it in a tin box marked "reserve." In a year you have $520. You wish to put it to work. You lend it to a friend who is in business, who is solvent, and who agrees to pay you 6 percent. He gives you a note which goes into the box. Each year you save $520 plus the interest your debtor pays you. In 10 years you have in the reserve box the promissory notes of your friend covering his borrowings of your savings and the interest, all amounting to nearly $8,000. You may say you have saved $8,000. But what you have will be claims for $8,000 in loans and interest against your debtor.

Now, suppose you handle your savings in the following manner: You put $10 a week in the tin box marked "reserve." In a year it amounts to $520. From time to time you need money. Instead of borrowing from a bank or a friend you decide to borrow it from your reserve. You take out $100 and put in your I O U as a man may do in his petty-cash drawer. You continue faithfully saving the $10 a week for 10 years. You continue at intervals to borrow what you have saved. You put in I O U's and bind yourself to return the money with interest at 6 percent to the box. You are very faithful with your I O U's and your bookkeeping. At the end of 10 years you have in the tin box your own promissory notes to the amount of nearly $8,000. You may say you have saved $8,000. But what you have is $8,000 in claims—upon yourself. If they were claims upon your friend, they would be paid to you out of your friend's earnings. But being claims on yourself they must be paid back out of your earnings. It is not necessary to press this seemingly simple transaction any further. For it is very obvious that you have no savings; that you have nothing. The reserve you have created is a pure fiction. The dollars in your little tin box are phantom dollars.

It is through this seemingly foolish performance that we can now see the fallacy of comparing a government old-age annuity system with a private insurance company and a government reserve with a private insurance-company reserve. Let us apply this test.

The International Insurance Co. puts aside $10,000,000 a year in its reserve. That ten million it invests each year in the bonds of various utilities, railroads, and government bodies. In 10 years it has over $100,000,000 of claims against various corporations and public bodies. It has an annual income of perhaps $4,000,000 in interest.

An insurance company has two sources of revenue—from its policyholders and from its investments. It has claims for premiums on its policyholders which must be paid out of their pockets. It has claims for interest upon the corporations which must come out of their earnings. An investment is a means of adding to your own earnings part of the earnings of another person. It is not a device for merely earmarking part of your own earnings. Therefore each year the International has the revenues collected from its policyholders plus what it collects from the earnings of various corporations against which it has claims. If at any time it should run into difficulties, if policyholders' revenues should decline in hard times, the International could meet its obligations by drawing upon its reserves, by using the interest or by converting the reserves into cash. It could, in short, go to sources of revenue outside its own assets or the resources of its policyholders.

Now, suppose the International put its surplus into a tin box marked "reserve." Then suppose it needed money from time to time and borrowed from its reserve, putting bonds into the tin box. At the end of 10 years it would have in its tin box a hundred million of its own bonds bearing interest. Would this be a reserve? Would the International really have savings of a hundred million? Would it not have in reality merely a tin box full of claims upon itself, which would mean claims upon its policyholders? In other words, instead of having claims upon the earnings of others, it would merely have claims upon its own earnings. And is it not as plain as a pikestaff that it does not have to have a tin box full of I O U's to have claims upon its own earnings? It has those claims anyhow.

Of course, it is not possible to imagine an insurance company engaging in a farce comedy of this sort. If it did, it would be promptly pounced upon by the authorities. Its officers would probably be indicted. Yet this is precisely what the Government is now doing through the Social Security Board and the Treasury.

The Social Security Board is merely a large Government-operated insurance company. But it is also merely a department of the Federal Government. So is the Treasury Department. The acts of both are merely the acts of the Government. When, therefore, the Government puts aside a billion dollars in a year in a box marked "reserved" and then borrows that billion, substituting its promises to pay in the form of bonds, and then pays interest each year on these billions and borrows it, giving bonds in its place, what it will have at the end of 43 years will be a box full of bonds—claims, not upon some outside assets, but upon itself; which, of course, are no claims at all. It has no means of getting the funds or the interest upon the funds save by going to the very people from whom it took these funds in the first place—the policyholders, the workers thus insured, 26,000,000 of them, who constitute the chief part of the population which must bear the taxes. If the Government invested these billions in the bonds of some other government or some private corporations so that it could realize on the investment out of the earnings of some other entity than itself, then it might claim to have a reserve. But, of course, no one would suggest doing this.

In short, there is no reserve. There will be no reserve. The whole thing is a solemn and cruel farce.

IV

One reason assigned for this most singular device is the need for relieving future generations of the burden of supporting all of the heavy load when pensions reach their full dimensions. The idea that we can relieve future generations by taxing this one and spending now the taxes collected and then repaying the loan in the future by taxing future generations is too fantastic for serious discussion.

But it leads to an important fact which we must face. A public old-age insurance plan can be financed on a pay-as-you-go basis and in no other way. We cannot escape it.

The object of an old-age insurance plan is to provide the aged with the necessities of life. These necessities will have to be produced at the time they are distributed. In other words, we shall not save those necessities against the day of need. In any given year those under 65 must produce enough for themselves and also enough for those who are retired and who produce nothing. However, as our method of distributing goods is by means of money, workers under 65 must create in any given period enough money income for themselves and, in addition, the sum needed for the aged.

To put the matter differently, whatever is paid out to the annuitants in any given period will have to be collected out of the workers in that period by means of taxes.

We cannot doubt this if we will look at the way it works out in practice. In the year 1960 the actuaries estimate that the Government will have to pay out $1,379,900,000 in benefits and spend $102,000,000 on administration of the plan—a total of $1,481,900,000. But in that year it will collect $2,041,200,000 from the insured and their employers as premiums. No one will doubt that all this money will be collected in the period in which it is paid out. In other words, 1960 will pay for the 1960 benefits.

But in 1970 it will be different. The benefits will amount to $2,303,500,000 and the expenses $110,300,000, a total of $2,413,800,000. But in that year the collections of premiums will be only $2,205,100,000. And so the Treasury will be $208,000,000 short. And so this $208,000,000 must be raised some other way. Now by 1970 the reserve will have grown to over forty-one billions. The interest on it will amount to over $1,200,000,000. It is this interest which will supply that extra $208,000,000. And because of this our naive President imagines that the people living in 1970 will be relieved of the burden.

But where does he suppose that $1,200,000,000 in interest is to come from? Certainly not out of the people of today. The Government must collect it in taxes out of the people of 1970 and go through the empty comedy of paying it in interest to the reserve which will pay it out to the beneficiaries in annuities.

Since the plan can be operated on a pay-as-you-go system and can, in fact, be operated in no other way, very low rates could be adopted which would enable the Government in each year to meet

all its obligations to the retired and during the next 43 years to collect $47,000,000,000 less than it will for social old-age insurance.

This can be proved. In the present act the old-age tax on employer and employee starts at 2 percent and increases by 1 percent every 3 years.

From 1937 to 1970 the total amount needed to pay all benefits and costs in those years will be $34,237,100,000. In the next column I give a short table based on two tax plans.

One is the tax plan of the President, now embodied in the act. The other is a tax plan which I propose and which is arrived at to produce enough revenue to pay costs and benefits and nothing else. It is a pay-as-you-go plan. Both taxes are levied on employers and employees equally. The first column shows the employer-employee tax rate fixed in the act. The second column shows a proposed tax rate very much lower.

Year	Tax rate in act	Proposed rate
	Percent	*Percent*
1937	2	¼
1940	3	½
1943	4	¾
1946	5	1¼
1949	6	2
1951	6	3
1961	6	5
1970	6	6

This table reveals that up to 1940 the proposed tax would be only one-eighth as big as the tax now in force. Ten years from now the proposed tax would be only one-third as big as the tax in the act. Not until 1970 would the tax be the same under both plans.

And yet the proposed tax would suffice to pay the costs and all the benefits due in all the years from 1937 to 1970.

But it is important to remember that the tax in the act is not the only tax which will be required if the present system continues in force. In the years between 1937 and 1970, by the President's plan, all of the excess taxes will be used to build up a reserve. This reserve will grow in figures (although the fund will be dissipated) by leaps and bounds. By 1942 it will be over $3,600,000,000. By 1950 it will be over fourteen billion. By 1960 it will be nearly thirty billion. By 1970 it will be forty-one billion. And all that time the Government will be called on to pay interest on the reserve. To pay this interest it will have to impose additional taxes. By 1942 it will have to raise taxes for interest of $84,000,000, by 1950 almost half a billion, by 1960 nearly a billion, by 1970 much over one billion. In other words, while, between 1937 and 1970, the employer-employee taxes will be enormously more than will be needed to pay the costs and benefits, additional general taxes will have to be raised to pay the interest on the mythical reserve. So that to get the amount of taxes which will have to be imposed between 1937 and 1970 under the President's plan, you have to add to the employer-employee taxes the general taxes to pay interest on the reserve. On the next page I give the taxes which must be raised by both plans—by my suggested plan and by the President's plan. By my plan only employer-employee taxes must be collected. By the President's plan two taxes must be collected—employer-employee taxes and general taxes to pay interest.

Sum needed to pay costs and benefits, 1937 to 1970	$34,237,100,000
Sum to be collected by proposed low employer-employee tax from 1937 to 1970	35,000,000,000
Sum to be collected under President's plan, 1937 to 1970:	
Employer-employee tax	56,000,000,000
General tax for interest	19,000,000,000
	75,000,000,000

By 1970, under the President's plan, the Government will have levied taxes of $75,000,000,000 to meet a $34,000,000,000 obligation and will have used the balance for all sorts of purposes utterly unconnected with social security. The money will be gone.

Now see what happens from 1970 on. By 1970, as we have seen, the amount needed in the year for benefits and costs will be $2,413,800,000. The old-age employer-employee tax by both plans will by that time be the same, 6 percent. It will yield $2,205,100,000 that year. So the old-age tax by that year will be insufficient to pay the costs and benefits. By that time additional sums will have to be found under both plans. And in each year up to 1980 the amount needed for costs and benefits will increase. By 1980 the need for benefits will be $3,511,000,000 for that year. By that time the yield through the old-age tax by both plans will be the same. By both plans the deficit will be about $1,400,000,000 a year. And so in each year some means will have to be found to collect money to meet this deficit.

What that means may well be left to that generation to determine, since it will know its own problems best. But one thing is certain. Whatever it may be, it will be some form of tax. In other words, in each year from 1970 to 1980 two taxes will have to be imposed by each plan—the old-age employer-employee tax of 6 percent on pay rolls and some additional tax. The table below shows the amounts that will be needed and amounts to be raised by both the employer-employee tax and the additional tax in different years.

[In millions of dollars]

Year	Amount needed	Proposed plan		President's plan	
		Old-age tax	General tax	Old-age tax	General tax
1970	2,413.8	2,205.1	208	2,205.1	1,210.9
1975	2,986.5	2,287.1	700	2,287.1	1,341.8
1980	3,626.1	2,295.3	1,400	2,295.3	1,406.6

In both cases it will be seen that a general tax will be levied in order to meet the deficit. In the proposed plan this tax will be levied in an amount sufficient to meet the deficit. It will be levied for that purpose. It will be paid to the Social Security Board as a subsidy for the old-age pensions. It will be called a subsidy. Everybody will know precisely what it is. In the President's plan embodied in the act the tax will be levied. But it will be called a tax to pay interest on the phantom reserve. When it has been paid in the form of interest, part of it will then be devoted to old-age insurance payments precisely as in the proposed plan. In both cases it will be a tax. In both cases it will be levied for the same ostensible purpose. The difference will be that it will be called by a different name.

But there is another difference. In the proposed plan the tax will be proportioned to the deficit to be met, to the actual purpose for which it is intended. In the President's plan the tax will be gaged in size and rate not by the purpose for which the money is supposed to be intended but in order to meet 3-percent interest on this imaginary reserve. Hence until 1980 it will continue to be enormously greater than it need be. In plain figures, by my plan this supplemental tax will have to equal $7,905,000,000 in those 10 years from 1970 to 1980. That is what it should be under the other plan if the tax were levied to make up the deficit. But as it will be levied to pay interest on the reserve, it will be $13,348,000,000. And, of course, as usual, the excess of five billion will be taken over by the Government for general expenses.

To sum it all up, by the proposed plan the supplemental deficit taxes will not have to begin until around 1970. Under the President's plan they will begin at once—have already begun. By the proposed plan only about $8,000,000,000 in supplemental taxes will have to be collected from now until 1980. By the President's plan these supplemental taxes will amount to $32,000,000,000. By the proposed plan the old-age employer-employee taxes will be very much lower and will yield fifty-seven billion in 43 years. By the President's plan the old-age employer-employee taxes will be heavy and will yield seventy-eight billion in the same length of time.

V

I have said that by 1980 the Government will have collected forty-seven billions which it will never use for old-age pensions and, furthermore, will never repay to the old-age account. The Government of course has no intention of ever repaying this money or any part of it. The whole theory of the reserve is inconsistent with the idea of repayment, even if repayment were possible.

The idea at the bottom of it is that the $47,000,000,000 reserve will be invested in United States bonds at 3-percent interest. And it is this interest which will make up the deficits of the insurance plan after 1970. Therefore this assumes a continuance of the bonds as a Government debt and as a basis for this interest. To repay the bonds would be to end the basis for the interest. Besides, to repay the bonds would be a preposterous performance. Whether the bonds are outstanding or not, whether the reserve plan is continued or not, future generations, beginning in 1970, are going to have to raise by taxes from two hundred to one thousand four hundred million dollars a year to cover the deficit of the old-age tax. The only course for these future generations is to do that. But if in addition they should decide to raise once again by taxation the forty-seven billion in order to go through the motions of repaying the money, not only would the burden be intolerable, but it would be indescribable folly. For, if they did raise the forty-seven billion, what would they do with it? Put it back in cash in the reserve tin box? And then reinvest it some other way? Or distribute it among the aged? And having distributed it among them, the Government would still have to go on raising by taxes the equivalent of the interest each year.

What the future really has to do is to collect each year enough to discharge its annuity obligations in that year. The quicker it forgets about the reserve the better.

VI

This reserve ghost is an offense against the younger workers who are burdened with an excessive levy; against the older workers who will retire in the early years of the plan; against the economic society.

The employee and his boss must pay a 2-percent tax when one-fourth of that would be more than sufficient for some years; in 1950 they must pay 6 percent when 2 percent would pay for what they are getting.

The present plan forces payment of shockingly low retirement benefits to those who will pass the 65-year milestone in the next 20 years. In 1942 the man who has averaged a hundred dollars a month in earnings will be forced to give up his job to draw $17.50 a month, while his indigent neighbor, who has paid nothing,

may be drawing nearly twice as much. To him who retires in 1947 the benefit will be $22.50 a month; to the annuitant who retires in 1952 the benefit will be $27.50 a month, while for the man who quits work in 1957 the pension will be $32.50 a month.

Obviously the Government cannot pay adequate pensions if it insists on "borrowing" most of the old-age taxes and spending them to support the Government. The whole thing is a disguised tax levied upon the lowest income groups under the pretense of old-age pension premiums. No government would dare attempt to support itself out of a pay-roll tax if it honestly proclaimed its purpose. The workers have remained silent because they have been deceived.

Chief victims are the very youngest workers. For 6 percent—the permanent tax aimed at—a private company will guarantee to a young man taking old-age insurance at 20 a retirement annuity at 65 of $58.94 a month. The Government plan will give him only $53.75, with this difference—that under the private plan the annuity will be his of right when he reaches 65, while under the Government plan he may have to sacrifice his job to get the annuity.

The Government plan diffuses its evil effects throughout the economic society. It is a grave mistake to associate taxes with pay rolls. This almost requires employers who wish to cut their taxes to cut their pay rolls for this purpose. Nothing will so swiftly accelerate the shift from hand workers to machines as this exorbitant tax, for the employer's only escape from high social-security taxes will be by replacing the taxable worker by the machine which claims no pension.

And who can doubt that the extraction of over a billion dollars a year in taxes from the pay envelopes of the lowest income groups, not for social insurance, but for Government expenditures (as will be the case in 4 years) will have a most depressive effect upon the already limited purchasing power of the wage-earning groups? Mr. Marriner Eccles, Chairman of the Federal Reserve Board and a Presidential adviser, has expressed the belief that the withdrawal of half a billion in the last year hastened and deepened the recessive movement of this year.

VII

How came this monstrosity into the Social Security Act? It is a depressing story.

In the winter of 1934–35 a group of technical agents of the Cabinet Committee on Economic Security were bringing their labors to an end. The idea of a reserve had arisen somewhere, but every actuarial and financial expert consulted opposed it vehemently. Messrs. O. C. Richter and W. R. Williamson were the actuarial consultants of this group (Mr. Williamson is now actuary of the Social Security Board). They opposed it as "quite beyond the realm of practical possibilities" and "an unsound departure from the principles that should govern social insurance." They are authority for the statement that "representatives of the Treasury and Federal Reserve System who acted as financial advisers to the committee were of the opinion that an old-age pension plan which did not require a reserve would be preferable."

Four eminent actuarial consultants of the Cabinet committee were called. They were Mr. M. A. Linton, president of the Provident Mutual Life Insurance Co.; Prof. A. L. Mowbray, of the University of California; Prof. Henry L. Reitz, of the University of Iowa; and Prof. James W. Glover, of the University of Michigan. Mr. Linton writes me: "The actuarial consultants were unanimously opposed to a large reserve and expressed themselves clearly on the point." Says Dr. Reitz: "It is my recollection that the committee was unanimously against holding reserves on this basis. * * * The members of our committee argued as strongly as they could against this feature of the plan in certain committee meetings of the larger group, including representatives of the Treasury."

Finally the Cabinet committee adopted the advice of these consultants and in their report to the President expressly declared that "the plan we advocate amounts to having each generation pay for the support of the people then living who are old." It warned against large reserves and announced that "to keep the reserves within manageable limits we suggest that the combined rate of employers and employees be 1 percent for the first 5 years (against 2 percent for the first 3 years adopted in the act); 2 percent for the second 5 years; 3 percent the third 5 years; 4 percent the fourth 5 years; and 5 percent thereafter." And upon this report, signed by four members of the Cabinet and Harry Hopkins, the Wagner-Lewis bill was framed.

But at this point a strange thing happened. The President, seeing the report of the committee, expressed apprehension at the fact that in 30 or 40 years general taxes would be required to supplement the old-age pay-roll taxes. He gave the matter a swift, glancing blow of his mind and decided that future generations ought not be burdened. About this time, and perhaps hearing of this, an official of the Treasury Department called upon the President and spun him a whimsical yarn of fairy finance. He pictured how a great reserve might be created; how with this, which would belong to the poor, all the national bonds would be bought; how the interest being paid the rich would now be paid to the poor; how the grave problem of tax-exempt bonds would thus be solved since the debt would be practically extinguished as a possession of the rich; how the old-age system would thus become self-supporting and future generations would be emancipated from the drudgery of providing for their aged; and how, most delightful to contemplate, these immense old-age tax collections and the mounting reserves would become an almost inexhaustible reservoir of funds to meet Government deficits. Here was a miraculous contrivance of heavenly finance. It was a wondrous vision which could survive only upon one condition—a condition easily complied with—that it be not looked at too closely.

About this time the House committee was holding hearings on the bill as introduced by Messrs. WAGNER and LEWIS. The heat was on and the administration managers were jamming it through the committees at the full speed then so easily managed. Except for administration spokesmen, witnesses were allowed only 5 minutes each. Only a few days remained when one morning Secretary Morgenthau, who had signed the report against large reserves, walked into the committee chamber with a message. The Treasury, he declared, wanted the huge reserve—the 47-billion-dollar devise—put into the bill and the rates raised to make that possible. And so with little or no thought about the matter, under the pressure of the Presidential "must," this grotesque fraud was railroaded through the committee. It got little notice. Later the bill was jammed through Congress. Some Members warned against it. The American Association for Social Security, which for years had fought the battle for social security, issued a solemn protest. But Mr. VINSON told the House the President wanted it. And it became a law. It remains in the law despite the fact that it has, so far as I have been able to find, the support of no first- or second-class economist, actuary, or finance expert either here or abroad and despite the fact that old-age insurance systems have existed for many years, even decades, abroad without anything more than small contingent reserves.

VIII

Many criticisms of the Social Security Act have been made. It is probably just to say that to set this system aright it may be necessary to start all over again. But of the other defects in the plan we need not speak. So far as the reserve is concerned the wise course would seem to be fairly obvious.

The idea of a reserve should be taken out of the act altogether. The pay-as-you-go plan should be employed completely and for the very good reason that any other plan is impossible.

The rates should be promptly reduced. The table used on an earlier page of this discussion was offered not as an ideal schedule of rates but merely to illustrate the discrepancy between the present exorbitant rates and rates that would be sufficient to pay the benefits authorized in the present act. The rates should be somewhat higher because the benefits should be higher at least in the early years of the plan. Instead of a 2-percent total tax on employers and employees increasing by 1 percent every 3 years and rising to 6 percent by 1949, the original rates of 1 percent rising by 1 percent every 5 years, attaining to 5 percent by 1957 and 6 percent by 1962 would be sufficient to produce the needed payments up to 1970 and a reserve of perhaps $10,000,000,000 besides. But if the benefits were increased in the earlier years, the reserve would be kept to a low and manageable level.

Of course, some reserve is inescapable—a billion or two or even three or four. But the question would be well worth considering whether investment of such reserves ought not to be limited to the open bond market to prevent a political government from exploiting the reserve as part of the public fiscal policies.

Congress and labor, as well as the employers, will do well to face this problem squarely and honestly in this session. There is going to be no end of pension tinkering. Behind every crackpot scheme of politicians competing for the votes of the aged will be the problem of money—where to get the money. This reserve fund offers a tempting reservoir of money upon which they will cast hungry eyes. Already the housing advocates have made a bid for it. Mr. Roosevelt thinks it looks good for his present spending purposes. The Townsendites will presently lay claim to it. The best thing to do with this monstrous child is to slay it at once and thus frustrate the kidnapers.

Some Aspects of Our Foreign Relations

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 3, 1939

ADDRESS BY HON. SUMNER WELLES, UNDER SECRETARY OF STATE, BEFORE THE ANNUAL MEETING OF THE NEW YORK BAR ASSOCIATION, JANUARY 27, 1939

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given by the Honorable Sumner Welles before the annual meeting of the New York Bar Association, January 27, 1939:

While I admit to no small measure of trepidation in appearing as a layman before these distinguished members of the bar of the State of New York, I welcome the privilege you have afforded me of speaking to you tonight on some aspects of the foreign policy of your Government. I value particularly the opportunity of addressing you, because you, in the exercise of the profession of the

law, necessarily play so outstanding a part in the molding and crystallizing of public opinion in the United States.

I am satisfied that there is no component part of our national public opinion which is better qualified to think things through for itself and to determine on the strength of that individual analysis where the best interests of the Nation lie, and what course the Government should pursue in its dealings with other nations during this troubled period of world history.

In a democracy such as ours, foreign policy should be determined by the people themselves through their elected agents as provided by the Constitution. It is all important therefore that the American people should be in full possession of the essential facts, and that they should be clearly and accurately informed by the officials of their Government of every aspect of international problems as they arise so that, so far as it may be humanly possible, they may decide coolly and dispassionately for themselves what road they wish their Government to follow—and determine in what manner their own interest may best be served.

It is with that thought uppermost in mind that I speak to you tonight.

For I am convinced that the greatest need of the people of the United States at this moment is to do their own thinking for themselves. So long as they refuse to permit others to do their thinking for them and reach their own conclusions with regard to national policy uninfluenced by the often plausible and insidious arguments advanced by alien interests, I think we can all feel that our national destiny will remain secure. I have profound faith in the ultimate wisdom of our people. They have proven it over a period of more than a century and a half.

We can all of us readily admit that it is no easy task in this age of high-pressure publicity for the average man and woman, necessarily often engrossed with their own personal affairs, readily to sift the wheat from the chaff and to distinguish the sincere and spontaneous expression of belief from the assertion of the paid propagandist.

Such sense of uncertainty as our citizens may have with regard to our country's foreign relations is not unnaturally still further increased by the violence with which extravagant and frequently contradictory opinions are expressed in our newspapers or over the radio. From one source we may be told that because our Government demands that its treaty rights be upheld and that the legitimate interests of its nationals be safeguarded, or because it takes a public stand in behalf of elementary principles of right and justice, the Government is under the control of a group of "world savers" who are quite willing to plunge the United States into war in order to further their own crack-brained theories. By another source we may be told that because our Government pursues a policy of noninvolvement in controversies in which this country is not directly concerned, this policy is the fruit of the devious machinations within the administration of open sympathizers with the Nazi or Fascist form of government. On the one hand the public is admonished that men who sincerely and wholeheartedly are laboring to avert the slaughter of millions of human beings in a new world conflagration are traitors and cowards. On the other hand the people are warned that unless the United States withdraws completely from all contact with other nations and surrounds itself with a policy of impenetrable isolation, it will inevitably be pulling other nations' "chestnuts out of the fire," and consequently must soon plunge to its own doom. One individual tells us that no one knows what the foreign policy of our Government really is. Another proclaims that our foreign policy is rapidly driving our people into war.

Searching analysis and critical review of foreign policy are salutary and desirable in our democracy. Open discussion, complete freedom of speech and of the press are not only, thank God, fundamental rights guaranteed us by our Constitution, but they are essential to our very form of living. In order that they can safely appraise the situation for themselves, the men and women of our country are entitled to know, and must be authoritatively informed, whenever the views they hear over the radio or read in print represent propaganda, whether it be direct or indirect. Particularly at a time like this, I believe that it is in the highest degree essential that further thought be given to the method by which the full origin and background of the views presented to them can be made more readily available to our citizens.

The greatest safeguard to unbiased thinking which the American people today possess lies in the fact that no country on earth is blessed with news services so completely objective, accurate, and impartial as are those which appear in the American press. The fair and thorough manner in which, during the world crisis last September, news was given both in the press and over the radio to the American citizen can always be a source of legitimate pride to this country.

Twenty years ago the nations of the earth met together with the hope that the way might be prepared for the permanent maintenance of peace. A great vision of an enlightened civilization based on a new world order of international justice and fair dealing was frustrated by human limitations and by the shortcomings of some of the statesmen entrusted with the power to bring about its realization. A peace treaty was signed which resulted, and which could have resulted, in no real peace, because it was not based upon the foundations of equity which alone could have transformed an armistice into a lasting peace. But more than that, the treaty itself made possible the revision or elimination of such provisions therein as experience demonstrated were inequitable or unworkable. And yet the opportunities thus offered for the fair adjustment of such provisions were scarcely ever availed of.

Since that day we have seen a progressive and an evermore rapid deterioration in international relationships and in human relationships.

Cruelty by human beings to other human beings of a type which even at the height of the World War would have seemed incredible is now becoming a commonplace.

Before 1914 a government which massacred women and children, or slaughtered civilians in the course of military hostilities, would have been regarded as an outcast among nations. Today such conduct is almost a daily occurrence.

Before 1914 the family of nations traded freely with one another, subject solely to the tariff restrictions which they might individually impose. Today, in great regions of the world, quotas, exchange restrictions, manipulated currencies, tariff embargoes, governmental export subsidies, and all of the paraphernalia of autarchic economics reign supreme. All of the benefits to labor, agriculture, and industry, to national well-being, and to international good will, which are derived from the free flow of export and import trade, have vanished where these economic barriers have been built up. Many parts of the supposedly civilized world will soon have in reality no international trade beyond that which savage tribes possess, namely, barter transactions.

In 1921 the great powers made one realistic and practical approach toward limitation of armaments. Since that time many conferences have been called for a similar purpose. But today the peoples of the earth are paying annually for armaments very nearly six times what they paid before 1914. This crushing burden upon national economies of the translation of productive wealth into nonproductive elements of destruction can only bring as a result either war or the fixing of a standard of living so pitifully low as inevitably to prepare the way for social upheaval and chaos.

Perhaps the greatest achievement of the civilized world in the latter decades of the nineteenth century was the growing reliance of governments upon the sanctity of the pledged word. Treaty promises were kept. Treaty rights were respected. I wish the world of 1939 could believe with the same measure of assurance as did the world of 1899 and 1907 at the time of The Hague conferences that observance of treaty obligations was axiomatic.

I could, of course, continue this relation of the specific ways in which earlier and higher standards of international conduct have lapsed, but no useful purpose would be served thereby. Nor need I, I believe, describe in any detail the situation in which the nations of the world find themselves today. It is apparent to us all. On every hand, outside of the Western Hemisphere, hostilities, military or economic, are either threatened or are in actual progress. And the threat alone, as we all know, often suffices for an aggressor to achieve his ends without resort to open violence.

It is a gravely serious—a deeply disquieting moment in our modern civilization. It is a situation which demands the clearest thinking from us all. And the conditions are such as to make us all, I think, desire to approach the consideration of the part our own country should play without passion, without prejudice, and with no thought save of what the true interests of the American people may be.

The major objective of the foreign policy of this administration is to keep the United States at peace. There are, of course, other highly important objectives, such as the developing and strengthening of our friendly relations with other powers; the improvement of commercial opportunities for American trade abroad; the maintenance of the legitimate interests and treaty rights of American nationals in foreign countries; the reestablishment of the reign of international law to supersede the rule of force; the reduction and elimination of economic barriers to international trade; and the limitation and reduction by international agreement of military and naval armaments. But all these objectives are but supplementary to the fundamental objective so frequently announced by the President and by the Secretary of State, and by other responsible officials of your Government, namely, that the people of the United States be kept at peace and that they be permitted to lead their lives in a peaceful world.

With that fact established as the underlying foundation for every development in the foreign policy which this Government has carried out during the past 6 years, I should like to touch briefly on five major aspects of our foreign policy—the course which we have pursued in each one of these fields, the objectives which we have had in mind, and the salient features of each particular situation as of today.

The five general aspects to which I refer are, first, our relations with the other countries of the Western Hemisphere; second, our policy and our relations in the Far East; third, our policy with respect to certain developments in Europe; fourth, our efforts to enhance the volume of our foreign trade and to stimulate our own recovery, as well as international stability, through the trade-agreement program; and, finally, the problems presented by the neutrality legislation.

I think there will be no difference of opinion when I express my belief that there has been no phase of our foreign policy which has met with such widespread approval and which has been productive of such gratifying and beneficial results as the application by your Government of the good-neighbor policy in its relations with the other American republics. In the place of the suspicions, the bitter rivalries and jealousies of earlier days there exist today between all of the 21 American republics an intimate friendship and understanding and a unanimous agreement not only upon the code which

should govern and determine their relations as between themselves, but also an identification of objectives insofar as their relations with the rest of the world may be concerned.

In support of this assertion I need merely cite these phrases from the Declaration of Principles of Inter-American Solidarity and Cooperation adopted unanimously at the Buenos Aires Conference of 1936, which state, "That the American nations, true to their republican institutions, proclaim their absolute juridical liberty, their unqualified respect for their respective sovereignties, and the existence of a common democracy throughout America; that every act susceptible of disturbing the peace of America affects each and every one of them, and justifies the initiation of the procedure of consultation provided for in the convention for the maintenance, preservation, and reestablishment of peace," and this portion of the Declaration of Lima, adopted unanimously last month at the Eighth Inter-American Conference, which states that the American republics "reaffirm their continental solidarity and their purpose to collaborate in the maintenance of the principles upon which the said solidarity is based. That faithful to the above-mentioned principles and to their absolute sovereignty, they reaffirm their decision to maintain them and to defend them against all foreign intervention or activity that may threaten them. And in case the peace, security, or territorial integrity of any American republic is thus threatened by acts of any nature that may impair them, they proclaim their common concern and their determination to make effective their solidarity, coordinating their respective sovereign wills by means of the procedure of consultation, established by conventions in force and by declarations of the Inter-American Conferences."

Those two continental declarations of purpose and of principle are in my judgment epoch-making in their importance. They mark in all human probability the beginning of a new and an auspicious chapter in the history of the Western Hemisphere.

But the development of healthy inter-American relations is not created primarily by conferences. The conferences are rather the milestones which commemorate periodically the achievement made possible by the daily growth of comprehension and of cooperation between our several independent peoples. It is the day in, day out, effort on the part of the American governments and of the citizens of the various republics to remove difficulties, to negotiate agreements, to resolve misunderstandings, to increase commercial and cultural ties, which makes possible these results.

The good-neighbor policy is not and can never be a unilateral policy undertaken solely by the United States in its dealings with its neighbors. It is a policy which can only persist on a basis of complete and sincere reciprocity. There is much still to be done by all of the 21 republics. Serious issues still remain unsettled, but the will toward the fair solution of these issues exists. I believe that the peoples of every one of the American nations fully recognize the advantage to them, in this present stage of world history, of the fact that they are no longer separated by dissension, suspicion, or antagonism, but that they stand as sovereign equals united by common ideals and common aspirations.

In our relations with the countries of the Far East the policy of this country is in no way different from our foreign policy in general. We have the same objectives there and we apply the same principles as elsewhere. The situation, however, and the problems that arise in our relations in the Far East have their individual peculiarities. Thus, for instance, in their relations with other powers, practically all far eastern countries at one time accorded to the former rights of extraterritorial jurisdiction; also, the far eastern countries agreed to and applied certain restrictions in the making and the administering of their tariffs. In many treaties to which countries of the Far East, especially China, have been parties, treaties, most of which have been bilateral but some of which have been multilateral, there have been special provisions which were formulated and adopted in special reference to special situations and problems.

As the situations in those countries have changed, the United States has, by processes of negotiation and agreement, voluntarily agreed to the alteration or the removal of these special features. It did this in the case of its relations with Japan. It has done this in the case of its relations with Siam. It had gone far with the process of doing this in the case of its relations with China before, in 1931, there developed a conflict between China and Japan one result of which has been to divert the attention of the Chinese Government from such matters to more urgent and vital problems.

Under the aegis of the general principles and rules of international law and of treaty provisions, nationals of the United States have gone to countries of the Far East, have developed trade with the nationals of those countries, have made investments there, and have engaged in a variety of legitimate activities beneficial and profitable both to themselves and to the peoples of the Far East with whom they have carried on these activities. As is well known, many American citizens have gone to China and to other parts of the Far East solely to engage in philanthropic and educational work.

In 1921 the nine powers most interested in the problems of the Far East, including the United States, Japan, and China, met in conference at Washington. After 3 months of full consideration of the various rights and interests and problems involved, treaties were signed and subsequently ratified which provided for the resolution of existing controversies, and the regulation of the situation in the future in such a manner as to diminish existing friction, and to prevent the arising in later years of even more serious issues. These treaties were negotiated in a spirit of give and take. Certainly the United States would not have agreed to certain provisions in those treaties which represented concessions and commitments on its own part without the inclusion of equivalent concessions and similar commitments on the part of the other nations involved.

Among the principles agreed upon in the treaties then concluded was the principle of equality of commercial opportunity in China. This is a principle for which the American people and their Government have contended not only in China but equally in every other portion of the world throughout this country's history; a principle which has been widely, almost universally, accepted throughout the world. It is a principle respect for which, no matter where, makes for amicable relationships and peace. It is a principle disregard for which makes for controversy, irritation, a sense of injustice, and conflict. It is a fixed and fundamental principle of American foreign policy, not only in the Far East, but in all parts of the world as well.

Treaties, like contracts in municipal law, are not subject to amendment or termination simply at the will of one of the individual parties thereto. If principles embodied in treaties and agreements are to have effect, and if law and order are to prevail, treaties must be respected. Neither the American people nor their Government can assent to acts by other countries in disregard of this principle.

In this country's relations in the Far East we are confronted today with a difficult situation and a perplexing problem. One country is endeavoring by armed force to impose its will on a neighboring country. In extenuation of these aspects of its efforts, it has declared that there exists a new situation and that it intends to produce or to bring about the production of a new order. It has to all intents and purposes given notice that it will henceforth be bound by treaty provisions only insofar as it may find it convenient to it to be so bound. It has indicated that it alone will determine what constitutes equality of commercial opportunity in China. It has made it clear that it intends that it alone shall decide whether the historic interests and the treaty rights of American citizens in China are to be observed.

The Government of the United States does not admit that any other country has the right arbitrarily to abrogate the treaty rights of the United States. The principles to which we are committed are the principles of law, order, and justice—for ourselves and for those with whom we have relations. Our policy is to safeguard by appropriate measures, methods, and means the legitimate rights and interests of the people of the United States, including our interest in the objectives and principles which I have just mentioned.

We have informed the Government of Japan, as we have informed in other situations the Government of China, of the position of this Nation, and at the same time we have made it clear that this Government always has been, and is now, disposed to discuss with all of the nations who have a direct interest in the Far East, including the Governments of Japan and China, any proposal based on reason and justice which may be advanced for a modification or an elimination of existing treaty provisions. This Nation, when difficulties arise and conflicts of interest occur, prefers as a means of solution methods of conciliation and negotiation. But that as a people we will continue to stand by our principles and persist in our policies I, for one, am convinced.

There has been, and there continues to be, apparently, in the minds of many of our people, some measure of misapprehension as to the attitude which our Government has adopted with regard to the policies of certain of the governments of modern Europe. It seems to me that with regard to this issue not only are the facts apparent, but that the traditional policy of the United States is well established. The people of the United States and their Government have always maintained, and in practice have made it clear, that they assert the right to protest and to condemn the cruel and inhuman treatment of human beings wherever such brutality occurs. They have likewise made it clear that they possess and will avail themselves of the right to protest, or, if need be, challenge, the foreign policy of any other nation which threatens the peace or security of the United States, or which results in the violation of the treaty rights of the United States or of its nationals. Those traditional tenets of our national policy, however, have never involved the right on the part of this Government to condemn or to assail the form of government under which other peoples may live.

The mere fact that other peoples may have possessed forms of government totally divergent from our own, and by which we ourselves would never agree to be governed, has not meant, during the century and a half of our national existence, that we have not usually maintained cordial and friendly relations with such governments and peoples. It is desirable, I feel, that this issue be clarified. We desire to maintain friendly relations with all peoples, and we do not presume to suggest by what form of government other peoples should be governed, but to the degree that a foreign government persists in policies of inhumanity, or refuses to respect the treaty rights and legitimate interests of this country, or by its national policy threatens our security, friendship, and understanding between the United States and that government must be correspondingly impaired.

The trade-agreements program was undertaken at a moment when the United States and almost every other nation of the world were at the lowest ebb of a profound economic depression.

It was undertaken primarily for the purpose of increasing the volume of our foreign trade. The trade agreements negotiated

thereunder have resulted in the reduction of unemployment and in obtaining for a large number of our people—workmen, as well as those engaged in agriculture and industry—increased security and prosperity. But, more than that, through the operation of the principles of the trade-agreements program, the benefits accruing to our own national economy have simultaneously redounded to the benefit of the national economy of those nations which have cooperated with us. Without the expansion of international trade any general rise in living standards would be impossible.

The reciprocal-trade agreements negotiated under the trade-agreements program upon the basis of the unconditional most-favored-nation principle have eliminated inequitable discriminations as well as unwarranted barriers to commerce between nations. They have arrested the trend toward that economic autarchy which is today responsible for so many of the ills from which the world still suffers.

Without the economic security which the healthy movement of international trade tends to create, and without the political stability which is derived from such security, there can be no permanently peaceful or orderly relations between nations. In short, the basic principles of the trade-agreements program represent in regard to international commerce what the basic principles of our general foreign policy represent in regard to political relations between nations—equality of opportunity and fair dealing.

During these past 5 years 20 trade agreements have been negotiated by the United States. In the years to come I believe that it will be recognized that the persistent and unfaltering policy which this Government is pursuing under the direction of Secretary Hull in carrying on, at times against almost overwhelming odds, the trade-agreements program, will prove to be one of the greatest contributions this country will have ever made to the cause of world recovery and of world peace.

Our existing neutrality legislation, which modified in certain particulars our traditional neutrality policy, was enacted with the intention of minimizing the risk of the United States being involved in difficulties which would tend to draw our country into controversies not of its own making. But, as the President said in his message to the Congress of the other day, "We have learned that when we deliberately try to legislate neutrality our neutrality laws may operate unevenly and unfairly—may actually give aid to an aggressor and deny it to the victim. The instinct of self-preservation should warn us that we ought not to let that happen any more."

The experience of these past years under this new neutrality legislation undoubtedly has given cause for much thought to the members of the executive and legislative branches of our Government. It is my hope that any amended legislation which may be adopted will, insofar as legislation can, safeguard the interests of this Nation and make less likely in the future our involvement in dangers which in past years may have threatened to draw us into conflict, but will, at the same time, eliminate such aspects as those to which the President referred in his recent message.

The international problems which have arisen in the world during these recent years, and increasingly during these past months, are many in number and grave in nature.

But as we look back over the pages of history we can see time and again how the world has been confronted with similar crises, and how by the inherent desire of mankind for peace, and occasionally by the wisdom of the statesmen of the moment, similar crises have been solved, and modern civilization has come through to a period of renewed tranquillity and to a better day.

A short time ago, in reading the pages of a famous British diarist, I came across this passage, which is singularly applicable to the present moment, although it was written 108 years ago. The author commented: "Europe is in a nice mess. The events of a quarter of a century would hardly be food for a week nowadays." A few years later he took, and had reason to take, a far more optimistic point of view. So, I hope, with courage and determination and with the aid of men of good will everywhere, may we.

In the meantime the appropriate officials of your Government, in harmony with the wishes of the people of the United States, must continue to conduct the foreign relations of this country. Conditions change hourly, and each problem must necessarily be determined on its own merits and in the light of immediate circumstances. Consequently there is nothing more impossible, I think, than for the Government to determine inflexibly, in advance, what it will do in a hypothetical contingency at some time in the future. But there are, as I have attempted to point out tonight, certain basic principles underlying the policy of your Government in its effort to assure the peace and security of this Nation and to safeguard its best interests. I believe they may be summarized as follows:

The cardinal elements in the policy of the United States should be to retain at all times complete liberty of action; to maintain her defensive strength always at such a standard as to be able to repel attack from whatever source it might arise, and to be enabled to play her full part in cooperating with the other American republics in keeping the Western Hemisphere free from any form of aggression; to promote and to strengthen political, cultural, and commercial ties with the other democracies of the Western Hemisphere; and, finally, to foster friendly relations with all countries which make friendship possible, and to further at all times and in every practicable manner, through conferences or through cooperation with other nations, the elimination of economic barriers, the limitation and reduction of armaments, and the return by the nations of the world to those standards of good faith and of right and justice which civilized mankind has painstakingly evolved and which experience has shown make for an orderly and for a peaceful world.

National Press Club Begins a New Year Under Brilliant Auspices

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

Mr. LUDLOW. Mr. Speaker, in the presence of a record-breaking throng, the National Press Club began its thirty-first year formally on Saturday evening, January 28, with the installation of the active Washington newspapermen who will direct the destinies of the world's largest and most influential journalistic group for the ensuing year.

Arthur Hachten, who covers the Capitol for International News Service, was inducted as president, along with Richard Wilson, of the Des Moines Register and Tribune, as vice president; Lawrence Stafford, of the Grand Rapids Press, secretary; Charles A. Hamilton, Binghamton Press, treasurer; and Richard L. Harkness, Philadelphia Inquirer, financial secretary; and a new board of governors, which, in addition to the foregoing, comprises Melbourne Christerson, of the Associated Press; Felix Cotten, Washington Post; Morris D. Ervin, Cincinnati Times-Star; Raymond Z. Henle, Paul Block newspapers; Paul R. Leach, Chicago Daily News; Clifford L. Prevost, Detroit Free Press; and Thomas L. Stokes, Scripps-Howard Newspaper Alliance.

Harold Brayman, retiring president of the club, called the assemblage to order. A feature of the entertainment was a reproduction of the National Broadcasting Co.'s "Battle of the Sexes," staged by Alan Kempt, master of ceremonies, of the original air cast, but which included club members and their wives in the question-and-answer competition. The winning male side numbered Phelps H. Adams, of the New York Sun; Albert L. Warner, of the New York Herald Tribune; Erwin D. Canham, of the Christian Science Monitor; Raymond P. Brandt, of the St. Louis Post-Dispatch; Ernest K. Lindley, columnist; and Tom Stokes, of the Scripps-Howard newspapers.

The women's team was composed of Mrs. Frances Parkinson Keyes, writer; Doris Fleeson, New York Daily News; Ruby A. Black, of the news service of the same name; Elizabeth May Craig, correspondent for New England papers; Martha Strayer, Washington Daily News; and Elizabeth Van Wagoner Tufty, correspondent for midwestern newspapers.

The musical program included selections by Mary De Sibour, society night-club vocalist; Sid Cowan; and instrumental selections by the Navy Band under the direction of Lt. Charles Benter.

News of the inauguration was heralded by a special edition of the Washington Herald-Times in collaboration with the Goldfish Bowl, house organ of the National Press Club. This "extra" was made up of humorous contributions by Mark Sullivan, New York Herald Tribune Syndicate; Joseph Alsop and Robert Kintner, columnists for the North American Newspaper Alliance; Jay Franklin, Bell Syndicate columnist; Earl Godwin, president of the White House Correspondents' Association; John Jay Daly, of the Washington Star; Walter Karig, Newark Evening News; Mark Foote, Booth Newspapers; William C. Murphy, Jr., Philadelphia Inquirer; Richard W. Westwood, editor of Nature magazine; Kendall Hoyt, of the Annalist; Merwin H. Browne, Buffalo Evening News; H. J. Whigham, editorial writer for the Patterson newspapers; George Sanford Holmes, writer; Mr. Lindley; George W. Stimpson, of the Houston Post; Frank A. Hall, of the National Catholic Welfare Council

News Service; Representative Stephen Bolles, of Wisconsin, and others. The art work of this notable publication was by H. J. Carlisle, of the Des Moines Register and Tribune; Ralph Patterson, Washington Herald-Times, and Clifford K. Berryman, Washington Star; and editorship by George O. Gillingham, editor of the Goldfish Bowl.

The audience was convulsed when Strickland Gillilan, the noted humorist, garbed in black robe and white wig, took over the function of "Chief Justice" with great dignity and administered the following iron-bound and copper-riveted oath of office to President-elect Hachten:

Do you, Arthur Hachten, of the Irrational News Service, solemnly and deliberately perjure yourself that you will so conduct the affairs of your high and undesirable office as to keep down the alternately smoldering and flaming conflict between the bone-dry he-Carry Nations of the club and those who, after the third quick one, would move the bar into the lounge with Phryne, provide separate self-serving cellarettes for the library and the writing room, refillable hipflasks for the help, and suspend all other club functions what-the-so-ever; will you stop this war in order that, just before each club election, some guy with a gaudily decorated breath will not buttonhole and lead aside the middle-of-the-road take-it-or-leave-it-alone members and whisperingly adjure them by all that is good and alcoholic to cast a vote for Dave Zilch for a place on the board of governors because Dave is irrevocably pledged to provide Polled Angus instead of Doberman Pinscher for the beef stew—said beef stew being the perennial Polish Corridor, Tunisia, Sudetenland, and Mediterranean crises of our menu? The answer, if ever we get to it, is, "Yes and no!"

May I also, Arthur Hachten, whose remaining moments of freedom from care are now mighty few, suborn in you the perjurious pledge to supply off-the-record speakers who will really hint something that IS off the record and not matter that might as well be shouted from the housetops with perfect harmlessness to all concerned and to the always vastly greater number of the totally unconcerned; speakers that might now and then say something that would tempt the crook that always latently lurks in the honest bosom of every good newspaperman to slip out and put 500 words of it on the wire, anyway, just for the hell of it; or, when you do secure speakers whose talk would really be of necessity off the record, said speakers be required to furnish black sheets for the representatives of publications in totalitarian countries? The answer is, "On advice of counsel, I refuse to answer."

Do you, Arthur, aver, with a dead pan, that you will, in all your Machiavellian machinations and sly skulduggery connected with the purely political aspects of this highly paid office—as nominal head of this ballyhoo bund—favor only New Dealers, Republicans, Garner Democrats or the tweedledum-tweedledees which, as we are informed by a well-known Jackson Day orator, are the people who show their complete nonpartisanship by not caring a damn who kicks the New Deal in the shins; and in such outright appointments as fall or may come to fall within your duties and perquisites, appoint men strictly on their merits as Abraham Lincoln did, regardless of party affiliations or predilections or previous condition of turpitude, not favoring your own clique of friends and admirers, which has been the custom in this and other Governments always before and ever since the administration of Honest Abe? The answer is not obligatory.

And now, Arthur Hachten, having heard with painfully suppressed disagreement the rigid requirements set forth in this hand-tooled custom-made oath of office, do you promise faithfully and well to perform such onerous and nefarious duties to the utmost of your ability, natural, acquired, and pretended? The answer is, Arthur—and don't for a minute think I haven't seen that your fingers are firmly crossed—"I do."

Ha, ha, we gotcha, Art! Up to the time you uttered them two fateful words you were a mere member of the club that only your enemies had a right to cuss. Now you are subject to bullyragging ad lib by the entire club membership. You asked for it. There is an endless year ahead, and may the lord of publicity exercise an especially precious and tender brand of mercy on your hunted soul!

Having been thus duly installed in office amid laughter and cheers, Mr. Hachten delivered his inaugural address, which was followed by dancing until a late—or, rather, I would say, an early—hour. In accepting the cares and responsibilities of office the new president spoke, as follows:

Thank you very much for your cordial greeting.

To our outgoing president I want to wish the peace and contentment that goes with satisfaction of having given his best. We all appreciate the good work Mr. Brayman has done for our institution.

I suppose some of you came here tonight to look me over. Well, that goes both ways. I am happy to see all of you.

The National Press Club is a solid organization.

It has succeeded through the years.

It is the greatest press club.

Its 2,000 members are spread over the world.

We have in our membership men of sharply conflicting political and economic views. But we take no part in politics—that is, outside of our club politics. And after our elections we close ranks.

But let it not be said the National Press Club is out of tune with the times. This Nation, probably, has no more fervent advocates of the more abundant life than there are within this club.

Now, in order that no avenue leading to this more abundant life may be overlooked, we have explored all possible proposals suggesting greater benefits in harmony with more bounteous living.

In fact, at the present moment, an extraordinary committee is preparing to confer with fellowmember Jesse Jones, custodian of the pursestrings of the R. F. C.

The purpose is to work out a deal with Mr. Jones whereby our members, unable to pay their bills—bar bills, dues, game-room losses—may be granted loans with a minimum of red tape, with no collateral necessary other than the signed bills, dues notices, and games tally sheets.

Another committee, no doubt, will be appointed to confer with the League of Nations, to provide identification passports for refugee Press Club members, who are temporarily without haven; men who have been driven from their homes and firesides, because of long hours spent within the walls of our sumptuous club quarters.

In this connection arrangements should be made with the C. C. C. to construct temporary dog houses on the roof of this building.

Pipes running from the Passamaquoddy tide-harnessing project will be installed.

And while we are considering accommodations, may I suggest that 67 years from tonight—not counting Sundays—our club will be receiving dividends from the Press Building Corporation.

When that happy day arrives, no membership dues will be required. In fact, we will pay people to join—provide each one a bathtub along with an individual shaving mug.

I notice there are Members of Congress present tonight. Legislators, you will confer a favor upon us if you will insert an amendment in the unemployment compensation law to provide for our worthy brethren, who find our cardroom so attractive that they have been severed from their customary pay rolls.

I am offering these suggestions—not in a boastful way—just to let the four corners of the round earth know that we in the National Press Club have vision.

At the outset I suggested that some of you had come here tonight to look me over. May I now reveal that my favorite color is blue. I like to roller skate and go to the movies.

Naturally, I have given considerable thought to the problems of the Press Club. That matter of silverware disappearing has given me much thought. I believe I have the solution. Let us have all of the silverware fingerprinted. Then no one will dare take it.

Enough of that. Seriously speaking, I am very grateful for this high honor. I shall do my very best to serve you and merit the confidence you have shown in me.

This being an inaugural ceremony, perhaps I should proclaim the keynote of my administration.

Good-fellowship.

Those two words sum up my entire conception of the National Press Club.

Our board of governors—the Supreme Court back here—is with me 100 percent in promoting good-fellowship, and I am equally certain of the other members of our club—for good-fellowship has been the keystone of our organization down through the years.

Pay of W. P. A. Workers

EXTENSION OF REMARKS

OF

HON. MALCOLM C. TARVER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 3, 1939

EDITORIAL FROM THE ROME (GA.) NEWS-TRIBUNE

Mr. TARVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the News-Tribune of Rome, Ga.:

[From the Rome (Ga.) News-Tribune]

SOUTH MUST LEARN TO FIGHT BACK

The Senate's action in turning down the proposal to establish something approaching equality in the pay of W. P. A. workers in the North and South has a strangely illogical aspect when it is remembered that the Senate joined in the adoption of the wage-hour law under which it was sought to make Southern industry pay on the same basis as Northern industry.

In the adoption of the wage-hour law differences in climate, the cost of living and so forth, as between the South and North, were wholly ignored, but when it comes to W. P. A. pay such differences receive full approval.

It is just another case of politics, based upon the fact that northern votes count and southern votes do not. It influenced action upon both measures. The approval of the wage-hour law pleased northern workers and northern industrialists because it was believed the results would be to cripple southern industry. Approval of differentials in favor of the North, in the matter of W. P. A. pay, was given for the same motives. It enables the northern representatives to say to the northern voters, "Look what we have done for you; we have given you money that was taken away from the South, and now you ought to stand by us."

This difference in treatment, with its hurtful and often destructive discriminations, will end only when the votes of southern men and women are respected as much as the votes of northern men and women—and not before.

There was a time when the South received fair treatment from party leaders because it carried great weight in national conventions, but this time is gone. When the two-thirds rule was overthrown at Baltimore it put the South where it has to take anything that is offered—and plenty is being offered these days. The South will have to learn to fight back or take its unpleasant doses in increasing quantities. This has been made clear.

The Townsend Plan

EXTENSION OF REMARKS

OF

HON. FRANK O. HORTON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Friday, February 3, 1939

RESOLUTIONS OF THE LEGISLATURE OF THE STATE OF WYOMING

Mr. HORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions adopted by the Legislature of the State of Wyoming:

Senate Joint Memorial 1

Joint memorial memorializing the Congress of the United States of America to consider and act upon proposed Federal legislation related to the Townsend plan

Whereas there is now pending or will be pending in the current session of the Congress of the United States of America proposed legislation embodying essential principles of the so-called Townsend plan, in which thousands of Wyoming citizens are keenly interested: Now, therefore, be it

Resolved by the Senate of the State of Wyoming (the house of representatives concurring), That the Congress aforesaid be, and it is hereby, memorialized to promptly, diligently, and fairly consider and act upon at said session, by its legislative branches as such, and not merely in committee, the proposed legislation aforesaid; and be it further

Resolved, That certified copies hereof be promptly transmitted to the President and Vice President of said United States, the Speaker of the House of Representatives of said Congress, United States Senator JOSEPH C. O'MAHONEY, United States Senator HARRY H. SCHWARTZ, and Representative FRANK O. HORTON.

House Joint Memorial 1

Joint memorial memorializing the Congress of the United States to defeat any legislation provided for the purchase or acceptance as a gift by the United States, or any of its agencies, of privately owned lands in Teton County, Wyo.

Whereas there is now pending in the Congress of the United States legislation providing for the acquiring of certain lands in Teton County, Wyo., and providing for the extension of the Grand Teton National Park by transferring from private ownership to the ownership of the United States large tracts of land in Teton County, Wyo.; and

Whereas the transfer of such privately owned lands to the United States Government would remove said lands from the assessment roll of said Teton County and would exempt the same from taxation; and

Whereas Teton County, Wyo., as now organized has within its borders privately owned property subject to taxation of a value of approximately $2,200,000; and

Whereas if the boundaries of the Grand Teton National Park should be extended as provided in said legislation, Teton County, Wyo., would be unable to continue to function as a county; and

Whereas a large part of the big-game hunting areas of the State of Wyoming lie within the boundaries of the proposed extension, as well as a large part of the game and fish of the State of Wyoming inhabiting the areas involved; and

Whereas such park extension would be detrimental not only to Teton County, Wyo., but as well to the large number of sportsmen who annually pay large sums of money into various trade channels for the privilege of hunting and fishing in the areas involved: Now, therefore, be it

Resolved by the House of Representatives of the State of Wyoming (the senate concurring), That the Congress of the United States be, and it is hereby, memorialized to defeat and reject any legislation which would remove from private ownership any lands now subject to taxation in Teton County, Wyo.; and be it further

Resolved, That certified copies of this memorial be sent to the President of the United States Senate and the Speaker of the House of Representatives, and to United States Senators JOSEPH C. O'MAHONEY and HARRY H. SCHWARTZ, and to Congressman FRANK O. HORTON.

We Should Thoroughly Investigate Un-American Activities

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 3, 1939

TELEGRAM FROM FORMER GOVERNOR OF WEST VIRGINIA

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram from the former distinguished Governor of West Virginia, the Honorable John J. Cornwell, and my reply thereto:

BALTIMORE, MD., *February 1, 1939.*

Hon. JENNINGS RANDOLPH,
House of Representatives:

Everyone in our State with whom I have discussed the subject thinks the appropriation for the Dies committee was pitifully inadequate especially by comparison with appropriations for other investigations. Further they believe the investigation should be continued and made thorough with fairness to all parties, of course. If the "reds" and their fellow travelers bluff the House into halting the investigation, I hope it will not be with the aid directly or indirectly of any West Virginia Member.

JOHN J. CORNWELL.

FEBRUARY 1, 1939.

Hon. JOHN J. CORNWELL,
General Counsel, Baltimore & Ohio Railroad Co.,
Baltimore, Md.:

Replying your telegram of today, be assured I shall actively support resolution and the appropriation of additional funds that the Dies committee may continue its work. It is my firm opinion that we must not allow the forces of communism, fascism, or any other ism to gain a foothold in this country and undermine our own American principles. As long as it is felt that such dangers may exist, it is our duty as legislators to thoroughly investigate. I pledge my cooperation to see that this is done.

JENNINGS RANDOLPH, M. C.

Reclamation

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, February 6, 1939

ADDRESS PREPARED BY JOHN C. PAGE AND DELIVERED BY ROY B. WILLIAMS ON JUNE 23, 1938

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject Reclamation Fulfills Its Mission. The address was prepared by Mr. John C. Page, Commissioner of Reclamation, and was delivered at the Western Regional Farm Bureau Conference held at Old Faithful Inn, Yellowstone National Park, on June 23, 1938, by Mr. Roy B. Williams, Assistant Commissioner.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Last week, 36 years ago, a great social improvement and conservation program was launched by the Federal Government.

On June 17, 1902, when President Theodore Roosevelt signed the Federal Reclamation Act, high hopes were held that important and lasting benefits would be derived from the conservation of the arid soils and the scant waters of the West. It was hoped that new opportunities to gain an American standard of living could be made available to large numbers of people who might found homes on the reclaimed land; that the natural handicaps of these big Western States could, in part, be overcome through the construction of soundly planned irrigation works with public funds on a self-liquidating basis, and that through building homes and communities the United States could be made a better and richer country.

Thirty-six years have passed. Let us look at the Federal reclamation program from this vantage point in time and ask ourselves: "Have events justified the expectations of 1902?"

Since the Bureau of Reclamation was organized within the Department of the Interior, 34 irrigation projects have been constructed to serve more than 3,000,000 acres of land which recently were desert.

On the projects which have been put in operation, 900,000 people make their homes and find their livelihood on nearly 50,000 irrigated farms and in 257 towns and cities which serve and are dependent upon them. These people have built communities which support 859 public schools and 996 churches. Their banks at the close of the last year had a total of deposits of more than $225,000,000.

These are normal American communities where men live and work, where they earn and achieve a measure of prosperity. These are the permanent improvements of reclamation. Before analyzing these results and attempting to determine their significance, let us see what the peculiar western conditions were which made this program necessary.

Here lay 700,000,000 of acres which were arid or semiarid or which were mountainous wastes. Most of the slight water supply was received during winter months, and, with the coming of spring, it collected into a few streams and ran off, without benefit to mankind, to the sea. Only through the damming of streams, the storage of spring floods, and their distribution through canals could a little of the land be made productive and be made to support a considerable population.

As the receding frontier drew the American people westward, they came upon the arid and semiarid region, trapped its waters for fur; explored its mountains for metals; and cut into its forests, but they passed rapidly over its deserts. They crossed miles upon miles of arid land, hoping to find fresh fields; they pressed onward until they realized that it was upon the foundatıcn of this desert that the permanent civilization of the West must be built. Then they began the easy stream diversions and irrigated the low-lying valleys and the benches near the big rivers. Gradually the irrigation systems became more complicated. Finally the unregulated flow of the streams became insufficient to the needs of developments relying upon them, and storage works were required.

It was at about this point that the Government adopted its reclamation policy. Summarized, this policy was to invest funds received from the sale of public lands in the Western States in irrigation. These funds were not to be expended as gifts, but were to be placed in a revolving fund into which the settlers upon the lands reclaimed must repay the cost of the construction of their projects. It was a simple and businesslike arrangement and, although the Reclamation Act has been amended, the principle remains unchanged.

Look at a map of the West now. The populous areas, the cities and the farms, are gathered together in spots where irrigation can be practiced, where water can be taken from the rivers or from the ground and applied to the arid land.

Of the 700,000,000 acres in the West 20,000,000 now are irrigated, and this small fraction forms the major support for 12,000,000 of people. Surveys show that some unused water remains available—sufficient in the estimation of the Bureau of Reclamation to irrigate, with projects which now can be considered feasible, an additional 10,000,000 acres. Beyond the boundaries of these projects as yet unbuilt stretch the untracked desert and the short-grass plateaus, and above them rise the peaks of a maze of mountain ranges. Hundreds of millions of acres must forever remain uncultivated.

The growth of the West since the shaking-down process which followed the gold rush to California has been keyed to its irrigation development. This relationship must be retained in the future. The Bureau of Reclamation has played an increasingly important part since 1902 in the widening of the agricultural base for this growing section. For 15 years it has been the principal agency in the field of irrigation construction. It is likely to remain such in the future because the remaining developments generally are large and costly, involving too many complications to attract private finances and being too difficult to be undertaken cooperatively by irrigation districts.

What has been done under the Federal Reclamation Act, then, assumes a greater importance. To date the Bureau of Reclamation has built 138 storage and diversion dams, 20,000 miles of large canals, and has expended $237,000,000 on projects which have gone into operation and are settled. With the expenditure of these funds it has contributed 15 percent of the total of irrigated land in all of the arid and semiarid region.

Let us analyze these figures a little more carefully. The construction of the irrigation systems for these projects has cost less than $263 for each person who has been provided a home, and, moreover, this expenditure is to be repaid. Of the $263 per capita outlay for construction, about $55 already has been repaid, and that represents within 2 percent of all the money that has become due and payable. The provision of homes and new opportunities was the fundamental objective of the Reclamation Act. They have been provided for 900,000 persons, and for each of these people products of a cash value of more than $2,500 have been harvested from lands which recently were useless. In addition, taxable values have been created in the States exceeding $400 for each and every one of the persons living on the Federal reclamation projects—on farms and in the cities and towns which the farms have created.

What does this mean to the public welfare? Here are a few facts: During the severe drought of the Great Plains in 1936 the President's Great Plains Committee found that in counties where adequate irrigation systems had been built and were in operation only 5 percent of the taxes were delinquent, while in many counties adjacent or nearby where there were no irrigated lands tax delinquencies amounted to 95 percent, and this difference resulted despite the fact that the appraised value of irrigated land generally was more than ten times as high as that of dry farming and grazing lands. The support provided by irrigation for established government and institutions in this semiarid region becomes more obvious under such conditions. Irrigation lends a stability without which the very governmental structure of the West, as we know it today, could not exist.

Another bit of evidence: The Repayment Commission, in the chapter devoted to general observations in its recent report, said that its survey of relief conditions on Federal reclamation projects revealed that bona fide farm operators in these areas were forced on relief only in a few areas. These isolated cases, it added, resulted from the fact that the farmer was a new settler who had not had the opportunity to bring his land into production or who had been subjected to a condition over which he had no control. The records of the Bureau of Reclamation show that the average gross return per acre on its projects is more than two and one-half times that received by the farmer the country over. It is realized that the overhead costs of the irrigation farmer are necessarily higher than that of those who do not have to buy and handle their water, but in the light of the observation of the Repayment Commission it can be stated that these projects have brought a measure of prosperity to those who sought the opportunities they offered.

One can pick three States out of the arid region, combine their populations, and find that the total is less than the 900,000 who live on Federal reclamation projects. This comparison becomes even more striking when it is realized that in each of the three States there is one or more Federal reclamation projects supporting a high percentage of that State's people.

The provision of homes and new opportunities, the support of government and institutions, and the stabilization of the economy of a wide area are contributions to the social welfare not only of the project areas, the counties and States in which they lie but of the whole United States.

Remember, too, that the social value of a reclamation project does not depreciate. These projects are permanent improvements which will continue to provide homes, employment, and a decent living for their people.

These values could be deprecated only if by their creation other values elsewhere were destroyed. This is not the case. The national enrichment, social and economic, which has come through the Federal reclamation policy is clear gain.

The agriculture of the irrigated sections of the West complements that of other regions of the country.

Livestock is a major western industry. Half of the feed which supports this industry is produced on the 20,000,000 acres of irrigated land and the other half is obtained from the public ranges, hundreds of millions of acres in extent. These Western States provide the feeder stock for the pens of the midwestern farmer.

General farming and the production of specialty crops, which can be shipped to distant markets for a cash return, occupy the irrigation farmer. The big staple crops, of which other areas produce exportable surpluses, are not grown in appreciable quantities on irrigated land. For example, no tobacco is grown in the West. The Federal reclamation projects do not produce sufficient wheat generally for their own needs. The large western cities, which are the nearest markets for the products of irrigation, buy large quantities of pork and pork products from the Mississippi River Valley. Some cotton is grown, but most of it is of the long-staple variety not produced elsewhere in the United States.

Every project has its specialty crop, and they are of wide variety. They range from citrus fruit to sugar beets. Winter truck is an important crop of these projects. On first thought it might be believed that the production of cherries in Idaho, or lettuce in California, or cantaloups in Colorado, and their shipment throughout the country might provide a source of competition with gardeners and orchardists near the large cities of the East and Middle West. The products of California, Colorado, and Idaho can be sold in Boston, New York, and Chicago, however, only after being freighted from 1,000 to 3,000 miles. To bear the freight charge they must be produced out of season so far as eastern markets are concerned. They cannot compete with locally grown produce in season, and they never attempt to do so.

The growth of the West has not been made at the expense of other sections. It has, on the other hand, reflected the growth of the country. There are insufficient opportunities now in the West to take care of more than a small fraction of those seeking them. Last year 69 farm units were opened for settlement on the Tule Lake division of the Klamath project in the extreme northern section of California. More than 3,000 home seekers applied on the first day for consideration in connection with the assignment of these farms.

At this time there are in the West more than 50,000 farm families which have been driven by drought from their homes in the Great Plains alone. Few of them can hope to find permanent lodgment on farms.

We are now engaged in the greatest construction program in the history of the Bureau of Reclamation. Projects under construction will, upon their completion, add an additional 2,500,000 acres to the watered area of these States. This construction program also will provide supplemental water for about as much more land now irrigated but with insufficient water to produce good crops. We look forward to public betterments to grow from these projects with a confidence based on the experience of the past.

When these projects are completed, opportunities will be provided, according to our estimates, for a total of 825,000 people on 41,600 farms and in cities and towns, as yet unlocated.

Some of the new projects will make settlement opportunities within a year or two, but some will take much longer. There is no possibility that all of the new lands could be thrown open at once even though it might be desirable to do so. On the contrary, they will be made available in steady progression and the last of those to be irrigated by the Grand Coulee Dam may not be ready for 20 years. Such a large and complicated development cannot be completed quickly. If it were possible by some engineering legerdemain to complete overnight the network of canals in order that we might deliver water to each farm in the 1,200,000 acres to be served by Grand Coulee Dam, we would not be able to provide farms for more than three-fifths of the families which are now refugees from the Great Plains drought alone.

One function of the Bureau has been to investigate the water and soil resources of the West and to plan for their development. The program growing out of this work is of long range. No effort has been made to keep the construction abreast of the demand for farm homes. Ultimately any such attempt must fail. As we have seen with respect to the Grand Coulee Dam, the largest unit possible of inclusion in any such program, the development must proceed slowly, while the needs may become quickly urgent. The best that can be done is to provide a sound plan and to spread the opportunities as intelligently and as widely as can be done.

No review of the contributions made by Federal reclamation can be complete without the mention of benefits incidental to the construction or the operation of the projects. Among these are found widespread employment in building the projects and in the manufacture and transportation of materials. Among them also are contributions through the provision of flood control, by the aid of navigation, to the improvement of domestic water supplies for urban areas, through the creation of recreational centers and wildlife refuges, and through the generation of hydroelectric power. I shall dwell for a moment only on the latter, since it has received widespread public attention. But the others should not be overlooked.

From the outset projects built by the Bureau of Reclamation have grown progressively more complicated and complex. This was necessarily so since larger rivers had to be dealt with. Wherever a dam is built, a power head is created. The very scarcity of water in the West makes it a prudent policy to put this resource to multiple uses wherever feasible. It is not always economically feasible to make use of the power head created by an irrigation dam, but in recent years it has proven feasible in an increasing number of instances Wherever this is true, the power plants have been installed.

The first power plant on a reclamation project was built to provide energy needed in the construction of an early dam. When this work was completed the plant was taken over by the settlers on the project who have enlarged it and who are still operating it. Another power plant was constructed to run pumps which were an integral part of the irrigation system of a second project. This plant is still in operation. It also has been enlarged and the water users are producing energy in excess of the pumping requirements. This energy is being sold. Power developments such as these have had a marked influence on the progress of the projects. On the Minidoka project there is scarcely a farmhouse which is not lighted by electricity and scarcely a farm which does not have motors to run its heavy machinery.

Considerably later, when large dams were begun, power generation was considered in the planning of the project and the sale of power was taken into account when the calculations were made of the return of the project costs.

More than a score of power plants are being operated on our projects. Several of them are important, and one of them, that at Boulder Dam, is very large. In connection with five additional projects now being built important power developments are being made. These are at Grand Coulee Dam in Washington, at Shasta Dam on the Central Valley project in California, on the Colorado-Big Thompson project in Colorado, at Seminoe Dam on the Kendrick project in Wyoming, and at the Elephant Butte Dam on the Rio Grande project in New Mexico and Texas.

The output from these plants, like that at Boulder Dam, will be used in industries, in mining and smelting, in the lighting of city homes, and in rural electrification.

We believe that this byproduct of irrigation should be made available for widespread use in order that the benefit derived from the investment of public funds in the projects may be shared by the largest possible number.

Again pose the question: Have the expectations of 1902 with respect to the Federal reclamation program been fulfilled? Has it made new opportunities? Has it created new homes? Has it given the people an American standard of living? Has it improved their lot and has it enriched the Nation?

The answer must be:

Yes; the hopes of 36 years ago have been realized and the promise of further fulfillment still remains.

Foreign Policy of the United States

EXTENSION OF REMARKS

OF

HON. M. M. LOGAN

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, February 6, 1939

ARTICLE BY FREDERIC WILLIAM WILE

Mr. LOGAN. Mr. President, on last Friday Frederic William Wile had an article in the Washington Evening Star which so exactly expresses my views on our controveries over foreign affairs at this time that I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Evening Star, Washington, D. C., February 3, 1939]

WASHINGTON OBSERVATIONS—ROOSEVELT'S PLEDGE OF ECONOMIC AID TO DEMOCRACIES SEEN PREVENTING WAR FOR VISIBLE FUTURE

(By Frederic William Wile)

Incense is not habitually burned in this corner before the New Deal throne. But the impulse is irresistible to say that, in its opinion, Franklin Delano Roosevelt this week took a long stride toward immortality when he proclaimed his readiness to pledge the moral support and economic resources of this country to the European democracies in their struggle for existence against the dictatorships. I venture the long-range prophecy that by such action the President of the United States has prevented a world war for the measurable future. I lived in Germany in 1914. Had Woodrow Wilson been in position in July of that mad summer to let the Kaiser and the Berlin war party know that if they attacked France, Great Britain, and Belgium, Germany sooner or later would have to combat the matchless and inexhaustible resources of America, there is hardly the shadow of a doubt that the Reich's thunderbolts would never have been unloosed. The Germans would have known that victory was impossible against such a combination. They would sullenly have kept the peace. I am just as persuaded that if F. D. R., last September, on the threshold of Munich, could have assured Hitler and Mussolini that the moral influence and material wealth of the United States were back of Chamberlain, Daladier, and Benes, Czechoslovakia would still exist. Instead of bluffing, the dictators would have been bluffed.

Those howls of rage against the President and Americans in general, now welling up from anguished Nazi quarters, are tell-tale evidence to anyone who knows the German mentality that Hitler, Goering, Goebbels, Himmler, and Funk do not misinterpret the history written in Washington this week, when Mr. Roosevelt told the Senate Military Affairs Committee that he is prepared to go to every possible length, short of war, to help the British and French withstand Fascist attack. It is this observer's conviction that the President is not altruistic in thus putting himself on record. Franklin Delano Roosevelt is democratic in his every fiber, but he is, first of all, thoroughly and uncompromisingly American. He is genuinely concerned for the safety of free institutions in those European nations where they still flourish. Primarily his anxieties are associated with the security of human liberties in his own country. Mr. Roosevelt understands, as every American whose thinking extends beyond the 12-mile limit must realize, that the moment Britain and France succumb to the dictators our turn will not be far away.

We don't need to go back further than the World War to visualize the soundness of that theory. Any American military or naval authority worth his salt knows that all which stood between German guns and these shores in 1914–18 was the British fleet. If the Kaiser's armada had been victorious at Jutland instead of being driven to cover, never again to emerge on the high seas, after the gallant battle it gave Jellicoe and Beatty, Germany would have had command of the Atlantic and of the Pacific, too. I do not suggest that William II, Von Tirpitz, and Von Hindenburg could have imposed German subjection upon us at will, but our ability to resist the master of Europe would have been strained to a degree that would have made our World War effort puny by comparison. The probability is that, in expiation of our neutral complicity in the Allies' campaign, the Germans would have insisted on abrogation of the Monroe Doctrine. Their longings for a foothold in Central or South America antedate the Hitler regime by more than a generation. The United States was the inspiration for a hymn of hate in Germany long before we went to war with her in 1917.

Opinions differ, not only in Washington but in other world capitals, as to the "tone" of Hitler's harangue to his marionette Reichstag on January 30. Many authorities, to my own amazement, found it a "conciliatory" utterance. In considering the speech provocative and truculent in the highest degree, I am undoubtedly in a minority. Yet I do not think it reasonably possible to minimize the gravity of the Fuehrer's threat to pursue his own policies in the Western Hemisphere—political, economic, and "cultural"—without American "interference." If there is anybody in the United States who doubts the Reich's purposeful plans in South America, let him consult some of our people recently at Lima. They can a tale unfold which will convince the most skeptical doubting Thomas that Uncle Sam faces the fight of his life to hold his own in Latin America against Fascist penetration.

Let no American run away with the idea that because we hold no former German colonies, either as owners or mandatories, the United States is disinterested in Hitler's proposed "repartition of the riches of the world" among the nations "in proportion to their numbers, their courage, and their worth." The Nazis are not concerned with African deserts or jungles inhabited by savage tribes of backward natives. They hanker for territories in which "the world's riches" and export markets are to be found. They covet the Ukraine in Europe. They crave to get at the vast undeveloped and unexplored natural wealth of Latin America. They need bases for overseas operations for the mighty air fleet they already possess and the powerful navy they are constructing. If Spain or Portugal, under Hitler's "repartition" program, could be bribed or browbeaten, with or without the connivance of the British and French Empires, to part with such pearls as the Canary Islands, the Azores, the Cape Verdes, or Portuguese West Africa, then Germany and Italy (for henceforth those two powers must be bracketed when the requirements of the "have not" people are discussed) would have ideal jumping-off places for air or naval operations in the Western World. They would be nearer to Brazil than we are.

To get back to what Roosevelt's pledge of economic support to the democracies means to the dictatorships, let me quote a passage from Von Hindenburg's memoirs:

"America's brilliant, if pitiless, war industry had entered the service of patriotism and had not failed it. Under the compulsion of military necessity, a ruthless autocracy was at work, and rightly, even in this land at the portals of which the Statue of Liberty flashes its blinding light across the seas. The Americans understood war."

Tolerance in Democracy

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, February 6, 1939

RADIO ADDRESS BY HON. LEWIS B. SCHWELLENBACH, OF WASHINGTON, FEBRUARY 5, 1939

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject Tolerance and Democracy, delivered over the radio on February 5, 1939, by the distinguished Senator from Washington [Mr. SCHWELLENBACH].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

If war comes to Europe, the United States must have none of it. To be out, to keep out, and to stay out is the consummate wish of every straight-thinking American. Twenty-two years ago we thought we could reform Europe. We gave of our lives, our blood, and resources to that task. We found out that if we really want to reform Europe we must assume the job of permanently policing it. No true American wants us to do that. We helped rid the German people of their Kaiser and they got Hitler. Should we relieve them of him, the chances are that another 20 years would see an even more dangerous leadership. The ultimate, permanent solution of Europe's problems must lie in the hands of the people of Europe themselves.

Naturally, there has resulted here a revulsion of feeling against Germany and dictators in general. We would be ashamed if our senses were so blunted that we were not appalled. We may be proud that the expressions of indignation here were so universal in their origin. Every decent American hopes and prays that every effort will be made to exercise every possible restraining influence to mitigate future excesses and alleviate suffering.

The important question here is, Will we learn a lesson from what has happened in Germany? Will our people realize what happens in a country where hate and intolerance control the hearts and minds of the people? You say it can't happen here. I wish you could have read my mail during this session of Congress.

Every mail brings letters which portray that same hatred and intolerance toward certain races, nationalities, and religions. My fear is that if this feeling goes on unbridled, it will result in the same sadistic hatred which finally brought on the cruelties of Europe's dictator nations.

My hope is that what has happened in Europe may cause our people calmly and dispassionately to appreciate and understand our American democracy.

To find out what a thing is, it is first necessary to eliminate those things that it is not. That is particularly true when one attempts to know about an institution of government. It is so easy to confuse the superstructure with the foundations. Such confusion leads to misunderstanding, which sufficiently multiplied and repeated, leads to dangers to the institution.

There are so many people who view our form of democracy as a mere pattern. To them the pattern itself is the sacred thing. They see our Constitution as a set of rules, established and preserved to maintain a status quo. For myself, I don't think they honor either our Government or our Constitution by this view. Those who wrote our Constitution were not only wise; they were also farseeing. They visioned a nation ever expanding, ever progressing. No patriotic American would accuse them of conceiving a strait jacket upon American advancement or progress. Of course, in making changes we must be slow. Our legislative bodies must be slow. Our courts must be slow. Our people must be slow. However, need for care must not be the excuse for stagnation. There are times when stagnation will much more surely destroy an institution than even a little too rapid change. True progress in government comes from avoiding either of these extremes. I credit our founding fathers with sufficient astuteness to recognize this. They braked down our speed with a written Constitution. They insured against stagnation by making it a living, growing document, which could be used to fit the needs and the problems of the world's most rapidly expanding nation.

Holding this view, I cannot help but become impatient with those who see in every new proposal a threat to our institution of Government. It seems to me that they display but little faith in the fundamental soundness of the institution under which we live.

Then there are many who pay so much more attention to the trappings of government than to government itself. The pomp and ceremony is to them the important thing. Under dictatorship the beating of drums and the fanfare of trumpets are of supreme importance. In democracies they need not be. Every person wants to feel that he is a part of his government. Under a Stalin, a Hitler, or a Mussolini that opportunity is denied him. Under a democracy he has that chance. He can run the whole gamut of participation. We take our governmental activities directly into our own veins. We don't need to take them vicariously.

In order for a democratic community to endure, certain prerequisites are evident.

First. We must protect with our lives those weapons which will enable us to protect the democratic community. Most powerful of these are freedom of speech and freedom of press. Never for a minute may we permit these instrumentalities of democratic process to be impaired or diminished. That applies to those speakers and those papers with whom we disagree as well as those with whom we agree. For myself I would prefer to permit a speaker to tell or a paper to publish a deliberate lie about me than to try to stifle or suppress either one of them.

Second. Equality of opportunity to participate in government enjoyed by every citizen qualified to participate. That opportunity must be free from coercion or fear on the one side and free from impossible promises of reward upon the other.

Third. The minority in a democratic community must recognize the right of the majority to govern, provided that the majority gives equal recognition of its responsibility for fairness and honesty in its treatment of the minority.

In a democracy, the majority must insure to the minority the same degree of justice which it demands for itself. Failing in these obligations the majority becomes merely a mob. When the majority becomes a mob, democracy fades out.

It is the failure to recognize these fundamentals that has mobilized the force of world opinion against Germany and Russia today. We have no right to complain of the form of government which these nations may adopt. That is their business, not ours. But when those governments use their power to blot out the last vestige of decent, fair treatment toward those within their borders who are helpless and unprotected, those governments forfeit their right to recognition in any quarter of the globe.

Fourth. The right of independent opinion must be safeguarded to every person in the community. The opinion of the most humble must be as sacred as the opinion of the most powerful. In Thomas Jefferson's original draft of the Virginia Bill for the Establishment of Religious Freedom, we find these words, "The opinions of men are not the object of civil government or under its control." No one, certainly not I, can improve on that language.

Fifth. A democratic government must be a government of law. A civilized democratic community demands that all classes within it respect its law. If respect for law is to be maintained, the law must reflect the community's sense of justice and not the demands of any class or group. If the law reflects the community's

sense of justice, no class or group may defy or set itself above or beyond the law without bringing upon itself the just resentment of the whole community. Men must accommodate their demands to the demands of others. There must always be a large measure of give and take in the adjustment of human relations. A civilized democracy demands patience and self-restraint from all its citizens.

What word can we use to sum up these requirements. I think the answer to that question is simple. The word is tolerance. Tolerance is the very essence of democracy. When and under what conditions have democracies fallen? History plainly shows that they have fallen when the antithesis of tolerance existed. Hatred, bigotry, indifference, greed, selfishness, and avarice, those are the rocks upon which democratic ships of state have shattered.

Holding these views, do you wonder that I consider that the portion guaranteeing religious liberty is the most important part of our Constitution? It symbolizes to me the very basis of our democratic system. It is the outpost which we must first defend, if we are to protect our institution, democracy. It has been and it will be the first object of attack. Should we ever fail to protect it, the floodwaters of intolerance would engulf us.

Religious liberty played a most important part in our beginnings. The settlers at Plymouth came because of their separation from the Church of England. The Massachusetts Puritans came for the same reason. From them Roger Williams sought for his band an additional degree of freedom and established Providence. An even greater degree of religious liberty was sought and achieved by the Connecticut offshoot of the Massachusetts colony. The third seceding group settled at New Haven. In the meantime Lord Baltimore, a Roman Catholic nobleman, settled Maryland, and there in 1649 the first religious toleration act was placed upon the statute books of any American colony.

So we see the question of religious freedom woven into the very warp and woof of our colonial period. The framework of our Government, most of the liberties we so much cherish, we inherited from our English and Anglo-Saxon forebears. Religious liberty is something of our own creation.

We need not look to Europe for problems to solve. We have plenty here at home. If we are to solve them, we must depend upon the pathway lighted by the softened light of tolerance to lead us to the peace and happiness we deserve. We all must follow that path if democracy is to endure.

The duty of protecting and guarding that pathway lies before everyone who wills that democracy shall endure.

W. P. A.—Paradise for Bosses

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, February 6, 1939

RADIO ADDRESS BY HON. RUSH D. HOLT, OF WEST VIRGINIA, JANUARY 28, 1939

Mr. HOLT. Mr. President, I ask unanimous consent to have inserted in the RECORD a speech delivered by me over the radio on January 28, 1939.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

We have under consideration in Congress an appropriation for relief. Something must be done about finding the long overdue solution of the relief problem. There has been too much neglect already. Every year as new appropriations for relief are submitted we are told to hurry and pass the bill in order to provide for the emergency and to make a study of the fund and issues involved later. During the consideration of the present piece of legislation I do not say that the study should be made, but it should be made as soon as possible. Since 1935 to January 1939 there has been spent $9,632,271,227.71, and we are no nearer the solution. We are back at the same place, hoping and waiting for better economic conditions. Hoping and waiting will not provide the solution. Originally the relief set-up was a part of the R. F. C., then the C. W. A., then F. E. R. A., now W. P. A. Changing the alphabetical set-up has not helped. It is hinted now that the W. P. A. will be replaced with another agency with another name and with three more letters of the alphabet applied to its title. We have millions of unemployed. The people are demanding that we do something else than just appropriate money and hope. The way out is to get private business going so that it can reemploy the idle. The average unemployed American wants a job in one of the factories, the mines, the mills, or in the fields, not a place on the relief rolls. If the politicians would spend half of the time in studying the problem and in finding a fundamental solution instead of worrying about getting the right local politician to handle W. P. A., we would be closer to the promised prosperity. Those misusing the relief fund are hiding behind the word "humanitarian." They show a greater interest in the political possibilities of the distribution of relief money than they do in providing the actual needs of the unemployed. Their true interest has been, and is, to get votes to continue themselves and their machines in power.

I heard a Member of the House and a Member of the Senate over this same chain of radio stations at this same time last week and the week before. Their theme was that we should vote for increased relief appropriations; and if we failed to do so, we were going to aggravate the unemployment of the country, impose on the hungry, and commit many other crimes. It is too bad they and the administration spokesmen did not think of this when the money appropriated to feed the hungry was used to attempt a political purge against those Members of Congress who did not take orders. It is impossible to estimate the amount of the last W. P. A. appropriation bill that was used for political purposes. It is impossible to spend public money for political advantage without waste. In 1935 I asked for an overhauling of relief. In 1936 I asked the United States Senate for an investigation of the W. P. A. You may ask, "Why continue to discuss relief?" Eternal vigilance is a necessity to see that we have a correct expenditure of this money. Corrupt influences are at work all the time trying to use the fund for selfish purposes, and if we who want to see honest government do not work to prevent its misuse, we will see a repetition of the things that have gone in the past. Good government requires constant attention. Like every battle in which a true principle is at stake, right will prevail. The people want and demand that relief be cleaned up.

Over this same Columbia radio system I called for a nonpartisan accurate study of relief. In that discussion I advocated a continuing unemployment census. Not later than yesterday, when we were discussing the appropriation bill for W. P. A., we were confronted with the questions, "How many unemployed do we have?" "How much do we need for relief?" The answers were not and could not be definite. Behind the failure to provide for a continuing unemployment census is a political reason. There is too much unemployment. Any statement as to the number of unemployed can be thrown aside as an estimate. These estimates vary by 5,000,000 in some instances. We were supposed to be on the way out of this business depression, and it would be too embarrassing if the number of unemployed would be more than stated in the conservative estimate. It would be far better to have a survey to find out the number of unemployed and keep that information up to date than it would be to have a survey of the number of doors in a building of a midwestern city or to count the number of trees in an Ohio municipality. Many such surveys were made at Government expense. Beginning in 1936 I asked time and time again for legislation to stop politics in the administration of relief. Last year I repeated the demand, but I was advised that it was not the proper time because an election was just around the corner. Let us look at the record. It will not be pleasant to see, but we should face the facts. I shall not give you the stories of my investigations, but give you the story of the Sheppard committee. This was a committee composed of four Democratic Senators and one Republican Senator appointed to investigate senatorial elections.

In looking over these States that had senatorial contests they found out the sordid political story of W. P. A. Here is what was said about the handling of W. P. A. in the State of Kentucky:

"The evidence thus far presented to it convinces the committee that a deplorable condition exists in Kentucky. It is certain that organized efforts have been and are being made to control the vote of those on relief work and that contributions have been sought and obtained from Federal employees in behalf of one of the senatorial candidates."

It adds these words:

"These facts should arouse the conscience of the country. They imperil the right of the people to a free and unpolluted ballot."

What else do we find?

That the registration of W. P. A. employees was checked; that project workers had been approached by foremen to sign papers that they would support a certain candidate; that relief workers were discharged because of political reasons, but their 403's gave other reasons than that of politics. The story is far too long to detail in this radio speech, but instance after instance was shown as to the political use of the relief funds in Kentucky, and, as the committee said: "These facts should arouse the conscience of the country. They imperil the right of the people to a free and unpolluted ballot."

Now, what did the Sheppard committee find in the State of Tennessee? I desire to mention briefly some excerpts from the report, as follows:

"The report of our investigators in Tennessee shows there was a vigorous effort throughout the State to raise campaign funds by contributions from Federal employees * * *" and further says that this effort was directed at "those having relief classifications" with instances showing "intimidation and coercion." It says: "That contributions from Federal employees for the coalition ticket were solicited by attorneys and other persons and from W. P. A. noncertified workers by foremen, timekeepers, and others with the knowledge of ranking W. P. A. officials."

Also, is found this language:

"That Works Progress Administration labor and materials, paid for with funds appropriated by the Congress for emergency relief purposes, namely, farm-to-market roads, have been used in the construction, improvement, and repair of private drives and roadways under circumstances and conditions giving rise to a fair inference that such use may have been suffered and permitted for the purpose of influencing votes and voting in behalf of both sides."

Was this solicitation confined to one section of the State of Tennessee?

The Sheppard committee says:

"The committee has evidence of similar solicitation by W. P. A. workers and private parties in different parts of the State in behalf of both sides."

What was found in the State of Pennsylvania?

"The activities constituted a flagrant violation of ethics and that the conduct was reprehensible."

Let me read part of the findings:

"That W. P. A. workers and employees of the various classes have been maced for political contributions, for the purchase of tickets to political rallies, picnics, and the like, not only by numerous political leaders and political henchmen but by officials and employees of the State highway department, the employees and officials of other lesser political subdivisions of the State."

Listen to this:

"And by officials and employees of the Works Progress Administration." I continue with the report: "That such macing was accomplished and done with full knowledge on the part of high Works Progress Administration officials in the State and under such circumstances and conditions as to lead inevitably to the conclusion that the Administration's officials in the national offices have been and were aware thereof."

The report continues:

"That the business and affairs of the Works Progress Administration in the State of Pennsylvania have been, were, and are so affected by politics and political motives that in numerous instances needy persons entitled to relief and relief work have been deprived thereof for the sole reason that their political beliefs and convictions failed to agree with those in charge of administering the funds made available by Congress for relief and relief work."

Think of that. Needy persons deprived of food, deprived of clothes, deprived of shelter because they exercised their constitutional right to vote as they pleased. I am going to read another excerpt from the Sheppard report, which says:

"Workers and employees of the W. P. A. were imposed upon, intimidated, and coerced in the matter of attending political meetings and functions by and through representation by political leaders." Here was the story of women sewing for hours and hours to have a meager existence being forced to buy tickets for political picnics and that money being spent for the upkeep of a corrupt political machine. I do not have the time to read more. In my State, where the Sheppard committee had no authority to investigate because we had no senatorial election, the political activities of W. P. A. ran true to form in its corruption. In the past I exposed where one W. P. A. official wrote another telling him to separate the Democrats and the Republicans on a list of doctors so that a preference list could be made in treating injured workers. Another letter was sent in which it was stated that the list of employees should be checked so the "right boys could be put on." Political views of the parent do not stop the hunger of a child.

How could one expect politics not to be in the administration of the W. P. A.? It was set up to be a political machine. The Senate of the United States by a large majority of the administration Senators defeated an amendment to punish those who played politics with relief. The prospect for the passage of such legislation is far better today. Let us see what those in charge of W. P. A. said about politics. Harry Hopkins, recently removed to the Department of Commerce to take him out of the line of fire of a W. P. A. investigation and expose, delivered political speeches upholding the President's purge and saying: "There is nothing wrong in supporting the political group that will give you the most." Aubrey Williams, Mr. Hopkins' chief assistant, says:

"We have got to stick together. We have got to keep our friends in power." No politics in relief? That is too ridiculous to repeat. Even the Administrator himself admitted there was politics in W. P. A. Now, let me give you a few figures on the increase of W. P. A. rolls before election. Between April and November of last year, and you will remember that 1938 was an election year, W. P. A. rolls were increased by 812,177 persons. Immediately after the election W. P. A. workers were fired by the thousands. Let us look at 1936. We find 2,482,681 W. P. A. employees. This had declined by November 1937, and remember that 1937 was not an election year, to 1,519,740, or a decrease of 963,000 individuals. Now, look at November 1938, an election year, and we find the rolls back up to 3,216,400, or more than double the number of 1937. I cannot in the time of this broadcast go more into detail but I have broken down these figures and shall be glad to mail them to you.

Relief should be for the needy. Every dollar of the relief fund that goes for political purposes is money taken from the ill-clad and hungry. Every time a brass hat, sitting in the W. P. A. office, gets an increase in his pay check, it means that much less going to the needy. We have heard much about morale in the relief program. The conduct in handling relief has destroyed morale.

The handling of relief has been a paradise for the political bosses, National, State, and local. It gave them an opportunity to keep their machines, small or large, going at the expense of the taxpayer. The relief worker has borne much of the brunt of this handling because it was he who suffered when the ward and district bosses gave money appropriated for the workers to the political job holders.

The corruption and politicalization of relief funds must be stopped. We are winning this fight through public opinion. Right will prevail.

Sale of War Materials to Japan

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, February 6, 1939

EDITORIAL FROM CHARLESTON (W. VA.) GAZETTE OF JANUARY 24, 1939

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Charleston (W. Va.) Gazette entitled "End Our Shame."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Charleston (W. Va.) Gazette of January 24, 1939]

END OUR SHAME

This newspaper has never been jingoistic; it has always contended that one of the greatest blessings this country can possibly enjoy is peace and the friendly regard of other nations. We believe in a policy of live and let live.

Yet after long and reasoned reflection, with no desire to stir up bad feelings, and with sadness we are forced to the conclusion that it is the moral duty of our Government to institute an embargo against Japan insofar as war materials are concerned. We believe this should have been done long ago.

It is apparent now to even a casual reader of the news that the Japanese military ruling clique is bent upon the absorption of China's resources and the destruction of Chinese civilization. No other explanation can account for the systematic campaign of rape, murder, and destruction which has been methodically ordered by the Japanese leaders. "Spontaneous outbursts, spontaneous atrocities" will not account for this campaign. It becomes plain that the Japanese are bent upon the destruction of China's most powerful institution—the home. To that end the utmost in cruelty, barbarism, and wantonness have been employed and will continue to be employed so long as Japan can wage war upon her well-nigh helpless foe.

Do you say it is none of our business?

We agree with you, but, sad to relate, we have made it our business.

To our shame be it said that we are acting as partners with Japan in this systematic mass rape and murder. It is not a pretty confession to make, but it is one that must be made. We stand in the position of helping Japan commit one of the greatest mass atrocities of all time. And it is being perpetrated upon a nation for which we have always professed lasting friendship.

Japan would not be able to wage this war of terror if it did not receive help from the United States of America. We send them enormous amounts of raw materials—such as scrap iron—which they at once forge into engines of death for the Chinese. Our motor cars enable them to outmaneuver the Chinese foot soldiers. We cannot dodge the blame for a large part of the frightfulness that is going on in China. Every shell that screams through the air carries with it an American note. Many of the bullets embedded in Chinese soldiers, children, women, and the aged should bear the mark "made in America." If the outcome is a power-drunk Japan and a ruined China the fault will largely be ours.

An embargo on any materials that could be converted into munitions seems to us to be the only answer. Surely there is enough decency and compassion in this country to back a movement to end our liaison with these murderers and terrorists. Surely this country has had more than enough of a policy which is crucifying a nation of 400,000,000 fellow humans. The only right and decent thing for our Government to do is to stop this cruel and vicious policy—stop backing the rape and murder of a friendly people.

The answer to this—and we say it sadly—is to boycott Japan.

It may take a few dollars out of the pockets of the merchants of death, but at least it will square our national conscience. We have too long delayed the matter.

Let us boycott the sale of war materials to Japan in any way, shape, or form.

Public decency demands that we put an end to our shame.

Modern Air Power

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 6, 1939

ADDRESS BY MAJ. GEN. FRANK M. ANDREWS BEFORE THE NATIONAL AERONAUTIC ASSOCIATION, ST. LOUIS, MO., JANUARY 16, 1939

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there may be published in full in the Appendix of the CONGRESSIONAL RECORD a most interesting, inspirational, and informative address delivered by Major General Andrews at St. Louis, Mo., January 16, 1939; and may I say, Mr. President, in conjunction therewith, that the creation of the General Headquarters Air Force in March 1935 was the greatest step forward in military aviation in this country since the World War. Conceived by the Drum board in 1933, and authorized by Congress in response to the urgent recommendations of the board headed by the late Honorable Newton D. Baker in 1934, the General Headquarters Air Force welded together into one tactical fighting unit all of the Army's scattered combat aviation in continental United States. It placed under the command of one man the forces which up to that time had been operating under the nine corps area commanders.

Maj. Gen. Frank M. Andrews was selected by the War Department to organize and build up the air forces of the Nation. Chosen for the task over many seniors because of his outstanding ability as an organizer and administrator, General Andrews assumed a personal leadership of the General Headquarters Air Force, which he has steadfastly maintained throughout his tour of duty as its chief.

This leadership has served as an inspiration to the officers and men of his command. He has transformed a conglomerate mass of uncoordinated units into the finest trained air force in the world today—a corps of fliers whose training during the past 4 years has been such that they now regard poor weather as an aid rather than a hindrance to the performance of military missions.

General Andrews himself has taken the leading part in the development of instrument flying; and his early exploits, which at the time appeared to be miraculous escapes from foolhardy situations, now appear in their true light as necessary pioneer work in a type of flying which has become routine. General Andrews is still regarded as the No. 1 bad-weather pilot of the Air Corps. During his regime as chief of the Army's combat aviation he has, in addition to his arduous administrative duties, found time to pilot his own flagship a total of some 1,500 hours, almost half of which has been at night.

It was not difficult for such a man to set up high objectives for flying training. The example of his personal experience popularized a program of training which in a remarkably short time converted the air force into the effective all-weather unit it is today.

As regard his accomplishments as a leader, the organization, training, and readiness of the General Headquarters Air Force to go into action on a moment's notice are tributes to his wise administration and courageous leadership. On numerous occasions General Andrews has fought for principles which he correctly believed to be vital to the proper development of the Nation's air power. Yet withal he has exhibited a soldierly restraint and dignity which have won the admiration of his contemporaries and the respect of his seniors. As a result, he has been instrumental in obtaining recognition of air force requirements and principles which has led to better airplanes, facilities, and personnel, and a better general understanding of the problems of modern military aviation and the important part it plays in our present plans for national defense.

A graduate of the Military Academy in 1906, General Andrews served first with the Cavalry. He transferred to the Air Corps in 1917, and remained in various executive capacities with the Air Corps until 1934, when he was detailed to the War Department General Staff. It was while he was serving in this capacity as a lieutenant colonel that he was selected to command the newly formed General Headquarters Air Force.

General Andrews has performed such an outstanding job of coordinating our combat units that he has assembled our complete air force on either coast on 24 hours' notice. It is with sincere regret that we learn that soon he will complete his tour of duty as commanding officer of the General Headquarters Air Force.

On the eve of his departure from the General Headquarters Air Force as its commander, I desire that these remarks appear in the CONGRESSIONAL RECORD as a mark of appreciation for this outstanding accomplishment. It is also desired to include in the RECORD his fine exposition of the meaning and value of air power to this country, as contained in his speech before a convention of the National Aeronautic Association in St. Louis on January 15 of this year.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and members of the National Aeronautic Association, it is a great pleasure to be present today. I want to thank you for the privilege of talking with you on the subject of Modern Air Power. I am also mindful of the fact that an invitation to discuss such a subject before a group of individuals as vitally interested in our national defense as are the members of your organization carries with it a great responsibility, particularly at this time when adequate air power, or the lack of it, plays such an important part in determining the policies of nations. I hope the presentation of my convictions on the subject will prove of some value, but I wish to say, at the outset, that the views I express are my own, and in no sense commit the War Department.

Time does not permit a discussion of all of the elements that go to make up air power, consequently, I intend to confine my remarks mainly to the operating and strategical viewpoints.

Since the phrase "air power" is often loosely used, I believe it would be well to explain its meaning as accepted by most military students. Training regulations of the United States Army gives this definition: The air power of a nation is its capacity to conduct air operations; specifically, the power which a nation is capable of exerting by means of its air forces."

Air power in its present stage of development has accomplished two things. It has thrown the balance of power in war again to the offense and it has provided nations with a new agency to further their national policies, whether such policies be good or evil. Because of its ability to strike rapidly and without warning, against the vital economic and social structures of highly organized countries, it has become a formidable instrumentality in the hands of aggressor nations.

Air power, like land power and sea power, derives its strength from its ability to apply pressure against a nation's moral fiber, to compel submission of that nation's will to the demands of the aggressor.

Before the advent of air power the only military means by which one nation could compel another to respect its policies was through the employment of its army and navy. As we look back into the past we see that warfare on land and sea followed the same general pattern. It mattered not whether armies fought with swords or fire arms, or whether navies fought with sailing vessels or dreadnaughts. Armies invaded and occupied hostile territory in order to compel submission by physical force, if need be, to their country's demands. In carrying out this invasion land forces would first have to overcome the obstacle of the opposing land army and, a battle or series of battles, sometimes lasting for years, would result before this obstacle had been removed. Naval warfare had as its objective the control of the seas—a domination which would permit effective blockade of all enemy seaports, thus preventing aid in the form of troops or materials and food from reaching the enemy from abroad.

During this period of military and naval activity the economic structure of warring nations not only continued to function but often functioned with increasing expansion and acceleration. So long as nations were not absolutely dependent for their existence upon seaborne commerce, their defeat could be accomplished only through the defeat of their armies; for only then could the victorious armies advance, and through occupation or the threat of occupation apply pressure against the political and economic structure. Therefore, we see that the defeat of armies and navies has always been but a means to an end, the end being the application of sufficient pressure to break the defender's will to resist.

Modern air power in future wars makes the picture different. The ability of air forces to operate in three dimensions enables them to move over land and water without regard to obstacles on the earth's surface. Their freedom to select the time and place of attack, to operate during day or night, and to use clouds for concealment, makes adequate defense against air attack on a grand scale a serious problem. Air forces, unlike ground forces, are not forced to wage an exhausting war at a nation's frontiers. The speed at which airplanes travel enables them to cover long distances in a short time. It is these characteristics of air forces that increase the power of the offense in war and make the airplane such a terrible instrument in the hands of unscrupulous governments.

No one knows better than you gentlemen that air power is not a commodity that can be procured in the open market, no matter how much gold and silver may be available. Money will not buy it, desire will not create it. Timely foresight, based upon an intelligent conception of the potentialities of air power and its effect upon the destiny of nations, is the only formula that can assure its development.

The ability of a nation's industry to build airplanes and the existence of superior manpower available for training as pilots, navigators, mechanics, etc., do not make air power. They do constitute potential air power. However, it must be realized that it takes time to build a force of modern military aircraft, and further time to train the men to fly those airplanes and maintain them on the ground.

The existence of potential air power is important if it is utilized to create actual air power before the necessity arises to use it. The most fertile agricultural regions would be of no value to save a people from starvation unless they were sown with crops and those crops harvested before the specter of famine presented itself.

So it is with potential air power. Unless developed before the emergency occurs it will be of little value afterward, not only because of the time factor involved but also because aircraft factories and engine factories are early objectives of a hostile air force.

Because the outstanding characteristics of an air force, the spearhead of air power, are its ability to travel far and fast over land and over water and within the period of a few hours strike at the very vitals of a nation, we must, to be on an even footing with an enemy which possesses such a threat, also possess a like threat. But, I repeat, air power cannot be created after the necessity for its need arises. Like a navy, it takes years to build an air force.

The question naturally arises as to what would constitute for our country an effective air force. A nation's geographic situation has a large bearing on the constitution of its air force. In any land or naval engagement the advantage lies with that force which has the longer-range weapon. This same principle applies to the defense of an area by an air force. The nation which has the air force which can reach the hostile air bases without fear of having its own bases attacked, has a distinctly superior advantage in any conflict. It is the .45-caliber revolver against the baseball bat, and embodies such a threat that war may not be waged. The man with the revolver can secure his demands from the man with the baseball bat without actually firing the gun.

Our geographical location is such that our air force must be so constituted that it carries the revolver. From an air-force standpoint this means equipping our air force with enough airplanes of sufficient range and bomb-carrying capacity to enable them, from available bases, to reach any locality where an enemy might attempt to establish air bases, either land or water.

In any balanced air force there is a large requirement for local defense planes of the fighter type, for Air Service planes for reconnaissance and observation, and for other shorter-range types; yet, to equip our air force entirely with such planes, however numerous, however fast, but which fail to measure up to our range and bomb-load requirements, would be tantamount to selecting for ourselves the baseball bat and giving our possible enemy the revolver. Our basic air force weapon is the bombardment airplane with sufficient range and weight-carrying capacity for our job of continental defense.

Thus far I have spoken only of the requirements for types of aircraft; but there are other important elements of effective air power.

The combat crews to fully man each airplane must be trained and available, and they must have sufficient experience to prepare them thoroughly in their particular specialty. A superior pilot is of little value if his bomber cannot place the bomb on the target, and both will fail unless a competent navigator succeeds in directing the airplane to its objective. Also, without skilled mechanics to keep the airplane and its accessories in perfect condition, it would not long be of combat value. An airplane of a type in production can be built much faster than a crew can be trained to man and maintain it.

But highly trained personnel, even in sufficient quantities and equipped with the proper type and number of airplanes, will not give a nation air power in a given area unless bases are available in that area.

Air forces are similar to navies, insofar as bases are concerned. For example, no matter how essential it might be for this Nation to employ air power in Alaska, it could not be done until adequate air bases in that area had been prepared.

It is evident, therefore, that to have effective air power, a nation must possess not only an air force composed of airplanes capable of accomplishing the task demanded by the nation's particular strategic geographic problem, but also trained and adequate personnel to man the airplanes in the air and to maintain them on the ground, and adequate air bases in potentially critical areas.

The effectiveness of any nation's air power is measured by the extent to which it fulfills these requisites.

I have attempted to explain the meaning of air power. Let us now examine briefly the strategy that governs its employment.

Since the existence of the highly industrialized modern nation is dependent upon the continued functioning of an intricate economic structure, and since that structure is highly sensitive to air attack, it is obvious that air strategy dictates the selection of vital targets within that economic structure as the objectives for such attack.

The Panama Canal constitutes one of the vital links in our system of national defense. Unfortunately it is extremely vulnerable to air attack. Our defenses must be adequate to insure domination of all areas, land or water, from which air attacks might be launched against that vital artery of our communications.

As another example, the important economic structure along our northeastern Atlantic seaboard must be guaranteed against air attack. A study of that area discloses that the destruction of even a limited number of key objectives might result in a paralyzing effect upon the functioning of the entire area, if not of the whole Nation. It would not only materially interfere with our ability to wage a major war, it might make such action impossible. As one more example, 18 power plants supply 75 percent of all the electric power in the entire metropolitan New York area. It would not take a large force of bombardment airplanes to accomplish the destruction of those few plants. Any person who has studied the question of electric power with respect to New York City knows well that without it, that city, as we now know it, would cease to exist.

There are many students of air warfare who contend that a powerful force of bombardment airplanes can, by attacking key points within the social and economic framework of a modern nation, destroy that nation's will to fight and thereby accomplish the object of war. Whether one agrees with that school of thought or not, I personally feel that the potentialities of air warfare are so far-reaching that common sense dictates that a nation design its military forces so as to provide a defense against this new method of waging war.

The highly industrialized nations of our times have created an economic organization that is dependent for its functions upon certain key industries and utilities. Modern nations are as sensitive as a precision instrument. If you damage one vital part of a watch, the whole ceases to function. So it is with the intricate and involved framework which our twentieth century civilization has made necessary.

The nerve centers, the vital organs of this complicated economic organization must be protected from air attack if continued free existence in this world of "might makes right" is to be guaranteed.

That is our problem—that is why America must be strong in the air. That is why this Nation must be prepared to do its part to deny to any enemy the opportunity to establish bases, land or water, anywhere in this hemisphere from which bombardment airplanes may launch attacks. A study of geography will disclose the fact that there exists many land and sea areas which, under certain conditions, could be utilized by a foreign power for air bases.

Today our share of the Army, Navy, and air team for the defense of American territory and American policies is deficient in air strength. We must build up our air forces and create air bases for the establishment of a sphere of air influence around our part of the continent.

The General Headquarters Air Force, the entire Army combat air force in continental United States, numbers today but slightly over 400 fighting planes. In another 6 months, with delivery of planes now on order, this number will be increased to approximately 630. However, sufficient personnel are not now available in the General Headquarters Air Force to man these 630 planes.

We have now as part of our 400 combat planes 12 long-range bombers, familiarly known as "flying fortresses." Some 39 more are on order. Today, as far as we know, they are the best long-range bombers in the world. We should have many more of them.

Our air force must be built around long-range bombers. The ability to reach far from our shores and strike an enemy before he can come within his effective range should constitute the very foundation of our air-defense policy. Once a powerful air force leaves its base, though it may suffer losses, it cannot be stopped by any man-made weapons. Common sense dictates then that we prevent such an enemy force from starting. To do this requires numbers of long-range air force bombers.

Regardless of how much we would like to prevent it, our ocean bulwarks are shrinking rapidly. Aeronautical development will make of the Atlantic Ocean an English Channel. When that time arrives, and the world is on the threshold of that period, the problem of making America impregnable in the air assumes a more serious aspect than that presented today.

America, therefore, has two problems—the one for "today" and the one for "tomorrow." "Today's" problem involves the establishment of a sphere of air influence around the Western Hemisphere. "Tomorrow's" problem—and by "tomorrow" I mean the problem that will confront this Nation before many years have passed—involves security against air attack initiated from bases across the oceans. Our country should be the first to span the oceans both ways, nonstop.

I am afraid there is a tendency in the United States to think that the science of aeronautics has reached its zenith; that airplanes capable of easily crossing the oceans, and returning, nonstop, are figments of a Jules Verne imagination. You gentlemen know that we have hardly scratched the surface in possibilities of large airplane development. The so-called superbombers of today are actually nothing but small prototypes of the airplanes of the near future. It was only a few weeks ago that two bombers of the British Air Force flew nonstop from Egypt to Australia, a distance of 7,160 miles. The big airplane of "tomorrow" is a certainty. Normal progress alone will produce it; but if any country's national policy dictates its necessity development will be greatly accelerated. I believe that any of our large airplane companies would be glad to contract to build a bomber capable of a tactical range of 10,000 miles. If American airplane manufacturers can build such a bomber, it can be done in other countries. What is more, it will be done. In fact, we do not know that it is not already being done.

America must not find itself surprised should such possibilities materialize. We have the brains and the means to keep ourselves abreast, or better yet, ahead of the times; all we need is the vision to realize the necessity for so doing.

We are happy that our national policy is a defensive one. We desire only to protect our freedom and our territory. But a policy of defense does not mean that we should wait until a hostile air force appears over our cities or over the Panama Canal or other important military and civil objectives before we attempt to stop it.

A policy of defense does not mean that we should sit idly by while foreign nations build up powerful air forces with which they may threaten our peace and security. In these days it is apparent that force must be neutralized by force; that threat must be neutralized by the fear of retaliation.

Air attacks recognize no Maginot line or naval blockade. Pursuit and antiaircraft gunfire render an air attack only less effective.

There are only two ways of stopping an air attack. One is to prevent the hostile air force from getting close enough to launch an attack; the other is to stop the aggressor nation from even planning the attack through fear of retaliation.

When nations are in air juxtaposition there is only one certain method of preventing one of those nations from subjecting the other to air attacks or the threat of air attacks. That is by forcing the realization that such attacks would bring about a reprisal of the same or greater magnitude. So long as any nation, with aggressive tendencies, possesses greatly superior air power to other nations it may be able to enforce its demands upon those nations by the mere threat to employ that air power.

That is what appears to have happened at Munich. There, apparently, we saw the threat of superior air power defeat, in diplomacy, the greatest army in Europe, and the greatest navy in the world.

The results of that conference definitely established the fact that air power is one of the three links in the chain of national defense, and clearly illustrated the well known but often overlooked fact that a chain is no stronger than its weakest link. There air power, toppling the diplomatic balance, forcibly demonstrated its potentialities as an instrument of national policy.

The United States today is a fifth- or sixth-rate air power.

On November 15 the New York Times carried the report of a press conference at which President Roosevelt indicated that one of the primary objectives of this country's national-defense program was to make this continent impregnable from the air. He pointed out that the possibility of such an attack was infinitely closer than it had been as recently as 5 years ago, because of the trend of world events and scientific contributions to methods of warfare.

The threat to use military forces is not something new or novel in this world; it has been employed since the dawn of history. The threat of air power, however, is new and will have a more spontaneous effect than either land power or sea power because of the realization that it can make itself felt in a matter of hours after the decision to use it has been made.

In the past armies and navies served as barriers to protect the homeland from the ravages of war. Although an invaded nation suffered, the brunt of the punishment was taken by the military forces and not by the civilian population. And while it is true that war is a destroyer of wealth, it is also a fact that the heavy demands on industry often resulted in a quickened temporary prosperity—a war boom. Powerful industrial concerns grew more powerful. Wealthy business concerns grew wealthier; governments, in relative security behind their armies and navies, were not so hesitant about the possibility of war in their diplomatic maneuverings.

Air power has changed all this. The seat of government will constitute a bombing objective of high priority, and the first blow can be struck within a few hours after the decision to strike has been made. Its effects will be felt immediately by industry. Great industrial concerns instead of becoming more powerful may be entirely destroyed. Stocks will decrease instead of increase in value. From the initial attack, the brunt of punishment and suffering, instead of being borne mainly by the armed forces, will also be experienced by the noncombatants. All of this cannot help but tend to make governments act today with greater caution when confronted with the possibility of war. Those whose air power is second class, will acquiesce with little argument to those who have superior air power. Between great nations, both of whom are capable of powerful air action, there will be a very eager and mutual willingness to find some peaceful solution to conflicting policies.

As we study the development of air power today, and as we project ourselves into the very near future and realize its possibilities it seems to me that there can be little doubt in the minds of any citizen of this country that the United States must lose no time in building up an air force.

As much as all of us would like to find a formula for universal peace, history has proven beyond doubt that the ability to defend one's self has always been the deciding factor in the security and life of a nation.

Air power is imperative for the security of this Nation and its policies. Its possession by this country in adequate degree in our military organization will constitute strong insurance that no hostile army will ever approach either coast for the purpose of landing on our shores, and that no hostile nation will ever establish air bases in this hemisphere. It will provide additional freedom of action to our Navy.

With the passing of each year air power will become more and more vital in the shaping of the policies of nations. For generations the power of the British Navy, with its bases strategically located in all parts of the world, kept the British Empire secure. Today the British fleet can no longer provide that security. England is leaving no stone unturned to build air power the equal of any other nation. Air power has changed the strategy of British defense.

An America powerful in the air would not constitute an aggressive threat to any nation. America desires to live in peace and friendship with all. Its history speaks, as no spoken word can, that America hates war and wants peace. That history, however, should be a warning to all the world that this country, although hating war with all the fervor of a peace-loving people, will never countenance aggression of its soil or its principles.

Our air forces are inadequate. We need air power. In building up our national defenses we are saying in unmistakable language: "Hands off the Western Hemisphere; America is for Americans."

Confiscatory Chain-Store Tax Bill

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1939

RADIO ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK, FEBRUARY 5, 1939

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD I include an address I delivered before the American Forum of the Air, Sunday evening, February 5, 1939, entitled "Confiscatory Chain-Store Tax Bill," as follows:

Ever since the days of Theodore Roosevelt the policy of the Federal Government has been based on the irrefutable truth that in government the interests of all of the people are paramount as against the interests of any selfish minority group. This has been expressed in a long series of laws, State and Federal, enumerating the principles set forth in the Sherman antitrust law and the Clayton Act. In other words, whenever two or more people, be they individuals or corporations, big or little, agree to do anything to raise prices to the American people, that agreement constitutes a criminal conspiracy.

Twenty years ago a very large percentage of all the goods that the American people had to buy—groceries, medicines, notions, shoes, clothing, etc.—reached the average family through a system of distribution in which the distributing costs were exceedingly high, so that in the average retail price the cost of distribution greatly exceeded the cost of production. Nobody did anything wrong, improper, or illegal. The manufacturer or producer sold his goods to the retailer through wholesaler or jobber. Let us say, for example, a bottle of medicine was intended to sell to the public for $1—the manufacturer sold it to the drug jobber for 50 cents, the drug jobber sold it to the retailer for 60 cents, and the retailer sold it to your family or to mine for $1. The jobber had a margin of 16⅔ percent on his selling price, and the retailer had a margin of 40 percent on his selling price. In the grocery field, the grocery wholesaler's margin varied from 10 percent to 30 percent. Whatever part of the cost of the goods was represented in the wholesaler's cost of doing business and profit was passed on to the average citizen by the retailer.

I repeat, nobody did anything wrong. The costs of doing business this way were necessarily high. The wholesaler had to make frequent small deliveries to a multitude of retailers. He had to extend credit to them, and in many cases the credit was not very good. The retailer, in turn, made deliveries and extended credit, and the delivery cost and the unpaid bills had to be averaged into the price at which the goods were sold to you or to me.

At about the time I speak of, chain-store systems began to develop. Advocates of punitive and discriminatory taxes have pictured the chain stores to you as a Wall Street operation or as

something that grew so big that it threatened to become a monopoly. This is far from the truth. Practically every national chain-store organization in the United States and the State and local chains started from humble beginnings—usually a single merchant, who found a better way to serve the public and who was rewarded by a public patronage that made his business big. The change was very simple but dynamic. The chain store bought direct from the manufacturer, eliminating the 10-percent, the 16-percent, or the 30-percent cost of the middleman or wholesaler's operation, and then sold the goods direct to the public. They generally sold for cash, eliminating credit losses, and the customer came to the store and carried the goods home, eliminating delivery costs. The result was that without below-cost selling or loss leaders, chain stores could supply our people with the necessities and luxuries of life at much lower prices. Or, to put it another way, the average family could get a great deal more in food, medicine, shoes, notions, and clothing—a better standard of living—by buying through a chain store. The public wanted more for their money; they were entitled to more for their money; they were willing to pay cash and to carry their purchases, and so in increasing numbers they patronized the chain store.

Now, wholesaler-retailer special interests who are unable to fend for themselves and who are unable to meet chain competition successfully have inaugurated a scheme to put chain stores out of business. They have espoused the Patman bill, which seeks to inflict extortionate and confiscatory taxes upon chain stores so as to make it impossible for them to continue in business.

The bill provides for a steeply pyramiding series of license taxes, graduating from $50 per store for chains of 15 or less stores to $1,000 per store for chains with 500 or more stores, and such taxes per store shall be multiplied by the number of States in which such chain operates.

The author of the bill fails to realize that the power to tax should not be made the power to destroy. To give you an idea of how ridiculous this taxing measure is, let me draw your attention to the following:

In 1937 some 34,000-odd stores of 13 chains operating in 39 States showed gross sales of $1,810,000,000 with a net profit of a little over $43,000,000. The annual chain tax under the Patman bill would total over $793,000,000. To put it another way around, the Kroger chain last year made a net profit of $3,487,000. Its tax, under the bill, would be over $73,000,000, or 25 times its net profit. The Safeway Stores of California made a net profit of $4,157,000. Its tax would be $65,887,000. J. C. Penney Co. made a net profit of $18,712,000, and its tax would be $61,560,000. The Melville Shoe Co. made a net profit of $2,388,000. Its tax would be $17,340,000.

In any event, I am quite sure that the courts would frown upon such a destructive, slaughtering measure.

These same selfish interests organized the great whispering campaign, ascribing to chain stores all the evils of the retail business, whether practiced by themselves or by the chains. They financed with large sums of money propaganda in State and Nation for passage of price-fixing and price-raising bills.

On the far-sounding plea of equalizing the opportunity of the small dealer, legislation was secured which, generally, prohibited the manufacturer from making any better price to the large buyer than he made to the small one, although, generally, this saving was passed on to the public. Under the guise of eliminating "loss leader" sales, they secured legislation which, by legalizing high fixed prices to the consumer enabled the retailer to charge the highest prices, and this in turn enabled the wholesalers to again demand of the retailer unreasonable profit.

Now, these same groups propose to recapture lost business by closing chain stores through confiscatory taxation.

The Patman bill is, frankly, a measure to destroy the national chain-store system. That it would throw a million Americans out of work, at wages and hours the best in their field; that it would destroy 30 percent of the marketing machinery of the American farmer; that it would lower the standard of living of 140,000,000 people; that it would take bread off the workmen's tables and milk out of the mouths of their children; that it would add many hundreds of millions of dollars to the cost of the American people for food, clothing, shoes, and medicine seems of no consequence to these selfish retailers and wholesalers.

They argue that the chains put the little fellows out of business. The facts show that this is not true. On the contrary, more little fellows are in business today than ever before. They fail to indicate that the number of chain stores are diminishing.

They argue the chains sell goods below cost and use "loss leaders" as bait. I can show a thousand evidences in print and show from my own personal experience that these practices are no more the practices of the chain stores than the practices of their competitors. Look around your own neighborhood and see whether this is not so.

They argue that the chain stores hurt the farmers, but the great farm organizations of this country have testified by resolution to the contrary. I refer to the National Grange and the National Cooperative Council and others. The American Farm Bureau Federation in its last convention said, "Such unnecessary taxes and restrictions have a damaging effect by increasing cost of distribution, increasing cost to consumers, reducing total consumption, and limiting production in agriculture as well as in industry, and we oppose all such tax proposals."

Many proponents of the chain store tax bill whisper "under the hand," the chains pay lower wages and work their employees longer hours than their competitors. Only recently the American Federation of Labor, supported by hundreds of local labor unions, at its annual convention in Mr. PATMAN's own home State, passed a resolution opposing the bill. Speaking for 5,000,000 wage earners throughout the country, it declared that the destruction of chain stores "would dislocate upward of 1,000,000 wage earners" and condemned and disapproved "the Patman bill and all forms of taxation which prostitute the taxing power of the Government to a weapon for the destruction of worthy enterprise by business rivals."

I contend that the organized farmers of this country and organized labor in this country are better judges of what benefits them than are the protagonists of the Patman bill.

Even the Texas Newspaper Publishers Association, the Southwide Association of Texas, and the Texas Federation of Labor, all in Mr. PATMAN's own State, have condemned his measure as a menace to the Nation's standard of living.

It is argued the chain stores involve so-called "absentee ownership." Well, if absentee ownership is the vicious thing we are led to believe it is, it should be destroyed in the field of mass production—automobiles, radios, food, et al.—as well as in mass distribution. There might as well be a law making it criminal for anyone to invest money in any business or enterprise which operates outside his city or village. It is argued that "the money you pay your independent stays in your community," the presumption being that all money for purchases in chain stores leaves town.

Go into any independent store. What do you find? Thousands of nationally advertised products made by concerns far removed from the locale of the independent. The products of the American Tobacco Co., the National Biscuit Co., General Foods, Fuller Brush Co., Swift & Co., and thousands of other concerns come from afar.

It is ridiculous to charge that chains draw all the capital from local towns. In fact, chain stores actually start more money in circulation in local towns than would be possible with any other type of retailer. A study by the Harvard Bureau of Business Research shows that when a consumer spends a dollar in an independent grocery store, 81 cents of it leaves the community and 19 cents remains in it; while if the identical merchandise were purchased in a chain store, only 78 cents would leave the community and 22 cents would remain in it. What is far more to the point, 10 cents of it would remain in the consumer's own pocket because of cheaper prices.

The charge that chain stores are the products of the Captain Kidds of Wall Street is as demagogic as it is emotionally false. The vast majority of chain store companies are local enterprises, owned and controlled locally. Most of the rest are owned by stockholders—1,500,000 men and women in every walk of life and every section of the country. A recent survey of 37 of the largest chain store companies revealed that 25 had no bonded indebtedness nor other fixed obligations which would in any way involve them with Wall Street financiers. Of the 352 directors of these companies, only 7 held directorships in Manhattan banks.

I wish Mr. PATMAN would tell me why there is expressly exempted from his bill cooperatives and gas-filling stations which do not handle automobile accessories. Is it possible that chain filling stations are sacrosanct, whereas all other chains are the very embodiments of evil? Why are gas stations without tires, fair; but with tires, foul? Chain filling stations are certainly as guilty of "absentee ownership" as are chain stores. I know one filling station chain, most of whose owners live 3,000 miles removed from the United States. Their stations bear a red and yellow label.

Is the exemption of filling stations due to the fact that much of our gas comes from Texas? Perhaps the workers of the Texas oil fields rebelled because they anticipated a serious disadvantage.

As to the cooperatives, they are certainly, if anything, as guilty or as innocent as the ordinary chains. In fact, the cooperatives have been most active against the operators of independent stores.

Still stranger is the omission of wholesale trade from the bill. Why should so-called independent wholesalers be denied the so-called "beneficent" provisions of the bill? There are numerous chains in the wholesale trade. There is McKesson & Robbins wholesale drug chain, having units in 38 different States and Hawaii; as compared, for example, with the Atlantic & Pacific Tea Co., which is usually cited by the bill's proponents as a chain-store monopoly and which has considerably less than 10 percent of the entire retail food trade in the United States. This particular wholesale chain drug company has a sales volume amounting to more than 30 percent of the entire wholesale drug trade. According to the logic or the illogic of our adversaries, if a 10-percent share of the food trade constitutes an evil monopoly, then certainly a 30-percent share of the drug trade must be three times as bad.

Since Mr. PATMAN first introduced this bill there has developed a very decided change in public opinion concerning chain stores. In the Fortune survey or poll appearing in the current issue of that magazine the following statement, in part, appears:

"Now the pattern has changed and a plurality directs that chain stores be let alone and allowed to make what profits they can. Hardly any want them put out of business, which has been precisely the purpose of the "popular" legislation, recent or pending. The sands have suddenly shifted from under the feet of the Honorable WRIGHT PATMAN and there may be several factors to account for it. One may be a general nostalgia for 'normalcy' and for returning to a policy of letting business go its way rejoicing. Another may result from the actual closing of thousands of chain stores during the past few years and the dislocation of the buying habits of their price-conscious customers. And a third reason for the change may be the effect of publicity, which the chains have been employing in self-defense. To such a campaign was credited the conversion of an

adverse majority in California in time to defeat by referendum an anti-chain-store tax bill that seemed on the point of adoption."

The United States Department of Agriculture points to the unquestioned improved efficiency and reduced cost of getting goods from the grower to the consumer because of mass distribution made possible because of the chains.

The Twentieth Century Fund, probably the outstanding impartial tax fact-finding agency in the country, has made a 2-year study of the problem and recommended that "all special taxes on chain stores be immediately repealed," because "they tend to raise the cost of living for the large number of people with small incomes who depend upon efficient merchandising to get the most for their money."

But most significant was the conclusion reached by the Federal Trade Commission in regard to chain-store taxation after a 6-year study of the chain store which cost the taxpayers more than $1,000,000. At the end of their exhaustive, painstaking job, in which they examined every conceivable scrap of evidence, the Commission said:

"To tax out of existence the advantages of chain stores over competitors is to tax out of existence the advantages which the consuming public has found in patronizing them, with a consequent addition to the cost of living for that section of the public. So, on the whole, the number of people adversely affected by such a tax would constitute a very substantial percentage in comparison with the number adversely affected by present conditions."

Unemployment Compensation Payments

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1939

EXCHANGE OF LETTERS BETWEEN HON. JOHN W. McCORMACK, OF MASSACHUSETTS, AND HON. A. J. ALTMEYER, CHAIRMAN OF THE SOCIAL SECURITY BOARD

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following letter to A. J. Altmeyer, Chairman of the Social Security Board, and his reply:

JANUARY 16, 1939.

A. J. ALTMEYER,
Chairman, Social Security Board,
Washington, D. C.

MY DEAR MR. ALTMEYER: I noticed recently a news item in various newspapers of the inaugural message of Governor Barrows, of the State of Maine, relating to the delay in the payment of unemployment compensation in that State, and from reading the news item it appeared to place the blame upon the Federal Government. It was difficult for me to understand why the Federal Government should be involved in any such delay. To be sure that Governor Barrows was quoted correctly, I wrote for a copy of his message, which I have received. In his message to the Maine Legislature, January 5, 1939, he stated in part:

"In my opinion, there should be less dictation by the Federal Government and more control by the State. Several changes could be made in regulations that should promote speed and efficiency. The unemployed have been compelled to wait an unreasonable period for the benefit checks and too much time is required for compiling records."

If there is no action on the part of the Federal Government, through the Social Security Board, which caused or contributed to this situation in the State of Maine, it seems to me that such statements should be refuted and challenged. Statements of that kind, particularly coming from an official source, carry weight with the general public unless challenged if incorrect.

I am calling this matter to your attention. Will you kindly advise me if the charges made by Governor Barrows are correct, his statements clearly placing the blame for any delay upon the shoulders of the Federal Government?

Sincerely yours,

JOHN W. McCORMACK.

SOCIAL SECURITY BOARD,
Washington, D. C., February 3, 1939.

Hon. JOHN W. McCORMACK,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN McCORMACK: This is in reply to your letter of January 16, in which you quote from the inaugural address of Governor Barrows, of Maine, as follows: "In my opinion, there should be less dictation by the Federal Government and more control by the State. Several changes could be made in regulations that should promote speed and efficiency. The unemployed have been compelled to wait an unreasonable period for the benefit checks and too much time is required for compiling records."

Any implication or interpretation of this statement to the effect that the Federal Government was responsible for any lack of efficiency or delay in the payment of unemployment compensation by the Maine Unemployment Compensation Commission would be incorrect. Under the Social Security Act the responsibility for administering State unemployment-compensation laws resides with the State agencies. The Social Security Board is charged with the responsibility of granting funds necessary for proper administration and has fully complied with such duty. The Maine Unemployment Compensation Commission has always had adequate funds to carry on its duty of paying claims promptly, and no difficulties of Federal-State relations have arisen which have not been readily adjusted to the complete satisfaction of the Maine agency.

As regards the actual operations of the Maine Unemployment Compensation Commission, the facts are that this commission is now operating on a current basis and has apparently been operating on that basis since late last spring, according to the statistical reports submitted by the Maine agency. On May 14 there was a backlog of initial determination work of 5,731 claims, and as of December 24, 1938, this number was only 216. Some slight increases occurred in certain weeks during the summer due to peaks in the number of claims filed. These figures are given as illustrations that the usual backlog of initial determinations to be made has been a week's processing or less for some time. On December 31, 1938, there were 7,166 compensable claims filed for which checks had not yet been written. This would seem to indicate that the current delay in check writing as of December 31 amounted to not more than 3 or 4 days. Also, we notice that through December 24, 127,135 original claims had been filed, 583,584 checks written for a total sum of approximately $4,537,000.

Apparently, delays which now occur rather than being the general rule would be isolated cases or unusual cases which for some special reason or another require more time for handling. The Maine commission seems to have diligently endeavored to expedite benefit payments and to have undertaken many measures toward that objective consistent with good administrative control.

If Governor Barrows had in mind the situation with respect to the early part of 1938, it must be observed that nearly every State agency underestimated its claim load and the number of checks to be issued to claimants. This, coupled with the fact that the program was new and the personnel relatively untrained, would make delays in some States in the first quarter of 1938. However, in Maine such delays were probably not more than would be expected under a newly established program operated by newly appointed personnel. The Social Security Board has endeavored to preserve cordial State relations with the States and the State agencies. To this end an attempt has been made to apply the rule of reason with reference to standards necessitated by the Federal Social Security Act. The Board has always been ready to give technical advice to State unemployment compensation agencies. Such advice has frequently been requested by the Maine commission. It was eagerly sought during early days of benefit payments, and more recently it has been requested with reference to filing problems and with reference to revision of forms and benefit procedures in the interest of expediting the processing of claims and the payment of benefits.

I trust the foregoing statement will clear up any misunderstanding that may exist. Your kindness and interest in this matter are greatly appreciated.

Sincerely yours,

A. J. ALTMEYER, *Chairman.*

Investigation of Un-American Activities

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 3, 1939

Mr. SIMPSON. Mr. Speaker, $80,000,000 for a battleship, $250,000 for a bomber, $100,000 for a big gun. Congress willingly provides all the money necessary to construct them, subject only to receiving proof of their necessity for our national defense.

We know that our form of government insures most in freedom for the individual. To preserve it we know no limits. Our military and naval forces will take care that our borders will not be crossed by invading military or naval powers.

But, Mr. Speaker, this is not sufficient. When all the world is at peace, when there is no threat of war, the enemy coming as a guest has crossed our borders, beyond the watchful eye of our national defenses. Stored temporarily in his

mind are those Old World teachings, Old World ideas so contrary to Americanism.

Once obtaining the privileges of our boasted freedom this guest unloads his mind—he violates the confidence America placed in him and tries to undermine the very system of government, by whose grace he enjoys the freedom of speech he violates.

He preys upon and with others of his kind, and they upon our neighbors and our children endeavoring to make them dissatisfied with Americanism. He would have them join him in bringing about a change in our form of government, substituting some untried theoretical "ism," or worse yet, an "ism" imported from present-day European powers for Americanism.

We have no checks upon him; we do not know how many of his kind there are here. We do not know what he has accomplished nor what his complete plans are.

We do know that he infiltrates our public offices; he reaches high places.

We should know, we must know. We now have an opportunity of investigating him and his activities through a committee of this House.

Comparatively a small amount of money is needed to continue the investigation; only $100,000 is asked, a small fraction of the cost of one battleship.

Certainly everyone in Congress will vote to continue this investigation, giving by a unanimous vote definite and conclusive word to alien agitators in the United States a warning that their "isms" have no place in Congress or this country.

Domestic Fats and Oils Conference

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1939

STATEMENT PREPARED BY THE DOMESTIC FATS AND OILS CONFERENCE

Mr. HOBBS. Mr. Speaker, under the authority granted, I extend my remarks by inserting a statement prepared by the Domestic Fats and Oils Conference at the conclusion of its sessions here Saturday, as follows:

Delegates representing farm and factory producers of more than one-half of all domestic fats and oils ended a 2-day meeting here Saturday evening, at which a national organization was completed.

Directors, representing commodity groups, are as follows:

Soybean producers, G. G. McIlroy, Irwin, Ohio; butter producers, A. M. Loomis, Washington, D. C.; cottonseed-oil producers, T. J. Kidd, Birmingham, Ala., and J. I. Morgan, Farmville, N. C.; soybean-oil producers, J. F. Johnson, St. Louis, Mo.; corn-oil producers, J. B. Newman, Washington, D. C.; tallow and grease producers, Roger E. Morse, Boston, Mass.; fish-oil producers, W. S. Snow, Alexandria, Va.; southern commissioners of agriculture, Harry D. Wilson, Baton Rouge, La., and C. C. Hanson, Memphis, Tenn.

The officers elected were: President, J. F. Johnson, St. Louis, Mo.; first vice president, T. J. Kidd, Birmingham, Ala.; treasurer, Roger E. Morse, Boston, Mass.; secretary and assistant treasurer, F. B. Wise, Washington, D. C.; Washington representative, A. M. Loomis, Washington, D. C.

Additional vice presidents are to be elected. Letters and telegrams pledging support were received from representatives of the American National Live Stock Association, the American Cotton Cooperative Association, the National Livestock Marketing Association, and the United States Livestock Association.

President J. F. Johnson, before leaving for his home in St. Louis, issued the following statement on behalf of the conference:

"The individuals and organizations which have associated themselves in this conference have two practical objectives.

"One is the immediate objective of relieving those engaged in the production of oil-bearing raw materials from the present ruinous low prices of their products. I refer to the farmer producers of cottonseed, soybeans, dairy products, and beef and swine. The prices now, and for months past, are much below cost of production and help must be secured.

"These prices are ruinous because the values of oil- and fat-bearing materials are limited by the prices secured for the oils and fats.

"The oils prices are at present levels not because of any overproduction—we do not produce enough fats and oils for our domestic needs—but because of the volume of imports of competing oils and facts, bought here at prices which are ruining all domestic producers. We think this can and must be remedied.

"The other objective is to create conditions in this industry which will lead to increased domestic production which will make it unnecessary for the citizens and industries of the United States to go outside their own country for the 2,000,000,000 pounds or more of these oils and fats which are now demoralizing the domestic prices.

"This is not alone an economic objective. It is a national-defense necessity. We do not now supply our military, naval, aviation, and munitions needs. Yet we have land, facilities, labor, and knowledge with which to do so. The American producers relieved from the incubus of below cost-of-production prices, can within conservative prices and conditions, supply the deficiency.

"Let me also emphasize that in working toward these two objectives, namely, fair price and national safety, we need and ask no subsidies or gifts. Our program will ask for nothing other than proper limitation and control of competing imports."

The conference program was under discussion most of the day Saturday. Legislation will be proposed to deal with the large imports and low prices at which they are offered in the United States. No statement is made at this time as to details of the proposal, awaiting, it is stated, final drafting and submission to all member groups.

Attention was called by one member of the conference to the figures released Friday by the Census Bureau showing decline in consumption of domestic oils and fats in the last quarter of 1938, while consumption of foreign fats and oils sharply increased. Some of these Census Bureau figures are as follows:

Consumption of coconut oil (imported) increased 30 percent.

Consumption of palm oil (imported) increased 25 percent.

Consumption of palm-kernel oil (imported) increased 25 percent.

The platform of the Domestic Fats and Oils Conference adopted at a previous meeting at Memphis, Tenn., reads as follows:

"1. It is the purpose of this group to protect and further the production of domestic fats and oils until such production reaches our domestic requirements.

"2. We advocate the principle of excise and import taxes on foreign fats, oils, and oil-bearing materials.

"3. We advocate an adjustment of excise-tax rates on oil-bearing materials to make them compensatory with the rates on corresponding and competing oils, taking into account the costs of production in the United States.

"4. We oppose any attempt to lower the present 3-cent processing tax on coconut oil made from Philippine products."

Un-American Activities

EXTENSION OF REMARKS

OF

HON. LEON SACKS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 3, 1939

Mr. SACKS. Mr. Speaker, it seems to me that in this age and period of civilization we are becoming more and more concerned with those problems, social and economic, which tend to create a philosophy of government ascribed to by the democracies and once referred to by a great American President and patriotic leader as "A government of the people, by the people, and for the people." To my mind the blood that was shed by those brave patriots in order to establish this form of government is worthy of the greatest sacrifice that the human race ever made for its progress and advancement, and as I stand on the floor of the House, cognizant of the fact that I live in the greatest democracy in the world, I cannot help but think of the wisdom of past Americans who voted to keep it as an international example of government, promulgated and conducted by the people.

I am unalterably opposed to any form of government which would take as its basic principle the control of every phase of life within its borders as a governmental duty. I am strenuously opposed to communism, fascism, and nazi-ism. The only philosophy of government in which I am interested is the one we enjoy in this country—that of the American democracy.

I am heartily in favor of an investigation of un-American activities, which includes, in my mind, an investigation of every phase of political philosophy known to the world today as communism, fascism, and nazi-ism.

Let it be distinctly understood that this great country of ours and its governmental policies signify to me the only social order by which we can exist as a free and independent people. The devious methods employed by the Communists, in my opinion, should be excluded from our philosophy of life and government. The same holds true of the dictatorship of nazi-ism and fascism. I will vote for any investigation made against these types of government and will vote for any legislation that would forever drive from our shores those aliens who propagate and advance these theories.

It seems to me that if aliens in this country desire to benefit from our vast and great resources they should adhere to the American way of government, to wit, democracy. I would urge that every organization in this country have as one of its basic principles of existence the preservation and the allegiance to the American type of government, our form of government—democracy.

Therefore I want to make clear my stand when I say I am opposed to these "isms." I will vote for any legislation to curb them and prevent their spread in this country. However, I want to be fair and judicious, and I feel that an investigation conducted by a committee which negligently and carelessly allows itself to be used as a vehicle of character assassination ought not to be given the dignity and power of this great legislative body. I feel that the Dies committee, laudable of purpose as it is, and for which purposes I would fight to support any legislation and investigation, injudiciously and carelessly allowed witnesses to slander and malign great Americans without giving them an opportunity to appear in defense of their patriotism.

Permit me to reiterate that I stand for freedom of religion, freedom of worship, and freedom of speech, and I believe that any "isms" denying these rights should be ferreted out and exposed to the public gaze, as should their alien advocators within our shores.

At the same time, I do not believe in trial without defense. I believe in the American way of judicial procedure, which is to give every man and woman an opportunity to an honest defense, whether before a jury of 12 men and women, or before a jury of the American public.

For that reason, I am casting this vote as a protest against the methods used by the Dies committee in its investigation, and not as a protest against the basic principles upon which the committee was founded—which, as previously stated, I would vote for at any time, either in the shape of legislation or for an investigation.

The vote I cast today, therefore, is merely a protest vote in order to remind the committee that they must continue their investigation in the American way and in a judicial manner. I know that there is overwhelming sentiment, including my own, for this investigation, and I hope my feeble protest to the method used in the past by this committee, and which the chairman of the committee admitted on the floor of the House when he said, "We might have made mistakes," will be a beacon light in its future investigation so that they may continue their work in the American way and in a judicial manner.

The Spanish-American War

EXTENSION OF REMARKS

OF

HON. J. HAMILTON LEWIS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, February 6, 1939

ADDRESS BY A. F. W. SIEBEL, SEPTEMBER 17, 1936, AT MEETING OF EVANSTON CAMP 57, DEPARTMENT OF ILLINOIS, UNITED SPANISH WAR VETERANS

Mr. LEWIS. Mr. President, I tender an address delivered by Mr. A. F. W. Siebel, past judge advocate general, U. S. W. V. As it presents a brief résumé of the history of the Spanish-American War, it will be of interest to those who served in that war as well as to others. I ask that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The U. S. W. V., or United Spanish War Veterans, was born of men with a background of warfare that was unique in the history of nations. It arose from the ruins of wrecked humanity in an army that suffered more from the derilections of our own Governmen than from the firearms of the enemies. Men untrained, unequipped, and uncared for were sent against a trained foe who had not the courage to fight American men, who, by their dauntless energy, swept everything before them. A war humanity saw coming slowly but surely by reason of the tyranny of an absolute monarchy over helpless subjects in a neighboring island.

For centuries preceding our War with Spain, that tyrannical monarchy had misgoverned her colonial possession so severely that her subjects there were a pitiful, starved, helpless lot, and those in Cuba were dependent upon the charity of our people. Around Habana alone Clara Barton and her several agents fed 300,000 starving people. Several times the Cuban people made unsuccessful attempts to throw off the Spanish yoke but failed, and their punishment was most severe. One Spanish general, Martinez Campos, in answer to an order to enforce the demands of his Government, reported in 1878 as follows: "There are but two alternatives—one is to grant these people their just rights and the other is extermination, and I refuse to be the instrument of the latter." He was relieved and the inhuman punishment continued.

A state of rebellion existed in Cuba for some time prior to 1896, and President William McKinley said in his message of 1897 with reference to Cuba:

"The existing conditions cannot but fill this Government and the American people with the gravest apprehension. There is no desire on the part of our people to profit by the misfortune of Spain. We have only the desire to see the Cubans prosperous and contented, enjoying that measure of self-control which is the inalienable right of man, protected in their right to reap the benefits of the exhaustless treasures of their country.

"The cruel policy of concentration was initiated February 16, 1896. The production districts controlled by the Spanish armies were depopulated. The agricultural inhabitants were herded in and about the garrison towns, their lands laid waste, and their dwellings destroyed. This policy the late Cabinet of Spain justified as a necessary measure of war and as a means of cutting off supplies from the insurgents. It has utterly failed as a war measure. It was not civilized warfare. It was extermination."

And thus they starved the innocent children, women, and old men and reduced the manpower to ineffectual resistance. But perpetual resistance was the determination of the Cuban people.

We have mostly forgotten the conditions of Cuba, for misery is soon forgotten. The intervention of the United States was preceded by personal investigations of men of the highest integrity. The great Senator Thurston, of Nebraska, accepted an invitation of a New York newspaper to go to Cuba, investigate, and report. The Senator went, taking along his wife, who died there before their return. Upon his return he spoke in the Senate, in part as follows:

"I am here by the command of silent lips to speak once and for all upon the Cuban situation. I trust that no one has expected anything sensational from me. God forbid that the bitterness of a personal loss should induce me to color in the slightest degree that statement that I feel it my duty to make. I have no purpose to stir the public passion to any action not necessary and imperative to meet the duties and necessities of American responsibility, Christian humanity, and national honor. I would shirk this duty if I could, but I dare not. I cannot satisfy my conscience except by speaking, and speaking now. * * *

"Under the inhuman policy of General Weyler, not less than 400,000 self-supporting, simple, peaceable, defenseless country people were driven from their homes in the agricultural portions of the Spanish provinces to the cities and imprisoned upon the barren waste outside the residence portions of these cities and within the lines of entrenchments established a little way beyond. Their humble homes were burned, their fields laid waste, their implements of husbandry destroyed, their livestock and food supplies for the most part confiscated. * * * They were thus placed in hopeless imprisonment without food or shelter. * * * They were left there with nothing to depend upon except the scanty charity of the inhabitants of the cities and with slow starvation their inevitable fate. * * * Upwards of 210,000 of these people have already perished. The Government of Spain has never contributed one dollar to house, shelter, feed, or provide medical attention for these, its own citizens. Such a spectacle exceeds the scenes of the Inferno as painted by Dante. There has been no amelioration of the situation except through the charity of the people of the United States. * * * Spain cannot put an end to the existing condition. She cannot conquer the insurgents. She cannot reestablish her sovereignity over any considerable portion of the interior of the island and the revolutionists * * * cannot drive the Spanish Army from the fortified seacoast towns. * * * I never saw, and, please God, I may never again see, so deplorable a sight as the reconcentradoz in the suburbs of Matanzas. I can never forget in my dying day the hopeless anguish in their despairing eyes. Huddled about their little bark huts, they raised no voice of appeal to us for alms as we went amongst them. * * * The reconcentradoz—men, women, and children—starved, silent, famishing with hunger. Their only appeal comes from their

sad eyes, through which one looks as through an open window into their agonizing souls. * * * In Matanzas * * * there were 3,600 deaths in 3 months. In 1 day * * * 15 persons died in the public square in front of the executive mansion. * * * The ability of the people of Matanzas to aid is practically exhausted. * * * These people have no homes to return to. Their only hope is to remain where they are, to live as long as they can on an insufficient charity, and then die.

"The Government of Spain has not and will not appropriate one dollar to save these people. They are now being attended and nursed and administered to by the charity of the United States. Think of the spectacle * * * and yet there are those who still say it is right for us to send food, but we must keep hands off. I say that the time has come when muskets ought to go with the food.

"We asked the Governor if he knew of any relief for these people except through the charity of the United States. He did not. * * * I shall refer to these horrible things no further. They are there. God pity me; I have seen them—they will remain in my mind forever; and this is almost the twentieth century. Christ died 1,900 years ago, and Spain is a Christian nation. She has set up more crosses in more lands, beneath more skies, and under them has butchered more people than all the other nations of the earth combined."

That is the description of the conditions we faced as given by a great man.

Our consular representative pointed out the advantages to flow from the visit of national ships to the Cuban waters, in accustoming the people to the presence of our flag in the fulfillment of the mission of protection to American interests, even though no immediate need therefor might exist.

Accordingly, on the 24th day of January 1898, with the consent and approval of the Spanish Minister, the U. S. battleship *Maine* was sent to Habana Harbor, arriving there on January 25, and anchored at buoy No. 4 in 6 fathoms of water. A valiant crew she had—men who volunteered to serve at the outposts of our Nation and watch the horizon of the sea so that those nestling in the bosom of this hemisphere might sleep in peace and safety. They served where the billows surged back and forth, ever ready to respond to the wrath of the elements and to the call of duty; and there on that fateful night, February 15, 1898, they dreamed of the firesides back home, where America tenderly nurtured her future guardians. The god of dreams reigned supreme on board until Spanish treachery rent the ship asunder and sent 266 human souls to eternity. Fate decreed that sacrifice to the god of war that he, through his wrath, might restore 12,000,000 souls to their natural state of freedom and human existence.

On April 9, 1898, Congress adopted a resolution that the people of the island of Cuba are and of right ought to be free, demanding that the Spanish Government relinquish its authority and government in the island, and directed the President to call into actual service of the United States the militia of the several States to such an extent as might be necessary to carry the resolutions into effect. Spain deemed this a declaration of war and treated it as such. President McKinley called for volunteers and the American youth sprang from hill and vale, and, with a resolute determination to strike the tyrant's shackles from the limbs of oppressed humanity on this continent, kept step with the music of the flag until its spotless furls waved triumphantly from the ramparts of ancient castles, silently receiving the edicts of America's invincibility.

The motives that actuated our people in embarking upon a war for humanity were expressed in the proclamation of Gen. Nelson A. Miles to the people of Puerto Rico in language more eloquent than I could compose, as follows:

HEADQUARTERS OF THE ARMY OF THE UNITED STATES,
Ponce, P. R., July 28, 1898.

To the Inhabitants of Porto Rico:

In the prosecution of the war against the Kingdom of Spain by the people of the United States, in the cause of liberty, justice, and humanity, its military forces have come to occupy the island of Porto Rico. They come bearing the banner of freedom, inspired by a noble purpose to seek the enemies of our country and yours, and to destroy and capture all who are in armed resistance. They bring you the fostering arm of a nation of free people, whose greatest power is in its justice and humanity to all those living within its fold. Hence the first effect of this occupation will be the immediate release from your former political relations, and, it is hoped, a cheerful acceptance of the Government of the United States.

The chief object of the American military forces will be to overthrow the armed authority of Spain and to give to the people of your beautiful island the largest measure of liberty consistent with this military occupation. We have not come to make war upon the people of a country that for centuries has been oppressed, but, on the contrary, to bring protection, not only to yourselves but to your property, to promote your prosperity, and bestow upon you the immunities and blessings of the liberal institutions of our Government. It is not our purpose to interfere with any existing laws and customs that are wholesome and beneficial to your people, so long as they conform to the rules of military administration of law and justice.

This is not a war of devastation, but one to give to all within the control of its military and naval forces the advantages and blessings of enlightened civilization.

NELSON A. MILES,
Major General, Commanding the United States Army.

Mighty men came forth into the scenes of activities that have not received the credit due them. Beside that great soldier, Gen. Nelson A. Miles, we find the dashing cavalry leader, Gen. James A. Wilson, Gen. Joseph Wheeler, Gen. H. W. Lawton, Gen. Leonard Wood, General Chaffee, Gen. Arthur MacArthur, Gen. Elwell S. Otis, Gen. Fred Funston, Gen. Charles King, Gen. Lloyd Wheaton, Gen. John R. Brooke, Gen. Fitzhugh Lee, General Shafter, and others. And there were men of the sea with dauntless courage and ability whose names shine with splendor from the dome of our national history—Admiral George Dewey, Admiral Winfield Schley, Admiral Sampson, Admiral Richard Hobson, Capt. R. Evans, Captain Sigbee, Captain Philip, and many others. The leadership of those men inspired us on in the performance of our duties and the dash and vigor of Dewey's men at Manila characterized every engagement, whether on land or on sea.

Our Navy emerged from an unknown quantity to a powerful fighting unit. Never was a fleet of battleships crowned with such complete victory as ours at Manila and Santiago Harbor. They fought their battles as gentlemen of the sea and after the victors took the victims, Admiral Cervera reported to his Government as follows: (referring to our Navy): "They were chivalrous and courteous; they clothed the naked, giving them everything they needed; they suppressed their shouts of joy in order not to increase the suffering of the defeated; and all vied in making our captivity as easy as possible."

After the naval battle at Santiago Admiral Schley's report to Sampson says:

"I have never in my life served with a braver, better, or worthier crew than that of the *Brooklyn*. During the combat, lasting from 9:35 a. m. until 1:15 p. m., much of the time under fire, they never flagged for a moment, and were apparently undisturbed by the storm of projectiles passing ahead, astern, and over the ship. The result of the engagement was the destruction of the Spanish squadron and the capture of the admirals and some thirteen to fifteen hundred prisoners, with the loss of 600 men estimated by Admiral Cervera.

"The casualties on board the *Brooklyn* were: Chief Yeoman G. H. Ellis, killed; Fireman J. Burns, severely wounded.

"The marks and scars show that the ship was struck about 25 times, and she bears in all 41 scars as the result of her participation in the great victory of your force on July 3, 1898. The speed-cone halyards were shot away, and nearly all the signal halyards. The ensign at the main was so shattered that in hauling it down at the close of the action it fell in pieces."

Admiral Cervera also said after the conflict:

"There could be no doubt as to the outcome, but I should never have believed that our ships would be destroyed so rapidly."

After the destruction of his fleet, Cervera jumped into the water, followed by his son and two seamen. He was picked up and placed aboard the U. S. S. *Gloucester*. This vessel had several hundred insurgents on board, several of them wounded. The rebels said to him if he would go with them they would assist him. He refused, saying, "We have surrendered to the Americans." The proud old Spanish man of the sea maintained the traditions of his fighting sphere.

But they say that the War with Spain was a picnic and that no particular hardships were endured. Were they? Let's read the record.

It started with the blowing of 266 human beings into eternity. Human beings that considered life worth living, even as you and I. Then President McKinley called for volunteers and 300,000 American youths sprang to arms, realizing that they would be sent to southern climates laden with malaria and yellow-fever germs where Spanish battleships and land troops were watching for an opportunity to send them to their graves.

Our men had no training and no equipment with which to protect themselves. In some instances they were drilled with sticks and in others antiquated single-shot, black-powder Springfield rifles, in the subsequent use of which they exposed their location as an admirable target for the enemy. The Spaniards did take advantage of this with death-dealing instruments of warfare that were up to date, and if their degree of patriotism to fight for their country with first-class equipment had been one-half as ardent as ours was with antiquated equipment, your Republic might have sustained some severe losses. Let's read the record of Admiral Dewey:

On April 6 Dewey purchased the English steamship *Nanshan* and her cargo of over 3,000 tons of Cardiff coal and engaged the services of her crew. Three days later he purchased for $90,000 the Manila-Hong Kong steamship *Zafiro* and her provisions in full and placed aboard of her all his spare ammunition. The crews of the squadron were already putting the dull, dark, drab war paint on their vessels when, on April 24, Dewey received the following dispatch from Washington:

"War has commenced between the United States and Spain. Proceed at once to Philippine Islands. Commence operations at once, particularly against the Spanish fleet. You must capture or destroy. Use utmost endeavors."

To read the report of the Battle of Manilla by Admiral Dewey sounds like a fairy tale. May I relate some of the preparations he made and a part of his report.

As early as January 27, the Chief of the Bureau of Navigation ordered Commodore Dewey, then at Yokohama, Japan, to retain until further orders the crew of the squadron whose terms of enlistment had expired, and on the day of the blowing up of the *Maine* the Assistant Secretary of the Navy sent him the following telegram despatch:

"Order the squadron, except the *Monacacy*, to Hong Kong. Keep full of coal. In the event of a declaration of war with Spain, your duty will be to see that the Spanish squadron does not leave the Asiatic coast, and then offensive operations in Philippine Islands. Keep *Olympic* until further orders."

Dewey lost no time and reports:

"MANILA, May 1.—The squadron arrived at Manila at daybreak this morning. Immediately engaged enemy and destroyed *Reina Cristina, Castilla, Don Antonio de Ulloa, Don Juan, de Anstra, Isla de Luzon, Isla de Cuba, General Lezo, Marquez del Duero, El Correo, Velasco*, 10 capital ships and a transport. I shall destroy Cavite arsenal dispensatory. The squadron is uninjured. Few men slightly wounded. I request the Department will send immediately from San Francisco fast steamer with ammunition."

On May 4 Dewey took possession of Cavite and destroyed its fortification and cut the cables to the mainland. He reports further:

"I was unable to obtain complete accounts of the enemy's killed and wounded, but their loss was very heavy. The *Reina Cristina* alone had 150 killed, including the captain, and 90 wounded.

"The damage done to the squadron under my command was inconsiderable. There were none killed, and only seven men in the squadron very slightly wounded. Several of the vessels were struck and even penetrated, but the damage was of the slightest, and the squadron was in as good condition as before the battle."

On the 3d and 4th of May Dewey took possession of the island arsenals, effected safe landing, was in complete control, and the Spanish squadron was no more. A busy 4 days for our comrades.

When Schley engaged the Spanish fleet in a running fight until he plugged them one by one until scores of first-class battleships were either sunk or captured, it was not a game of pleasant pastime but a superhuman effort that wrecked men in a supreme sacrifice. It was death to one side or the other.

The trip of the battleship *Oregon* from the Pacific around the horn of South America to Cuba to engage in battle was no frolic.

The charge at El Caney and San Juan Hill and trench life around the swamps of Santiago was no picnic.

The forced marches through the hills of Puerto Rico in uniforms fit only for the icy northland and the complete victory in all engagements was no game of pleasantries.

Seven hundred and seventy-eight engagements were successfully fought under the torrid heat of the Philippine sun, and that required real men.

Listen to the tale of Company C of the Ninth United States Infantry. After assisting in quelling the Boxer uprising it remained for duty in China for a year, later guarding Aguinaldo as a prisoner of war, and then was sent into the mountains to subdue the savages who were burning towns and murdering civilians. They passed through a trackless jungle cleft by immense mountain gorges, fording deep and rapid streams, through dense forests of the mountains, where enemy spring traps and pitfalls with sharp pointed stakes at the bottom cunningly covered with earth and leaves awaited the unwary as instruments of torture and death. They arrived at Balangiga with 78 men and were there brutally slaughtered by treacherous natives, leaving only 25 men alive.

And there were sacrifices in many places as tragic as all of these.

The most inexcusable crime was the absence of food, medical supplies, and sanitary measures for the preservation of health. Embalmed beef that permanently impaired the health, fever for which no medical aid was available, and a Medical Corps that was a sham and disgrace.

Sanitation and care of men was unknown or unheeded. After we captured Santiago, the whole army of invasion would have been wiped out in 2 more weeks by fever if the War Department had not finally yielded to the almost insubordinate demands of the officers that the force be taken away while any of the soldiers were still able to walk. We recall distinctly the death transports which brought back the fever-stricken troops. A little more resistance at Washington that the men remain uselessly in the malarial districts and none of them would have returned.

An inexperienced nation, unprepared in equipment, organization, and knowledge, tried to fight a war and punished its soldiers much more severely than the enemy injured them.

Significant figures of the Spanish War are these:

Killed in action, and died of wounds	1,704
Died of disease	8,933
Total deaths	10,637

You will, therefore, see that approximately five times as many men were taken by disease, than were killed in action, with no figures at hand to indicate how many died of disease after they returned home.

This is an indictment of men assigned to guard the health of our troops, men who long ago were convicted at the bar of public opinion, and whose punishment was fixed at eternal shame.

The Spanish War, taking Regulars as volunteers, which they were, was 100 percent volunteers. The Civil War had 62 percent volunteers, and the World War 36 percent. It lasted from April 9, 1898, to July 2, 1902, with an average length of service per man of 14 months. The men engaged in our various wars were:

The Revolution	309,791
War of 1812	576,622
Mexican War	112,230
Civil War	2,778,304
Spanish War and Philippine Insurrection	459,474
World War	5,019,874

Americans in foreign service:

Civil War		Navy only
Spanish-American War	percent	61
World War	do	46

Ours was an army composed entirely of volunteers, the most patriotic and worst-treated army ever assembled by the American Republic. No American troops were ever so completely deprived of what the Government could well afford to provide for them, but disgracefully permitted to drift into the coffers of private grafters who enriched themselves at our expense.

The achievements of our Army, notwithstanding the embarrassments of its limited equipment and transportation and the scandal of its corrupt food supply, were successful to a marked and unprecedented degree. The campaign was aggressive from start to finish. Not a single reverse or disaster occurred. Not a single soldier, gun, color, nor an inch of ground was captured by the enemy. Twelve million people were liberated from despotism and our victorious Nation became a world power. The war cost us $1,200,000,000 and we received in return property worth $8,000,000,000. No war was ever so profitable to us in dollars, but none was ever conducted so inefficiently in the care of men's health.

In that conflict we plucked victory from the mouths of Morro Castle; dashed the Spanish Navy to the bottom of the sea; swept away all resistance of the Philippines; planted Old Glory on the mountain peaks of Puerto Rico; and gave liberty to a worthy people struggling against tyranny. The celerity and completeness of our work was the marvel of the nations of the world.

The youth of the South fought beside the youth of the North, and for the first time we destroyed every vestige of sectionalism and healed the wounds of the Civil War. The past was forgotten and by reason of that war we became a united people. No East, no West, no North, no South; one great, grand country, magnificent in motives, invincible in power.

We came, we saw, we conquered. And then we returned from whence we came and our grand columns of volunteers faded away among the civilians at home like mist before the sun and as active soldiers we were no more. And what was it all for? What inspired us to answer the call of President McKinley? All for the glory of a government we believe in, a government founded by soldiers, preserved by soldiers, and glorified by soldiers. A Government welded together by the wisdom of the ages. A government that safeguards our liberties but only so long as men are willing to fight for its preservation. No one wants war, particularly the men that must carry the burden of the conflict, but there is no security unless man gives it, and ingratitude will eventually receive a deaf ear.

The soldier volunteers with faith in the Government that it will care for him when afflictions come. He enlists with a feeling that if his services deprive him of earning capacity his Government will make good. And woe to the government that neglects its duty to the man that made it. When men feel that governments have not kept faith, then governments will perish.

With unrest and insecurity prevailing, men of wealth are apprehensive of the future. And well may they be so, for avaricious and uncontrolled mobs are but samples of hordes that would overrun the world if it were not for the fidelity of the men that gave and give them security. Such men should realize that if the heroes of yesterday are to be the paupers of today, volunteering for war service will cease, and conscripting men will be dangerous. Present civilization has not and will not abolish war. The impractical dreamer may talk of orderly tribunals and learned referees; we may sing in our schools the gentle praises of the quiet life; we may strike from our books the last note of every martial anthem, but until race distinction disappears and the judgment of all men come to the same conclusions wars will come and wars will go. Men may prophesy and women may pray, but universal peace will come here to abide only when the innocent dreams of childhood are the accepted charts to guide the destinies of men.

The U. S. W. V. was organized to keep alive the spirit of comradeship planted within our breasts while rendering common service under one flag. Four hundred and fifty-eight thousand men were engaged in a short but decisive conflict. Of those, but 179,069 men remain. They are passing on at the rate of 6,000 comrades a year. One hundred and six thousand four hundred and ninety-four of these belong to the U. S. W. V., with 5,615 of them in Illinois, with their monthly meetings and continual exhortations to the youth of our land for patriotic devotion to the Government we fought for. A government that may not be perfect, but is the best that has yet been devised by the mind of man. A government whose edict we obeyed by going forth to fight your battles and gave you victory from wherever we went. A government that must not be overthrown but must be perfected by a process prescribed. If we deviate from the process, the substance will fail. The United Spanish War Veterans stand for strict adherence to law and honesty in public affairs. We engage in no marches to the Capital and want no Treasury raids, but we insist upon teaching those that gather riches unto themselves while soldiers and sailors fight their battles, that those possessions are secure to the owners thereof only so long as men are willing to fight for them, and we further insist that men who made and saved our Government be given adequate compensation for those services, whether in the form of pensions or whatever it may be designated. We tarry here only a few more years, but while we're here we intend to carry along the lines our forefathers planned.

A Giant Conspiracy Against the Consumer

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1939

RADIO ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK, ON FEBRUARY 4, 1939

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD I include a radio address delivered by me over radio station WABC, at New York City, and the Columbia network, Saturday evening, February 4, 1939, at 10:45 to 11 o'clock, eastern standard time:

From time to time during the past few years I have raised my voice in speeches over the radio and on the floor of Congress to sound a warning against legislation that penalizes the consumer—making him pay more.

This type of legislation has masqueraded under high-sounding names and has been loudly proclaimed to be designed for very laudable purposes. But when the false whiskers were stripped away and the disguising make-up removed, there stood revealed in each case the same old greedy purpose of legislating profits into the pockets of certain types of middlemen. And, of course, there is usually only one place that these extra profits can come from, and that is out of the pockets of the consumers—you and me and the millions of others who have to spend most of what we make merely to feed and clothe and house ourselves and our families, educate our children, and provide for our old age.

When as ranking member of the Judiciary Committee of the House I attacked certain hidden features of the Robinson-Patman bill back in 1936; when I denounced as price-fixing and price-raising measures the misnamed Fair Trade Acts enacted by unsuspecting State legislators and later made effective in interstate commerce by the Federal Miller-Tydings Act of 1937; and when last year and today I denounce the Patman anti-chain-store bill, proposing to tax the chain stores out of existence, I have always had in mind those millions of consumers who are being forced to pay more.

Fortunately, the efforts of myself and others were successful in eliminating some of the worst features from the Robinson-Patman bill as it was presented in its original form. And I predict here and now that the Miller-Tydings Act will not long remain upon the statute books—at least, not in its present form. Even the Attorney General's recent report clearly indicates this. The Patman anti-chain-store bill not only lost many of its supporters in the last congressional election but the people are rapidly awakening to this particular threat to their pocketbooks and are letting Members of Congress know in no uncertain terms that they will not stand for the placing of special punitive tax burdens on chain stores for the mere purpose of giving some other special group of distributors a chance to extract higher prices and profits from the consumer's pocketbook.

As I have said, only a few of us in Congress saw the ugly claws of selfishness and greed concealed under the fine wrappings of high-sounding words and phrases such for instance, as "prevention of price discrimination," "fair trade," "equality of opportunity," "help the little man," and similar emotional expressions designed to deceive legislators and catch votes. We in Congress saw the terrific pressure that was brought to bear upon us by highly organized minorities, particularly by the National Association of Retail Druggists, organized in every congressional district of the United States, who did not merely ask but demanded that Congressmen do their bidding—the most amazing case of ruthless lobbying by a small minority that I have ever seen during my 17 years in Congress.

But it took a great national business scandal—the notorious McKesson-Robbins case—to bring out fully the picture of the huge plot and conspiracy against the consumer's pocketbook, which I will now try to describe.

First you must realize that the present McKesson-Robbins Co., which Mr. Coster-Musica put together, includes some 64 large wholesale drug and liquor distributing houses scattered over all parts of the United States. These wholesale houses sell very largely to independent retail druggists, since the chain drug stores that buy in large volume go direct to the manufacturer and get their goods at less cost because they can save some of the expense when dealing in this way. One step in the distributing process, namely, the wholesaler, is largely removed.

Mr. Coster-Musica dominated the National Wholesale Druggists' Association not only because of his large ownership of wholesale drug houses over the United States but also because of his willingness to spend money on legislative matters. Incidentally, the vice president of McKesson-Robbins was president of the National Wholesale Druggists' Association; so Mr Coster-Musica said to his associates, in effect, "Let us get a law enacted that will freeze the wholesaler into the distribution picture, so that he can never be destroyed, by preventing the manufacturer from giving the large retailer, whether chain or independent, as much of a discount as the manufacturer is now giving him."

This scheme, if successful, would, of course, tend to force all goods to flow through the wholesaler rather than directly to the retailer or consumer. The wholesale druggists found the United States Wholesale Grocers' Association just as selfish. So they joined forces in this attempt and widened the conspiracy against the consumer.

Then they espoused the so-called anti-price-discrimination bill. There were certain parts of this Robinson-Patman bill that were excellent in purpose. There were certain bad practices in the relations between manufacturers and distributors that needed to be cleared up. Mr. PATMAN is to be commended for his efforts to eradicate these evils. No one that I know of opposed the parts of the Robinson-Patman bill which covered unfair discrimination in prices as between purchasers. All the propaganda and ballyhoo was directed at these bad practices that needed to be corrected. But when I and others, in Congress and outside of Congress, endeavored to show that the real purpose of the bill in the minds of its druggist and grocer backers, and as admitted in one paragraph of the report of the Senate Judiciary Committee, was to prevent economies of mass distribution from being passed on to the consumer, thereby favoring the wholesaler and small independent dealer, and "framing" the consumer, we were branded as enemies of the small dealer.

Of course the wholesalers kept in the background. The "front" was put up by the retail druggists and a few retail grocers. These retailers were told—and I quote directly from Mr. PATMAN's statement on the floor of the House on March 9, 1936—"If the Robinson-Patman bill is enacted into law, all merchants will receive the same prices from the manufacturer that the chain stores now receive." With that prize dangled before the small inefficient dealer, it is no wonder that they went to work on their Congressmen in most vigorous fashion.

It was an amazing thing to see the small-store keepers being used as cat's-paws to pull the chestnuts out of the fire for the big wholesalers like the McKesson-Robbins Co.

While we succeeded in getting some very important changes in the language and interpretation of the Robinson-Patman bill, the consumer is still penalized by this legislation.

The next step in this Nation-wide plot of certain wholesalers to legislate themselves into an unfair, uneconomic, and artificially advantaged position consisted of the so-called fair-trade acts railroaded through most of the State legislatures without public hearings and under such gross misrepresentations that few legislators and practically no consumers knew what was going on. This legislation was also largely stage managed by Mr. Coster-Musica, and large sums of McKesson-Robbins were spent in lobbying these bills through the State legislatures. In Connecticut a grand-jury report last May showed that Coster-Musica and some retail druggists spent many thousands of dollars in improper efforts to influence legislation. Some of those who were indicted in this connection in Connecticut later pled guilty. While Connecticut is the only State in which such outrageous conduct has been officially brought to light, there were a number of other States in which extraordinary methods were employed to get the so-called fair-trade bills through the legislatures, and which may soon be exposed.

What were the National Wholesale Druggists' Association and the National Association of Retail Druggists trying to gain from these State and Federal price-fixing laws? Here again they practiced outrageous deception. Members of the State legislatures and voters were grossly and deliberately misled. They were told that these were not price-fixing bills; that all they, the druggists, wanted was the right to set minimum or "floor" prices to prevent "loss-leader" selling—sales below cost. But now that these laws are on the statute books what do we find? We find that instead of being mere "floor" or "minimum" prices, these fixed prices are the actual profitable selling prices in 90 to 95 percent of the cases. It has become a guaranteed profit-fixing scheme. We find also that instead of being used for the protection of the manufacturers, as was represented, the druggists' associations, both wholesalers and retailers, have turned the law around and are coercing and intimidating the manufacturers into fixing higher profits for the distributors. The majority of manufacturers never did want this legislation, which was represented as being passed for their benefit. This is just another illustration of the deception practiced by those backing this bill for their own selfish ends.

But remember this, Mr. and Mrs. Consumer, the wholesale and the retail druggists simply can't get bigger margins of profit unless they charge you higher prices. Again you get it in the neck.

Now we come to the third step in this gigantic conspiracy, namely, the Patman antichain store bill—a bill frankly designed to burden chain stores so heavily with punitive taxes that the larger chains will be completely destroyed and the others terribly crippled.

I have high regard for my colleague, Mr. PATMAN, the distinguished gentleman from Texas. I admire his perseverance, but I fear he is enthusiastically misguided.

Since you are now beginning to see the broad outlines and purposes of this wholesaler-retailer plot, I give you three guesses as to what forces are actively behind this Patman anti-chain-store bill. Your guess is right. Most of the same pressure groups that forced the passage of the Robinson-Patman bill and the price-

fixing bills. The National Association of Retail Druggists, backed and supported by the wholesale druggists and the wholesale grocers, are today using the very same high-powered tactics they used in lobbying through the other bills. Every Congressman in his home district is waited upon by a delegation of druggists and importuned to support the Patman bill. If he refuses, he either is or will be threatened—if the druggists run true to the form they used in lobbying for the Robinson-Patman and the Miller-Tydings bills.

You, Mr. and Mrs. Consumer, do not need anyone to explain to you what it will mean in dollars and cents—in your everyday costs of living—should these plotters be successful in this third step of their giant conspiracy as they have already been partly successful in the other two steps.

If the chain stores are either forced out of business or so loaded with special punitive taxes as to be compelled to raise their prices to about the level of the inefficient independent retailer, you know what that will mean to you in the way of increased living costs. Mr. Donald Richberg said in a speech recently that it would be equivalent to something like a 10 percent cut in wages.

It should be noted here that the efficient independent merchants are not asking for this legislation. Thousands of them—particularly grocers—have banded together and adopted chain-store methods and are doing very nicely. They do not ask for any legislative handicap over their competitors. It is the wholesalers who find themselves pressed and in some cases crowded out of the picture, and their services performed at less cost by other and more modern methods. It is they and the small inefficient independent druggists and grocers who have failed to keep up with modern progress who want the Patman chain-store tax bill enacted into law.

How long, I wonder, is Congress going to allow itself to be led around by the nose by a little group of some 20,000 retail druggists and a few hundred wholesale druggists? They are the arch conspirators. They, together with a few scattered grocers' groups who support this legislation, make up less than 5 percent of the retailers of this country. They represent far less than one-tenth of 1 percent of the population of this country. Isn't it about time that the consumers, who represent 100 percent of the population, wake up and come a little closer to exercising their true weight in this situation?

Fortunately that is just what they are doing. During the past year a tremendous change has taken place in consumer activity in these matters. Three great national farm organizations—the American Farm Bureau Federation, the National Grange, and the National Cooperatives Council—also the American Federation of Labor, many national women's organizations, the American Newspaper Publishers Association, the National Association of Real Estate Boards, and scores of other powerful groups, have all gone on record as vigorously denouncing legislation of this type.

If consumers' groups will keep up this display of intelligent interest and will let their State and Federal legislators know what they think about these laws and proposed laws, I can promise you not only that no more legislation of this type will get on the statute books, but that existing State and National laws will be critically scrutinized and either repealed or revised so as to serve the consumers' interest instead of penalizing them. At least this conspiracy against the consumer will have been scotched.

Coster Musica, with all his criminal activities and his spectacular exit from this life, may have done the consumer a service. Perhaps it required some dramatic exposé of this kind to warn the consumer of the dangers involved in these insidious legislative trends.

Now that you have had the veil drawn back and have had a good look at the three-phase conspiracy aimed at your pocketbooks, I trust that you will make your views known to your Congressmen and your State legislators.

The Federal Chain-Store Tax Bill Should Become a Law at This Session of Congress

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1939

RADIO ADDRESS BY HON. WRIGHT PATMAN, OF TEXAS, FEBRUARY 5, 1939

Mr. PATMAN. Mr. Speaker, permission having been granted February 2, 1939, I am inserting herewith a copy of an address delivered by me February 5, 1939, at the Department of Interior auditorium, and also broadcast over WOL, Mutual Broadcasting System, American Forum of the Air, on the subject of H. R. 1, the Federal chain store tax bill, as follows:

Ladies and gentlemen, Should H. R. 1, a bill providing for a Federal tax on retail stores, be enacted into law? This is the question under discussion.

The importance of such a law does not lie so much in the actual collection of revenue as it does in the method of correcting a bad economic system.

TAX APPROACH NO NEW PRECEDENT

For many years both major parties, Republicans and Democrats alike, have used the taxing power of Congress to reach a worthy objective when an otherwise direct approach to the problem was held doubtful as to constitutionality.

WILL NOT DESTROY ANY CHAIN COMPANY

If this bill is passed, it will not destroy chain-store companies, but it will regulate the selfishness and prevent much of the greed of the few money masters who operate them. There are now approximately 1,500 chain-store companies in the United States. The average chain has 35 stores, yet the tax under this bill will be so small that such an average chain will have no reason to object to its payment.

OBJECTIONS FROM 1 PERCENT

Objections to this proposal come from the 1 percent of chain-store company heads who operate principally from Wall Street and who seek absolute control over the retail distribution of this Nation. Such demonstrated greed should be restricted by law in order that many other people of this country may also have an opportunity.

NO BENEFIT TO PEOPLE DESTROYED

No benefit claimed for the people through the chain-store system will be destroyed by the passage of this bill, which will seriously affect only 1 percent of the chain-store companies and will not affect voluntaries and cooperatives that are individually owned.

WILL 10-PERCENT SAVING COMPENSATE FOR DISADVANTAGES?

Representatives of chain-store systems say that the people save about 10 percent on their purchases through the great multiple-store networks. I concede such a saving is possible while the chains are busy destroying independent merchants in any locality. But when they eventually get control the prices always go up again. If the consumers get this saving, they will continue to get it if this bill passes, since it will only seriously affect about 1 percent of the chain-store companies.

Is a 10-percent saving, if obtained, sufficient to compensate the people for their losses through a chain-store system operating principally from one city? The losses through such a system are putting millions of people out of work, draining net profits from local communities, and pouring them into a few banks in one city, thereby putting control of the wealth of the Nation into the hands of a very few men. These losses are also creating a monopoly for the benefit of the few; destroying local communities, which include homes, churches, and schools; destroying the competitive system that has helped to build this country. These losses are creating a Fascist state.

BILL MUST BE IN PUBLIC INTEREST

Passage of this bill cannot be justified in order to assist the competitors of chains. The people themselves must be convinced that this bill is definitely in the public interest; otherwise it should not be passed.

WHAT ABOUT CONSUMER?

"What about the consumer?" is the first question that is usually asked. Who is the consumer? He is a customer of the retailer. He is anxious to buy for a fair price. It is not in the consumer's interest to be a party to any system that will force prices so low that the purchasing power of the farmer, or the pay of the wage earner, suffers destruction. For if they are destroyed, they, too, will become the unhappy victims of an uneconomic system. We must have good prices and good wages.

FARMER TO BE CONSIDERED

The people who live in the cities realize now, more than ever before, that they "are their brother's keeper"; that they must "let live" as well as "live"; and that if the farmer works for starvation wages, he cannot buy what is produced by the people who live in the cities. Therefore, the city consumer is harmed—not helped—through such a system. The consumer is entitled to a fair price and should not want to become party to any scheme that robs the farmer of a fair opportunity to make a living.

OPPORTUNITIES FOR YOUNG AND OLD TO BE CONSIDERED

In addition, many consumers have sons and daughters who are preparing themselves for careers in business. What chance will these young people have if a few men control the privileges and opportunities of our Nation?

The consumer is also thinking about the time when he will become 35 or 40 years of age. He wonders what will happen to him if he should lose his job? He could not obtain employment from one of the large chain store concerns because he would be too old. Should the opportunity of going into business for himself, to earn a livelihood, be foreclosed to him in order to give a few people such great advantages? I say emphatically "No."

So, if the consumer is forced to pay a few cents a day extra in patronizing independent businessmen, it only represents a good insurance premium toward granting equality of opportunity to his children when they step out into life's battles, and an opportunity for himself if misfortune should overtake him at a time in life when he will not be employable in private industry.

WATCHMAN FOR PEOPLE

A Member of Congress is supposed to be a watchman for the people. If he sees danger approaching the public, it is his duty to warn, even though it would be much more pleasant and profitable for him to remain quiet.

It is my belief that the concentration of wealth and power through the 1 percent of the chain-store systems of this country is a very great evil, and I believe it my duty to call the people's attention to this problem in the hope that the people will correct it. We must view it not from the standpoint of today so much as 5 years or 10 years from now. We must all take definite steps to make this country a better place in which to live in the future. Government must protect the weak against the strong as its first duty.

Every business cannot be conducted by local people or people within one State, but we are safe in saying that there are certain types of business that local people will conduct if they are given the opportunity to do so. I refer to banking and retail distribution.

NO INTERSTATE CHAIN BANKING

Today banking is so safeguarded from chain monopoly that it is a violation of the law for one bank to own a branch in another State. Our bill, if passed, will adopt the same policy for retail stores.

FARMERS WELFARE INVOLVED

How will the farmer be affected by this bill?

The large chains have framed up on the farmer and practically ruined him. Recently the largest chain in America carried the following advertisement all over the Nation. I quote:

"We have got food prices pinned down to startingly low levels and are holding them down. We will keep them down—way down—every day in the week."

That statement means that the producers of dairy products, poultry, eggs, tomatoes, potatoes, and all fruits and vegetables will continue to receive below the price of production in order that this concern might control prices and get a firmer monopolistic grip upon the throats of the American people.

Mr. City Consumer, I plead with you to study this question. It goes back much farther than saving a few cents on farm products. Farmers work hard. They are entitled to a fair price and a sufficient income to enjoy the American standard of living, which they are not getting.

These big monopolistic concerns are destroying farm prices, placing farm families upon starvation, depriving farm children of an opportunity in life. And doing all this in your name and claiming that, as chains, they are a great benefit to you, the city consumers.

Time and time again the Federal Trade Commission has reported, in effect, that the 1 percent of the chain store companies (seriously affected by this bill) are operating against the interest of the farmer.

MIDDLEMEN WERE TO BE ELIMINATED

When the interstate chain-store system started operation, the claim was made that producers would enjoy greater profits; that consumers would benefit through increased savings; that definite economy would result through elimination of wholesalers and by taking traveling men off the road.

What happened? Why, the chain managements immediately set up their own wholesale houses and saved not one penny on distributive expense. They caused hundreds of thousands of traveling men to be taken off the road and thus seriously affected our unemployment problem. At the same time they have not saved the consumer one extra penny and have not given the producer one extra penny.

The United States Government figures disclose that the spread between the producer and consumer is much greater under interstate chain-store domination than under the old competitive system.

So, the move that threw thousands of people directly into unemployment, also poured millions of dollars into the pockets of a few Wall Streeters. It also gave added millions to a few ambitious American girls, who took the money to foreign lands for their count husbands and no-account husbands to spend abroad.

CERTAIN INSURANCE COMPANIES AND INTERSTATE CHAINS

Obviously a long discussion is impossible. But in the brief time remaining, I desire to invite your attention to the following: I am informed that executives of certain large life-insurance companies, seeking a place in which to invest their funds, and representatives of certain large chain-store systems anxious to control retail distribution (and willing to pay high rent in certain localities) have been conferring.

ALL TOWNS OF 1,000 OR MORE TO GET CHAIN BUILDINGS

It is contemplated that the insurance companies will construct buildings in towns and cities, down to 1,000 people, and rent to the chains for operations. Each building, to be constructed, will be sufficiently large to accommodate the chain companies necessary to do the retail business of that particular town. Then if an effort is made to curb the greed of these absentee owners, it will be pointed out that the insurance money of widows and orphans is tied up in these buildings.

Suppose they get by with this contemplated plan? What will happen to community life in America? There will be no local bank, no local lawyer, no local insurance agent, no local print shop or newspaper, and certainly no local druggist or grocer.

What will be the economic consequence of such a condition? We will have a nation of clerks and no one sufficiently able to support community life. Will we have more opportunities for all, or will we let a few men in Wall Street own, control and dominate these privileges?

Would you, the consumer, rather buy from a New York concern, in order that you may save a few cents a week, or would you encourage local business in your own community which might eventually be in the hands of your son or yourself?

NET PROFITS SHOULD REMAIN IN COMMUNITY

Net profits are the foundation stones upon which your community is built. If net profits remain, they go into your local bank and become a reserve that may be expanded to accommodate local credit needs. If net profits leave your town they go to buy automobiles in some other place; they build churches and schools in some other place or they swell the wallets of people who do not need more money.

The farmer's gross income has drastically decreased during the rapid expansion of the interstate chain-store system. I say to you that interstate chains are either a good thing to be encouraged or a bad thing to be curbed.

THINK IT OVER

The best way to judge this problem is to consider what would happen if interstate chains had monopolistic control of all retail distribution in this country. In other words, if one building, of sufficient size to accommodate the retail needs of a town of from 1,000 to 5,000 people, should be constructed in such towns, what would happen to them? Would these towns grow and be prosperous or would they decline and be destroyed? Think it over.

INDEPENDENT MERCHANTS BEING PUT OUT UNFAIRLY

In determining the amount of business that is being taken over by the vast network of interstate chains, do not consider the whole United States, as that is not a fair illustration.

Consider only those areas where chains operate and consider the volume of business done by them in these areas. Do not resort to the dodge of including lines of business in which chains are not engaged and the small establishments in areas where chains do not operate.

IF PEOPLE WANT THIS LAW IT WILL BE PASSED

Remember this bill is in favor of you, your children, your home, your community, your State, and your Nation.

This bill—the Federal chain-store tax bill—will become a law only by the will of the citizens of the United States.

The unmistakable voice of the people will be heard by Members of Congress who are always alert to the desires of constituents.

Write to your Congressman and let him know how you feel about this community preservation proposal. Those of you who wish more detailed information regarding H. R. 1 may obtain it by addressing your request to my office—Congressman Wright Patman, Washington, D. C.

Thank you very much and good evening.

P. W. A. Writes a New Chapter

EXTENSION OF REMARKS

OF

HON. SAM RAYBURN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1939

RADIO ADDRESS BY HON. HAROLD L. ICKES FEBRUARY 6, 1939

Mr. RAYBURN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following radio address entitled "P. W. A. Writes a New Chapter," by Federal Public Works Administrator Harold L. Ickes, delivered on Monday, February 6, 1939, from Washington, D. C.:

Seven months ago I reported to the Nation that P. W. A. was on a timetable; that it was facing a task on a schedule that would test its mettle to the utmost. You will remember that when the new P. W. A. program was authorized by Congress, the business cycle had taken another downward swing. Industrial activity was falling off. Unemployment was rising. It was necessary that a quick remedy be applied and the Nation again turned to the Public Works Administration.

P. W. A. met the emergency of 1938. Alert to the task ahead of it and fully conscious of the heavy responsibility involved, the Public Works Administration went to work. Today, P. W. A. is on time. Its undertakings are 100 percent under construction. Employment at the site of construction and in the mills and factories supplying materials is rising. The program is exerting its expected regenerative effect on the Nation's economy.

Seven months ago I discussed the difficult assignment given to P. W. A. Congress, trying a new experiment, had written in the law specific time limitations in the form of three dead lines which P. W. A. had to meet. These were: (1) That no application could be accepted after September 30, 1938; (2) that all projects receiving P. W. A. funds must be under construction by January 1, 1939; and (3) that the entire program had to be completed substantially by July 1, 1940. To make this program possible, Congress authorized a fund of $965,000,000, which, under the P. W. A.

system, was enough to finance more than $1,500,000,000 worth of projects.

The Nation was quick to respond. Cities, States, and other public bodies poured their applications into P. W. A. for needed physical improvements. By September 30 our offices were swamped with 12,814 requests for projects. Obviously, this was far in excess of what we could undertake with the funds available.

Approval of projects was started immediately upon the signing of the bill. But after the flood of applications ceased, we still had the immense job of getting under construction the projects we had approved. One difficulty derived from the fact that Congress had decreed the inception of a gigantic construction program at exactly the time of year when the construction industry normally tapers off for winter. But despite this handicap, by January 1 we had achieved our goal. I was able to report to President Roosevelt that we had put more than $1,500,000,000 worth of substantial construction under way in 143 working days. Within 6 months we had actually started construction on nearly 8,000 projects.

It is a simple thing for me to tell you that within 143 days we had started work on 8,000 projects, yet it is difficult in a few words to give an adequate idea of the immensity of the task. In every part of the land, towns, cities, and public bodies assembled plans, let contracts, and started work on a myriad of projects. The sounds of steamshovel and pneumatic hammer resounded everywhere. The construction of the ancient pyramids, fabulous as they were, was a small undertaking in comparison to what went on in our own country between last July and December.

To create a composite picture instead of giving you cold figures, let us imagine the building of a gigantic P. W. A. city capable of rendering service to many millions of people. Let us imagine that this was the job assigned to P. W. A. This meant starting work on a municipality of 2,798 schools and other educational buildings and 154 electric power plants.

It meant the construction of a city to be serviced by 481 sewage systems and 304 disposal plants. This composite city to be built by P. W. A. would have 642 water systems and 166 bridges and viaducts. We would have to build 28 municipal auditoriums and armories, 235 hospitals and allied institutions, and 480 complete waterworks. The administration of our city would require the construction of 293 courthouses and city halls, and all would have to be built within a mandatory dead line.

Within 6 months P. W. A. sorted over the Nation's applications for public improvements and put its stamp of approval on 8,000 projects, gave the "go ahead" signal, and saw to it that all 8,000 got into actual construction.

The preponderance of requests was for substantial projects of lasting social value. America wanted municipal improvements in the following order: Schools, water systems, sewer systems, hospitals and institutions, colleges and universities, courthouses, roads, and bridges.

All of these projects played a part in putting men and money back to productive work. As a result of this burst of economic energy strong regenerative influences were let loose in American industry. More than a billion dollars worth of orders for basic commodities were quickly placed with business houses and manufacturing concerns. These involved such items as $280,000,000 for iron and steel products and $75,000,000 for lumber and millwork. The stimulus that these purchases gave to industry quickly showed its effect. The Federal Reserve Board index of industrial production advanced from 77 in June, when the Public Works Administration Act was passed, to 97 in October and 100 in November. Simultaneously with the making of P. W. A. allotments the steel index rose from 28 percent of capacity on June 28 to 62½ percent on November 15.

The Public Works Administration does not claim credit for all of this step-up in American industrial activity. However, I know that P. W. A. played its part in helping to push up these indices. The general effect of our program was to encourage other lines of business and persuade them also to place orders. Moreover, a job on a P. W. A. project or a job in a factory supplying materials for the P. W. A. program made it possible for a workingman to pay his grocery bill and his doctor's bill. Because workers were able to do this, some grocery men and some doctors were enabled to buy automobiles. Because some grocers and doctors did buy automobiles, the motor companies bought steel and the steel companies hired men.

Wages for hundreds of thousands of men and women in normal American private industry were made possible because of the P. W. A. program. These wages went to purchase food, clothing, shelters, medical care, entertainment, and other products and services that agriculture, industry, and trade place on the market. These purchases, in their turn, made possible other purchases and moved other goods, thereby creating a mighty economic force that was able to turn the economic tide. The millions of dollars thus turned into channels of business created a demand for goods. All of this affected our national income, sending it upward to higher levels to improve our economy.

Through the P. W. A. program the Government thus has increased the production of goods and services and thereby has improved the earning power of our people. Through quickening the production and turn-over of both heavy and consumer goods we have aided in starting our national income back toward the $80,000,000,000 mark, where it should be. By encouraging and creating private employment P. W. A. is playing an active part in making this an $80,000,000,000 income country.

In another way P. W. A. activity pumped new energy into our economic mechanism. Private money which had been lying idle was called to work. Under the P. W. A. system, private capital and private credit were drawn into the economic current in the financing of construction before Federal funds actually were paid out by the Treasury. A report made to me early in January showed that, although P. W. A. had paid out only about $100,000,000 in cash advances, approximately $1,500,000,000 worth of work was already under way. This was due to the fact that applicants had put up their own funds to get the projects started, in addition to which contractors, eager to get to work, had employed their own money and their own lines of credit.

There is some misconception about this point which it is worth while to clear up. When P. W. A. makes an allotment to a municipality for a non-Federal public-works project, it starts a private credit system in motion. This is because the making of the allotment is immediately followed by the execution of a contract between the municipality and the Federal Government which obligates a specific amount for a specific project. In turn a credit is set up at the Federal Treasury for the municipality. Bids are then called for, and a construction contract is let on the strength of this credit.

The contractor receiving the contract purchases or rents equipment, places material orders, and hires his men on the basis of his regular line of credit or his own resources. As his bills become due for materials or pay rolls, the contractor meets them by paying out cash that he has saved or borrowed. Afterward he sends a bill to the municipality, which pays its share of the project cost, amounting to 55 percent. The city usually raises its money by selling bonds to private purchasers, thus drawing in private funds over a wide sector.

Up to this point little Federal money has left the Treasury. Contracts have been signed, the project started, men put to work, and materials and equipment bought, nearly all with private capital. It is only after the work is well under way that the municipality calls upon the Federal Government to advance most of its contribution. The final payment is never made until the entire job has been finished and accepted by the P. W. A. engineer at the project.

During the last 6 months of 1938 the Nation was given an opportunity to see a clinical demonstration of an economic theory. This was that by properly "timing" a public-works program it would be possible quickly to stimulate industry. The soundness of this theory was demonstrated by a thorough test. When Congress authorized the new program, it so happened that P. W. A. had a substantial backlog of approved projects which were ready to go.

When the authorization came to begin a new program 1,800 of these reserve projects were released in 3 days, thus putting $450,000,000 worth of construction work on the market. Meanwhile we were taking in new applications and examining them. There was no lost time and no lost motion. Construction was begun, new applications were received and new projects approved in a continuous process which sent pulsation after pulsation through the economic arteries of the Nation. This was the first opportunity that this country has ever had to "time" public works. And this was possible because we had a going P. W. A. organization and a reservoir of examined and approved projects ready to be released over the spillway.

One of the essential elements of a properly timed program of public works is the ability to move quickly, to take fast, positive action. When I reported to President Roosevelt at the end of the year that P. W. A. had successfully met the first two of the three dead lines established by the Congress, I was able to give him some evidence of the swift pace at which P. W. A. had moved. I told him, for instance, that P. W. A. had released for heavy construction an average of more than $11,000,000 worth of work daily. During the first 4 months following the passage of the 1938 act P. W. A. approved projects at the rate of 2,000 per month.

I cite these facts to impress upon you that experience has taught us how a public-works program can be speeded up; how it can be made a flexible instrument capable of control in the public interest. We have come through our period of trial and error, and have learned to manage and direct a program to accomplish a predetermined result. We no longer have to experiment; we have learned how to operate this instrument of recovery when we have the instrument. But we should not have to stop to forge it again when a new need arises.

It seems to me that the Nation should now consider whether it wants to rely on sporadic efforts, as in the past, or whether it should profit by experience and establish the kind of a machine that will always be ready for action. I have urged this on former occasions and I urge it now. A permanent public-works organization would not mean the setting up of another great bureaucracy. A small permanent organization, in the nature of a general staff, with authority to accept and examine applications for useful projects is all that would be necessary. Such a staff could maintain a reservoir of desirable public works to be launched when Congress said the word. The result would be that when a downward economic trend threatened the Federal Government could take quick, effective measures to halt the downward curve and bend it upward before economic harm were done.

How much more worth while this would be than to lapse into the inertia of the past, when we have let the doom of economic disaster go rolling swiftly downhill and strike the bottom with a crash before doing anything about it. How much more intelligent it would be to take considered action in advance and thus be prepared to head off disaster before it has had a chance to gather

unpredictable momentum. Our experience with the P. W. A. program of 1938 shows that the ounce of prevention actually can be applied, provided that preparation is made in advance and that an organization, schooled and disciplined in its work, is at hand ready for the job. This Nation is alert to the need of military preparedness. But experience has proved that we also need economic preparedness.

Such a proposal is no partisan attempt to continue the policies of one particular administration.

Former President Hoover, while he shied away from actually putting a program into effect, repeatedly advocated the establishment of a public-works agency within the Federal Government. It was his idea that such an agency could coordinate and draw together the construction work of the various Federal departments and utilize such work to alleviate unemployment.

However, Mr. Hoover apparently lacked faith in his works, because, when others brought out legislation to put the public-works theory into action, he began to find reasons why such programs could not be carried out. In a statement he issued in 1932, in opposition to the public-works program advocated by Speaker GARNER, Mr. Hoover asserted that the erection of public buildings would produce only a limited amount of employment and that, he was informed, not 20 percent of it "could be brought to construction within a year." Yet, within the last 6 months of P. W. A. has brought more than $1,500,000,000 worth of work to construction.

We owe it to our people to protect them as much as possible from the strains and stresses of an economic system which throughout our history periodically has hurtled off the track. A program of "timed" or "balanced" public works with a small but competent staff in charge would act like a gyroscope to keep our economy on a more level line. Looking back over the years, we can see that our growth has been a sort of "off again, on again, home again, Finnegan" sort of economic progress. Isn't it about time for us to consider establishing a mechanism to prevent economic wrecks instead of being content to gather up the pieces afterward?

That such a conviction is beginning to be borne in upon the American people was shown by the recent report of the special committee appointed by the Senate to investigate unemployment and relief, headed by Senator BYRNES. This committee, after long and careful study, recommended that relief and public-works programs should be handled on a permanent basis and follow definite policies instead of by temporary authorizations hastily designed to meet some immediate situation.

With regard to public works, the report made several interesting recommendations which long ago were anticipated by P. W. A. and put into effect. For instance, the committee recommended that a definite formula be devised under which States and the Federal Government would share responsibility for works programs. The Public Works Administration has had such a formula in effect throughout its existence. Under the P. W. A. plan, the Federal Government contributes 45 percent of the cost of public works and the sponsoring municipality contributes 55 percent—a policy that has met with wide approval from our cities. The Byrnes committee report also says that there should be no competition between the various works programs of the Government. Long ago, P. W. A. defined the field in which it would work. The P. W. A. field of operations is that of heavy construction in which it has operated entirely through private industry.

Further evidence of the interest of the American people in a public-works program was shown by the recent action of the Senate in calling for the list of public-works projects pending before P. W. A. That list, which is now before Congress, shows that today there are some 5,807 applications for projects on file with the Public Works Administration, providing for a $1,775,000,000 program. It would seem that America certainly wants public works.

The Byrnes committee report puts forward as a fundamental principle the establishment of a permanent organization to handle the public works and relief problems. I have long advocated the establishment of a permanent public-works organization, equipped to meet emergencies as they arise. It has long been my conviction that, if the Federal Government is to deal at all with the problem of stimulating or reviving business and industry, it must do it on the basis of some permanent and well though out plan. Since 1933 we have had a number of P. W. A. programs. But each authorization by Congress was to meet an immediate situation. None contemplated the establishment of a permanent agency. Instead, these various programs were successively and independently authorized to lift up the business index after it had fallen. Yet, despite disconnected P. W. A. programs, the over-all effect has been to build up experience and improve methods for handling works programs. A purely fortuitous continuity of effort produced the fine results that we are experiencing under our 1938 program.

It was a tough job that President Roosevelt handed me in 1933 when he made me Public Works Administrator. There was no organization, no procedure, no policy, and no precedent. We were able to carry on only because we took courage from the President's unfailing support. That the country accepted P. W. A. then on faith and accepts it now on performance did not lighten the burden as we pioneered an unexplored land. It is my hope that no future President and no future Public Works Administrator will ever have to undertake such a task in such circumstances.

Now is the time to prepare against some future day of depression.

Now is the time to hold fast to and to perfect the machine that it has been proved will work effectively.

The Public Works Administration has met every test for 6 years. The American people have acclaimed that they are overwhelmingly in favor of useful public works of the type that P. W. A. has helped the country to build.

We must either move forward or retreat. Your Federal Public Works Administrator does not believe in retreating when the cause is both good and just.

The Faith of America

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1939

ADDRESS BY HON. A. LEONARD ALLEN, OF LOUISIANA, ON FEBRUARY 4, 1939, BEFORE THE LAMBSKIN CLUB OF WASHINGTON

Mr. ALLEN of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered February 4, 1939, before the Lambskin Club of Washington at the Masonic Temple on the occasion of the celebration of the twenty-fifth anniversary of the club:

I appreciate very much your kind invitation to appear here and address you on this occasion of the celebration of the twenty-fifth anniversary of the Lambskin Masonic Club of Washington. I fully appreciate the fact that I am addressing an assembly of well-informed men. I shall probably not be able to bring to you any new thought, but I shall be contented in the few moments that I shall take if I can cause all of us to think together on some very important questions.

If I were to choose a subject for my remarks tonight, I would call it the Faith of America. We all do know, gentlemen, that one's environment in life plays a tremendous part in his ideas, ideals, philosophies, and actions in life. In order that you may the better understand and appreciate my remarks, permit me to say to you that I hail from the deep South. I am a hillbilly and I come to you with the philosophy of a hillbilly. Perhaps some of you know what a hillbilly is. I am not ashamed to say that I was born and reared in a log cabin, was brought up by parents who still clung to the faith of their fathers, and I am very happy to tell you that I have tried not to depart from it.

FAITH IN THE SOUTH

In the deep South we still have tens of thousands of homes where the heritage of faith—faith in God, faith in our Government, faith in our institutions, faith in our fellow man—is still the guiding principle. There are many other things that we do not have in the great Southland, but I can say with pardonable pride that I do not believe there is any other place in all the world that can boast of a greater degree of faith than my beloved Southland.

PHILOSOPHY OF OUR FATHERS

One hundred and fifty years ago our forefathers settled this great country of ours and founded here this Government that all of us honor and love. It was faith, and the desire to exercise that faith according to the dictates of their own consciences, that brought the hardy pioneers of Europe to this Western Hemisphere. Our forefathers came with definite ideas and philosophies. There was no quibbling, no vacillation, no doubting concerning the great issues of life in their hearts and minds. The poet has well said in his immortal lines:

"What sought they thus afar?
The wealth of seas, the spoils of war?
They sought a Faith's pure shrine."

They were willing, for the sake of those principles, to say goodbye to homes and loved ones and start out across uncharted seas and face the rigors, privations, and dangers of a new land. They brought with them certain concepts which have been handed down to us as our glorious heritage. They believed, my friends, in the philosophy, the teaching, of the fatherhood of God. They came here to establish liberty of thought, conscience, and action. There was no thought of atheism, nor agnosticism. It is little wonder, therefore, that we find these men and women making faith the chief pillar of this Government. They did not hesitate to proclaim to the world their belief in Jehovah of Hosts. Yea, they let the world know that this Government not only subscribed to that principle, but sought to perpetuate that faith that had driven them to the primeval forests of this hemisphere. They even engraved upon their money that they issued, the very coin in your pocket, "In God We Trust." The founding fathers decreed that the Congress should be opened with prayer.

Not only that, my friends, but these founders here established churches, schools, fraternal, and civic organizations. One needs

but to go a short distance to find the footprints of men whose names are immortal in this country. Just a short distance down the historic Potomac we find the home of the great George Washington, by whom this city was established, and for whom it was named. Just across the river we may go into the church to which this founder was not ashamed to repair on Sunday morning, and worship the God of all the earth. As I go over this country, I see numerous churches, old and worn, some of them having been used for 100 years or more, all of them eloquent evidence of the consecration of our forefathers to lofty ideals and eternal truths. This beautiful city is filled with monuments, but the greatest of them all is that little parchment, old and faded, a monument to a great faith in a young democracy—the Constitution of the United States.

WORTHY SONS

And as I come to you tonight, gentlemen, I am reminded that I am addressing men, many of whom were reared in this historic community, many perhaps who are worthy sons of these noble ancestors; I am addressing men who have exemplified that faith in their lives, men who hold to an ideal, men who are honored members of a great and noble fraternity, a fraternal organization founded on the Book of Books, hoary with age, shrouded in antiquity; men who, in this cloistered hall, have been taught the lessons of faith, hope, confidence, and mutual assistance. This noble organization certainly had its beginning in the dim dawn of history; its mission is as boundless as humanity, its service wherever there is need.

A NEW DAY

But, gentlemen, whether we like it or not, times have changed. We are told that we are living in the day of the automobile, the radio, the airplane. This new day has brought unquestionably many good things, but it has brought some elements that are destructive. Since the World War this old world has undergone a great transformation. The change has taken place not only in Europe, but even in America. The disintegrating forces are at work, make no mistake about that.

As the tiny insect can eat away the pillar of a great building, so certain unholy influences can destroy an empire. The presence and work of enemies within our gates cannot be questioned. Everyone who reads at all knows that the poison is here. Every newspaper is filled with stories of the teaching and work of the enemies of Americanism. We are told today that we have far more Communists in this country than they had in Russia when they killed the Czar in 1917. We are told that Communists have grown from about 5,000 to more than 3,000,000 in a short period of 7 years. We are informed that there are hundreds of thousands of active Communist workers, that there are even thousands of paid workers, and hundreds of publications and dozens of camps teaching and preaching communism. Unquestionably much of this is going on. Let me say here, gentlemen, parenthetically, that we in America cannot control and should not seek to control the internal affairs of foreign countries. We do not agree with some of them in dealing with their own citizens, but it is a problem over which we have no control. Neither do I think we should undertake to police the world. In the end we will get no thanks for it. I believe we should see after America. That is all the job we need. I want the United States to have an Army and Navy adequate for that purpose, but I do not want to get our fingers scorched in Europe. But, my friends, when the overflow comes from Europe, bringing certain ideologies that we consider inimicable and dangerous to the people, the happiness, and the life of this great American Nation, it is your obligation and my obligation to speak out. That communism is atheistic and antireligious is well known to all. There is no question, gentlemen, but what we are living in an age of materialism. People all over the world, in my humble opinion, are forgetting the finer things of life. Our children in universities and colleges, and even in high schools, sometimes, are being taught by teachers who have an utter contempt for the Bible, for the church, for faith. There is no question but what there is a very studied attempt to leave out of American life today the finer attributes of life and substitute therefor rank materialism. We cannot lay all this upon communism and other un-American philosophies, but there is no question but what these elements are being infiltrated into our schools, our churches, and even our very homes. Some teachers in our higher institutions are bold enough to argue against Holy Writ in their classes. We all do know that the young mind is plastic. It is susceptible to every impression. These influences are teaching our children, right around our feet, so to speak, things contrary to what we want them taught. Likewise, nazi-ism and fascism, although probably not as antireligious as communism, nevertheless seek to muzzle the free speech of the human will and undertake to put the human conscience in a strait jacket.

FACING FACTS

Time was, gentlemen, when every man and woman had a profound respect for the Lord's day. Time was when no one would dare be caught out desecrating that day. Public opinion was such that the day was universally observed. But, my friends, I am sorry to say that this new day that has come upon us has brought all of these unsavory influences. I am not a pessimist. I do not want to be a pessimist. I much prefer to look upon the bright side of life. A sunshiny day is always more beautiful than a cloudy day, and yet blind is the man indeed who cannot see certain conditions existing about us. I cannot see anything to be gained by sticking our heads into the sand and saying they don't exist. What has become of the old-fashioned love and regard for the holiest of all days? What has become of the purity of the home that made divorce almost impossible? What has become of the sanctity of obligations existing between man and man? I remember the day, and so do you, when a man's word was really his bond, when his obligations did not even need to be put into writing. Yes, my friends; I regretfully say that there is no question but what the whole world and even our beloved America is losing its faith. We are losing our grip upon ourselves. We are losing our hold upon eternal truths. We no longer have the confidence in our institutions that we once had.

WHERE GOES AMERICA?

My friends, where are we headed in America? What is the destiny of those who are to come after us? What abiding principles have they embraced? What philosophies of life underlie their thinking? What will be their faith, their hope? What will be the position of the church in the future? Will America, my friends, surrender her faith? Will America surrender Christianity? There is no question but what paganism today is spreading over a large part of Europe. Russia, with more than 160,000,000 people, has outlawed the Sabbath, has outlawed the Bible, has torn down the most of her churches, and is undertaking to destroy every vestige of faith that once dwelt in that great empire. The pulpit and the open forum have been muzzled in a great portion of Europe. Shall we revert to the Dark Ages? Has this civilization served its end? Will this civilization destroy itself? Will America, my friends, give up her idea of God? If so, what then? We are prone to say that Christianity has brought the light of civilization to this world. We believe that it has. In America we like to boast of our great civilization, but I want to say to you, my friends, tonight, that if Saul of Tarsus had been permitted to go east, as he wanted to, the Asiatics probably today would be sending missionaries to this country instead of our sending missionaries to them. Yes, my friends; our boasted civilization came through the light that was started in this old world 2,000 years ago by the Man of Galilee. Shall we now renounce that source of light? Will America, my friends, surrender the ideal of the future life? A great portion of the world has. Will America shut up her Bibles, close her churches, and kill the faith that has brought us on this road for 150 years?

A PERILOUS DAY

My friends, no one can deny that we are living in a perilous day. No one can deny that forces have been shaped and are being shaped and are being fostered today that, if carried to their full fruition, will destroy faith, confidence, love, and perhaps civilization itself. Where shall we go? To what power shall we turn? Shall we depend upon our manpower? Manpower alone cannot save us. China had more of that than any other nation. Shall we depend upon diplomacy? Witness what has happened throughout the world during the last 20 years regardless of all the effort of diplomacy. What has happened to the League of Nations? What has happened to the various other international meetings? What permanent results came out of them? Shall we, gentlemen, depend upon philosophy? upon education? upon culture? The Greeks had all the philosophy. Certain European nations have claimed in the past to have a corner on the culture. Shall we turn to the teachings and philosophies of the Scribes and the Pharisees? Shall we turn even to our present-day leaders and rulers? My friends, the peace conferences have failed often, diplomacy has broken down many times. Unrest is prevalent everywhere, the flames of hate are fanned, the god of war is fattened, unholy victory is glorified, the God of love is pushed out. Too often we find strife, greed, and avarice prevailing in all walks of life.

RETURN TO FAITH

My friends, you learned in the beginning of my discourse that I was old-fashioned. Yes, I am old-fashioned. I am as old-fashioned as faith, as old-fashioned as confidence, love, and peace. Our modern age may have brought many good things, but there is no substitute for faith. There is nothing that can supplant and fill the place of confidence, love, peace, and hope in the human breast. These virtues that actuated and guided sturdy men 150 years ago, and enabled them to plant here this great Christian civilization, if properly watered and nurtured and permitted to come forth again, will save our land from this chaotic condition. We have spent billions and there is still great need. We fought to end wars, and there is more war than ever. We plan for peace, and there is no peace. I am wondering in this hurly-burly age—in this age of broken confidence, broken faith—what is the best way out. I am not alone, gentlemen, in believing what I am going to say. I am not as old, perhaps, as some of you; but my head is white, and it grew white getting some of the experiences in life; and out of my experience gained from the time as a barefoot boy I worked in the cottonfields, as student, as teacher, lawyer, and now as national legislator, it is my firm conviction that America and all the world needs most of all a great spiritual awakening, a return of faith.

A few weeks ago the United States News, published here in Washington, wrote me and asked me to give my opinion on "how America can heal its frictions and its class wars." I gave the following answer, which it carried in its issue of December 27:

"More nationalism, less internationalism.
"More Americanism, less un-Americanism.
"More love, less hate.
"More religion, less atheism.
"More understanding between capital and labor, less greed.
"More regard for the rights of all.
"More regard for the sanctity of laws and private and public obligations.
"More decentralization in wealth, government, and power.
"More of the faith in man and God which existed in the 'horse and buggy' days."

Two thousand years ago a little group of men had followed a teacher for nearly 3 years. The populace, having eaten the bread which He miraculously supplied, and having learned that He came to set up the great spiritual kingdom instead of a temporal kingdom, began to turn away. A little group of His personally selected followers were left standing with Him, and the Teacher turned and said to them, "Will ye also go away?" An old fisherman, assuming the position of spokesman for the 12, said to him, "Lord, to whom shall we go? Thou hast the words of eternal life." That little band had reached its extremity.

My friends, in this day of chaos, of broken faith between men and nations, has man not about reached his extremity? I call upon America to return to the faith of our fathers. Certainly our wisdom has failed, certainly the best-laid schemes and plans of men have gone astray. Hate and greed are in the ascendancy. Is this idealistic? Is this old-fashioned? No more so than God. Is it practical? My friends, having tried almost every other plan to save this country and to help this country, I am wondering if the American people will have the wisdom now to go back to their first love, restore faith, confidence, and try God's plan. Let us invite the Prince of Peace to our council tables. May the faith of America bloom again.

"Lord God of Hosts,
Be with us yet,
Lest we forget,
Lest we forget."

The President's War Program

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1939

RADIO ADDRESS BY HON. HAMILTON FISH, OF NEW YORK, FEBRUARY 2, 1939

Mr. FISH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio speech over the Intercity Broadcasting Co.'s network, delivered under the auspices of the National Council for Prevention of War, on Thursday evening, February 2, 1939:

What is all this growing mystery and secrecy that surrounds the New Deal foreign policy? What are the New Dealers up to? Are they seeking to change the foreign policies laid down by George Washington and approved by Jefferson and all other American Presidents until recently? My answer is, "Yes; emphatically yes," in spite of the denials from New Deal sources.

President Roosevelt was reported yesterday as stating that France had become the new American frontier, or words to that effect. This highly inflammatory and unfortunate remark, loaded with international dynamite, detonated a veritable barrage of caustic Italian and German replies, including an equally foolish assertion that the Panama Canal was their new frontier. What else can we expect as a result of the provocative statement of the President?

Tonight I have merely time to jot down a number of definite accusations or charges and to submit a few direct challenges to the President. I shall from time to time on the radio and in speeches in Congress take up and discuss in detail each one of these charges and challenges.

I accuse President Roosevelt of trying to scrap our traditional American foreign policy of neutrality, nonintervention, and peace, as he has other American traditions, and involve us in foreign entanglements, collective security, military alliances, and war commitments.

I accuse President Roosevelt of being both an internationalist and an interventionist.

I accuse President Roosevelt of repeatedly urging that we quarantine Europe and Asia and act as a policeman for the entire world with American blood and treasure.

I accuse President Roosevelt of asking the Congress to surrender its constitutional power to declare war and delegate to him the power to determine the aggressor nation, an unfriendly and unneutral act that leads directly to war.

I accuse President Roosevelt of entering secretly into a quasi-military alliance with France, the war partner of Soviet Russia, and permitting her officers to inspect our newest Army airplanes.

I accuse President Roosevelt of urging the use of the island of Guam as a submarine and air base, which amounts to an open act of provocation and aggression against Japan.

I accuse President Roosevelt of conducting our foreign affairs on a basis of hatred, abuse, and threats.

I accuse President Roosevelt of being largely responsible for the present wave of war hysteria and fear and dread of war in the United States.

I accuse President Roosevelt of having no plan or program to offset the economic failure of the New Deal and to restore confidence, recovery, and employment of labor, except to spend billions of dollars for purposes of destruction and armaments.

I challenge President Roosevelt to specify what nation, or nations, has the faintest idea or capacity of invading the United States or even South America.

I challenge President Roosevelt to allay the fear of American citizens that our cities will be bombed by explaining that no airplane has yet been invented that can cross the ocean and bomb any of our cities.

I challenge President Roosevelt to reassure the American people by telling them that the three totalitarian states—Germany, Italy, and Japan—have only 8 airplane carriers altogether, and that each carrier can only transport 50 planes, or a total of 400.

I challenge President Roosevelt to tell the American people that we will have within a few months 4,000 of the best airplanes in the world with the best pilots.

I challenge President Roosevelt to tell the so-called poor, defenseless American people that they are the proud possessors of the greatest Navy they have ever had, three times the size of that of Germany, twice that of Italy, and 50 percent larger than Japan's.

I challenge President Roosevelt to tell the American people that the reason that Japan is receiving arms, ammunition, and materials of war from America is due to the fact that he refuses to enforce the Neutrality Act, passed by practically a unanimous vote of the Congress. It makes no difference whether the law is good, bad, or indifferent; it is the law of our country and should be enforced or repealed.

After reading in the newspapers a few days ago that three ships were loading with scrap iron at Los Angeles for shipment to Japan, I introduced a bill prohibiting the sale and shipment of scrap iron to both Japan and China. The administration has winked at this noxious practice for the past 2 years and has done nothing about it. The New Deal can prove its good faith in this instance by supporting my bill to stop further shipments of scrap iron to be used for military purposes.

I want to take this opportunity to present my reasons for opposing the establishment of an airplane and naval base at Guam. This little island in the western Pacific is only 1,300 miles from Tokio and the largest industrial cities of Japan. It is well within bombing range for airplanes and for submarine attacks along the Japanese coasts. In view of the fact that we are voluntarily giving up the Philippines, it is preposterous to establish an air and submarine base near by Japan, like an arrow aimed at her heart and very lifeblood.

What is sauce for the goose is sauce for the gander. What would the American people say if Japan established a submarine and air base within 1,300 miles of Los Angeles, San Francisco, and the Panama Canal? It would be immediately regarded as a provocative and hostile act and virtually a cause of war. At the least it would create a spirit of suspicion, hatred, and hostility that would be bound to eventuate in war.

I am a firm believer in a strong and powerful national defense, but want it primarily for defense of our own shores and the Monroe Doctrine and not for acts of aggression 5,000 miles away, where we possess no territories. We have a great naval and air base at Hawaii, and there is no sound reason to go beyond that outpost of American defense or a direct north and south line from the Aleutian Islands, off Alaska, through Hawaii to the Samoan Islands.

I have always favored a powerful navy for national defense, but my suspicions of last year are beginning to be proven—that the proposed supernavy and super air force are not for defense but for aggression and to quarantine the world. If the establishing of a naval and air base at Guam is a part of the New Deal policy to act as a world policeman, the American people are entitled to the facts.

In reference to this proposed change in our American foreign policy, I desire to read a letter from a missionary in China, who expresses himself clearly and does not mince words:

APRIL 5, 1938.

As a Harvard classmate, may I send along just a word to say how completely I am in accord with things you have been saying lately about the Government's tremendous naval expansion bill. How anybody can imagine that it will promote either peace or security, I fail to see. On the contrary, it is an inexcusable policy, will lead us eventually into a war far across the world, in which the youth of America will be called upon to die in order that the bankers, the oil magnates, the steel tycoons, and automobile bigwigs may continue to peddle their wares in China. More power to you as you strive to keep us from becoming involved in a "defensive" war 6,000 miles from our own shores.

With every good wish, I am,

Yours faithfully,

REV. EDMUND L. SOUDER,
American Church Mission, Ichang, China.

I take this opportunity to read a statement signed by minority members of the Committee on Foreign Affairs of the House of Representatives this afternoon, which is self-explanatory:

"We, minority members of the Committee on Foreign Affairs of the House of Representatives, deplore and protest the unneutral actions and secret methods employed by the President of the United States, which would not have been known to the American people except through the accidental injury of a French flying officer in an American Army test plane.

"We have no objection to the sale of airplanes produced in this country to any nation with which we have diplomatic relations, but we insist that such secret and unneutral acts entangle us in foreign conflicts and endangers the peace of America.

"We urge the President to present all the facts openly to the American people and to uphold our traditional foreign policy of neutrality, nonintervention, and peace.

"The American people, irrespective of party, are opposed to being committed to any war program through secret diplomacy.

"Hamilton Fish, of New York; Charles A. Eaton, of New Jersey; Edith Nourse Rogers, of Massachusetts; Bruce Barton, of New York; Robert B. Chiperfield, of Illinois; Robert J. Corbett, of Pennsylvania; John M. Vorys, of Ohio; Foster Stearns, of New Hampshire; Andrew C. Schiffler, of West Virginia."

In conclusion, I urge the radio audience to insist, in view of the proposed huge armament program for destruction and intervention, to write to their Representatives in Congress to support the proposed constitutional amendment, House Joint Resolution No. 94, I have introduced, giving the American people the sole power by a national referendum to determine whether their sons shall be conscripted to serve in our armed forces outside of the Western Hemisphere. This in no way interferes with our program for national defense.

I do, however, believe that the men and women of America who are opposed to sending their sons to die on foreign battlefields should have the right and power to voice their views in a national referendum.

I am convinced that this is a proper issue to submit to the people in a free country through a free ballot, and that it would tend to preserve and promote peace and keep us out of foreign wars.

The American people have made up their minds on one thing, and that is that they propose to keep this country out of all foreign wars. If the President or anyone else tries to get us into a foreign war it is our duty to see to it that he does not succeed. I believe we can keep out if the Congress and the people insist on it. The only way we will get into a foreign war is by letting this war hysteria spread to such an extent that it gets out of bounds.

Where does it come from? It comes from our enemies within. It comes from the Communists, who would like to see us go to war with Germany and with Japan for the benefit of Soviet Russia. It comes from the British propagandists, who would like us to preserve the British Empire. It comes from internationalists and those who believe in collective security, and the League of Nations. It comes from the interventionists who would have us scrap our policy of neutrality and adopt one of collective security, sanctions, and war commitments.

As far as I am concerned, as a member of the Committee on Foreign Affairs, I propose to do everything I can by my voice and vote on that committee to keep the United States out of all foreign wars.

The Day of Liquidation Is Near

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1939

Mr. THORKELSON. Mr. Speaker, in my line of work we diagnose the patient's illness and, after having determined the cause, we prescribe treatments. Ordinarily we give a prognosis, stating expectancy, but we place the patient under treatment. If the prognosis is grave and treatment of no benefit, we estimate a reasonable period in which the relatives may expect termination of the illness. Estimating the time of death is difficult because treatment instituted to prolong life influences the time of demise. This plan would be employed by a reasonably good doctor, and it is a plan that we may use in determining national ills, and one that we may use here.

Our Nation is suffering from a serious illness; that is, morbid industry, collapse of business, and death of constitutional rights. What is the cause of all this? Greed for money and power; indifference to States' and people's rights; politics and political ambitions, and indifference of public officials to their obligation to adhere to the Constitution. In this they are not alone to blame, because banking and large business have failed in their responsibilities to the workingman.

The greatest power of all is control of money, and this has been recognized from time immemorial. There are certain people who spend their lives making money in order to wield power. Such people are not helpful to anyone but their own clique, so the selfishness and greed of them is largely responsible for the present social unrest.

While this condition is generally known and cannot be denied, it is no reason for destroying private ownership, as we are now doing; for in such course lies poverty and strife.

It is not my intention to propose a panacea for all trouble, yet I believe it is a good idea to talk things over. I do not believe it is just that special-privileged groups with interlocking directorial powers should alone benefit from the millions which accumulate in the larger banks. To have free use of such money is an advantage which those in smaller cities and communities do not enjoy. This concentration of money in the large cities drains currency from farming districts and small industrial towns and retards development. The moving-picture industry is a vivid example of what access to credit and money can do, and also what one person may do for an industry when properly connected.

The point I wish to make is that concentration of money in the large cities is hurtful to general development and instrumental in producing idleness. These unemployed must be cared for, and no one realizes that better than I. Small business actually employs more people than large industry. I therefore believe it is only just and fair that some provision be made for the worker when he is forced to retire. It is unjust to expect a man, after he has worked for 35 years or more, raised and educated a family, and provided for their general care, to be forced when he is old to rely upon the support of a charitable institution or upon assistance from his children. For our workingmen to become charitable objects, living in county institutions, is an indictment of business; and for the parents to be compelled to rely for support upon their children is an injustice to the young people who are beginning life. It places them in a position where they cannot accumulate or enjoy reasonable comforts that a family should expect in a nation as prosperous as ours. The only equitable plan is a retirement pension in which the employer and the employee share equally, the remainder of such fund to be made up by a transaction or sales tax. The name of such plan does not matter, but it is certain that the Social Security and Unemployment Compensation Acts are inadequate, too costly in administration, and they fall short of the purpose they are supposed to serve.

CONGRESS IS THE DOCTOR

Congress is elected by the people to regulate affairs of the Government, not to run business, but to watch and help industry, commerce, labor, agriculture, and all other earning groups. I shall call this business. Congress adhered to that plan reasonably well for 125 years, during which period our Nation became great and prosperous. During that period Congress acted nearly within its constitutional limitations. Business was left free to operate without excessive taxation and regulation. That was only proper, because everyone, I am sure, will agree when I say that the owner of a large industry is much more capable of running his own business than the usual majority in the Federal Government. Such owner at least has his own money invested and should be allowed to use such capital for the general welfare of the people by keeping them employed. He might also expect enough profit on his investment to remain in—and expand—his business for his own and for the welfare of the Nation. He may also expect to operate free from the Federal meddling, prosecution, and persecution. It is not an unreasonable expectation, because he, with many others, elected Congress to help, not only himself, but all business; but certainly not to break and destroy the Nation's industrial structure.

CONGRESS HAS FAILED THE PEOPLE

Congress has gradually become a legislative body with little understanding of business but with a large capacity for legislation. This has been particularly true during the last 6 years.

The New Deal is set to make Congress a handmaid to various Federal departments and bureaus. It has enacted legislation wherein congressional power to act is left in the hands of extra governmental departments and bureaus, or

under executive control. This is not only unconstitutional but it makes a rubber stamp out of Congress, for Congress is still responsible to the people for the security of the Nation and for the welfare of our children. Yet nearly all regulation is left in the hands of officials who are not responsible to the people and in reality not to Congress itself.

This wonder crew, employed in various departments and bureaus, is in reality doing the work that Congress ought to do. They do not understand the operation of sound business, for if they did, private business would claim them. They are instead filled with queer ideas, as impractical and unsound as they are themselves. They declare a profit on paper and create prosperity on the other page, but, as Solomon said when he beheld his 700 wives, "All is vanity." The 700 and more ideas do not work and do not make money; it requires actual knowledge of business and sound business sense to bring about such a desirable state.

Is it any wonder that our business people are tired and sick of Federal silliness and folly? It seems to me that there is some insidious and malignant menace directing Federal departmental and bureaucratic operation, which is intent upon the destruction or dissolution of our Nation. I believe it is better for Congress to retrieve its constitutional functions, take charge, and direct our Nation in a sensible and patriotic manner for the general welfare of all.

I cannot fail but to appeal to all patriotic citizens to actively express themselves and demand that their rights and liberties be safeguarded by Congress before it is too late. We are hypnotized by communistic and un-American propaganda. The people have been duped by condescending fellowship and menial supplication, to give support to a strange and destructive agency organized to take control of our Government.

In order not to be misunderstood, or rather, to make myself clear, I shall refer to incidents of general interest, not only to a few persons but to the whole Nation; that is, if we expect to remain a democratic nation.

WHERE DO WE GO FROM HERE?

The following article appeared in a Washington paper of January 30, 1939:

The Supreme Court today dismissed the suit of a group of privately owned power companies challenging constitutionality of the basic Tennessee Valley Authority program.

The tribunal dismissed the challenge on technical grounds, ruling that the private companies have no legal standing to maintain a suit because they are unable to prove illegal competition and damages.

The article concludes with—quoting Justice Roberts—

The contention amounts to saying that competition by an individual or a State corporation is not regulation, but competition by a Federal agency is.

LET US USE REASON

The Federal Government has no constitutional power to engage in competition with business. Such activity on the part of the Federal Government is unconstitutional and an invasion of States' and other people's rights.

The fact that a State has engaged in business does not establish the right of the State to remain in competition with its own citizens, and it is not a precedent the Supreme Court should follow or even use as a criterion for its own opinion. Such unconstitutional activity on the part of the States should be corrected when complaint is filed. That is one of the duties of the Supreme Court, to which it has obligated itself; that is, to uphold the Constitution.

When the State itself invades the people's rights, the Supreme Court should decide in favor of the people and not in favor of the State, as was done in the case of Power Utilities against Tennessee Valley Authority. Previous decisions of inferior courts do not prove the rights of the State except when the State is right. And such decisions by inferior courts should not be used by the higher tribunals for technical evasion of issues. One error does not justify another.

It follows, therefore, when basic issues are involved and constitutionality is in question, opinions rendered should be supported by the Constitution and not upon the opinions of anyone else. The Constitution of the United States is the foundation upon which all laws must rely for legal life and validity. It is a matter of understanding it as it is and as it was given to us. The Constitution gives body and meaning to all laws, and getting back to it is the duty of Congress.

President Thomas Jefferson, in his first inaugural address, wisely advocated—

The support of the State governments in all their rights as the most competent administration for our domestic concerns and the surest bulwarks against antirepublican tendencies, the preservation of our peace at home, and safety abroad.

This clearly shows the opinion of a great Democrat and a great President, who recognized, first, the right of the States; and, second, the right of the people to operate their businesses within the States.

The Constitution cannot be changed by Congress, by the Executive, or by the Supreme Court. It can only be changed by the people, as set forth in article V, and I sincerely hope that it will remain as it is.

I contend, therefore, that it is unfortunate that a private business was waved aside by the Supreme Court as having no constitutional grounds to object to its own destruction. For the Court to say that constitutionality was not the question is a technical evasion to avoid the issue that no fair-minded citizen should forgive or forget.

The T. V. A. is not only unconstitutional, but it is a well-organized attempt to set a precedent that will establish Federal ownership of all industry, commerce, and business. This decision shuts the door to freedom and public rights. It paves the road for a dictator and opens wide the door to State ownership or communism. If Congress and the people allow this decision to stand there is no industry in the United States that cannot be taken over by the Federal Government whenever it chooses to do so. That is, of course, if constitutionality rests upon the opinion of the Supreme Court or upon past acts of Congress.

It is well to bear in mind that a dam is not an aid to navigation. On the contrary, it is an obstruction to navigation unless a system of locks are incorporated in such dam. It is not actually a flood-control project unless it is kept partly empty to absorb the first shock of floodwaters. The dams were constructed under the pretense that they would be an aid to navigation, but they are in reality power projects, and part of a well-organized plan toward Federal ownership.

I am here as a representative of the people, and as such I can only stand in defense of my people. In order that we may have a clearer understanding of the Government's attitude and interpretation of the constitutional law, I respectfully request the Supreme Court or Congress to show where in the Constitution powers are delegated to Congress to enact, and for the Supreme Court to uphold, the Gold Reserve Act, the T. V. A., socialized medicine, and private corporations, created by special acts of Congress, or by Executive order under the laws of the District of Columbia, Delaware, Tennessee, Maryland, and so forth, and for regimentation of agriculture, and destruction of crops and cattle; for Congress to delegate power to the State Department or anyone else to negotiate trade pacts at the expense and destruction of our farm and mine production; for the Social Security and Unemployment Act or Acts; for turning over to the President and the Secretary of the Treasury $2,000,000,000 in gold, and for incorporating in the act, that "Under the exclusive control of the Secretary of the Treasury, with the approval of the President, whose decisions shall be final and not be subject to review by any officer of the United States" (Gold Reserve Act of 1934).

WHAT POWER HAS CONGRESS?

The Constitution bestows upon Congress the power of all legislation and also the power of regulation. I shall now quote from article I, section 8. This section is plain and clear. Congress has the power "to tax," to "collect such tax, duty, imposts, or excises," to "pay debts and provide for the common defense and general welfare of the United States," which means for the general welfare of all people equally. The question is how shall it be done. The answer is by economy in Federal administration. Operation or small overhead reduces all cost of production, it opens markets, increases sales, provides more employment, greater prosperity, and full consumption.

We cannot attain prosperity by borrowing or by the distribution of money to increase buying power and greater consumption. It does not work that way. We must instead reduce overhead, so that our $60,000,000,000 income will show a profit, and as business adjusts itself and regains markets for its products, our Nation will again climb to an $80,000,000,000 Nation. The point I wish to make is: That Congress is responsible for legislation and it must also supervise regulation so no injustice will be committed with congressional sanction. If Congress can enact legislation, it must by the same token understand it; so it follows, all legislation enacted should be constitutional, or else Congress does not perform its duty. Now, which is it?

Congress also has the power to abolish bureaus, investigate and reject appointments, repeal any act, remove judges, and even remove the President; and these are only a part of the total congressional powers. Now, then, as I see it—inasmuch as Congress must bear the brunt of all mistakes, no matter who commits such errors, and as it is held responsible by the people for legislation and regulation of the Government—the sensible thing to do is to accept this responsibility and act within the constitutionally delegated powers. If this is not done, that is, responsibility courageously accepted, Congress invites public contempt in nonperformance of its delegated duties.

Additional Appropriations for, and Continuance of, the Public Works Administration

EXTENSION OF REMARKS

OF

HON. PIUS L. SCHWERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1939

Mr. SCHWERT. Mr. Speaker, since 1933, when the first allotments were made for construction of public-works projects, under the P. W. A. program, sufficient experience has been accumulated to determine whether Federal participation in the construction of local public-works projects is practical and feasible.

Certain aspects of such a plan were necessarily experimental in the beginning. To begin with, it was open to question, whether or not a Federal department could aid in the construction of such projects efficiently. I think that it has been pretty clearly shown that this could be done. The organization, which has been functioning under the direction of the Public Works Administrator, has had presented to it almost every conceivable form of public improvement. Naturally, these improvements fell into certain classifications, such as schools, hospitals, waterworks, sewage systems, toll traffic facilities, and similar undertakings.

Owing to the fact that no organization has ever had presented to it, in an equal space of time, so many projects in the various classifications it has been possible to set up standards by which all projects could be judged. There were, of course, varied problems, and while no two projects were exactly alike there were broad general rules which could be applied for the testing of projects in each classification. As a result of this the municipalities and political subdivisions, which have taken advantage of the various public-works programs, have been given the advantage of a very much broader experience and knowledge concerning the type of project which they contemplated building. This has resulted in the construction of very much better facilities than would, as a general rule, have been provided by the sponsors of the projects had they been left to their own devices.

A survey of projects already completed indicates quite conclusively that in almost every case the completed project is a lasting credit to the community where it has been built. One result of building these projects has been the increase in the intrinsic value of the community, which will most certainly be reflected over a period in better real-estate values throughout the area.

It would seem apparent, therefore, that there is a real and continuing necessity for a permanent organization within the Federal Government to use effectively the experience which has been accumulated during the public-works programs which have been or are being carried to completion. The necessity for such an organization within the Federal Government is very clearly evident from the fact that every program of the Public Works Administration has generated applications for assistance in the construction and financing of projects far in excess of the funds available.

This shows beyond any question of doubt that there exists throughout the country a real need for the construction of necessary and desirable facilities and that the ready cooperation of local governments can be depended upon. Therefore, the necessity exists for a permanent Government department to handle such construction programs, and it would seem unfortunate, indeed, if there were to be a too sudden lapse in the functioning of such programs. The result would be a let-down in the flow of business created by previous efforts. This let-down would be felt in architectural and engineering circles, in legal and municipal finance circles, by the contractors and the labor they employ, by steel mills, the lumber industry, and every industry which contributes materials and supplies that are used in an extensive building program.

Another class that has been greatly benefited by these programs is that great and rather inarticulate body known as "white collar" workers who find employment in industries stimulated by construction activities.

In view of the fact that there is now on file with the Public Works Administration a vast number of projects whose sponsors, in good faith, spent time, effort, and money to design and prepare for construction, it would seem most logical to take prompt steps for the establishment of a permanent organization which could study these plans and develop them further. It could, as well, turn its attention to aiding in the preparation of more projects for construction. It would then be ever ready to put into actual construction thousands of projects, with the resultant benefits to our national economy. We have come a long way on this road. It would be foolish to turn back now.

With the permission of the House, I am including in my remarks a list of the projects pending before the Public Works Administration in Erie County, N. Y., which might be eligible for allotment if additional appropriations were provided for a new P. W. A. program:

Location	Type of project	Loan	Grant	Total	Total estimated project costs
Springville	School		$165,600	$165,600	$368,000
Getzville	do		249,300	249,300	554,000
North Tonawanda	Disposal plant		354,144	354,144	786,988
Orchard Park	Waterworks		71,765	71,765	159,478
Hamburg	Water mains		38,779	38,779	86,176
Cheektowaga	School addition		27,954	27,954	62,120
Evans	School		26,730	26,730	59,400
Buffalo	School No. 18		267,531	267,531	594,514
Lackawanna	Municipal building.		56,250	56,250	125,000
Kenmore	Combination sewers.		157,500	157,500	350,000
Grand Island	Paving		58,500	58,500	130,000
Lackawanna	High school		697,631	697,631	1,550,293
Hamburg	Retaining wall		9,000	9,000	20,000
Cheektowaga	Incinerator		46,151	46,151	102,558
Buffalo	Drains		1,125,000	1,125,000	2,500,000
Do	School No. 40	$349,000	285,546	634,546	634,546
West Seneca	School		93,951	93,951	208,779
Holland	Waterworks improvement.		1,170	1,170	2,600
Buffalo	Civic building	312,000	255,272	567,272	567,272
Do	School	813,000	665,182	1,478,182	1,478,182
Do	City hospital	338,000	276,545	614,545	614,545
Tonawanda	Swimming pool	49,000	40,090	89,090	89,090
Buffalo	Library	33,000	27,000	60,000	60,000
Bowmansville	Waterworks		8,140	8,140	18,088
Evans	Water mains		11,614	11,614	25,810
Blasdell	School		135,000	135,000	300,000
Total		1,894,000	5,151,345	7,045,345	11,447,439

Investigation of Un-American Activities

EXTENSION OF REMARKS

OF

HON. WILLIAM H. WHEAT

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 3, 1939

Mr. WHEAT. Mr. Speaker, under a general leave granted to the Members of the House to extend their remarks in the debate on a resolution to expand and continue the investigation of un-American activities by the Dies committee, I desire to submit to the House some observations which I believe pertinent to the subject.

Being a new Member of this House, I trust my colleagues will indulge me for a short time while I respectfully submit these observations.

The Dies committee and its operations have been the subject of much approbation on the one hand and a good deal of criticism on the other. There may be some ground for criticism of some of the aspects of the investigations carried on by the committee, but in my humble opinion there can be no grounds for criticism of the purposes of the investigation and the efforts of the Dies committee to uncover the extent and the purposes of alien "isms" being propagated in this country among our people.

I think much of the criticism of the Dies committee has arisen from a lack of definition of purpose and a misunderstanding of the objectives sought by this investigation.

I speak in an effort to clarify the purposes of the committee's operations and the objectives of its investigation and thereby eliminate the misunderstandings which I believe exist, which, in turn, have given rise to some very bitter criticisms of the committee's activities.

The question may be fairly asked that if the committee or any Members of this Congress believe that the communistic or fascistic ideas of government are so wrong as to constitute a crime, why have not Earl Browder, an openly avowed Communist, and his associates, also openly avowed Communists, not been arrested, tried, and imprisoned for their views and activities?

It is also a fair question to ask why, if communism and fascism as political beliefs and expressions are criminal, have not the openly communistic daily and weekly newspapers been suppressed and their editors and publishers convicted and imprisoned?

Why have not the openly avowed leaders of the fascistic and the Nazi groups in this country been arrested and convicted and imprisoned?

The point I am raising is whether or not a communistic belief and activity is a crime under the Constitution and the laws, and whether or not fascism or nazi-ism or any other "ism" as a political belief is a crime under the Constitution and the laws.

The Supreme Court has held, I believe, in at least one case, that the right of an individual to advocate a change of government from our present form, including the abolition of the Supreme Court itself, exists under the Constitution and is not a violation of the law.

I understand that the rights of free speech and free press, and the freedom of religious and political beliefs under the Constitution, give any citizen the right peacefully to advocate a change of our form of government, even though he may advocate the adoption of a dictatorial form of government such as the fascistic government of Italy, the nazi government of Germany, or the communistic government of Russia.

I also understand that under the Constitution and the laws when two or more persons conspire to change our form of government not by the peaceful methods of the ballot box but by the seizure of the Government by force of arms or by the interference by force with the due processes of government, they have crossed the line of sedition and have become guilty of high crimes and misdemeanors, for which aliens must be deported and citizens must be apprehended and, if found guilty, imprisoned or fined, or both.

It is just here that I believe the misunderstanding has arisen with regard to the operations and objectives of the Dies committee.

That there are groups—how large and influential we do not yet know—working in the United States to bring about the overthrow of our form of government and the adoption of a totalitarian form of government is well established. That these groups are extensive and are busily at work propagating their political beliefs among the people is also well established. Some of these groups advocate a communistic form of totalitarian government such as exists in Russia. Some of them advocate a totalitarian form of government such as exists in Italy and Germany.

If the activities of these various groups and their "fronts"—which mean various societies and organizations being used to mask their real activities—are advocating and working for a change of our constitutional free republic into a totalitarian form of government, it is vitally important that the activities of these groups be brought into the open, made public, and carefully scrutinized, in order that those who desire to continue our constitutional republic as our form of government may have due notice of these activities and may move to oppose them. No individual in this House or out of it could fairly oppose that view.

These various groups ought not to object to having their activities made public in order that the whole country may know what they are seeking to achieve and how they are seeking to achieve it. But the Dies committee has uncovered, I understand, a vast amount of evidence which needs to be further investigated, indicating that some of these groups are not stopping at the point of merely trying to persuade a majority of the people peacefully to vote to overturn our present form of government and adopt some form of totalitarianism. It is said, I think on the authority of some members of the Dies committee itself, that the committee does have evidence that activities are being carried on for the purpose of producing such interference with the orderly processes of government and the orderly conduct of industry and business as to discourage our people to the point where they will be ready to embrace some other form of government than the one we have.

If that is true, sedition is being committed; the perpetrators ought to be apprehended; those who are aliens ought to be promptly deported; and those who are citizens ought to be brought to trial.

A learned trial judge, in defining a seditionist, has this to say:

> * * * To say, then, that a person is a dangerous, able, and seditious agitator is to charge him with being a disturber of public tranquillity and guilty of acts by writings, speeches, and otherwise tending to the breach of the public order, all of which is inimical to good society and the highest and best interests of the people. Such acts and conduct even in this free country must make the person therewith charged an object of public distrust, reproof, and contumely * * * (181 Pacific, 373; 257 Federal, 378; 64 Northwestern, 921).

Now, Mr. Speaker, if and when two or more persons go beyond even the line of breaching the public order or disturbing the public tranquility and plot to produce a condition in which they may by force of arms seize the machinery of government, overthrow it and forcibly install some form of dictatorship, then those persons are guilty of a crime which falls within the category of sedition, if not treason, and they ought to be apprehended and appropriately dealt with.

I understand it to be the purpose and objective of the Dies committee to pursue investigations into just such circumstances and actions to determine whether or not there are persons and groups who are, by writings, speeches, and otherwise, disturbing the public tranquility, breaching public order and setting up a condition which would lead to the further step of seizure of our governmental machinery by force of arms.

If there is any Member of this House who believes that such activities ought not to be investigated and exposed, let him rise in his place in this Chamber and say so.

With world affairs in such a chaotic condition, and with a determined effort being made within our own country by various groups to propagandize in the interests of some totalitarian form of government now being practiced in other parts of the world, it seems to me that it is not only the duty of every Member of the Congress, but a privilege as well, to raise his voice against any continuance of this sort of activity in America.

From what I understand, the Dies committee, it seems to me, has uncovered a real desire on the part of certain factions in this country, not only to seize control of but to overthrow our Government.

We who believe in the Constitution of the United States and in a free republic as the best form of government do not think there is a place in this country for those aliens who disagree with the principles laid down in the Constitution.

If they disagree with our constitutional form of government, they may do that under the protection of the very Constitution itself, but let that disagreement be open and above board in order that those of us who are devoted to the Constitution and our free government may combat it in the open.

My understanding of the term "un-American activities," which it is the duty of the Dies committee to investigate, is this:

It is not an un-American activity for some to disagree with others as to our form of government. It is not an un-American activity for those who disagree with constitutional government to say so openly. It is not un-American for them to advocate a peaceful change of government. But it is un-American for anybody to endeavor to so interfere with the orderly processes of government, to secretly conspire and act to interfere with the orderly processes of industry and commerce in order to produce such poverty, insecurity, and dissatisfaction with the existing government as to enable them to persuade a majority of the voters to overthrow the government by ballot or to enable them by force of arms to seize the instrumentalities of government and subdue the people by force of bullets.

I come from an agricultural district consisting of eight counties, with a population of about 300,000 people, in the heart of the Corn Belt of Illinois. In my district are located three large universities and many medium-sized and small businesses. I can assure this House that the people of my district are patriotic Americans first and partisans afterward. They do not believe in any tampering with or the destruction of any of the protective provisions of our Constitution.

When our forefathers came to this country they did so to get away from the tyrannies of the Old World, the very tyrannies that are now being practiced in Russia under communism, in Germany under nazi-ism, and in Italy under fascism. I have nothing to say about what form of government the people of Russia or of Germany or of Italy shall choose for themselves. But I do say that our forefathers sought in the Constitution to keep forever from this land of ours those tyrannies which drove them from their homes in the Old World. They set up the Constitution and our form of government for that end. They spilled their blood on many a battlefield in order to establish this free Government which we enjoy today.

We have successfully operated under the Constitution for 150 years. It is the belief of the people of my district, and it is my belief, that we should continue to operate under our Constitution. They believe, and I believe, that it is our duty to pass on to posterity the heritage of freedom which our forefathers shed their blood to pass on to us. We believe in the preservation of America and American institutions for Americans. Mr. Speaker, I assure you that I considered it not only a duty but a privilege as well to cast my vote in favor of the continuance of the Dies committee.

Foreign Relations

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1939

RESOLUTION ADOPTED BY MINDEN POST, NO. 94, AMERICAN LEGION, DEPARTMENT OF NEBRASKA, FEBRUARY 2, 1939

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution passed by the American Legion at Minden, Nebr. I am informed that this was a large Legion meeting and that, in the opinion of the resolutions committee, the following resolution expresses the opinion of a majority of the people of my congressional district:

Be it resolved by Minden Post, No. 94, of the American Legion, Department of Nebraska, That we are opposed to any armament or preparation for any war except what may be reasonably necessary for defense, and that we are opposed to any interference by our Government in any controversy between foreign nations, and that we are opposed to any public statement being made by any official of our Government which might involve us in any foreign entanglements.

We remember well the course of events in 1916 and 1917 which resulted in getting us into that World War. We think we see much similarity in the present situation. There are several million of us who participated in that war in the military service. The resulting benefits to humanity from our participation in that war are far from satisfactory and we do not want our country to engage in another such war. Millions for defense is all right, but not a cent for interference in the squabbles of other nations. Be it further

Resolved, That we intend to hold our Congress and the officials of our Government strictly accountable for any action they may take or any public utterance they may make which may involve our country in a quarrel between other nations or which may result in war except a defensive war.

(The above resolutions adopted by unanimous vote by Minden Post, No. 94, of the American Legion, Department of Nebraska, at its regular meeting February 2, 1939.)

Dr. H. S. ANDREWS,
A. I. PETERSEN,
JAY H. BRACKEN,
Resolutions Committee.

Venereal-Disease Control

EXTENSION OF REMARKS
OF
HON. JOHN M. HOUSTON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1939

REMARKS OF DR. THOMAS PARRAN AT THE TWENTY-SIXTH ANNUAL MEETING OF THE AMERICAN SOCIAL HYGIENE ASSOCIATION, WASHINGTON, D. C., FEBRUARY 1, 1939

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Dr. Thomas Parran, Surgeon General of the United States Public Health Service, who a few days ago received from the American Social Hygiene Association the William Freeman Snow award in recognition of his leadership of the campaign against syphilis and venereal diseases:

Mr. Chairman, Mrs. Roosevelt, and friends, it is with profound gratitude that I accept this award. May I express my deep appreciation to the committee on awards for the great honor which has been bestowed upon me. My sincere thanks to you, Mr. Chairman. It means much to me to have this gift from your hand.

Some 13 years ago I enrolled as a pupil of William Freeman Snow in the elementary principles of venereal-disease control.

During these years he has been the patient teacher, the wise counselor, always eager to help his pupils in their efforts to solve the scientific and social aspects of this problem. In one sense, therefore, this award comes to me as a certificate of progress. For in Dr. Snow's school we work as we learn. As we gain a little proficiency we are put to practice it for the good of mankind. Perhaps this occasion symbolizes the commission laid upon all of us to work harder and fight more intelligently for the good cause from this day forward. In the first few skirmishes since we have all begun to fight together, the spirochete has been on the losing side, but we are dealing with a resourceful opponent, an opponent which for centuries has spread and multiplied throughout the civilized world. It does not retreat except for cause. It is immovable in the face of earnest conversation and wishful thinking.

The control of any disease involves three stages: First comes the patient efforts of scientific investigators in the laboratory, at the bedside, and in the field to learn the nature of the disease, its mode of spread, and the best methods of prevention and treatment. It is necessary that we perfect our tools for use against any disease before there is hope of controlling it. For three decades we have had the basic knowledge necessary to control syphilis, but public ignorance of the problem prevented in this country any effective action against it. In the face of this discouragement, however, doctors and health officers have continued patiently to measure the size of the problem, to test and appraise the effectiveness of their tools. Their value has been demonstrated. In the Scandinavian countries, particularly, syphilis has been made a rare disease. As a result, it has been possible in recent years to speak confidently of what can be accomplished by putting science to work in the control of syphilis.

Not until the past year or two have we been able to develop comparable tools against gonococcus infections. Through the use of sulfanilamide, however, it is now evident that a large proportion of cases can be cured promptly, which means that we can attack this infection also with assurance of success.

The second stage necessary for the control of any disease is education of the public concerning it. In this the American Social Hygiene Association long has played a prominent part. The people are at last convinced that syphilis and gonococcus infections are dangerous to life and health, a danger which we need not endure. Citizens are eager for facts. The public has demanded that health agencies and the medical profession put their knowledge to work. As a result there has followed promptly the third stage, that of action.

The first action on a national scale for the control of the venereal diseases was taken last year when Congress passed the La Follette-Bulwinkle Act. This act provides for cooperation of the Public Health Service with the States and localities to attack these diseases simultaneously on 48 State fronts and in a thousand communities with an increasing scale of governmental support. The States are doing their part. More than $5,000,000 of State and local moneys have been made available as a result of this Federal action.

Three years ago 16 States had full-time venereal-disease control officers; today there are 29. Thirty-seven State health departments were furnishing antisyphilitic drugs for poor patients then; all except Utah are doing it today; 14 States furnish such drugs for all patients. For the first time all State health departments furnish free serologic tests for syphilis and examinations for gonorrhea. Forty-four States now provide case-finding service. The reporting of disease has improved phenomenally, a very significant indication, I think, of the increased confidence of the private physician in the methods and purposes of the public-control program. Doctors, nurses, and social workers are being trained for the task according to the best-known scientific methods.

In addition, 10 States now have laws requiring premarital physical examinations, including laboratory tests, which will minimize the spread of syphilis to the next generation.

In order to take care of the large increase in the number of new patients seeking treatment, the number of clinics has risen from one clinic for each 130,000 persons to one for each 80,000 persons in the general population. This is not enough, and the service is not yet good enough. I repeat, as a Nation we have just started to fight syphilis. The main job is ahead of us, but the movement is forward and the trend is up.

But action by governments is not enough to deal with a problem such as this, which affects the whole people. Increasingly there is needed a strong national voluntary agency through which citizen interest can make itself felt. We are fortunate in having such an agency in the American Social Hygiene Association and its national antisyphilis committee which was organized last year. Working actively on this program also we have had great citizens' groups, such as the General Federation of Women's Clubs, the American Legion, and the United States Junior Chamber of Commerce. Interested citizens everywhere have contributed their time and effort. Your presence here today, Mrs. Roosevelt, will be a great encouragement to such citizens in their efforts to improve the health conditions of their own communities.

I have referred to the fact that the American people now consider syphilis to be a serious epidemic disease, which it always is; not the punishment for sin, which it frequently is not. Our public-health attack upon it, therefore, has been primarily an epidemiological and a chemical attack. This is the first job of a health officer. However, we are not only health officers but citizens, and as such we should lend our efforts to remove those conditions which promote the spread of the venereal diseases. In whatever measure we are successful in this objective, there will accrue spiritual benefits even more important to us and to our families than the absence of infectious disease.

It is for this reason, Dr. Farrand, that although I believe governmental leadership to be essential in a united and successful attack upon the venereal diseases, the prime factor today, as it has always been, is the work of your organization in enlisting the citizen's army which must bear the brunt of this and every other effort of civilized men and women to lift us by our boot straps. No matter how excellent the drugs to fight syphilis or how able the doctors, no matter how competent and considerate the clinical service, nothing important will occur unless we as a people understand our need for such service, unless we are willing to use it intelligently and faithfully, and unless we make the clear-cut choice to spend tax money for the prevention of misery due to syphilis and gonorrhea rather than bear the larger costs of care for the stricken.

The awareness of this situation to be seen at every hand, I firmly believe, is the cumulative result of your 20 years of effort since the World War, Dr. Snow, and ladies and gentlemen of the American Social Hygiene Association. What I have done has been merely to execute that part of the whole plan which was given me as my personal responsibility. The task is not finished. It has not become easier. But, thanks to Senator LA FOLLETTE and Congressman BULWINKLE, who were leaders of the good fight in the Seventy-fifth Congress, we can say confidently that the task is at last possible. And to you, Mrs. Roosevelt, who symbolize the great-hearted women who are leaving this Nation happier and more wholesome than our generation found it, in behalf of this oganization, I promise that the task will be done. If human effort can achieve it, our children shall be free of this burden which it is in our power to lift.

Recent Progress Against Syphilis and Gonorrhea and Its Relation to the National Defense

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1939

ADDRESS BY DR. R. A. VONDERLEHR

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a speech by Dr. R. A. Vonderlehr, Assistant Surgeon General, United States Public Health Service.

Public policy demands that adequate treatment be abundantly available to every man, woman, or child who suffers from syphilis and that every infected person be given the opportunity to continue those treatments until cured, regardless of economic or social status.

Public-health authorities must insist upon treatment in order to protect the other members of the public, and if legislative support for proper control work languishes it is a failure of legislative education.

Dr. Vonderlehr's speech is as follows:

There has always been a close relationship between the health of the civilian population and the physical condition of the fighting forces of a nation. This connection has been closer with syphilis and gonorrhea than with most other diseases, and despite the control efforts of official and voluntary agencies, the former diseases remain a major health problem. But the trend seems to indicate that success is ahead.

Twenty-five years ago the directors of the newly formed American Social Hygiene Association selected a health officer to head that organization. Time has demonstrated the wisdom of that selection. Under his administration the association has undertaken first things first. Fighting syphilis, fighting gonorrhea, are among its foremost objectives.

The relationship of this voluntary organization to the campaign was established early. The need for governmental action in the public-health aspects of social hygiene work was appreciated by the forward-looking organizers of the association 4 years before the movement was given official national recognition. And even then this recognition did not come until a war demonstrated the vast prevalence of syphilis and gonorrhea in America's manpower.

Before 1914, public opinion regarding the venereal diseases conspired to hide syphilis, neglect treatment, and spread syphilis. Since then a sense of public responsibility has been gradually evolved which demands that we find syphilis, treat syphilis, and prevent syphilis.

In the control program during recent years emphasis has been placed upon the most practical public-health principles. This course has been pursued because the frailty of human nature

appears to make it more practical to attain an important end through emphasis on physical rather than moral measures. Yet health officers, with all other public-spirited citizens, realize the need for the application of both the physical and the moral principles of social hygiene in order to develop the finest type of human being in future generations.

PROGRESS IN RECENT YEARS

The headway which has been made in the application of new and intensified public-health principles during the past 2 or 3 years has been most encouraging. This progress has been so extensive that I shall summarize only a portion of it.

The use of serologic surveys to determine the prevalence of syphilis has given valuable information. The Public Health Service has recently completed a study of serologic blood tests performed on 78,000 college students, which has established a rate of approximately two per thousand syphilitic individuals for this group. Industry, particularly the railroads, has also employed routine serologic tests in the selection of new employees and, to a lesser extent, as a part of the routine examination of old employees. Limited reports indicate that the prevalence rate for syphilis in industrial employees ranges from 4 to 6 percent. While there is some evidence that the rate in industry may be inaccurate because of the influence of selective factors, these surveys nevertheless emphasize the need for effective control of syphilis in industry.

Blood testing of large population groups has been undertaken in several communities, and the people have cooperated enthusiastically in each instance. In Chicago, for example, a straw ballot among a large group of people indicated that 90 percent were willing to submit to a serologic test for syphilis.

The distribution of antisyphilitic drugs by State health departments has increased from 1,400,000 doses in 1935 to 2,800,000 doses in 1938. The total sales of arsenical drugs in the United States increased from 4,300,000 doses in 1935 to 6,700,000 doses in 1937.

Although sulfanilamide is used for the treatment of several infections other than gonorrhea, the amount of this drug which is sold is of some interest. More than 267,000 pounds of sulfanilamide was sold in the United States during 1937, while the 1936 sales were negligible. Figures for the calendar year 1938 are not yet available.

During the fiscal year 1936 the number of venereal-disease clinics reporting to State health departments was 713; during 1938 the number of these clinics had increased to 1,254. In the first 4 months of the 1938–39 fiscal year the total number of these clinics was 1,415, or almost double the number in 1936. All States except South Dakota, Utah, and Wyoming reported at the beginning of the present fiscal year that they either maintained or cooperated in the maintenance of clinics for the treatment of venereal diseases.

The number of new admissions to, as well as the total number of treatments given in, clinics maintained by or in cooperation with State health departments, has increased steadily year by year. During the fiscal year 1937 over 149,000 new patients were admitted to venereal-disease clinics, and a total of approximately 3,800,000 treatments were reported as having been administered. In the fiscal year 1938 the number of new clinic patients increased to over 197,000, and the number of treatments to approximately 5,200,000.

In the period from 1927 to 1937 the number of serologic tests performed in State laboratories tripled. The fiscal year 1938 marked a further increase of 37 percent in the number of serologic tests over the 1937 total.

There has been a great dearth in the personnel available for service in the campaign to control syphilis and gonorrhea. In order to meet this demand the Public Health Service, in cooperation with several State health departments, has aided in the organization of postgraduate training courses in venereal disease control. This postgraduate training, financed to a considerable extent with funds available under the provisions of the Venereal Disease Control Act and title VI of the Social Security Act, has been located in nine centers. The courses are offered to health officers, physicians, public health nurses, and medical social workers who are employed by or cooperating with health departments in the control of the venereal diseases. Both theoretical training and practical demonstration of methods and technics are made available.

Nineteen State departments of health have made some form of provision for approval or licensing of laboratories for the performance of serologic tests for syphilis. In view of the recent findings of the Committee on Evaluation of Serologic Tests for Syphilis, indicating that a few laboratories are not doing efficient serologic work, and because of the importance of these tests in the campaign against syphilis, it is believed that special emphasis should be placed upon this aspect of venereal disease control administrative practice during the next year or two. The excellence of the present-day serologic tests for syphilis when they are properly performed permits no excuse for the few laboratories whose work is not up to standard.

All these services have been badly needed for many years. They are needed for humanitarian reasons. They, and even more expanded services, will be required to control syphilis.

SYPHILIS AND MANPOWER

There is no better example of the need for intelligent, prolonged national action than the crippling effects of syphilis on our manpower.

The United States is planning a concerted drive to bring national defense up to a standard which will insure the future of our Government against all conceivable odds. In doing so we must not forget the need for an armed force free from syphilis. We should have learned that lesson well during the World War. Let us review conditions in the male population of military age.

Study of the men drafted in the last war revealed that syphilis was diagnosed by clinical methods alone without the aid of laboratory tests in 19,114 of 2,500,000 men. Only the obvious cases were accounted for since routine serologic tests were not done.

An estimate of the number of men of military age infected with syphilis in the present population has been made from data assembled in recent surveys (1936–37) in the United States. This study shows that 324,000 of the Nation's 20,000,000 men between the ages of 20 to 39 years, inclusive, would be found so infected. The significance of this estimate is evident when we recall that of our men only 260,783 were killed or injured in action during the entire World War. Thus, casualties due to syphilis at the present time, in this age group, would exceed considerably our total battle casualties during the entire period of the last war.

And this is not the complete story of syphilis as a military problem. An additional 67,000 of the 18,000,000 white men in the age group 20 to 39 years, and an additional 43,000 of the 2,000,000 Negro men in the same age group, would acquire syphilis each year. True, prophylactic measures under rigid military control are relatively effective. But the militia must be selected from the civilian man power, and this selection from the total male population available would require several years. With 324,000 syphilitic men at the beginning of hostilities and 100,000 more each additional year, syphilis would, indeed, assume a major problem.

The cost—local, State, and Federal—of treating these 324,000 syphilitic men now in peace time would be $15,000,000 the first year, and each year thereafter the bill would diminish. The Technical Committee on Medical Care stated in its report to the National Health Conference last summer that $50,000,000 a year would be necessary to bring syphilis and gonorrhea under control in the entire population. In this connection the people of the country have some pertinent decisions to make about the public health.

We, as a nation, have agreed that we must have a strong national defense. We have unhesitatingly authorized the purchase of flying fortresses at a cost of $285,000 each and the construction of battleships at a cost of $70,000,000 each.

Armaments are essential to national defense. Alone they do not prepare us for war. Much depends upon the physical fitness of the men who man them.

Is it not a waste of money and of men to spend millions on the treatment of syphilitic soldiers as we did during and shortly after the World War and provide inadequately for the civilian control of syphilis beforehand?

Should not adequate provisions be made for civilian syphilis control not alone for humanitarian reasons but as an essential in the national defense program?

The public-health stage is set. A successful war against syphilis is assured. Now is the time to act.

Workers Demand the Right To Bargain Collectively Through Representatives of Their Own Choosing

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1939

Mr. HOFFMAN. Mr. Speaker, how much longer will this Congress delay the amendment of the Wagner law?

Practically every Member of the House realizes that the act has not brought industrial peace. Complaints against its operation are widespread. Almost daily protests are being received from workingmen, complaining because the right of collective bargaining is taken from them and their organization and placed by the Board in the hands of organizations which do not represent the workers, which are not for collective bargaining purposes the choice of the employees.

As an illustration let me read this protest from Laureldale, Pa.:

ROSEDALE EMPLOYEES ASSOCIATION,
Laureldale, Pa., January 13, 1939.

Re National Labor Relations Board.
Hon. CLARE HOFFMAN,
House of Representatives, Washington, D. C.

DEAR SIR: I am president of Rosedale Employees Association, a Pennsylvania nonprofit corporation formed for the purpose of collective bargaining, and having a membership of about 1,500 of an approximate total of 2,800 employees of Rosedale Knitting Co., Laureldale, Berks County, Pa.

On or about June 8, 1937, we filed a petition with the National Labor Relations Board requesting an investigation and certification

of the association as the exclusive bargaining agency for all workers of Rosedale Knitting Co. The Board never held a hearing in the matter, and after repeated efforts to induce it to do so we withdrew the petition on or about November 23, 1938, after almost a year and a half of inaction by the Board.

Immediately after withdrawing the above petition we filed a new petition under section 9 (c) of the N. L. R. A., setting forth that we represented a majority of the employees of Rosedale Knitting Co. and requesting the Board to investigate the situation, and either to certify us as the exclusive bargaining agency or to hold an election to determine what organization, if any, represented a majority of the employees. The only other labor organization interested in the matter is the American Federation of Hosiery Workers, a C. I. O. affiliate, having about 500 of the Rosedale employees as members.

It would appear that if we were affiliated with the C. I. O., or possibly even with the A. F. of L., we would have had our certification or election long ago. Since we are an independent union, however, it seems that we are refused a certification or a vote for that reason. If the N. L. R. A. is to be administered on a basis of majority rule only if that majority happens to belong to one of the two largest national unions, something is radically wrong with the act.

We are now faced with the proposition that the only way to secure recognition of what we consider our rights would be to go on strike, an alternative which we were under the impression the N. L. R. A. was intended to obviate, and one which would work a great hardship upon us.

In the meantime Rosedale Knitting Co. has entered into a contract with the American Federation of Hosiery Workers, which directly, in our opinion, violates the N. L. R. A., and we charge the Board with being fully aware of this fact. Using this contract as an excuse and a justification, Rosedale Knitting Co. is now bringing open pressure to bear upon employees to join the federation and is operating a quasi-closed shop. The result of this is, of course, a violation of the act, in that the company is, by "discrimination in regard to hire or tenure of employment or any term or condition of employment," encouraging membership in the federation and discouraging membership in the association, when in fact and law the federation has never been certified as the exclusive bargaining agency. We charge that the Board is also fully aware of this condition.

The only reason the Board has given our attorney for its refusal to act is that many of our members joined our union in 1933–35. This is like saying that we must reaffirm our allegiance at regular intervals or else become obsolete, or, like Representatives, "rejoin" the House every 2 years.

Believe it or not, so far are we from being a company-dominated union that Rosedale Knitting Co., by its apparently illegal conspiracy with the federation, might aptly be called a union-dominated company—something unique in labor-employer annals.

Inasmuch as indications point to a congressional investigation and possible revision of the N. L. R. A. and its administration we wish to bring to your attention with all the force at our command the above situation. We would like you to do whatever you can to see that we are secure in our rights under the N. L. R. A. and that this and similar discrimination by the Board against independent labor organizations are stopped.

Yours respectfully,

EDWARD W. HECK, *President.*

Amendments to the Wagner law have been proposed. There is no longer reason why we should delay giving them consideration.

Industrial peace will be hastened if we so amend this law as to accomplish the purpose for which it was enacted; if we so amend it as to secure to employees the rights which the seventh section of the act declares they shall have, but which have in practice been denied them.

Investigation of Un-American Activities

EXTENSION OF REMARKS

OF

HON. JOSEPH A. McARDLE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 3, 1939

Mr. McARDLE. Mr. Speaker, in casting my vote in favor of continuation of the Special Committee on Un-American Activities I have in mind the need to explore the methods and examine the extent of alien and domestic forces engaged in propagating political doctrines foreign and hostile to our native democracy.

I have little fear for the eventual survival of our present form of government. I have faith in the sturdy American love for freedom and the fierce American determination to protect liberty at whatever cost.

Yet in a world confused and befuddled by wide break-down of the accepted order of things, I recognize the existence in a small minority of a state of mind fertile to the hysterical promises of messiahs of many political doctrines. I believe this is the time to air the extent to which foreign panaceas are being used to woo Americans into the toils of strange doctrines as this totalitarian state or that seeks to draw us from our natural orbit into a strange alliance with race hatred, atheism, paganism, and bloody persecution.

But there is a danger from within of which I am not unmindful in casting this vote. That danger is that we should embrace the methods of inquisition, slander, and prejudgment adopted abroad and engage in an orgy of witch burning instead of a calm, an open-minded, and a fair American inquiry.

The chairman of the committee on the floor of the House has just admitted to mistakes in past procedure. As a new Member of this body, it is not mine to judge. But the gentleman from Texas has given us his word that those mistakes will be rectified.

It is inconceivable to me that any committee composed of Members of this House will stoop during the future course of this inquiry to prostitute its high position by un-American methods of investigation.

I vote for a continuation of the investigation that the cancerous propaganda of social destruction spread by moral gangsters representing foreign dictators may be bared to the understanding of the American public.

I hope and trust and pray that the committee in which I today place such confidence will pursue its task in an objective, inquiring manner, giving fair play to all, giving every rational person a chance to be heard, protecting the innocent and the weak, and protecting the committee against those who would use the committee as a sounding board to vent their spleen and malignity on honest Americans just because they hold social and political beliefs different from their own.

Disqualification of Federal Judges

EXTENSION OF REMARKS

OF

HON. CLARENCE E. HANCOCK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1939

Mr. HANCOCK. Mr. Speaker, I wish to call the attention of the House to a bill I have just introduced in an effort to strengthen and improve the law with reference to the disqualification of Federal judges having interests or relationships which are likely to bias or prejudice their judgment in cases coming before them. It is far from a perfect bill, but it deals with a subject that needs legislation.

A week ago the whole country was shocked and scandalized by the publication of a letter written by Hon. Thomas E. Dewey, district attorney of New York County, to our distinguished chairman of the Judiciary Committee, giving factual data regarding certain transactions of Senior Judge Martin T. Manton of the Second United States Circuit Court of Appeals. Six specific transactions are described in the letter, and if the statements are true there are strong grounds for suspecting, at least, that an honored member of a high Federal court has been guilty over a period of years of the grossest corruption in office.

Most of the gentlemen here read Mr. Dewey's letter, and I will not attempt to review it, but let me briefly summarize two of the transactions that are described to indicate the seriousness of the charges.

The first charge grows out of the case of the Schick Dry Shaver, Inc., against Dictograph Products Corporation, Inc., involving the basic patent for electric shaving devices. It was tried in district court and decided in favor of the Shick company. An appeal was taken to the Second Circuit Court of Appeals, of which Judge Manton was the senior member. The case was reversed and decision rendered for the Dicto-

graph company by a divided court, Judge Manton being one of those who voted for reversal.

Between the date the appeal was taken and the time the decision was handed down the man principally interested in the Dictograph company, through the agency of a man named Spector, gave or loaned Judge Manton, or corporations owned or controlled by him, sums aggregating $52,000, and after the decision supplied the judge or his corporations with an additional $25,000.

Incidentally, Spector was convicted for contempt for destroying records that had been subpenaed and which were thought to contain evidence pertinent to the transaction, and a man named Bracken was presented to the court by the grand jury for punishment for contempt of court for refusal to produce records relevant to the New York district attorney's investigation of Judge Manton's office.

Let me mention one other matter brought out by Mr. Dewey. A man named McGrath was made a trustee of the Prudence Co., Inc., in a reorganization proceeding brought under 77B of the Bankruptcy Act. He had been recommended by Judge Manton to the district judge who made the appointment as a man worthy of receiving such an appointment. From time to time McGrath received fees and allowances, and when they amounted to $32,000 he turned over $12,000 to Judge Manton.

These facts and the others set forth in his letter were brought to light after a year's careful investigation into Judge Manton's affairs by Mr. Dewey and members of his staff. In so doing he has performed a duty which a less painstaking, alert, and fearless prosecuting attorney might not have undertaken.

I do not mean to pass judgment on the charges that have been made. Judge Manton may, as he states, have a complete and satisfactory explanation of all of them, and I sincerely hope he has. The implications are so grave, however, that nothing but a thorough sifting of the facts will satisfy the public now. There can be no doubt that the controversy in which Judge Manton is the central figure, if not vigorously pursued to a final conclusion, will cast reflection on the courts and weaken public confidence in the courts and the administration of justice. That must not be allowed to occur. It is to be hoped, if not expected, that the Federal Department of Justice and the office of the district attorney of New York County will cooperate in an effort to find the truth in the Manton case and see that justice is done rather than go their separate ways in a spirit of suspicion and rivalry.

During this past week I have heard a number of people dismiss the charges against Judge Manton by the flippant remark, "Dewey is ambitious." Let me say in reply that if it is sinful to be ambitious this House contains many very wicked men.

The Attorney General issued an interesting statement when Mr. Dewey's letter became public. He said that on the previous Wednesday, 5 days before, he went to New York and discussed with the judge the desirability of his resignation and received the judge's assurance that he would resign. He also said:

> Upon taking office on January 2, on the basis of information available in the Department of Justice, the Attorney General took under his personal direction the immediate consideration of the charges against Judge Manton. The Attorney General is convinced that the resignation of the judge will facilitate the thorough investigation of charges against the jurist and protect the administration of justice by keeping the courts completely above suspicion.

This statement raised a number of questions in my mind.

If the information revealed by Mr. Dewey and the press was available in the Department of Justice, how long had it been there?

If the Attorney General knew the facts on January 2, and took the Manton matter under his personal direction, why did he wait until January 25 to ask the judge to resign?

If an investigation was under way in his office and he was convinced that the resignation of the judge would facilitate the investigation of charges, why did he wait until January 30, after the publication of Mr. Dewey's letter, to announce the resignation?

Why did his predecessor in office fail to take any action on the "available information"?

If he did not have the evidence, but merely rumor and hearsay, why did he suddenly demand the judge's resignation?

If Mr. Dewey and the press had not disclosed some of the facts, would the whole matter have been hushed up and the judge allowed to sit on the bench indefinitely and resign at his convenience?

But another and more important question occurred to me, as it must have to many of you. I wanted to know what protection the law gives to litigants against having to submit to the jurisdiction of biased or prejudiced judges in Federal courts. I have not had time to make any but a cursory examination of the law, but I find that litigants have almost no protection at all. There are the bribery sections of the Criminal Code and a provision—section 373, title 28—making it a crime for a Federal judge to practice law, but the only disqualification section I find is section 24 of title 28 of the United States Code. It is quite brief; let me read it to you.

> When it appears that the judge of any district court is in any way concerned in interest in any suit pending therein, or has been of counsel or is a material witness for either party, or is so related to or connected with either party as to render it improper, in his opinion, for him to sit on the trial, it shall be his duty, on application by either party, to cause the fact to be entered on the records of the court; and also an order that an authenticated copy thereof shall be forthwith certified to the senior circuit judge for said circuit then present in the circuit; and thereupon such proceedings shall be had as are provided in sections 17 and 18 of this title.

This action is applicable to district judges only, and it gives them complete and final discretion to determine whether it is proper for them to sit in trials in which they are personally interested.

In my bill I have attempted to take that discretion away and lay down positive rules with penalties for disobedience. I doubt whether there is a State in the Union with so weak a law on the disqualification of prejudiced judges. I have looked at several of them. The bill contains most of the provisions of section 15 of the judiciary law of New York State, some of the existing Federal law, a little from the Canons of Judicial Ethics adopted by the American Bar Association in 1924, and a few ideas of my own. I have no pride of authorship, and I know that no public bill introduced by a Member on this side of the aisle is allowed to pass under the present regime. It is my hope—fatuous, perhaps—that lawyers here and elsewhere will be stimulated to study this subject and that we may without too much delay enact legislation to correct what I believe to be a serious defect in Federal law.

Men concerned with good government have recognized from the earliest times that independent, impartial, and incorruptible courts are essential to good government.

> Thou shalt not wrest judgment; thou shalt not respect persons, neither take a gift; for a gift doth blind the eyes of the wise and pervert the words of the righteous (Deuteronomy 16: 19).

The American Bar Association adopted Canons of Judicial Ethics in 1924 "as a proper guide and reminder for judges, and as indicating what the people have a right to expect from them." Among the 34 canons I find the following:

> He—the judge—should not incur obligation, pecuniary or otherwise, which will in any way interfere, or appear to interfere, with his devotion to the expeditious and proper administration of his duties.
>
> He should not enter into any business relation which in the normal course of events reasonably to be expected might bring his personal interest into conflict with the impartial performance of his official duties.
>
> It is desirable that he should so far as reasonably possible refrain from all relations which would normally tend to arouse the suspicion that such relations warp or bias his judgment, or prevent his impartial attitude of mind in the administration of his official duties.
>
> He should not accept any presents or favors from litigants or from lawyers practicing before him or from others whose interests are likely to be submitted to him for judgment.

The chairman of the committee which framed and recommended those canons was ex-President, ex-Chief Justice William Howard Taft.

The President of the United States when he was Governor of New York went to great lengths in 1931 in saying—

It is repugnant to our sense of the proper administration of justice that judges should be permitted to engage in business during their term of office. This principle admits of no doubt and should be applied throughout the State.

We know that practically all of the judiciary, Federal and State, is composed of men of the highest standards of rectitude, private and official, that they jealously guard the good name of the court and are keenly aware of their duty and great responsibility to retain the respect and confidence of the people by administering the law fairly and impartially. For their protection and the protection of litigants there should be a law on the Federal statute books definitely prescribing the grounds for the disqualification of judges in certain cases and imposing punishment for violating such a statute.

To my mind there is no crime more despicable than a betrayal of public trust.

Amlie Should be Confirmed

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1939

EDITORIAL FROM THE GAZETTE AND DAILY, OF YORK, PA.

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include herein an editorial appearing in the February 2, 1939, issue of the Gazette and Daily, of York, Pa., entitled "Amlie Should be Confirmed." Because of my warm friendship for Tom Amlie, I desire to take this means of expressing hearty approbation of Tom Amlie's integrity, ability, character, and qualifications. To me it is absurd that anyone should question Mr. Amlie's sound patriotism, his devotion to American institutions, his thorough scholarship, his grounding in economics.

If we have reached the point, Mr. Speaker, that we cannot advise and consent to the appointment of a scholar of national reputation because he may espouse ideas differing with ours, then, indeed, one may entertain fear for the future of America.

I may add that the liberals, who comprise the majority of the voters in my congressional district, thoroughly approve of the appointment of Tom Amlie to the Interstate Commerce Commission, and that in panegyrizing Tom Amlie I sincerely believe I am representing truly the majority sentiment of my own people.

The editorial is as follows:

[From the Gazette and Daily of York, Pa.]

AMLIE SHOULD BE CONFIRMED

Last week the President appointed Thomas R. Amlie to fill a vacancy on the Interstate Commerce Commission. The appointment was greeted with howls of Tory rage. The reactionaries in the Senate immediately began marshaling their forces to block his confirmation.

From the editorial rash that has broken out in the newspapers of the country, and especially among the top flight slanderers of the New Deal, it would seem that the word has gone out ordering Amlie's appointment killed by the press. The editorializing about the matter is so similar in structure that one could easily be led to believe that those who are condemning Amlie's appointment are writing from the same outline.

The tirade against Amlie is made up of the three stock arguments that have become too familiar with us in recent years: (1) Roosevelt makes a gesture of contempt for his opponents; (2) the confidence of business is being destroyed; and (3) communism.

One would think that persons of any imagination at all would long ago have discarded these shop-worn frauds. But again and again they are dragged out to discredit any Roosevelt move.

Let us consider the facts in the matter of Amlie's appointment.

There are 11 members of the Interstate Commerce Commission. Six of these at present are Democrats. Five are Republicans. The term of one Republican has expired. Roosevelt, in naming a successor, chose Amlie who is neither a Republican nor a Democrat. He is a member of the Progressive Party in Wisconsin, which until lately was the dominant political party in that State.

As a Representative in Congress, Amlie stood on a par with Maury Maverick in ability and in his representation of the people of the whole country. He was independent. He was incorruptible. He was sincere. He was one of the most energetic Members of Congress. And he was a member of the group of young Congressmen known as "Young Turks" and hailed throughout the country for their constructive liberalism.

In the recent elections Amlie was defeated in his try for a Senate seat.

Hugh Johnson doesn't call Amlie an outright Communist, but he fears he might be. Of course, anything more liberal than a cyanosed dead eagle is anathema to Johnson since he cast off the robes of liberalism which he wore with such ill grace. So Johnson shudders in his iron pants for fear that Roosevelt, by his recent appointments, is trying to erect an imitation Bolshevist Party on the ruins of the Democratic Party.

Mark Sullivan inadvertently pays Amlie a compliment rarely received by any man. He argues that Amlie, as one of the 11 Interstate Commerce Commissioners, would exercise such an influence that his appointment is likely to scare business into dismay.

Think of it! Business, the great moving force of this country, in Sullivan's own opinion, being chased to the tall timbers by one lone Interstate Commerce Commissioner! Business running away from profits for fear that a former Congressman, who declared the people of his district elected him and therefore he would serve them, might say "Boo!"

And then Sullivan reveals a type of thinking that is all too common in this country. He implies that an Interstate Commerce Commissioner should be the servant of business.

It is high time that the Johnsons and the Sullivans were told that the United States is more than just business. It is the whole body politic. Any appointment to any governmental agency should be predicated upon service to the country, not service to some predatory interest.

If Amlie were some hack lawyer, totally undistinguished for anything but obscurity; if Tom Amlie were just a run of the mine political spoilsman, if he were some obscure ordinary businessman, not one of his present detractors would raise his voice against him.

What these calumniators fear, however, is not that Amlie will be a nonentity on the Commission. Your average American citizen cannot name three of the present Commissioners. They fear that Tom Amlie will bring to the Interstate Commerce Commission the same integrity and the same concern for the general welfare that characterized his career as a Congressman.

They have not produced a single valid argument as to his unfitness for the office. All they can say of him is that he will not play their game. And because of that, and because they will use any stick to whip Roosevelt, they will try to destroy him.

On his record in Congress alone, Tom Amlie deserves to be confirmed.

The Present Job of Government and Private Capital in Our Democracy

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1939

Mr. CANNON of Missouri. Mr. Speaker, the Department of Agriculture has just released statistical summaries of Government and private debt, which are of particular interest at this time. The data includes summaries covering approximately two decades, beginning in 1920.

In the 1920's, as we went from depression to prosperity, private investment increased by five to six billion dollars a year. Private investment is, of course, essentially the same as private debt. Widespread private investment, or debt, does not differ greatly from national debt except that often it is not paid back. The increase in private investment, or debt, gave use more production and more jobs and therefore more consumer purchasing power.

Since 1930 private investment has been far below normal and the Federal Government has had to step into the breach. In a capitalistic society like ours capital for investment must be supplied or the wheels stop turning. Either individuals must supply it or the Government must supply it, or both.

Since 1930 Federal indebtedness has been increasing at an average of about $2,500,000,000 a year. This is less than half of the annual increase in private indebtedness during the 1920's, and together with debts of Government agencies has hardly been sufficient to offset the shrinkage in private debts.

A substantial part of the increased Federal debt has gone to replace a $15,000,000,000 shrinkage in private long-term debts since 1930. Another part has gone to offset a $20,000,000,000 shrinkage in bank loans. Add together the present private debts and the Federal debt and you have a total today somewhat less than in 1930. See table 1.

While the Government since 1930 has added less per year to the national debt than did private enterprise in the 1920's, each dollar of Government debt produced more results in terms of increase in national income than did a dollar of private debt or investment in the 1920's. See table 2.

The real question about Government debt is now how we are going to carry it, because with lower interest rates and a smaller private debt the carrying charges on both Government and private debt in 1938 were 14 percent less than in 1930. See tables 3, 4, and 5. These interest payments took a somewhat smaller share of the national income than in 1930 and a much smaller share than in 1932. The real question is how the Federal Government may most effectively invest and spend for productive and social purposes until such time as private capital can carry its fair share of the social load, now increased because of the entirely different world outside of the United States and by the persistent unemployment problem within. Unemployment is the source of many of our internal difficulties.

Another question with regard to Government investment or debts is what the Nation gets for those expenditures. How do the tangible and social assets of Government compare with the net Government debt? One attempt to evaluate Federal and other Government assets—buildings, roads, and so forth—shows assets of over $70,000,000,000 at the end of 1938 and a net debt of $51,000,000,000. See table 6.

We must do some deep thinking immediately on the proper balance between Government and private investments and upon new productive opportunities for surplus farmers and displaced city people. The creation of these opportunities is now the great test and task of our democratic form of government, and its most effective performance at present is the right combination of both private and public investment in productive effort and socially desirable services.

Proposal for Naval Holiday and Arms Conference

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1939

Mr. LUDLOW. Mr. Speaker, as a citizen and as a Representative of citizens who are greatly concerned over existing trends, I should like to see our Government take the lead in trying to secure an arrangement by agreement among the powers of the earth for a naval holiday and a conference on limitation of armaments. It seems to me that in this direction lies our opportunity for a supreme service to mankind.

By unanimous consent I present for the consideration of the Congress and the country a letter I have written to Secretary of State Hull, as follows:

FEBRUARY 6, 1939.

Hon. CORDELL HULL,
Secretary of State, Washington, D. C.

DEAR MR. SECRETARY: I am moved to write this letter not only because you are our leading official in the field of foreign relations but because of the friendship that has existed between us, long antedating your career in the service of the Nation, subsequently strengthened by our association in the House of Representatives and continuing until this hour. It is needless for me to reiterate my admiration of you or to accord to you the high place you hold in the universal esteem of our people as a good citizen and a high-minded, conscientious, capable official.

I am further moved to write this letter to you because of the hope held out and the assurance given in point No. 3 of our President's four-point program of foreign policy, enunciated by him at his press conference on February 3 when he said:

"We are in complete sympathy with any and every effort made to reduce or limit armaments."

I am writing to suggest that the time has come when the United States should undertake the role which we alone among all the nations of the earth are capable of performing with any assurance of success—the role of peacemaker.

I would respectfully suggest that the United States Government should proceed without delay to sound out the powers on two fundamental propositions: (1) An agreement on a naval holiday which would suspend naval construction until January 1, 1941; and (2) a proposal that all nations send delegates to a conference to discuss limitation of arms, to be held in this Capital City some time during the coming summer or fall.

I believe as firmly as I ever believed anything in my life that now is our opportunity to act along these lines, for if we delay action there is a prospect that we may find ourselves just another belligerent in an awful world war, with our opportunity to serve as peacemaker gone forever.

Some may say that with the war psychology pervading the earth, now is a queer time to be proposing intervention for peace, but my reply to that is that now is exactly the right time, before the nations come to grips in a cataclysmic world warfare that might be avoided by a little forehanded discussion around a table. Dictators and warmongers would not like such a proposal coming from America, but it would be hailed with joy and satisfaction by 99 percent of all the peoples all around the globe, for the people who have to do the dying and suffering and to bear the burdens and griefs of war are unspeakably weary of war. By espousing a naval holiday and an arms conference America would instantly win the respect and love of the masses in every land. In dictator countries the masses might not be able immediately to make their approval articulate, but even there a great sentiment would be built up for peace. Nor do I believe that such a straight-from-the-shoulder peace move by America would be foredoomed to failure. I believe it would be successful. As you so well know, Japan, through her official spokesman, her Foreign Minis-

ter, already has stated that she will welcome an opportunity to send delegates to such a conference. European dictators may demur, but I believe they would fall in line when they feel the pressure of the common people of their countries. As for the European democracies, I believe they would welcome such a move by America.

Such a movement coming from Washington would not indicate a soft or weak attitude on our part but would show that, armed in the cause of righteousness, we have the strength and the vision and the determination to assume a role that no other nation is capable of performing nearly as well as we are—the role of peacemaker to relieve the world of the fears and tension that now engulf it.

Let it be known that America stands for conserving and building up human values rather than for tearing them down. A great commander once drove away the animosities and lifted the burdens from the hearts of millions of people by saying, "Let us have peace," and by assuring the poverty-stricken men of the Southland that they need not surrender their horses, as they would need them for the spring plowing. How relieved humanity would be at this juncture if there were someone in authority to take the lead in checking the war tide, so that we in America might have peace and freedom from agitation; so that we might turn to the problems of economic and moral rehabilitation that so much need our attention and so that the peoples of all other countries everywhere, insofar as their local conditions and surroundings will permit, may be vouchsafed the same blessings. May I conclude with some words by Neville Chamberlain? I quote from his speech to the Foreign Press Association as reported in the London Times of December 14, 1938, when, in discussing how happiness comes to nations, he said:

"Something depends upon our material condition, upon our ability to command a standard of comfort which each sets for himself. But even more are we dependent for our happiness upon our mental condition, upon our freedom from apprehension, upon the possession of that peace of mind without which no material comforts can bring satisfaction. It is the absence of that peace of mind which today weighs upon the world and in its turn, by destroying confidence, prevents us from reaping the material advantages to which human progress, in mastering the forces of nature, should entitle us. And I would conclude by appealing through you to all the nations you represent to realize that our aim should be the happiness of all our peoples, and that that happiness can be attained if we are willing to lay aside suspicion and prejudice, to cease looking for points of difference, and to search instead for points of agreement."

These are the words of a wise statesman, and I do not know of any greater service America could render to the world than to implement his philosphy with the means of action, so that around a conference table the representatives of the nations may cease looking for "points of difference" and may search for "points of agreement."

I realize that in the present psychology of the world there can be no disarmament that is not mutual, and that with other nations arming to the teeth America must build up its defenses, nor do I have any criticism of those in charge of our foreign relations, because I believe that we are all striving for the same objective—peace on earth—though perhaps with different ideas and different plans as to how that objective can be reached, but I do hope that you will give serious consideration to this proposal of a naval holiday and an arms-limitation conference, because I sincerely believe it offers the way to break the war psychology and to enable America to render the greatest service it possibly could render to the world.

Very truly yours,

LOUIS LUDLOW.

Fortune Magazine Speaks on National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1939

Mr. VOORHIS of California. Mr. Speaker, there has for some time been a considerable amount of critical comment in the press and elsewhere regarding the work of the National Labor Relations Board. In view of the many barbs which have been thrown at the Board, I was extremely interested in an article which appeared a few months ago in a magazine which has an established reputation for impartiality and detached, scientific observation. The publication I refer to is entitled "Fortune," and the article describing the accomplishments of the National Labor Relations Board appeared in the issue for October 8, 1938, on page 56, under the title "The G—— D—— Labor Board."

According to this article, some 16,200 cases involving about 3,900,000 employees were brought to the Board by workers and labor organizations between October 1935—when the first N. L. R. B. hearing was held—and July 1, 1938. Of these cases more than three-quarters were officially closed during that period. Of this number, about 16 percent were dismissed by the Board or its regional directors, approximately 25 percent were withdrawn, and an additional 54 percent were settled by mutual agreement. I was pleased to read that only some 5 percent of all the charges filed required a formal hearing before a trial examiner.

That single fact seems to me to be of tremendous significance. It is unanswerable evidence of the fact that the Board has been doing splendid work in conciliating and arbitrating differences between employers and workers. We all know that a policy of conciliation and arbitration represents the only sound basis for permanent harmonious relations between employers and workers. Precisely such a policy has been followed consistently by the Board, as the figures from Fortune show, and I simply wished, Mr. Speaker, to take a brief moment to point out that important fact to this House.

Inasmuch as the members of the Board have so often been represented as terrible ogres about to pounce on all businessmen in the country, it seems interesting that Fortune magazine described Mr. J. Warren Madden, Chairman of the Board, as—

A tired, soft-spoken, 48-year-old dean from Pittsburgh, named Joseph Warren Madden. He came to Washington with a sound, legal background (he personally argued the Jones & Laughlin test case before the Supreme Court), a genuinely judicial temperament, few if any New Deal connections, and faith in the essential fairness and honesty of both industry and labor, a faith that had survived his successful chairmanship of the three-man arbitration board that settled the Pittsburgh street-car dispute in 1934.

Agricultural Relief

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1939

RESOLUTION OF THE HOUSE OF REPRESENTATIVES OF THE STATE OF MONTANA

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the House of Representatives of the State of Montana:

House Resolution 1

A resolution commending Members of the Congress of the United States for introducing a bill designed to guarantee to farmers the cost of production

Whereas 18 Senators and 6 Representatives have introduced in the Congress of the United States a bill designed to guarantee cost of production to farmers; and

Whereas it is the sense of this house that such legislation is essential if the economic status of agriculture be raised to a parity with other industry: Now, therefore, be it

Resolved, That the House of Representatives of the Twenty-sixth Montana Legislative Assembly do hereby commend said Members of Congress for their action in introducing this legislation, and that the clerk of this house be, and is hereby directed to convey to each of said national legislators this expression of commendation.

W. P. A.

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1939

RADIO ADDRESS BY HON. CLARENCE CANNON, OF MISSOURI, JANUARY 14, 1939

Mr. COCHRAN. Mr. Speaker, in view of the message of the President today, with reference to the Works Progress

Administration, I include, under leave to extend my remarks in the RECORD, the following address delivered over the radio by my colleague, Hon. CLARENCE CANNON, on Saturday, January 14:

Some time ago a prominent citizen insisted jocularly that if W. P. A. was discontinued the unemployed would have to go to work. He was loudly applauded, but just about that time his son came home from college, and his son-in-law lost his job, and suddenly our friend changed his tune and began to say "something ought to be done," and finally was insisting that "the Government ought to see that men had an opportunity to work." He wrote his Congressman asking if the boys couldn't get a foremanship in W. P. A. or be appointed to something in Washington, and finally got one of them a local State appointment and put the other out on a farm he was able to buy at depression prices. Today with the boys off his hands and business again on the upgrade, he is talking about the public debt, and the malingerers on W. P. A., and asking "how are we ever going to pay the bill?" Apparently circumstances alter cases and the point of view depends largely on whose ox is gored—which brings us down to the fundamentals of the proposition.

The right to labor is inalienable. It is a right. And the opportunity to labor, to earn the daily bread by the sweat of the brow is the greatest blessing vouchsafed by a benign providence. Interference with that opportunity is always artificial. Panics and depressions are man-made. And being man-made they must be man-remedied. The W. P. A. is the most successful plan yet devised for remedying the situation—of providing work—and of keeping body and soul together until economic readjustment again permits private industry to take up the burden where it left off. The W. P. A. is something new in business and government—an experiment—and conducted on such a vast scale as to have no counterpart in history. Depressions have recurred periodically in all lands, but nowhere from ancient Egypt down through medieval Europe to the modern continental nations of either hemisphere have such astronomical sums been spent on so inclusive and comprehensive a scale for such a purpose.

Of course, an expenditure of such unprecedented amounts—in so broad a field without blueprints or formulas from the past, is inevitably attended by complaint and criticism—and no doubt there is ample occasion for both. "Men given work who do not deserve it"—"men denied work who should have it"—political exploitation—waste—favoritism—and all the gamut of charges which inevitably accompany public expenditures, whether by village, State, or Nation. In my home Congressional District militant delegations of Democrats call, write, telegraph—protesting against the prostitution of W. P. A. by Republican foremen for political purposes. My files are full of vigorous protests by militant Republicans against the use, by Democratic foremen, of W. P. A. positions to control the election of constables and school directors, not to mention Senators and Presidents. And all of them are more or less justified. For in the enlistment of personnel in a huge organization extending across the continent you cannot change every Democrat and every Republican to a cloistered, nonpartisan eunuch "in the twinkling of an eye" or in any other space of time. They are still Democrats. They are still Republicans. They still have their personal prejudices and their local interests to serve with too often the proverbial provincial incompetence. And no amount of announcement of precept or policy from Washington can neutralize or control them. In every Red Cross drive, and every community chest campaign—in every church and fraternal program for local relief we are confronted by precisely these same problems. "Those receive who do not need." And "those who deserve are neglected." And political support in church or lodge or school election is solicited on the strength of largess so distributed. But it is a testimonial to American efficiency and American integrity, and should be a matter of gratification to every American citizen, that in the distribution of billions of dollars through W. P. A. from the back rooms of that dingy yellow brick building on a side street in Washington—from which the W. P. A. was administered—not a dime of the billions that flowed like an avalanche through its doors, ever stuck to the hands of the Administrator or the efficient staff that occupied the building with him. That record is one of the brightest chapters in American history, one in which every citizen of the Republic may take pride regardless of political affiliation.

And among all the welter of attempted political maneuvering by local ward heelers of all parties, one conclusive and irrefutable record stands out like the headlight on a locomotive in the dark of the moon. That is the election in Michigan. In the interest of President Roosevelt and Administrator Hopkins, the election in Michigan took precedence over the election in any other State. It was the only State—outside of his own State of New York—in which President Roosevelt went on the air to specifically urge the election of his personal candidates. Certainly if the weight and prestige of the W. P. A. was to be used in any State it would be used in Michigan. What actually was the course of W. P. A. in the Michigan campaign? In the September before the election W. P. A. expenditures in Michigan reached $14,251,125.45. In October—just when the campaign was hottest and sentiment was crystallizing—expenditures were reduced to $11,243,614.37. And in November—the month of the election—expenditures were further dropped to $9,489,342.44. Again on September 3, 1938, W. P. A. was employing in Michigan 202,296 men—potential voters. On September 17 the number had been reduced to 197,943—on October 1, to 181,176—October 15, to 172,424—October 29, to 165,264 and by the day of election, November 8, the number had dropped from 202,296 to 159,139. If W. P. A. was being used for political purposes anywhere in the United States, it would have been used in Michigan. Additional men would have been employed—larger sums would have been expended. But during the heat of the campaign—when the issue hung in the balance—steadily through September and October the number of men was decreased and the amount of money expended was reduced. There could be no more striking or convincing evidence of the nonpartisan integrity of the high command in charge of this stupendous army of voters—and the fabulous sums of money being daily expended in every community in the Nation.

W. P. A. is honest. It is nonpartisan. And, most important of all, it is effective. It has served the purpose for which it was created. All over the country today families have been rehabilitated, saved from suffering, and tided over an abyss the depth of which can only be surmised. And along with this invaluable service the Nation has been enriched with public improvement, streets, highways, bridges, farm-to-market roads, schools, libraries, community buildings, water systems, and numerous other municipal, State, and National projects which never could have been secured in any other way and which will serve to enrich and bless the life of communities throughout the Nation through all the years to come.

Those who are now complaining of the cost had nothing to say when we were taking even larger sums from the Public Treasury to lend to European nations for their rehabilitation after the war—billions which never have been and never will be paid. I leave it for the American people to say which has been better invested, the money sent to Europe or the money spent for W. P. A.

Of course, W. P. A. was created to serve an emergency. It is temporary. And we look forward to the day, in the near future, when rapidly improving economic conditions, accelerated business, and private industry will again take over the job. In the meantime, let every man in his own particular field work and sacrifice, and cooperate to that end. For in work and sacrifice and in cooperation lies the hope and destiny of individuals and of nations.

Hon. Thomas R. Amlie

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1939

STATEMENT BY HENRY OHL, JR., PRESIDENT OF THE WISCONSIN STATE FEDERATION OF LABOR

Mr. GEYER of California. Mr. Speaker, in connection with the consideration by the Senate of the nomination of Hon. Thomas R. Amlie as a member of the Interstate Commerce Commission, it seems to me pertinent to have printed in the RECORD the following statement on Mr. Amlie recently given out by Henry Ohl, Jr., of Milwaukee, Wis., president of the Wisconsin State Federation of Labor, at the Hamilton Hotel, here in Washington.

Mr. Ohl said:

The attack on Thomas R. Amlie, which inspired a resolution in the Wisconsin Legislature can hardly be understood by people on the outside until they become informed as to the unsocial caliber of the majority of that body.

The resolution issued from the Wisconsin statehouse will be better understood when the legislature gets down to work on the vicious antilabor and unsocial legislation already introduced.

Reactionaries and illiberals it appears have combined for united action against labor's most rational demands.

The resolution condemnatory of Amlie is one of the first acts of the Wisconsin Legislature which indicates what may be expected from that body.

Labor in Wisconsin generally was pleased with the President's nomination of Thomas Amlie for the Interstate Commerce Commission post.

The wild charges of communism made against Amlie are refuted by the Communists' own attacks on Amlie from time to time. Those of us who know Amlie best consider him a clear, rational thinker, and a consistent cooperator swerving neither extremely to the right nor so far to the left as to leave good reasoning behind.

The interest of Wisconsin labor is not so much in the position for which Amlie has been nominated as it is in keeping faith with a man who has served and has been loyal to the people as a whole.

Thomas A. Edison

EXTENSION OF REMARKS
OF
HON. ALBERT L. VREELAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1939

Mr. VREELAND. Mr. Speaker, as we go about our daily tasks we sometimes are inclined to let the accomplishments of our fellow man go by without thought, and we soon forget that the very articles we are using in our daily life and have grown accustomed to were not in existence so many years ago. Were it not for inventive geniuses, we would still be struggling along through life with the candle, the horse and buggy, with no radio, no telephone, or many other conveniences. Yet they have become so much a part of our daily life and become a part of our very existence that we forget their origin. It is perhaps true that were it not that we have national holidays in memory of the great men of this country we would forget even characters of the import of Washington and Lincoln. But again most of our national heroes and those we remember by holidays were great in civic or military affairs, and we pay little heed or attention to the great works of men and pioneers in industry and inventive geniuses who have given us so many of the conveniences of life.

Saturday will mark the birthday of a man proclaimed universally as this country's greatest inventor, Thomas Alva Edison. He is responsible for some of the basic process that later developed into industries, conveniences, and commodities that we now accept in our daily life as a necessity.

Mr. Edison's life had not been one of ease and comfort, nor had it been one of the result of higher education. He was not afforded this privilege. Mr. Edison's parents, while by no means paupers, were not above the comfortably fixed middle class, and being of a wandering nature and quick to move to new territory Mr. Edison, Sr., never remained in one locality for any great length of time, which interrupted the education and training of the many children in the Edison family. Thomas Edison, as a child, was not well, being of sickly physique. Because of this his mother, a fine, well-educated lady, took it upon herself to educate young Edison. While still a young boy he showed his business ability in opening a newspaper route on the various trains in and around the town wherein he lived. Young Edison, even though not too strong physically or too well, was still a typical boy and had many an experience of the average mischievous child, which sometimes caused his mother considerable anxiety.

He was born February 11, 1847, in Milan, Ohio, and moved with his family to many cities in the Middle West and Canada. At an early age he became interested in telegraphy, which was then in its infancy, and it was not long before he became an expert operator and, like all of those engaged in that occupation at that time, he became a wanderer and drifted from one section of the country to another, taking a job as telegraph dispatcher on the railroads.

While following this occupation his inventive mind began to function and he saw many difficulties arising with the crude telegraph equipment in vogue in that day. It was not long before young Edison began to experiment with improvements to the telegraph systems, both receiving and sending. Even then he was working under difficulties, bearing in mind that it had not been many years after his birth that he became practically totally deaf through an accident.

But, in spite of this physical handicap, he continued his work with the telegraph and his first patented invention was in 1868, when he was 21 years old, and was known as an electrical vote recorder. Subsequently, in rapid succession, he invented many new products, perhaps the best known of which to us is the first practical incandescent lamp known at that time as a "hairpin burning in a bottle." This invention was created at Menlo Park, N. J., where Mr. Edison had established a small laboratory for experimental purposes and where now stands a large masonry column at the top of which a dome in the shape of an incandescent lamp burns continuously in memory and recognition of this great man who brought to us the electric light.

Because his inventions, evolved to benefit and bring profit to millions of people all over the world and particularly to this country, are today the foundation upon which we shall continue to advance and progress; and because the businesses which he founded during his lifetime are still prospering and carrying on his work, it is only proper and fitting that appropriate recognition be given this country's benefactor and world-famous genius. Setting aside the anniversary of the birth of this great American, February 11, each year as a national holiday would be a deserved tribute.

The benefits we all derive today and will continue to derive in the future are beyond human calculation. In Edison's accomplishments the world has not only a foundation upon which to build industrial and social progress but every living soul for innumerable years to come will profit spiritually from happier human relationships and happier living conditions.

The name of Thomas Alva Edison rightly belongs on the list of America's greatest men. His memory should be fittingly perpetuated so that our citizens and the peoples of the world will never be allowed to forget the greatness of this genius whose achievements better their lives. No other American ever contributed more to our present civilization and the stimulation of industrial progress. Even so, Thomas Alva Edison's laboratories are carrying on his great work, founded on Edison's principle of first recognizing a need and then inventing a solution.

During his lifetime Edison received some 1,150 patents. Among his best accomplishments, besides the first practical incandescent lamp, are the first commercially practical generator and the first practical system of electric-power transmission and distribution—a group of basic inventions with which, in 1882, with the opening of the first commercial generating plant, he ushered in the age of electricity.

Other accomplishments include the multiplex telegraph; the motion-picture camera; the phonograph; the alkaline storage battery; the microphone transmitter, which played an important part in the development of the telephone and also in the art of radio broadcasting; and the Edison-effect lamp, which was the first thermionic tube and basis of our present radio "tubes."

It has been estimated that at the time of Edison's death in 1931 the industries arising directly from his inventions represented an investment of more than $25,000,000,000 and were directly providing 2,000,000 jobs to our people of this country. This was a larger number of persons than were employed during the same year by all the railroads, automobile, and steel industries combined; or, considering the total of 18,000,000 persons gainfully employed in all the manufacturing, mechanical, and communication industries, 1 out of every 9 owed his employment directly to Thomas Alva Edison.

Similar benefits exist today and will continue to exist as the foundations he made for advancement and expansion of industry have built upon them new and great industries which would not be possible were it not for this genius and humanitarian whose chief pleasure was to provide additional means to others securing happiness, comfort, and prosperity.

It was Thomas Alva Edison who brought about stimulation of the basic industry of mining. Through his inventions, markets for coal, copper, lead, nickel, silver, and zinc were increased. For instance, about one-third of the silver production today goes into the making of motion-picture film, an industry to which Edison gave birth. Something like half of today's copper output goes into wire, cable, and other uses in the electrical industry, which Edison brought into being.

I could cite statistics indefinitely and still not give a full measure of the enrichment Edison has brought to everyone's life. Few people associate this inventive genius with our present-day conveniences, such as vacuum cleaners, automobiles, refrigerators, and similar home appliances. And yet

without the basic principles perfected by Edison, we might not have these things today. In fact, as I have previously remarked, the extent of the daily benefits we derive from this great American's inventive prowess are beyond calculation.

As pointed out previously, Thomas Edison worked not so much in the field of pure science as in the application of known scientific fact. In the estimation of those men who were closely associated with Mr. Edison and who are now carrying on in companies which he founded, the organized methods by which he accomplished his great work are more valuable to society than the inventions themselves. The men carrying on today say that these methods of organized research will continue to bring forth new inventions in ever-increasing quantity and usefulness long after those originated by this great American, whom we should honor, may have grown obsolete. Following his example, American industries now have extensive research organizations and laboratories which are of paramount importance to our country, but which before Edison's time were unheard of. Such research organizations patterned after the one established at Menlo Park by Mr. Edison over 60 years ago represent a living force for continued progress in the arts and sciences that are servicing mankind today. In setting such forces in motion, Edison has made his greatest contribution to civilization.

But besides Edison being a great contributor to the progress, welfare, and happiness of mankind, this country had in him a patriot whose work during the great World War is alone worthy of perpetuating his memory through the declaration of a national holiday on the anniversary of his birth. Not only was his work of immediate national importance in this crisis but out of it have come industrial benefits which exist to this day. The Great War brought shortages of important chemicals, chief among them carbolic acid, benzol, and so forth. Edison was equal to the situation and established in an exceedingly short time plants to manufacture these chemicals and others used in American industries. The products of these plants saved the day for many manufacturers in the United States.

And there are other evidences of his interest in our country and the citizens of the United States. About 1923 Edison made a study of economic conditions, and in 1924 presented to the Secretary of the Treasury a proposed amendment to the Federal Reserve Banking System. It is interesting to note that many other points outlined by Mr. Edison some 15 years ago have actually been applied in the United States through governmental endeavor to stabilize economic conditions.

On October 18, 1931, this great inventive genius died and took with him one of the greatest productive minds in history. However, he has left behind him a group of men who have worked with him through the years and whom he has trained to carry on the production started by him and to continue his research and the tradition of this great man.

Because he is truly a great American and one of the greatest contributors to our civilization of today and recognized as such universally, and also because he died a resident of the Eleventh Congressional District of New Jersey, I have introduced, in the Congress of the United States, House Joint Resolution No. 91, requesting the President to proclaim February 11 of each and every year as Thomas Alva Edison Day and to urge all public institutions to have appropriate exercises and the people of the United States to display the national colors.

I fully realize, however, that with the pressure of national business it will be impossible to have the resolution reported by February 11 of this year. However, in spite of the short time within which I could act, I have written to the Governors of the several States respectfully urging that they, as Governors, make a similar declaration for their State, and I have been greatly impressed with the many favorable responses received to date.

I respectfully urge the Congress of the United States and the Committee on the Judiciary to report this measure and act favorably upon it so that February 11 of 1940 may be nationally proclaimed as Edison Day.

French Trade Agreement Costs American Lace Workers $3,500,000 in Wages Annually

EXTENSION OF REMARKS

OF

HON. HARRY SANDAGER

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1939

PRESS RELEASE OF AMERICAN LACE MANUFACTURERS OF JANUARY 24, 1939

Mr. SANDAGER. Mr. Speaker and Members of the House, I desire to call the attention of the House to another evidence of the failure of the reciprocal-trade agreements not only to fail to substantially increase American exports but also to the injury which the agreements are doing to American labor.

The specific instance I deal with today is the lace industry of the United States, which is a relatively important industry in my home State, Rhode Island. There has been an estimated loss of $3,500,000 annually in wages to the American lace workers due to the fact that French imports are increasing at a terrific rate.

I also desire to call attention to the wage differential of our workers and those of France, which shows that in many instances the French lace workers receive less than 25 percent of the amount paid to American employees. Because the administration is well supplied with statisticians, experts, publicists, and propagandists, who, at a minute's notice, are ready to bombard the Congress and the country with data to justify these trade agreements and to attempt to show the great resultant benefits, it is only fair that the other side of the question be heard, namely, that in many instances the agreements have not only done irreparable harm to American industries but have failed to provide the promised increase in American foreign trade. This is strikingly evident in the case of the American lace industry, and for that reason I desire to place in the RECORD the press release of January 24, 1939, of the American lace manufacturers, as follows:

FACTS OF THE TRADE AGREEMENT WITH FRANCE AND ITS RELATION TO AMERICAN LACE WORKERS

1. Shrewd Yankee trading: On October 12, 1934 (4 months after passage of our Trade Agreements Act), the French press reported that their Government was preparing to raise tariff barriers.

On October 17, 1934, the French Minister of Commerce confirmed this newspaper report. French tariff experts explained that these increases had a double purpose and were to be intentionally high both for protection and for bargaining purposes. (New York Times, October 13 and 18, 1934.)

On October 18, 1934, in the New York Times appeared an article captioned "Hull Hits Nations Padding Tariffs." Intimating that he would not negotiate a reciprocal tariff treaty with a country taking such action, he said: "It should be obvious that no bargaining program based upon a sincere effort for an all-around reduction of trade barriers can succeed on the face of such practices. Failure to agree, under those circumstances, is certainly not an improbability."

Other officials made it clear that Mr. Hull's remarks applied to France.

On November 29, 1934, the French act raising tariff duties was signed by Premier Flandin.

On June 15, 1936, a reciprocal-trade agreement with France became effective, despite Mr. Hull's utterances, under which United States duties were reduced on laces among many other items.

2. Currency depreciation: On the effective date of the agreement (June 15, 1936) the French franc was valued at $0.0658; on October 15, 1936 (4 months later), at $0.0466; on May 15, 1938, at $0.0279; on January 21, 1939, at $0.0264.

Article XI of the agreement makes provisions for abrogation or modification of the agreement "in event * * * of a wide variation in the exchange rates." Our Government has taken no action, despite this wide variation.

Furthermore, the first paragraph of the preamble to the French agreement states that because there is stability in fact between the currencies, the agreement has been concluded. Since the World War the French franc has displayed great instability.

3. Importation of laces: Comparing importations of laces for the 12-month period immediately preceding the effective date of the French agreement (June 1, 1935, to May 31, 1936) with the last 12-

month period for which figures are available (November 1, 1937, to October 31, 1938), we find the following:

Importations of so-called silk laces increased 1,734 percent. From June 1, 1935, to May 31, 1936, 12,360 pounds were imported. From November 1, 1937, to October 31, 1938, 226,696 pounds were imported.

Importations of silk veilings increased 1,217 percent. From June 1, 1935, to May 31, 1936, 8,223 pounds were imported. From November 1, 1937, to October 31, 1938, 108,354 pounds were imported.

The third item of lace, duties of which were reduced under the French agreement, was cotton laces made on specific machines. These items were not segregated in Government records prior to June 15, 1936. Those daily associated in the lace industry have very conservatively estimated the increase in importations of these articles to be at least 800 percent.

By comparing the index of industrial activity in the United States for the two periods, compared above, it will be noted that importations of laces increased tremendously, in sharp contrast to all American industrial activity, which suffered a severe decline.

4. Employment in American lace mills: During the latter part of October 1938, 26 American lace mills reported unemployment at 66 percent and increasing. As a number of employees are relatively "fixed employees," the production could conservatively be expressed as 70 percent below normal.

5. Activity in French lace mills: The demand for laces for the American market from the French lace-making centers, Calais, Caudry, and Lyons, is so great that orders are accepted only for from 3 to 4 months for delivery. (American deliveries, 1 to 2 weeks.)

The American consul at Calais has reported that 85 percent of the production of laces in that French city are being shipped to the United States.

6. Exportations to France of important farm products: The State Department advised that industrial tariff rates were reduced so as to increase exports of the products of the farm. The following are important farm exports to France. Due to the drought of 1936 there were practically no exports of either wheat or corn during that year.

		For 8 months to Aug. 31—	
		1936	1938
Raw cotton	bales	280, 838	199, 014
Leaf tobacco	pounds	19, 507, 784	19, 143, 536
Canned asparagus	do	2, 869, 375	560, 147
Canned pineapple	do	1, 427, 438	575, 951
Canned pears	do	148, 465	125, 216
Canned peaches	do	148, 460	345, 879
Fresh pears	do	8, 297, 100	5, 657, 620
Fresh apples	boxes	821, 000	1, 213, 821
Fresh oranges	do	309, 000	321, 055
Dried pears	pounds	1, 353, 202	1, 272, 433
Dried apples	do	3, 987, 121	3, 176, 046
Dried raisins	do	2, 775, 117	4, 202, 402
Dried apricots	do	8, 314, 261	8, 864, 480

7. Losses in wages to American lace workers: Loss in wages to American lace workers due to the French agreement are running at the rate of approximately $3,500,000 annually.

8. Prices of French laces: Despite the tremendous depreciation of the French franc, prices in francs of French laces have not advanced proportionately. Dollar prices of French laces are one-half of those existing on the effective date of the agreement. (A preponderance of evidence is available.)

9. Comparative prices of French and American laces: Exactly comparable French laces are being landed in the United States at one-half (and less than) the prices at which these goods can be offered by American lace manufacturers.

It may be interesting to note that the value of an importation of French laces imported in August 1938 cost $1.27 per pound, while the cost of cotton yarn alone (of which this article was made) to the American lace manufacturers is $1.35 per pound without labor. American labor involved in the making of this type of lace is approximately 150 percent of the yarn cost.

10. *Comparative wages of lace workers in France and the United States*

Workers	United States	France
Brass bobbin winder	$21.20	$5.40
Spoolers	15.20	4.05
Warpers	30.00	5.94
Bobbin pressers	23.50	5.40
Menders	20.00	3.68
Sample girls	20.00	3.95
Card punchers	30.00	7.23
Machinist	35.00	9.20
Dyers (formula)	50.00	11.18
Twist hands (weavers)	55.00	18.00

11. All of the above figures and percentages of importations and exportations have been obtained from the records of the Department of Commerce. Unemployment percentage of American lace mills, wage data, and all other statements above can be very readily authenticated.

12. The above statements have been condensed for ready reference and may be readily augmented in more detail.

Annual Installation of the B'nai B'rith

EXTENSION OF REMARKS
OF
HON. LEON SACKS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1939

RADIO ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK, FEBRUARY 6, 1939

Mr. SACKS. Mr. Speaker, I ask unanimous consent to extend in the RECORD a radio address made by Senator JAMES M. MEAD, of New York, at the annual installation banquet of the B'nai B'rith on February 6, 1939, as follows:

I am happy, indeed, to join with you on this splendid occasion—the annual installation of the B'nai B'rith—Sons of the Covenant—whose watchword, "Benevolence, bortherly love, and harmony," is so very much in accord with the finest principles of our American democracy.

As we reecho those words—benevolence, brotherly love, and harmony—we cannot but view with saddened hearts and burdened minds the tragic events in those benighted countries across the seas where the fundamental truths of God and man are being challenged, flouted, and cast to the winds by dispensers of prejudice and of discord. There we have beggared and broken men, women, and children—the innocent victims of an inhumanity, the depredations of which sadden the hearts of peace-loving, tolerant, democratic people everywhere.

It is typical Americanism to oppose oppression and persecution wherever it may exist. We consider it good citizenship and it is an American virtue that rises far above racial and religious differences. It is democracy in action.

We believe in democracy. We believe in defending the right of a man to follow the dictates of his religious and political conscience. We subscribe to a philosophy which permits and encourages freedom of personal and public independence in thought and action. We believe the oppressed minorities are entitled to these rights.

Representative government was founded here to secure and to preserve the personal prerogatives and individual opportunities lacking in other parts of the world—freedom of speech, of religious liberty, of self-government, of political and social equality. These were the pillars upon which a new nation rested—the tenets of a new civilization which was destined to prosper and to succeed at a time when other governments would bow to the inroads of violent and radical philosophies.

In Europe all of these self-same principles were enjoyed by its people following their emulation of America's example. But today it is Europe's misfortune that democratic government has yielded to a cruel form of absolutism.

Today there is leadership in other countries which appears alien to our fundamental convictions. There are ambitious men today who apparently seek to ignore the experiences of the past, men who throw into the discard those sacred principles of liberty and independence, for which successive generations have so valiantly fought.

Military dictatorships, enticed by temporary advantage and temporal power, have attempted to embitter one race against another, one faith against another. They would deny to those who disagree with them those privileges which, as children of one God, all mankind should of right possess.

Under our happier political circumstances it is not only discouraging but almost beyond our comprehension that in some nations of the world today people are told what to think and how to act. The last vestige of human liberty has been removed; * * * only the cold steel of a military machine and the deadening narcotic influence forced upon them through propaganda of an oppressive, soulless rule, quiets the unrest and the dissatisfaction of the masses.

Here you rejoice in the lofty principles of your order, and here we all feel safe and secure under the protecting arm of our democracy, but people in other lands are less fortified against oppression. There bigotry beclouds the mind of leadership. There group is set against group. There doubts are instilled as to the worth of democracy. There religion is being defiled, culture is being stifled, the higher aspiration of man is being crushed to earth. Current events in Europe involve not only the unfortunate victims who have been caught in the whirlwind of racial bigotry and hatred, they involve every citizen throughout the world who subscribes to freedom, equality, and tolerance. With this in mind, we must take heed lest these antidemocratic philosophies scatter their seed in our own peaceful and happy land; lest here, too, the poison of oppression and bigotry threaten our national well-being.

What steps, therefore, should we take to insure the preservation of our democratic institutions? What should be our plan of action in this battle of force against freedom? What challenge may we issue to those who would destroy those liberties which we cherish so deeply? How best may we join in an endeavor to secure the fullest quota of freedom and justice within our borders? How should we emphasize the necessity for all our citizens to eliminate

hatred of creed against creed, race against race, and to look upon one another not as enemies but as brothers?

The answer, my friends, is threefold: First, we must rededicate ourselves to the Bill of Rights and reconsecrate ourselves to those basic principles of freedom and justice contained in that immortal document. In these days, when in so many parts of the world the fundamental ideals of democracy are being challenged, we must resolve ourselves to a sustaining moral support of our heritage of freedom of speech, of the press, of worship, and of assembly—the sacred rights guaranteed to all Americans by our Constitution.

All of us, regardless of racial ancestry and of differences in religious worship, must stand shoulder to shoulder in a united aim for the elimination of racial and religious prejudice. We must defend the principle of equal justice for both the big and small, for both the weak and strong.

If such is our faith, it follows that we must not assume the role of a complacent, self-satisfied citizen lulled into the inertia of slumbering half-interest. We dare not leave the arena of human rights to the demagogue, thinking him to be a harmless nuisance. Not if our eyes, ears, and mind are alert to the grim realities of today; not if we remember that democracy is not saved by laws alone but by those who will speak for it, live for it, and, if need be, defend it.

Simply to guarantee and to insure these fundamental liberties by law is not in itself sufficient. Therefore, our second resolve should be to strive to provide for men the actual enjoyment of these liberties. "To be a free citizen," that eminent American liberal, Justice Brandeis, says, "one needs a job, a minimum standard of living, a little saving, a little insurance. These are essential to the security of a free citizen." Ours must be a determination, therefore, to look after and to care for that group of our citizens who, through no fault of their own, are without proper food, clothing, and shelter.

All of us who love our Nation may well join forces to carry to fruition the recommendations of our President who, in May 1937, issued a call to the country, drawing attention to that group of our fellow citizens who, because of the vicissitudes of fate, are ill-nourished, ill-clad, and ill-housed. In his message to the Congress of the United States the President said: "As we move resolutely to extend the frontiers of social progress we must be guided by practical reason and not by barren formulas. We must ever bear in mind that our objective is to improve and not to impair the standard of living of those who are now undernourished, poorly clad, and ill-housed. We know that overwork and underpay do not increase the national income when a large portion of our workers remain unemployed. Reasonable and flexible use of the long-established right of Government to set and to change working hours can, I hope, decrease unemployment in those groups in which unemployment today principally exists. Our problem is to work out in practice those labor standards which will permit the maximum but prudent employment of our human resources, to bring within the reach of the average man and woman a maximum of goods and of services conducive to the fulfillment of the promise of American life."

Thus, if our democracy is to continue as the supreme hope and example for a world that has gone politically berserk, we must leave no stone unturned until this "fulfillment of the promise of American life" becomes an absolute reality.

In the third place we must be ever alert to combat sinister influences which may come to our shores from abroad. Those who would come here to undermine our democracy must be unwelcome. Those who would abuse our hospitality and who would violate democratic morality must not be permitted to flourish under our benevolence. To those who would scoff at our institutions of self-government and who would ridicule our political philosophy, which upholds tolerance and which extends a friendly hand to the oppressed everywhere, it would be well to remind them of our history; to recall that Protestants, Catholics, and Jews came to our shores searching for freedom, opportunity, and the liberties we all now enjoy.

Let those who scoff remember that one of the basic reasons for the greatness of our country is that from the beginning of the United States this Nation has always been a haven of refuge for those who have been forced to flee from religious and political persecution and oppression.

We must say to our subversive critics that "If my Government means anything to me it means that its philosophy is broad enough to protect every man in his right of political opinion; every man in his liberty of speech; and every man in his freedom of religious worship."

We must insist that if our democracy is to work, then the springs of liberty must not be polluted with the poison of hate; or drugged with the spirit of intolerance.

We may proudly declare that here in America we oppose regimentation; we respect our democratic heritage; we despise the abrogation of freedom of speech, press, and religion; and we reject prejudice and persecution as panaceas to be fed to hungry and desperate men.

We might repeat the burning words of Justice Brandeis, who said: "Those who won our independence believed that the final end of the state was to make men free. They valued liberty both as an end and as a means. They believed liberty to be the secret of happiness, courage to be the secret of liberty." How fitting and proper that this sentiment should be uttered by a fellow American who stems from your great race. It is the glory of your race that before other people upon the earth, you caught a vision of swords beaten into plowshares, of spears beaten into pruning hooks. Not by arms and fighting and war forever would Utopia be gained—but by benevolence, brotherly love, and harmony. It is the miracle of your race that you have met the assault of the fire and sword of persecution, not by striking back, not by warring in the name of God and country, but by suffering and sacrifice. Thus, in this spirit, your race has survived the worst its enemies could offer.

You have resisted swords for centuries. Continue, I urge you, in this courageous fashion. In so doing, you will contribute to that stern and lofty standard of personal and public morality which guarantees to each and every man his rights, and which insists in return upon the full performance by each man of his duties, both to his neighbor, and to the great Nation whose flag must symbolize in the future, as it has in the past, the highest hopes of all mankind.

The President and the Works Progress Administration

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1939

Mr. BENDER. Mr. Speaker, President Roosevelt continues to throw dust in the eyes of the American people in the face of three very recent investigations of W. P. A. in New York, New Mexico, and Ohio. He insists that widespread suffering will result from the action of Congress in voting a cut of $150,000,000 in W. P. A. for the period ending June 30. If the chiselers are eliminated from W. P. A. rolls, if graft and political shysters are dropped, the money Congress appropriated will be more than ample.

A partial investigation of the eligibility of W. P. A. workers in Cleveland, made by Relief Commissioner Frank G. Jones, has resulted in the firing of over 11 percent on the rolls in my home city as chiselers. I am sure that similar investigations made elsewhere will confirm the Cleveland survey.

Whenever any branch of our National Government begins to walk around with a halo firmly affixed to its brow, it is time to bring out the screw drivers. And when one of our biggest money spenders shouts loudly across the conference table that every dime it touches is subject to the utmost care and the most rigid scrutiny, it is time to get hold of the dictionary and check up on our terms.

Every businessman who is willing to talk confidentially will admit that there are isolated—and sometimes frequent—examples of graft and corruption in every line of commercial activity. Rumor has it that this unfortunate condition occasionally straddles across the boundaries of private enterprise and actually invades governmental business as well. But one of Uncle Sam's biggest propositions in recent years has been insisting repeatedly and with no little heat that it is a simon-pure, lily-white, nonpolitical, holier-than-thou affair.

To hear them tell it, W. P. A. is the fragrance of spring. There is no taint of impurity within it; Harry Hopkins was wont to assert in the days before he repented and became Secretary of Commerce in Mr. Roosevelt's cozy Cabinet.

Alack and alas, the myth has been seriously damaged by the recently reported conclusions of a New York Federal grand jury. Returning several indictments against Works Progress Administration contractors and others, the jury charged a "general laxity in the administration of public works" and urged a broad investigation of W. P. A. frauds throughout the State of New York. So seriously did the members of the panel view the matter that they sent copies of their official presentment to United States Attorney General Frank Murphy as well as to the United States attorney for the district. They recommended that the inquiry into W. P. A. activities be conducted "under the jurisdiction of one prosecutor."

Using carefully guarded language the grand jury declared, "The isolated examples of law breaking which we found do not constitute a general indictment of W. P. A. They do, however, indicate the presence of that common factor in all

public affairs—graft and the condonation of graft." Among the specific charges of highly odorous conduct were accusations that W. P. A. officials had submitted false claims to the United States Treasury Department, that "witnesses frequently disclosed facts which merited scrutiny," and that "the pursuit of these facts gave indications of separate frauds and at times shocking official ignorance."

That contracts occasionally were let through gentlemen known to the trade as "contacts" would probably sear the soul of Mr. Hopkins, but such was the finding of the grand jurors. "Testimony before this grand jury," they insisted, "forcefully called its attention to many instances of supplies sold to the Government through the agency of 'contacts'; many instances of equipment rental maneuvered by payment of gratuities; many instances where certification of vouchers depend upon the whim of a 'fixed' employee. These are some of the matters whose cumulative effects indicate a general laxity in the administration of public works.

"The administration of public works is a grave responsibility when we consider the vast amount of money invested in the creation of work and the absorption of millions of idle man-hours."

Translated into simple language, it is obvious that the findings of the grand jury are ample evidence that something is rotten in the State of New York's W. P. A. It has become equally obvious that something is decidedly rotten in the State of New Mexico's W. P. A. And now Cleveland finds 11 percent of those on W. P. A. to be chiselers. Propagandists of the New Deal variety tell us needy people will suffer as the result of Congress' recent action. Cleveland's answer is, Clean house and no needy person will suffer. These are the only three places where an investigation has been made. So far W. P. A. is batting three strikes out of three pitches.

Mr. Roosevelt's statement is an insult to the intelligence of the American people. Congress will vote sufficient funds for the relief of the needy but not one cent for chiselers, grafters, and political papsuckers.

Federal Home Loan Bank Board

EXTENSION OF REMARKS

OF

HON. JOSEPH W. BYRNS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1939

Mr. BYRNS. Mr. Speaker, under permission heretofore given to revise and extend my remarks, I wish to state that I propose to vote for amendments to a portion of the independent offices bill with reference to the Federal Home Loan Bank Board and its subsidiary, the Home Owners' Loan Corporation. This Home Loan Bank Board, which seeks in the bill as introduced, on page 56, at lines 14 and the following, to obtain $2,500 for traveling expenses at meetings concerned with the work of the Board, and on page 58, at lines 4 and the following, seeks to obtain $5,000 additional for the same purpose for the Home Owners' Loan Corporation, is in this respect, as in so many others, going entirely too far with the taxpayers' money. The hearings on the bill show that the Federal Housing Authority received $2,000 for this purpose, the P. W. A. $1,000, and the Maritime Commission $2,000; and I, for one, see no reason why this Board should receive any more or as much as these Commissions before mentioned. This is the same Board which gave $40,000 of the people's money, which was appropriated to relieve distress on the part of home owners, to a socialized medicine group in the District of Columbia. This is the same Board whose general manager, Charles A. Jones, illegally used a good amount of the people's money in a direct attempt to lobby against a bill pending before the House. This is the same Board whose general counsel, Horace Russell, resigned under fire after it had been shown that he illegally used the Government frank in an effort to solicit business for a former employee of the Home Owners' Loan Corporation. At this time this same Board had much to say regarding the necessity of having a general counsel, and particularly Mr. Russell; but although that resignation occurred about a year ago, this position has not yet been filled. This is the same Board who procrastinates at every turn in the road, and which has left the position as regional counsel at Memphis, Tenn., vacant for several months. This is the same Board which left the position of State manager in Tennessee vacant for several months. This is the same Board which shows an utter contempt for Members of Congress. This is the same Board that employs what is known in football as a "blocking back" in the person of Mr. John W. Childress to keep the Board members from being annoyed by visits and letters from Members of Congress. This is the same Board which maintains at Memphis, Tenn., a regional manager who spends his time issuing economy memorandums about how many times an employee must turn the crank on a pencil sharpener when sharpening a pencil. This is the same Board that does not approve of its employees answering letters from Members of Congress, and requires them to reduce to writing for the Board's information the substance of any conversation had with Members of Congress. This is the same Board which ostentatiously announced that the position of assistant general manager had been abolished and then proceeded to hide practically all of the former incumbents of that position on the pay roll under other titles but at the same salary. This same Board comes now before the Congress for an increase in appropriations. This is the same Board which refused to make a high-salaried employee in Tennessee pay his debts. This is the same Board which has made a record which in many respects, like a dead mackerel in the moonlight, will "stink and shine and shine and stink" to high heaven. For the above reasons, and because the people are insisting on economy, I do not feel that I can vote for an increase for this same Board.

Investigation of Un-American Activities

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 3, 1939

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I wish to insert my views on the continuation of the Dies committee's investigation into un-American activities.

The chairman of the so-called Committee to Investigate Un-American Activities has repeatedly asked the public and Members of this House to refrain from judging the work of his committee on the basis of the printed record of its hearings. This is a rather unusual request. But then the Dies committee is a rather unusual committee. The gentleman from Texas has protested that even he did not believe everything his witnesses told him. Methinks the gentleman doth protest too much. At any rate, he has never defined the precise limits of his credulity.

Members of this House have been so unkind as to make references to the preposterous charges leveled against distinguished American citizens by the Dies committee witnesses. The gentleman from Texas, apparently embarrassed to find that his colleagues actually read the record of hearings held by a committee responsible to them, has sought to embarrass them in turn by asking if they have read the committee's report. He implies that the hearings themselves may perhaps sound like the proceedings of a lunacy commission, the report on the contrary makes sense.

The gentleman from Texas has admitted that some of his witnesses were "screw balls." Which witnesses? That question is not answered in the report. Others have charged that some witnesses were criminals with recorded police histories, labor spies, politicians with a preelection ax to grind, and other unsavory characters. The gentleman from Texas has never separated the goats from the sheep among his witnesses. On the evidence of that same report, to which he directs our attention, I am forced to believe that he considers them all honorable and reliable experts.

I have not the time to question the gentleman about all of the witnesses who appeared before him, nor to ask how much credence he placed in their testimony. But there is one witness from my own State about whom I know a good deal. I would like to ask the gentleman from Texas [Mr. DIES] if he put any stock in the tall tales told by Mr. Harper Knowles? Mr. Knowles, I admit, made an impressive witness. He came to Washington at his own expense, and the gentleman from Texas may have been loathe to look a gift horse in the mouth. Mr. Knowles came supported by legal counsel, and his attorney, Ray Nimmo, backed up all of Knowles' assertions. Knowles and Nimmo together were a formidable team. But, though they initiated a choral procedure unique in congressional history, they did not depend on the spoken word alone. Knowles and Nimmo brought with them to Washington fat bound volumes of fantasy which they presented to each member of the committee. These remarkable documents added weight to the weighty remarks of client and lawyer. Together with the verbal testimony of Knowles and Nimmo, they are printed in the record.

I submit to the House that the true story of the vaudeville team of Knowles and Nimmo is not contained in their testimony, written or spoken, nor in the printed record, nor yet in the committee report. It is a story well known to the people of my district. Parts of it have crept into the magazines and newspapers of the East. It can scarcely be a secret from Chairman DIES, for it is familiar to his "ace" investigator, Eddie Sullivan.

The record of the hearings contains 400 pages of Knowles and Nimmo, purporting to be the views of the American Legion. The report gives every evidence that the committee swallowed the whole Knowles-Nimmo fabrication without a single grain of salt. The report, in part, says:

> From the information before the committee, we feel convinced that a thorough investigation of the west coast will show that the Communists have enjoyed greater success there than in any other section of the country; that they have seized many important positions in the labor movement and are directing many labor and political activities.

I challenge the gentleman from Texas to state whether the words "information before the committee" refer in whole or in part to the testimony of Harper Knowles. I challenge him to state why, if they do not so refer, he does not come out and say so. What other "information" has the committee got on the California situation? Why has it withheld that information from the people of California and from this House? Why has it printed the bulk of Knowles' testimony if it did not believe in its validity? And are the sources of any other information the committee has in its possession as polluted as the source of the information it got from Harper Knowles?

HE CALLS ALL ELECTED DEMOCRATS IN CALIFORNIA COMMUNISTS

Here I may state in passing that he would have you believe that my presence in this House is itself "proof" that the Communists have "enjoyed great success" in California, and also that out in California the people have been duped into believing that my colleagues on this side of the aisle and the new Senator from my State, Mr. SHERIDAN DOWNEY, and Governor Olson and Lieutenant Governor Patterson are all Democrats. But, of course, we are very simple people, easily tricked by Comrade Stalin and his henchmen. Mr. Knowles knows much better. On the eve of our election last November he did his best to enlighten the California electorate. He told the Dies committee, and through its loudspeaker the people of California, that if the Democrats won Moscow would rule. Mr. DOWNEY and Governor Olson, I believe, are merely fellow travelers. But Lieutenant Governor Patterson is put down in the Dies committee record as a card-holding Communist Party member. And so is Mr. John Clark, who masqueraded as Democratic campaign manager. If the gentleman from Texas believed what Harper Knowles told him, he is fully justified in concluding that the Communists have made great strides in California. If he does not believe it, he owes a duty to that party in which I believe he is himself still a card-holding member to clear up the doubts he has helped create.

The gentleman from Texas says of his report that—

> None of our findings are predicated upon (exaggerated) testimony or upon opinions or hearsay.

There is evidence in this report that in one instance at least its findings are predicated on understatement, specifically on Mr. Harper Knowles' understatement. Mr. Knowles wound up his extensive harangue on the "red" menace with a couple of sentences dismissing Nazi and Fascist activities on the west coast as relatively unimportant. The committee's report, in the section dealing with the west coast, says:

> Not only are the Communists active here, but to a lesser extent, the same is true of the Nazis.

At least this conclusion is not based on hearsay. It is based rather on total and willful deafness to the facts. Nazi spies have been arrested on the west coast for overt acts violating Federal statutes. Nazi instigated spread of anti-Semitic and subversive propaganda inciting to violence has resulted in arrests and preferment of charges. Mr. Knowles and Chairman DIES, who had such keen ears for hearsay rumors of what the "red" Democrats were plotting, heard nothing of all this.

The reason for Mr. Knowles' minimizing the Nazi menace on the west coast is not hard to find. Limited as it was as to funds, even the Dies committee might have found it, if it had cared to look around.

Mr. Knowles himself is American blood brother to the Nazi menace.

THE FACTS ABOUT HARPER KNOWLES

Let me tell you the story of Harper Knowles, a story you will not find in either the record nor the report of the Dies committee.

Until a short time before he appeared in Washington as a supposedly disinterested witness before the Dies committee, Harper Knowles was secretary of the Associated Farmers.

Mr. Knowles is not a farmer, nor is the Associated Farmers a farm organization. In view of what is now known of other witnesses and the groups they represented, we need not be surprised to find that the Associated Farmers is engaged in un-American activities, and that Mr. Knowles' own experiences did, indeed, qualify him as an expert on that subject.

ASSOCIATED FARMERS IN POLITICS

But Mr. Knowles' personal experiences with Associated Farmers did not, of course, enter into the story he told the Dies committee. He did not tell them that Associated Farmers is financed and controlled by the traditional enemies of California's independent farmers—by the big railroad and utility interests, by the banks and mortgage holders, and by the monopolistic processors of farm produce. Nor did he tell the Dies committee that Associated Farmers is in politics. About the time that Knowles resigned in order to conduct the Republican campaign from the temporary headquarters of the Dies committee, one of the vice presidents of the organization also took a leave of absence. This was Phillip Bancroft, Republican opponent of Senator SHERIDAN DOWNEY. Needless to say, Candidate Bancroft had the full support of the organization he had served as vice president.

Associated Farmers was playing local as well as national politics in November. It helped to originate and pushed the iniquitous "labor initiative and referendum No. 1" which would have destroyed all west coast trade-unions and wiped out the constitutional rights of labor. The American Federation of Labor, no less than the C. I. O., is entitled to full credit for the defeat of this measure. A united labor movement gathered the support of the majority of middle-class people and farmers in a magnificent defense of American

democracy. Initiative No. 1 was defeated, and so was the Associated Farmers' candidate for the Senate, Phillip Bancroft.

Since the Associated Farmers was organized there has been no strike in California in which it did not play an important—and bloody—part. Strikebreaking and vigilante terrorism have been its un-American weapons. In view of Chairman DIES' frequently expressed abhorrence of violence and class hatred, it is interesting that he never looked into the violence of the Associated Farmers nor listed it among his promoters of class hatred.

COLONEL SANBORN

One of the leaders and organizers of the Associated Farmers' ax-handle brigade in the Salinas lettuce strike was Col. Henry Sanborn. Sanborn is an old pal of Harper Knowles. They have worked together at labor espionage and strikebreaking in the past. Sanborn and Knowles are well known in my part of the country as fomenters of labor disputes, out of which they then made a cash profit. And the gentleman from Texas, who collaborated so obligingly with Harper Knowles in the happily unsuccessful effort to influence the California elections, is no stranger to Knowles' ex-partner, Colonel Sanborn. Sanborn is said to have been the Dies committee's first choice for the job of chief investigator of un-Americanism. It was only when even the gentleman from Texas was convinced that Sanborn's notoriety was so widespread that even the Dies committee could not hope to hide it, that Eddie Sullivan got the job. Eddie Sullivan's record has been exposed to this House by my esteemed and courageous colleague, the gentleman from Illinois [Mr. KELLER]. No more need be said of Colonel Sanborn than that his record is blacker than the black record of Eddie Sullivan.

Acting for the Associated Farmers and their senatorial candidate, Bancroft, Harper Knowles won hands down in the Dies committee hearing room and in the reactionary California newspapers. He lost at the polls.

He returned from Washington to California, and at first claimed to be working for the Dies committee. But a congressional committee less gullible than the Dies committee had business with Harper Knowles, and he found it expedient to sever his connections, if any, with Washington. Under an assumed name he rented a house in Palo Alto. I draw no inferences from this choice of a safe place in which to locate. But it may be that Knowles felt Palo Alto was all of California that Herbert Hoover had managed to save from the November revolution, and therefore a good place to settle. However that may be, his stay in that de luxe Hooverville was brief. Congressional investigators, armed with subpenas, were hot on his trail. By the time they reached Palo Alto Knowles had flown the coop. His whereabouts are not now known. It is reported that he has grown a beard, perhaps to placate the "reds" who now rule California.

This is the man who dared to impugn the Americanism of the highest officials of my State, and by implication the Americanism of the majority who elected them to office. This is the man whose testimony is included in proceedings of which the Dies committee has the effrontery to say:

It must be emphasized that this committee is nonpartisan. It has not been deterred by partisan or political consideration from the fearless performance of its duty and functions. The committee has felt that it is its sworn duty and solemn obligation to the people of this country to focus the spotlight of publicity upon every individual and organization engaged in subversive activities regardless of politics or partisanship.

CALIFORNIANS ARE REAL AMERICANS

Mr. Speaker, I do not need to tell you what the people of my State think of the Dies committee. They spoke for themselves in the November elections. They showed that they do not regard attacks on the rights of labor as evidences of Americanism. They showed that they do not believe that those who wanted the 22-year-old injustice to Tom Mooney righted are Communists. They freed Tom Mooney and vindicated justice in America. The people of my State gave an American answer to those who tried to defeat the Democratic candidates with the Nazi cries of "Jew" and "Communist." We registered our veto of any more funds for the Dies committee when we elected the Democratic slate in California. I come here with a mandate from my people: Stop the un-American Dies committee. I am only a newcomer in this House. But I shall do my utmost to carry out that mandate. And I call upon all who cherish the principles on which this Government is founded, on all my colleagues regardless of party, to put an end to a committee which has brought disgrace upon this House.

FAVORS A REAL INVESTIGATION

In conclusion let me say, Mr. Speaker, that I favor an investigation into un-American activities. But I want a real investigation. I do not want a committee that has been guilty of character assassination to do the job. A committee that has done everything in its power to smear everyone and every organization that is honestly trying to find a solution to the social and economic ills that beset our bountiful land.

I want a committee that will inquire into the causes of un-Americanism. I believe that such a committee that went about the job honestly would find that the seeds of disloyalty thrive best in a people that are denied the rights that all American citizens should have. This committee would find, I believe, that to cure the disease we must strike at the cause. The solution would be a good job for all at decent wages, and a pension for our aged that is their just desert. Then when this had been done we would have put a purchasing power into the hands of the people that would make our population happy and contented, and foreign "isms" would be no more. Mr. Speaker, I cannot vote to continue the Dies committee.

The Townsend Plan

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1939

STATEMENT OF HON. JAMES C. OLIVER, OF MAINE, BEFORE THE COMMITTEE ON WAYS AND MEANS, FEBRUARY 7, 1939, ON H. R. 2 AND H. R. 11

Mr. OLIVER. Mr. Speaker, under permission granted to me by unanimous consent of the House, I am extending my remarks by incorporating at this point a statement made by me yesterday before the Committee on Ways and Means. This statement indicates my viewpoint with respect to the broad general philosophy of the Townsend plan and the great need of this country for legislation of this type. I consider this to be one of the most important issues before the Members of the Seventy-sixth Congress. The statement is as follows:

Mr. Chairman, my remarks here this morning shall be addressed to both H. R. 11, introduced by Congressman SHEPPARD, and H. R. 2, introduced by Congressman HENDRICKS.

Some members of this committee may believe this position on my part to be somewhat inconsistent. But I do not and for these reasons:

1. Both bills are entitled "the General Welfare Act."
2. Both bills provide for an old-age pension to be wholly financed and wholly administered by the Federal Government.
3. Both bills provide for a retirement age of 60.
4. Both bills provide for the removal from gainful occupation of all beneficiaries under the acts, as a condition precedent to the payment of the pensions.
5. Both bills are predicated on the repeal of titles I, II, and VIII of the present Social Security Act.
6. Both bills are fundamentally based on the idea that purchasing power distributed monthly to qualified annuitants in mass volume will stimulate the complete utilization of our mass production plant structure.
7. Both bills are designed to create much needed work opportunities in private enterprise for our citizens under the age of 60.

Therefore, although there are differences in the two bills in connection (1) with the tax medium to be levied; (2) with the top limit of pensions to be paid; and (3) with other details of more minor importance, I certainly believe that the broad general

philosophy behind the two bills is basically the same, and a person is not necessarily precluded on the basis of reason or logic from his support of the best details of both.

Now, Mr. Chairman, in the first place let me state for the record that I believe the members of this committee took a long step forward of social and economic importance when they secured the passage of the Social Security Act. Even though many of the objectives which many of us believe are essential have not and cannot be reached under the existing law, nevertheless this country has been made pension conscious during these past few years by the discussions which have resulted from the passage of this act.

In the second place, Mr. Chairman, let me add that I fully appreciate the fact that the able members of this committee are completely aware of the gravity of the economic problem which faces this Nation as well as the deplorable insecurity which confronts millions of worthy citizens of 60 years of age and over. The crisis created by persistent unemployment, by the menace of continued Budget deficits, by the freezing into continued inactivity of large industrial and agricultural areas needs no amplification nor lengthy discussion before you, gentlemen.

It is my sincere opinion that the membership of this committee stands today in a position of economic importance never before equaled in the history of our great country. I say this advisedly. For in your hands rests the decision as to whether or not this Nation will recognize the practical, the sound, the reasonable, and the effective medium of underwriting the capitalistic system under a democratic process in America, offered to us in the form of old-age-pension payments which might be better classified as social dividends.

We, as legislators, need not shrink from the idea that the profit system which we all desire to preserve under the democratic process needs to be underwritten. This has always been the case under our debt-credit financial and banking system. During our history as a Nation we have had ample evidence that this is true. Our economic structure has always been underwritten either through personal or public debt or a combination of both. When the debt structure during a cycle of employment has been expanded to a point where fixed charges and maturities could not be met through payments from the productive stream, then we have experienced a period of collapse and all debt which could not be met at these times became necessarily a subsidy to those who had to default whether it was an individual, a corporation, a public agency, or a foreign government which did the borrowing.

During the World War, through the medium of debt creation, the citizens of America underwrote with their labor, their capital, their productive machine, the military and in many instances the nonmilitary activities of our allies. We all know that during this period this country had no unemployment problem; we had no troublesome and bitter labor-relations problems; we had no public consciousness of unbearable tax burdens. On the other hand, we had a scarcity of labor, a wonderful experience of labor independence, a period during which tax burdens were met with no difficulty. Again during the peacetime era of 1922–28 we were underwriting with our debt-creating machinery South America and European nations, such as Germany, with shipments of steel, copper, cement, and other materials, as well as with our labor. During this period of subsidies we again experienced reasonable prosperity in America, even though it was at the expense of giving away our real wealth to foreigners. It is true that domestically we further stimulated and underwrote our economic structure with time-payment plans for our domestic production. As long as we could continue with this debt-creating stimulus we employed our citizens, we utilized our plant structure, and we met our tax burdens. We had no problem of insecurity.

It is quite apparent to me that in this Nation of ours full employment and decent security through proper living standards must rest entirely upon the underwriting of the consumption of large amounts of goods, but the labor involved in production should consist wholly of our own citizens and not the masses of foreigners for whom we have labored and produced in the past.

You, gentlemen, may consider this discussion to be far afield in these hearings on amendments to the Social Security Act. To me it is pertinent, because I believe that we can use the payment of social dividends to large masses of our people for the same purpose, namely, to underwrite the complete utilization of our existing plant structure and for the orderly expansion of our potential plant structure. Surely mass production must be matched with mass consumption. How can this be accomplished with a Social Security Act based solely on need? Obviously it cannot.

We do not lack illustrations or examples in other governments of this method of underwriting mass consumption through the medium of pension payments. Great Britain, according to my understanding, frankly uses old-age pension payments and other distributions of social dividends as a vehicle whereby a reasonable portion of the national earnings may be distributed to those who are in an insecure economic condition. The British spread the tax load over the whole economic order and by the immediate payments of the revenues collected establish a floor under which purchasing power cannot drop. It is my understanding that this has worked. On the other hand, Hitler rose to power partly, at least, on the issue of the unsuccessful and burdensome pay-roll taxes which had been in effect in Germany since the days of Bismarck. Pay-roll taxes are a stimulus to acute technological development. Pay-roll taxes as the sole basis of taxation for social security, in my opinion, are unwise. An accumulation of old-age insurance reserve is unwise and unnecessary for a government. The principle of compulsory thrift and contributory insurance payments can be established on a pay-as-you-go basis. Under a pay-as-you-go system on a blanket coverage basis of old-age pensions, each tax payment made by each individual in this Nation naturally becomes his compulsory thrift contribution for his annuity after retirement age.

Consequently, gentlemen, it appears to me that the broad general issue before this committee is not any particular bill, but rather is the question of whether or not you will change the basic philosophy of contributory and actuarial old-age insurance under a national law to that of a social philosophy under which a distribution equitably of social dividends for the purpose of stimulating and underwriting our economic machine may be established.

In my opinion, the members of this committee as the leaders of this Congress stand at a most vital crossroad in the history of our Nation. Today we have a plant structure capable of producing from 120 to 135 billions of dollars in national income annually, based on the 1929 price level. Accepting the 120-billion-dollar figure and accepting the liberal figure of 60 billion dollars as the average national income produced for the past 10 years, inclusive of 1939, then it is obvious that the lack of an intelligent solution to our problem of involuntary unemployment has cost us 600 billions of dollars during the past decade. Therefore, when we discuss the cost of this program as outlined in H. R. 11 and H. R. 2 we should ever keep in mind the tremendous cost of passively accepting our present condition of unemployment and insecurity.

In a consideration of this problem not one of you would deny that this Nation is easily capable of producing enough goods and services to supply all of our unemployables including those over 60 years of age with the equivalent of a $60 or $100 a month standard of living. No one doubts that the cooperative collective action and full-time work on the part of the sons and daughters of America would provide the materials necessary to place the fathers and mothers of America on this standard of living. It is only when we bring into the picture the dollar phase or the money representation of these goods and services that the apparently insurmountable barriers are raised. If the brains, intelligence, and intellect of America has proved itself capable of producing real wealth in plenteous abundance and it has—then why do we find it so difficult to devise the medium whereby the financial or the dollar vehicle may be provided to distribute these evidences of material and real wealth on a full capacity basis to our consumers. This to my mind is the essence of the question confronting the committee. I do not admit that this Congress lacks the necessary intelligence or the necessary courage to meet, face, and conquer the existing crisis.

Therefore, Mr. Chairman, the issue is not the organizational difficulties and squabbles of the Townsend organization versus the General Welfare Federation. It is not the question of whether $30, $60, $100, $200 per month is the proper amount for distribution. It is not the question of whether Hawaii-Indiana or any other division of government has reached the millennium in tax efficiency. It is not the question of whether or not the economists and experts of the Social Security Board or any other board recommend or disapprove H. R. 11 or H. R. 2. But it is rather a question of whether or not we have the necessary intelligence to place able and willing citizens back to work on productive enterprise and to make such a result possible through the adoption of the necessary and proper legislation. In this regard let me quote from Thomas Woodlock whose column appears in the Wall Street Journal on January 30. Mr. Woodlock in his discussion presents the issue "Now the immediate problem facing a modern community such as ours is to minimize unemployment." And then he continues as follows, "The more that one ponders these matters the more one tends to the same conclusion to which reference was made here a few days ago, namely, that man (as Prof. Edwin Conklin reminded us in 1916) has not yet acquired that degree of mental power necessary to understand and to master the complex thing that he has somehow managed to create, and that he is much in the position of Frankenstein facing his monster. Or is it, perhaps, less the intellectual power than it is the will that is lacking, and the spirit to move that will, the spirit of 'charity' in the widest sense of the word?"

Hitler has found the answer through a totalitarian government and the establishment of labor battalions. We must find the answer under our democratic process and, in my opinion, through the medium of Congress. That is the primary reason why I am interested in legislation of this type.

During the past 9 years we have tried to meet the problem through the debt cushion of R. F. C., first established under Republican administration. Then in succession we have subsidized our economic machine with deficit financing through F. E. R. A., E. R. A., C. W. A., W. P. A., P. W. A., R. A., F. S. A., A. A. A., N. R. A., and other governmental loan and relief agencies. But we have been underwriting with public funds the group which should have been employed in the productive activities of our economic structure. I have attempted to show that the capitalistic system has always had a debt-credit stimulus, but if private credit will not or cannot take up the slack, then Government or public action becomes necessary, but this should be done through the medium of our unemployables who cannot be economically or privately employed because of their age, physical disability, or in the cases of widows with dependent children because of their family responsibilities. Therefore it seems to me that these bills should be broadened to include all unemployables in those additional classifications. We are already doing this in a small measure through the present Social Security Act with

reference to aid for dependent children and the needy blind. This coverage should be extended and increased in amount wholly from a Federal standpoint. Dollars distributed to these consumers would make necessary immediately a tremendous upswing in industrial and agricultural production. The national income, both gross and net, would increase to a point where the balance of goods and services remaining after the distribution of those necessary to provide for our unemployables, would be materially larger than the total ever before available for distribution to the employed employables. In other words, our present labor supply, together with modern mass production methods, would effect the results which we all desire. Such a demand for goods and services must be stimulated if we are to establish a compensatory factor or element for our technological Frankenstein.

This is the conception of pension underwriting which the members of this committee must visualize if the existing crisis which has confronted and is confronting this country is to be met. I have confidence that you will give this viewpoint serious consideration.

Such consideration will, I am certain, lead you to revamp the existing law so that the following results will be effected:

1. A reduction of the retirement age from 65 to 60. This age bracket between 60 and 65 today comprises a large segment of the forgotten men and women of America. I know that you gentlemen fully appreciate the crisis confronting these citizens today who find it possible neither to earn a living nor to secure any degree of security.

2. Eliminate the old-age insurance philosophy which requires direct contributory payments into a reserve on an actuarial basis and which today necessarily discriminates against large numbers of our people including (a) the unemployed, (b) those who cannot be covered because of administrative difficulties, and (c) those who are well advanced in years so that old-age assistance beneficiaries receive in many cases more than those who have made direct contributions during their few remaining working years will receive.

3. An increase of monthly payments sufficiently large to those over 60 to put back to work at private production all under 60 who are willing and able to work.

4. An elimination of the State dollar-matching formula now in effect under old-age assistance which discriminates against the citizens of the so-called poorer States.

5. An elimination of the tremendous overhead incident to the recording and accounting of old-age insurance accounts for some 42,000,000 employees of America.

In closing, Mr. Chairman, permit me to complete the record insofar as my views of financing this program are concerned. I have two choices.

1. My first recommendation to make possible financially this mass consumption of our mass production would be to overhaul completely our existing monetary system based on debt, to the end that an orderly expansion of our medium of exchange, either currency or credit money, could be effected through the distribution of dollars to our unemployables. Of course, this would naturally call for a tax program limiting personal-use incomes.

2. My next choice would be a gross income-tax levy such as is outlined in H. R. 11, with any further safeguards that you gentlemen who are familiar with tax problems might feel necessary.

It must be obvious that a further expansion of our credit-debit banking system is not possible unless and until the Nation experiences a drastic deflation of existing debt. The only alternative is a cash-and-carry or pay-as-you-go underwriting of consumption on a scale generous enough to provide that decent standard of security for our unemployables which will necessitate a full employment of our employables. We cannot borrow ourselves into prosperity nor can we through deficit financing accomplish full employment on a permanent basis, but we can work ourselves into this condition if we will only provide the underwriting mechanism for the expansion. Perhaps bills similar to H. R. 11 and H. R. 2 are not the complete answer but in my opinion they afford the proper approach. I hope, Mr. Chairman, in your consideration of proposed amendments to the existing social-security law that you will study the possibilities of H. R. 11 and H. R. 2 along these lines.

The United States Coast Guard

EXTENSION OF REMARKS

OF

HON. THOMAS R. BALL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1939

EDITORIAL FROM THE HARTFORD (CONN.) COURANT OF FEBRUARY 6, 1939

Mr. BALL. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial on the splendid service rendered by the United States Coast Guard:

[From the Hartford (Conn.) Courant of February 6, 1939]

"SEMPER PARATUS"

Only an occasional paragraph or so in the papers reminds the landsman of the existence of the United States Coast Guard, but to those who live on the sea or by it the comforting presence of the Coast Guard is never out of mind. A child is ill on one of the islands off the shore. To whom but the Coast Guard shall the parents turn for help? A trawler on the banks snaps her shaft. A few minutes after her call for help is received a cutter is on the way with assistance. A small boat is unreported at nightfall with a storm brewing; the Coast Guard patrol boats will comb the Sound for her. Shortly after the Imperial Airways flying boat, the *Cavalier*, called for help a Coast Guard amphibian was on the way to search for her; the pilot was already in the first stages of pneumonia, but he answered the call. Semper paratus—ever prepared—is the Coast Guard's motto, and it lives up to it magnificently.

Probably no other Government service performs such diverse tasks. It polices yacht regattas and boat races and rides herd on the seal fisheries. It conducts the International Ice Patrol in the North Atlantic, and its planes warn the sponging fleet off the Florida Keys of approaching hurricanes. It operates the life-saving stations along the coast and on the Great Lakes, and it watches over the health of the Samoans. When a dead whale drifts on the beach on Cape Cod the Coast Guard drags it off again. Its next assignment may be to dynamite a derelict 200 miles offshore or to intercept a suspected rum runner.

Seldom praised, and seamen being a notoriously complaining breed, frequently and usually unjustly blamed, the Coast Guard well earns its none too generous appropriation.

Attitude of the West Virginia Public Service Commission Toward the Rural Electrification Administration

EXTENSION OF REMARKS

OF

HON. CLIFTON A. WOODRUM

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1939

LETTERS FROM PUBLIC SERVICE COMMISSION OF WEST VIRGINIA AND RURAL ELECTRIFICATION ADMINISTRATION

Mr. WOODRUM of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

PUBLIC SERVICE COMMISSION OF WEST VIRGINIA,
Charleston, February 6, 1939.

Hon. CLIFTON A. WOODRUM,
Chairman, Committee on Independent Offices,
House Office Building, Washington, D. C.

DEAR MR. WOODRUM: Under the heading "Congressmen Told P. S. C.'s Unfriendliness Toward R. E. A.," a local afternoon newspaper carries an Associated Press story from Washington quoting Mr. John M. Carmody, Administrator of the Rural Electrification Administration, as having declared before the House committee on R. E. A.'s request for an appropriation of $2,700,000 for the next fiscal year, that the Public Service Commission of West Virginia, particularly its chairman, "was not friendly to the R. E. A.," and had not done very much for its enterprises in this State.

We wish to take exception to the statements imputed to Mr. Carmody in order to correct the record and to show that the contrary is the fact, and that difficulties which rural electric cooperatives may have encountered in this State have been largely caused by Mr. Carmody.

In view of our information that hearings of your committee have been closed and its report filed, we understand that it is now impossible for us to correct the committee record by appearing before it, but we feel that the members of your committee, the public at large, and the citizens of West Virginia are entitled to know the truth. We, therefore, wish to submit the following information disclosing the actions of this commission respecting R. E. A. projects as shown by the public records of this commission:

The first R. E. A. project in West Virginia was that of the Barbour County Power Co., a rural electric cooperative. It made application to this commission on July 20, 1936, upon the advice of a member of the R. E. A.'s legal staff in Washington, as testified by the president of the cooperative (case No. 2464), for a certificate of public convenience and necessity under section 11, article 2 of the public-service commission law of this State (W. Va Code, ch. 24), for authority to construct a project of some 80 miles. The matter was immediately set for hearing at the courthouse of Barbour County, and the electric utility in the area,

the Monongahela West Penn Public Service Co., was required by the commission not to make any extensions to its system in that neighborhood pending disposition of the application. A hearing was held on July 29, and the evidence then adduced discloses that the applicant was clearly entitled to the certificate for which it prayed. The proceeding was continued. However, by letter dated August 17, 1936, the applicant, by its president, and the Monongahela West Penn Public Service Co., by its counsel, requested the commission to dismiss the case. This was accordingly done by order entered on August 27, 1936.

The next proceeding involved the Harrison Rural Electrification Association, Inc., a cooperative in Harrison County. It was organized in March 1937 and incorporated in June of that year. A loan was secured from the R. E. A. Construction work was commenced in August. The commission indicated to representatives of the R. E. A. and also to counsel and other representatives of the cooperative that, in its opinion, the cooperative was subject to the public-service commission law of the State, which required it to obtain a certificate of public convenience and necessity from the commission before the construction of its plant. All three members of the commission went to Washington and conferred with Administrator Carmody, Chief Counsel Nicholson, and others of the R. E. A. staff on November 7, 1937, in a sincere endeavor to reach an understanding with them for the observance of the State law by this and similar enterprises financed by the R. E. A. Finally an application was made by this cooperative to the commission for a certificate of public convenience and necessity (case No. 2570). The Monongahela West Penn Public Service Co., the electric utility operating throughout the territory involved, appeared as protestant in the case, and the United States, by the R. E. A., intervened on behalf of the applicant. Extensive hearings were held. By order entered on May 21, 1938, the commission found as a matter of law that the cooperative was a utility subject to the jurisdiction of the commission and must secure a certificate of public convenience and necessity from it, and further found as a matter of fact that the cooperative was entitled to a certificate of public convenience and necessity to construct a transmission and distribution system.

The next proceeding involved the Craig-Botetourt Electric Cooperative (case No. 2625) in Monroe County. Its application was filed on August 26, 1938, and the hearing was held on September 9, 1938. The commission announced at the conclusion of the hearing that a certificate would be granted and that it might proceed immediately with the construction of its lines. An appropriate order was entered accordingly.

The last R. E. A. project to come before the commission was that of the Hardy County Light & Power Association, Inc. (case No. 2628). Early in February 1937 Mr. S. L. Dodd, the county agricultural agent of Hardy County, and others interested in the project, communicated with the commission relative to steps to be taken for the purpose of developing the cooperative. They were advised that the State law required a certificate of public convenience and necessity to be secured from this commission. Similar advice was given to Mr. Zinder, of the R. E. A., early in May of that year, and to the counsel for the cooperative. Nevertheless, the cooperative, after procuring an R. E. A. loan, proceeded with the construction of its lines without applying for the requisite certificate. The commission, therefore, found it necessary to institute suit in the circuit court of Hardy County to require the cooperative to desist from construction of its lines unless and until it obtained a certificate. The supreme court of the State required the circuit court to issue a temporary injunction. Finally, on September 9, 1938, the Hardy County Light & Power Association, Inc., applied for a certificate. Hearings were held in the courthouse of that county at which the Potomac Light & Power Co. protested the application. An order was entered by the commission on November 9, 1938, granting the applicant a certificate as prayed for, except as to that part of the territory then being served by the Potomac Light & Power Co.

Chairman Preston did not concur in the granting of certificates in the Harrison and in the Hardy cases for the reasons clearly stated in his dissent in the former and his memorandum in the latter cases.

The foregoing constitute the only instances of R. E. A. projects in this State. The fact that others have not been undertaken obviously bespeaks the fact that they were not considered practical or feasible by the R. E. A. and the local inhabitants, and the inference may be drawn therefrom that generally speaking, the needs for electric service in this State where practical and feasible have been fairly well met. There are small sections which still need electric development, and the commission is constantly working to fill this need as rapidly as possible. The public record refutes Mr. Carmody's statements and inferences. If Mr. Carmody expected this commission to be friendly to or favor his utilities, we can understand his reasons for feeling somewhat chagrined when he found it to be unprejudiced, civil, and fair. The Public Service Commission of West Virginia would be untrue to its trust should it favor any utility.

In the instant matters our chief concern was to secure electric service to rural inhabitants at the earliest possible date and at the lowest possible cost. It has tried to do its duty as it sees it, under the law of this sovereign State. The delay in getting the electric service to rural inhabitants in Harrison and Hardy Counties was caused by Mr. Carmody's ignoring the statutory requirements and defying the law of this State in refusing to apply for the required certificate until forced to do so after more than a year's time. Otherwise, the people in these sections would have enjoyed electric service either from the cooperatives or from other utilities at least a year sooner than they did.

Respectfully yours,

JOHN J. D. PRESTON,
C. E. NETHKEN,
ALEXANDER M. MCLORD,
Commissioners, Public Service Commission of West Virginia.

RURAL ELECTRIFICATION ADMINISTRATION,
2000 MASSACHUSETTS AVENUE,
Washington, February 8, 1938.

The Honorable CLIFTON A. WOODRUM,
House of Representatives, Washington, D. C.

MY DEAR MR. CONGRESSMAN: Administrator Carmody is out of the city, attending a series of annual meetings of R. E. A. projects in the Middle West. I reached him by telephone and communicated the contents of the letter from the Public Service Commission of West Virginia which you so kindly sent him. I told him it was your intention to insert this letter in the CONGRESSIONAL RECORD and that you had offered to include any reply he cared to make.

Mr. Carmody said there were a great many things which could be pointed out in reply to Messrs. Preston, Nethkin, and Mahood. Our files contain much material on the experiences of R. E. A. borrowers in West Virginia, including many sworn affidavits. Mr. Nicholson, our general counsel, who is also very familiar with developments in West Virginia, is likewise out of the city.

Under these circumstances Mr. Carmody directed me to ask leave to quote from the record of the hearing on the independent offices bill before the Subcommittee on Appropriations. The passage which gave rise to the letter from the West Virginia commission reads as follows:

"Mr. JOHNSON of West Virginia. Mr. Carmody, take that map of West Virginia. Here is a map of Kentucky and a map of Pennsylvania and of Maryland and of Ohio and Virginia, all of them bordering on West Virginia. How does it happen that those States have so many projects and there are none, or practically none, in West Virginia?

"Mr. CARMODY. Well, I think, on the whole, West Virginia is not regarded as an agricultural State. That is one thing. It is very mountainous and beautiful in the summer, but its chief industry is mining, as I recall it. That has something to do with it.

"The other element is the desire on the part of the people for electrification. I would say that if the people in West Virginia were as anxious to get rural electrification on these terms as they are in Ohio and Kentucky and the other bordering States they would have found a way to do it even if that meant getting some of their State officials to change their attitude on the power question.

"In Kentucky I think we ought to say that the Farm Bureau, represented there by Ben Kilgore, has been much more aggressive in organizing rural electrification projects than anybody has been in the State of West Virginia.

"Mr. JOHNSON. The Shenandoah Valley is in West Virginia.

"Mr. CARMODY. Yes. Some parts of that valley are served by private power companies. The Potomac Electric Co. comes down there. They have not only been unfriendly to any R. E. A. enterprises, they have been hostile. We have a kind of standstill agreement with the companies now to try to work out the fate of two projects that the private companies tried to snuff out in your State

"Mr. JOHNSON. In West Virginia?

"Mr. CARMODY. In West Virginia—in Harrison County and in Hardy County.

"Mr. JOHNSON. Have you trouble also up and down the Ohio River?

"Mr. CARMODY. Somewhat similar to the project over there. Here is another thing over there. The commission for a time was not friendly to the R. E. A.

"Mr. JOHNSON. What do you mean by the 'commission'?

"Mr. CARMODY. The public service commission, particularly its chairman.

"Mr. JOHNSON. You mean the State public service commission?

"Mr. CARMODY. Yes; the State public service commission.

"Mr. JOHNSON. Who is he?

"Mr. CARMODY. I think the chairman is Mr. Preston. When I look back over the history of the two or three rural electrification projects that got started in West Virginia and read the record of their struggle before the commission and the courts I am amazed that they could survive at all in such unfriendly atmosphere.

"Mr. JOHNSON. The commission, then, has not done very much for them.

"Mr. CARMODY. No; it has not."

Mr. Carmody said he is prepared to stand on the record.

Sincerely yours,

MARGARET R. MCKIM,
Secretary to John M. Carmody, Administrator.

Extension of the Navajo Indian Reservation

EXTENSION OF REMARKS
OF
HON. JOHN J. DEMPSEY
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1939

MEMORIAL OF THE LEGISLATURE OF NEW MEXICO

Mr. DEMPSEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint memorial adopted by the Legislature of the State of New Mexico:

House Joint Memorial 1

A joint memorial of the State of New Mexico and the Fourteenth Legislature thereof to the President and the Congress of the United States of America, pertaining to any proposed extension in the State of New Mexico of the Navajo Indian Reservation

Be it resolved by the Legislature of the State of New Mexico, That whereas the further extension of the Navajo Indian Reservation within the boundaries of the State of New Mexico, and the purchase or condemnation of lands for that purpose by the United States Government within the State of New Mexico would result in permanent and irreparable injury to the people of the State of New Mexico, and to the State for the following reasons, to wit:

(1) The ownership of such land by the United States of America would seriously injure the State of New Mexico in its revenues by removing such lands from the tax rolls of the State.

(2) Ownership of such lands by the United States of America would at once remove from the tax rolls of San Juan County $389,304 and will result in the impoverishment of San Juan County in the State of New Mexico, to such an extent as will greatly hamper it, in functioning as a component part of the government of the State of New Mexico, and will greatly hamper the State officials and county officers of said San Juan County in the administration of the civil and criminal laws of the State.

(3) The oil and other mineral resources of the State are proposed to be placed within such Indian reservation, has been, and is being developed, sufficiently to determine the existence of such minerals in the area, and is at present, far from a state of full development, and offers a present and future potential revenue to the State of New Mexico from this source. The entire school system of the State to a very large extent depends upon oil and mineral revenue and any action which would deprive the State of the oil and mineral resources of the area, would reduce the efficiency of the State school system to that extent, and would deprive the County of San Juan, a governmental agency of the State, of considerable revenue, reasonably to be expected from the future development of mineral resources of the area.

(4) Since for more than one-half a century the cattlemen and sheepmen of northwestern New Mexico have used this area for a winter range for their cattle and sheep, when, on account of the severe winter and deep snows prevalent in other areas of the State, it has been impossible for those engaged in this industry to pursue the same without the advantage of the grazing afforded by the area contemplated as an addition to the Navajo Indian Reservation, and such addition would therefore injure and destroy to a very large extent the cattle and sheep industries of the northwestern area of the State, to the permanent injury of the industries and to the State, in the matter of its revenues, and especially to the County of San Juan and the business interests of the county largely supported from this source.

(5) The agricultural and irrigation districts of the county of San Juan and adjoining sections in Sandoval County, McKinley County, and Valencia County would be permanently injured in that a large portion of the agricultural products of the irrigated districts is feed for cattle and sheep and other livestock, which market furnished by livestock on the proposed extension area would be wholly destroyed, resulting in the impoverishment of many of our citizens.

(6) The future economic welfare of the Navajo Indians upon the reservation and the whites in San Juan County, Sandoval County, McKinley County, and Valencia County, depends to a very large extent upon irrigation projects and the future development thereof, which would add several hundred thousand acres of farm land, both on and off the present reservation, the development of which unhampered by a change of the boundary of the reservation would enable both the Indians and whites to attain greater prosperity and a better standard of living, and materially add to the future revenues of the counties hereinbefore mentioned and the State of New Mexico: Now, therefore, be it

Resolved, That the President of the United States of America and the Congress of the United States of America be, and the same are, very respectfully memorialized and petitioned in the name of the State of New Mexico and of the Fourteenth Legislature thereof, to prevent the passage of any measure which would extend the boundaries of the Navajo Indian Reservation within the boundaries of the State of New Mexico; and be it

Resolved further, That a certified copy hereof under the great seal of the State of New Mexico be forwarded to his Excellency, the Right Honorable Franklin D. Roosevelt, President of the United States of America; and be it

Resolved further, That a copy hereof certified under the great seal of the State of New Mexico be forwarded to the Right Honorable JOHN NANCE GARNER, Vice President of the United States of America for presentation through the proper channels, to the Senate of the United States; and be it further

Resolved, That a certified copy of this resolution, under the great seal of the State of New Mexico, be forwarded to the Honorable Speaker of the House of Representatives of the United States of America for presentation through the proper channels to the House of Representatives of the United States of America; and be it further

Resolved, That a certified copy of this resolution under the great seal of the State of New Mexico be forwarded to the Honorable CARL A. HATCH, United States Senator from New Mexico, and to the Honorable DENNIS CHAVEZ, United States Senator from New Mexico, and to the Honorable JOHN J. DEMPSEY, Member of the House of Representatives from the State of New Mexico.

Report Condemns Compulsory Pay Deductions In Veterans' Administration

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1939

REPORT OF HON. ALBERT J. ENGEL, OF MICHIGAN, ON CONDITIONS AT THE VETERANS' FACILITY AT CAMP CUSTER, MICH.

Mr. SHAFER of Michigan. Mr. Speaker, in support of H. R. 2402, a bill which would correct certain unfair working conditions in the Veterans' Administration, I herewith present a report of an investigation into conditions existing in the veterans' facility at Camp Custer, Mich., in my congressional district.

This investigation was made by my colleague, the Honorable ALBERT J. ENGEL, of Michigan, a member of the World War Veterans' Legislation Committee. I accompanied Mr. ENGEL on his tour of inspection of the Camp Custer facility and am, therefore, in a position to corroborate every statement made in his report.

I believe Mr. ENGEL's findings should be brought to the attention of every Member of this Congress so that each may have the information it contains. I therefore request the entire report, which is in the form of a letter to the Honorable JOHN RANKIN, chairman of the World War Veterans' Legislation Committee, be included in these remarks.

The report follows:

FEBRUARY 4, 1939.

Hon. JOHN RANKIN,
Chairman, World War Veterans' Legislation Committee,
House of Representatives, Washington, D. C.

MY DEAR MR. CHAIRMAN: In accordance with your instructions, I visited the veterans' facility at Camp Custer, Mich., on December 8, 1938, and beg leave to make the following report:

1. Description: The Veterans' Administration facility at Camp Custer, Mich., is a veterans' hospital for mental and nervous cases.

2. Capacity: The official capacity of the hospital is 1,070. On December 8, 1938 (the date of inspection), there were 21 on the waiting list, 8 of whom had been notified to report.

Two new buildings are under construction at the present time with W. P. A. funds which will provide for 166 and 358 beds, respectively, within a year. The total capacity of the facility, including the 2 new buildings, will be 1,534. This will be adequate for present and immediate future needs.

While equipment is generally good, there are numerous beds which have been in use since the beginning of the hospital, in 1924, and should be replaced.

3. Ration and per capita cost: The average cost of the ration of the hospital is 45.4 cents per day. The ration includes the cost of preparing the food, overhead, etc. Guests and employees pay for

meals. The total per capita cost, including ration, clothing, housing, overhead, and salaries, and all other costs, except capital investment, from November 1, 1937, to October 31, 1938, was $1.67. Out-patient cost was $1.94 per patient including transportation.

4. (a) Nurses: Nurses work 5 days a week 7½ hours, and 1 day a week for 5 hours; holidays, 6½ hours a day. Each nurse works 1 month in 6 on night duty, with 1½ days off a week. Night nurses work 12 hours a night, or 66 hours a week. Nurses work on an average of 47½ hours a week. All nurses are under civil service.

(b) Attendants: Day attendants work on an average of 55 hours a week, while night attendants work on an average of 66 hours a week. The average for the year is 52.5 hours per week. These attendants are not under civil service, but expect to be on February 1.

5. Pay: Hospital attendants' pay ranges from $1,020 a year to $1,612 a year for head attendant. The majority are in the $1,020-per-year class. These attendants are compelled to live, as a rule, at the hospital, and the Veterans' Administration deducts $396 a year from their salaries for quarters, subsistence, and laundry, leaving the employee a net amount of $52 per month actual cash with which to support a family. After February 1, under the civil-service laws, there will be another deduction of 3½ percent, or approximately $3 a month, for retirement, leaving the attendant $49 per month.

I have a list of the attendants, showing the number of dependents, and wish to give the following illustration of a typical case:

Salary	$1,020.00
Quarters, subsistence, and laundry	396.00
Retirement deduction under civil service	35.70
Total deduction	431.70
Balance	588.30
Net pay per month	49.02

Dependents to support: Wife, four children—16, 14, 12, and 7 years of age, respectively.

There are numerous other employees receiving from $1,020 up to $1,260 per year with from one to six or seven dependents each. In one instance a messenger is receiving $1,200 per year with a $450 deduction, which will be increased to approximately $490 after the 1st of February, leaving him $710 a year or $60 per month with which to support himself, a wife, and six children.

I was amazed to learn that the Government is charging these employees with and deducting from their salaries $22.50 per month for a ration that costs the Government (in 1938) an average of 45.4 cents a day, or $13.62 per month. When employees take 30 days' leave, the Government deducts the $22.50 for the 30 days in addition to quarters and laundry, although the employee was absent and did not actually eat the food.

The Government makes the following profit from each of these employees a year:

Subsistence charged against the employee, 12 months, at $22.50 a month	$270.00
Cost of ration, 335 days in the year, at 45.4 cents a day	152.90
Profit on each employee	117.10

While these employees are charged with quarters, subsistence, and laundry for themselves, they actually have to pay the same house rent, light, heat, and fuel for their families as though they lived at home. They also have to buy food, clothing, medical care, etc., for the family—all out of $49 a month.

Congress, on the recommendation of the President, passed a minimum-wage and maximum-hour law. This law will ultimately require industry to pay a minimum wage of 40 cents an hour and will limit the hours of employment to 40 hours a week. These attendants, working for the United States Government, work as long as 66 hours a week with a year-around average of 52.5 hours a week, and receive as low as 37 cents an hour pay, out of which the Government takes $396 a year for quarters, subsistence, and laundry, and will take, after February 1, $36 a year for retirement pay. This little employee who is charged with this amount is paying the Government, according to these figures, $117.10 a year profit. There are 44 attendants with from 1 to 7 dependents in this class.

There are 52 attendants with an equal number of dependents receiving from $1,080 a year to $1,260 a year with $396 Q. S. L. deduction, plus a deduction of 3½ percent retirement pay after February 1. There are a total of 137 in this lower-paid employee class, each of whom contribute $117 to the Government each year in profit. The total profit the United States Government makes on these 137 low-paid employees amounts to $16,029 a year for Camp Custer alone. Multiply this by the number of hospitals or employees, and we find the United States Government, through the Veterans' Administration, is doing a land-office business with enormous profits upon which there is no income or other tax levied.

As a member of the Appropriations Committee of the House of Representatives, I watched Congress dish out $21,000,000,000 in various ways during the past 2 years. During the same 2 years I have seen that same Government take $32,000 in profits out of these low-paid employees at Camp Custer, who are trying to support from one to seven dependents on as low as $49 a month. I understand that this condition prevails in practically every similar institution in the United States, and that the total amount the Government takes out of these low-paid employees runs into thousands of dollars.

No employee should be charged more for ration, subsistence, or quarters than the actual cost. Married employees should not be compelled to live at the hospital unless absolutely necessary, and then they should be given additional compensation to enable them to live and support their family decently.

I was rather anxious to have Dr. H. G. Clarke, the superintendent, take me personally through the institution, which he did. We visited practically every ward. The fact that the patients knew Dr. Clarke and that Dr. Clarke knew the patients and their condition evidenced the fact that he had been making his inspection trips through the hospital frequently. Dr. Clarke has a personal knowledge of every detail in this institution and knows personally both patients and employees. Basing my opinion on the inspection of the hospital which I made, I think Dr. Clarke is doing a splendid job and is getting results.

Sincerely yours,

ALBERT J. ENGEL.

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, February 9, 1939

ADDRESS BY THE PRESIDENT OF THE UNITED STATES BEFORE THE NATIONAL EDUCATION ASSOCIATION

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the President of the United States before the National Education Association on June 30, 1938, at New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Dr. Woodruff, members of the National Education Association, I am glad to come here today to this great meeting, and I am especially happy that, I think for the first time in my life, I was introduced by my wife.

If you have followed the arguments of financial experts over the last few years, you have guessed that they have as many theories of keeping books as there are ends to serve. They do not always agree on the definition of capital, and they even disagree on what is an asset and what is a liability. That is true both in private business and in government.

But whatever differences bookkeepers and financiers may have over the rules of their professions, no man or woman of common sense can forget, or allow government to forget, what are the true and ultimate assets and liabilities of a nation.

The only real capital of a nation is its natural resources and its human beings. So long as we take care of and make the most of both of them, we shall survive as a strong nation, a successful nation, and a progressive nation—whether or not the bookkeepers say other kinds of budgets are from time to time out of balance.

This capital structure—natural resources and human beings—has to be maintained at all times. The plant has to be kept up and new capital put in year by year to meet increasing needs. If we skimp on that capital, if we exhaust our natural resources and weaken the capacity of our human beings, then we shall go the way of all weak nations.

Before we can think straight as a nation we have to consider, in addition to the old kind, a new kind of government balance sheet—a long-range sheet which shows survival values for our population and for our democratic way of living, balanced against what we have paid for them. Judged by that test, which is history's test, I venture to say that the long-range Budget of the present administration of our Government has been in the black and not in the red.

For many years I, like you, have been a pedagogue—of course, many people who are not strong on spelling will get that word mixed up with demagogue—striving to inculcate in the youth of America a greater knowledge of and interest in the problems which, with such force, strike the whole world in the face today.

In these recent years we have taught the prudent husbandry of our national estate—our rivers, our soil, our forests, our phosphates, our oils, our minerals, and our wildlife.

Along these lines we have made mighty strides—come further than in all the years before in knowledge of how to grapple with the problems of maintaining the estate that our forefathers handed down to us.

With the dissemination of this knowledge, we have taken action. Few men begrudge what that action has cost, because it has been based on operations physically large and spectacular, dramatic, easy to see.

I am thankful that I live in an age of building, for it is far easier to dramatize to yourself the importance of the object if you

see it while it is coming up, than if you come along later and see it only in its completed stage.

And so we are fortunate today in seeing the New York World's Fair of 1939 in the construction stage. This glimpse will make it mean more to us when we come back and see it completed next year.

The other half of the preservation of our national capital is likewise a problem of husbandry—the conserving of health, energy, skill, and morale of our population, and especially of that part of our population which will be the America of tomorrow.

This also is a problem of the fullest use, the fullest development of precious resources of ability, human ability, which cannot be stored and will be lost if they remain unused. No nation can meet this changing world unless its people, individually and collectively, grow in ability to understand and handle the new knowledge as applied to increasingly intricate human relationships.

And that is why the teachers of America are the ultimate guardians of the human capital of America, the assets which must be made to pay social dividends if democracy is to survive.

We have believed, we have believed wholeheartedly, in investing the money of all the people on the education of the people. That conviction, backed by taxes and backed by dollars, is no accident, for it is the logical application of our faith in democracy.

Man's present-day control of the affairs of nature is the very direct result of investment in education. And the democratization of education has made it possible for outstanding ability, which would otherwise be completely lost, to make its outstanding contribution to the commonweal.

We cannot afford to overlook any source of human raw material. Genius—genius flowers in most unexpected places; "it is the impetus of the undistinguished host that hurls forth a Diomed or a Hector."

No government can create the human touch, the self-sacrifice which the individual teacher gives to the process of education. But what government can do is to provide financial support and to protect from interference the freedom to learn.

No one wants the Federal Government to subsidize education any more than is absolutely necessary. It has been, and, I take it, it will continue to be, the traditional policy of the United States to leave the actual management of schools and their curriculums to State and local control.

But we know that in many places local government unfortunately cannot adequately finance either the freedom or the facilities to learn. And there the Federal Government can properly supplement local resources.

Here is where the whole problem of education ties in definitely with the natural resources of the country and the economic picture of the individual community or State.

We all know that the best schools are, in most cases, located in those communities which can afford to spend the most money on them, the most money for adequate teachers' salaries, for modern buildings, and for modern equipment of all kinds. We know, too, that the weakest educational link in the system lies in those communities which have the lowest taxable values, therefore the smallest per capita tax receipts, and therefore the lowest teachers' salaries, and the most inadequate buildings and equipment.

We do not blame these latter communities. They want better educational facilities, but simply have not enough money to pay the cost.

There is probably a wider divergence today in the standard of education between the richest communities and the poorest communities than there was 100 years ago; and it is, therefore, our immediate task to seek to close that gap—not to close it in any way by decreasing the facilities of the richer communities, but by extending aid to those less fortunate.

We all know that if we do not close this gap it will continue to widen, for the best brains in the poorer communities will either have no chance to develop or will migrate to those places where their ability will stand a better chance.

To continue that parallel between natural and human resources it is well to remember that our poorest communities exist where the land is most greatly eroded, where farming does not pay, where industries have moved out, where flood and drought have done their work, where transportation facilities are of the poorest, and where cheap electricity is unavailable for the home.

All of this leads me to ask you not to demand that the Federal Government provide financial assistance to all communities. Our aid for many reasons, financial and otherwise, must be confined to lifting the level at the bottom rather than to giving assistance at the top.

Today we cannot do both, and we must, therefore, confine ourselves to the greater need.

In line with this policy, the Federal Government during the past 5 years has given relatively more assistance to the poorer communities than to the rich.

We have done it through direct relief and through work relief, through the Resettlement Administration and the farm-security program, the National Youth Administration, and through the rehabilitation of flooded, or stranded, or dust-blown areas. We have provided schoolhouses, colleges, libraries, educational equipment, and sanitation in every State in the Union, and I include "sanitation" because it has always seemed to me that good health and good education must go hand in hand.

We have placed many millions of dollars in the field of adult education through the Works Progress Administration, and, here again, most of the money has been expended in the poorer communities of the land.

I have spoken of the twin interlocking assets of national and human resources and of the need of developing them hand in hand. But with this goes the equally important and equally difficult problem of keeping education intellectually free. Freedom to learn is the first necessity of guaranteeing that man himself shall be self-reliant enough to be free.

Such things did not need as much emphasis a generation ago; but when the clock of civilization can be turned back by burning libraries, by exiling scientists, artists, musicians, writers, and teachers, by dispersing universities, and by censoring news and literature and art, an added burden is placed upon those countries where the torch of free thought and free learning still burns bright.

If the fires of freedom and civil liberties burn low in other lands, they must be made brighter in our own.

If in other lands the press and books and literature of all kinds are censored, we must redouble our efforts here to keep them free.

If in other lands the eternal truths of the past are threatened by intolerance, we must provide a safe place here for their perpetuation.

Yes, there may be times when men and women in the turmoil of change lose touch with the civilized gains of centuries of education; but the gains of education are never really lost. Books may be burned and cities sacked, but truth, like the yearning for freedom, lives in the hearts of humble men and women.

The ultimate victory, the ultimate victory of tomorrow, is with democracy, and through democracy with education, for no people can be kept eternally ignorant or eternally enslaved.

Interstate Operation of Motor Vehicles

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, February 9, 1939

RADIO ADDRESS BY HON. HARRY S. TRUMAN, OF MISSOURI, TUESDAY, FEBRUARY 7, 1939

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by the junior Senator from Missouri [Mr. TRUMAN] on February 7, 1939, relative to Senate bill 25, prohibiting the operation of motor vehicles in interstate commerce by unlicensed operators.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the radio audience, the United States Senate yesterday passed the bill, S. 25, unanimously, which I introduced to prohibit the operation of motor vehicles in interstate commerce by unlicensed drivers.

This bill calls for the passage by the several States of uniform laws governing the issuance of drivers' licenses. It does not set up any new Federal enforcement bureau nor create a Federal license law. It does authorize the Attorney General to make regulations for its enforcement by local authorities. It requires a driver who crosses the State lines to have a driver's license issued only after the driver has demonstrated his ability and his right to operate a motor vehicle. His ability to drive is proven by his passing a physical examination, meeting with the age requirement, and providing suitable identification. The purpose of this bill is to cooperate with those States which require safe driving and to encourage those States which have not yet enacted strict legislation governing drivers, to do so.

The necessity of some standard system of licensing automobile drivers throughout the country is all too apparent. Each year thousands of people are killed and hundreds of thousands are seriously injured; and of course the number of less serious accidents which are not reported is even greater. It is estimated to be well over a million accidents each year, over and above the ones on record.

Fatalities and injuries resulting from highway accidents in 1936 were greater than ever before. Over 36,000 persons were either killed or fatally injured; 105,000 individuals were permanently disabled and 1,150,000 more were temporarily incapacitated. The direct economic loss from these accidents attained the staggering sum of $1,580,000,000. This continued destruction of life and property must be stopped. The enactment of this bill, S. 25, will in a large measure assure the abatement of this tremendous loss.

In the last 15 years, more people have been killed by automobiles than were killed in all the wars we ever fought, from the Revolution to and including the World War.

S. 25 provides in section 1 that no person may operate a motor vehicle in interstate commerce unless that person has in his immediate possession a valid license issued under the laws of a State that conform to certain standards prescribed by section 2 of this bill.

Section 2 provides that no license issued under the laws of any State will legally permit the operation of motor vehicles in interstate commerce unless that State law requires—

(a) That the licensee must first pass an examination which includes a test of the applicant's vision (with or without spectacles), of his ability to understand various highway signs, and an actual demonstration of his ability to exercise ordinary and reasonable control in the operation of a motor vehicle.

(b) That such license must be renewed at least once in each 3-year period.

(c) That possession of a canceled, revoked, suspended, fictitious, or fraudulently altered license is unlawful, as would be the transfer from one person to another of a license.

(d) That such license may not be issued to persons under 16 years of age.

(e) That such license describe the person to whom it was issued.

(f) That the license may be revoked or suspended by proper authorities.

Section 3 provides that any person operating a motor vehicle shall display his license upon the demand of any law-enforcement officer, but no person shall be convicted for a failure to so display his license if he produces in court a license issued to him and valid at the time of such alleged failure.

Section 4 states that any person who violates any provision of this act shall, upon conviction thereof, be fined not more than $300.

Section 5 of the act defines the terminology used in the act, explaining the meaning of the words "license," "State," and "interstate commerce" and "foreign commerce." It is definitely stated that the District of Columbia is covered by the term "State," as used in the act.

This section also provides that the provisions of the act shall not apply to any person while operating a motor vehicle in the service of the Army, Navy, or Marine Corps of the United States.

Section 6 provides that the act shall take effect 4 years after the date of its enactment.

By means of this simple instrument, we believe that the needless slaughter of American citizens can be greatly reduced and that the highways of our Nation can be made safer for the use of our people for business and for pleasure.

When I announced in December 1936 that I proposed to introduce such a measure as this, the press of the entire Nation acclaimed it in their columns. Traffic experts, highway-department officials of most States, and other people who have an active interest in the regulation of motor vehicles are in harmony with this action. They heartily endorse such legislation as an effective means of reducing motor accidents.

By licensing drivers it is believed that it would be possible, first, to eliminate those drivers obviously unfit for the privilege of operating a motor vehicle or to keep the would-be drivers from the road until they are properly qualified; second, through the suspension or revocation of the license, to restrain the indifferent or reckless driver from driving for a period of time, or to permanently prevent him from driving in extreme cases, involving gross negligence, recklessness, or incapacity.

Many of the States now require that operators of motor vehicles obtain a license, but a good many of these license laws are solely for revenue. Only 21 States require an actual demonstration of ability to drive before granting a license, and here are some interesting figures. The records show that 10 of the States having driver-license laws are in the lowest bracket of deaths resulting from highway accidents. It is likewise significant that while 10 of these 21 States are in the lowest bracket for percentage of deaths, for gasoline consumed, the remaining 11 States are in the next lowest bracket. Those States which have no licensing laws, and those that require a license but no examination, were in the highest brackets of deaths by accidents.

We have witnessed almost unbelievable progress in recent years in street and highway construction. Highways are being improved and danger spots are being eliminated all over the country, and although the work is far from completed, experts agree that the general condition of streets and highways is not an important factor in traffic accidents.

Outstanding improvements have also been made in the construction of automobiles within recent years. We have motor vehicles whose mechanism is of a standard which makes for safety. Advances in braking, body construction, steering apparatus, and other features of the automobile have contributed to safe driving. Improved tires, nonglare headlights, and shatter-proof glass have added to driving safety. And with all these marvelous innovations automobiles are within the reach of nearly every American family. The American automobile is a great bargain, and motor travel has become an integral part of our national life. Yet it is this easy means of transportation that is our greatest hazard to life, limb, and property.

So it is that when the frequency and severity of traffic accidents continue to mount, in spite of the advances and accomplishments in perfecting the automobile and improving the highways, it becomes necessary to focus our attention upon the human element—the driver.

The research department of the Kansas Legislative Council has recently issued a report entitled "Safety Regulation for Motor Vehicles." In this publication it is stated that—

"The driver is the most important element in our traffic-accident situation. Authorities state that approximately two out of every three automobile accidents involve mistakes by the driver.

"Some drivers cause accidents because they suffer actual defects in mind or body. They may have defective vision, they may not be strong enough to control the vehicle they operate, or their minds may not react to a particular situation with sufficient rapidity.

"Some drivers have accidents because they do not know how to drive. This group is greater in number than those suffering from mental or physical defects. This class of drivers is capable but they have simply failed to learn the proper methods of making turns, backing, and signaling. They do not observe stop signs or traffic signals and have no sense of their obligation toward pedestrians or other highway users."

There was recently published a report on scientific investigation of driving skill under the direction of Dr. Harry R. DeSilva of the bureau of street traffic research at Harvard University. This report states:

"Obviously some important factor is being neglected; and on scanning the statistics of the causes of highway accidents, the conclusion is inescapable that it is the inability of the driver—his failure to anticipate dangerous situations and to handle the car skillfully—that is the underlying cause of the great majority of accidents. As the National Safety Council maintains: 'The driver is the most important element in our traffic-accident situation. Some drivers have accidents because they are actually defective in mind or body. A much greater number have accidents because they do not know how to drive.' "

The control of the driver, then, is what S. 25 sets out to accomplish. It provides a pattern by which those States which now allow any person who can get behind the wheel of a car to drive it can draw up their regulations to govern automobile drivers, but it does not in any way infringe on the rights of any State to control its own vehicular traffic. It merely sets a standard, based on the laws of States which have successful driver-control departments, for those States which have not yet enacted this vitally needed legislation.

S. 25 has twice unanimously passed the Senate. It has not yet been passed by the House, although a companion bill has been introduced at that end of the Capitol. Since the provisions of this act will not take effect until 4 years from the date of its passage, it is a matter of great importance that it be enacted into law as soon as possible.

We were all shocked by the news of the death of a Capitol page by a hit-and-run driver here in the District of Columbia a few days ago. Two days later another child was run down here by a hit-and-run driver and severely injured. This heedless killing and maiming must be stopped, and the sooner all of the States adopt uniform regulations governing the licensing of automobile drivers, the sooner the situation will be gotten under control. I know that the American people want such legislation, and I hope that S. 25 will be enacted into law at this session of the Congress.

Government Control of Business

EXTENSION OF REMARKS

OF

HON. WILLIAM H. KING

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, February 9, 1939

ADDRESS BY HON. MILLARD E. TYDINGS, OF MARYLAND, FEBRUARY 2, 1939

Mr. KING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject How Far Should Government Control Business, delivered by the senior Senator from Maryland [Mr. TYDINGS] before the Economic Club of New York on February 2, 1939. The address deals with an important question of great interest to the American people.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, in addressing myself to your question, to wit, How far should government control business? it is important, as they say in medical parlance, that I first isolate the word "control," analyze it carefully, and present a point of view based upon the varying definitions of that word, in order to avoid misunderstanding.

What does the word "control" mean? The dictionary gives it many shaded meanings, for it says "to control" means "to exercise restraining or directing influence over; to dominate; regulate; hence, to hold from action; to curb, subject, overpower."

Insofar as the word "control" means "to dominate, to hold from action, to subject or overpower" business, my answer to your question can be definite and immediate.

Government has no constitutional power, as I see it, to do these things to business; and, again, even if it had the power, it would be unwise to do them as a matter of national policy.

If our form of government has the power to control to the extent of dominating, withholding from action, subjecting or overpowering the everyday business of the Nation, then, in sum, we have a charter of state socialism unlimited, and not a charter of human liberty and of free enterprise, or a government of limited powers.

Let us examine for a moment the genesis of the Government of the United States of America. Ours was conceived as a government which would be the very antithesis of dominating, holding from action, subjecting, or overpowering either the individual in his person or the individual in his effects, which means nothing more nor less than the individual's business.

This Nation was conceived to dignify and exalt individual man. It came into being because 150 years ago there was no political equality among men. It was created to cure that condition.

The rulers, for the most part, then existing on thrones and in parliaments, held office by divine right. Political democracy did not exist. Men in the mass were inarticulate. They were the servants of their rulers, and hence of the state, and were so treated. It was a government of men and not of laws. Man at that time occupied a position above that of domestic animals, yet below that of those who ruled him.

With the termination of the Revolutionary War the old longing of mankind for a new concept of his status came into being with the formulation of our National American Government. The motivating purpose of that concept was to make the individual supreme, to give him a government of laws and not of men, to give him a government in which he was the master and not the servant of the government.

Man in the mass thus reached a new station along the highway of his destiny. He stood forth free. He was in reality his own government. He was the creature alone of Almighty God. He was the vassal of no other man.

Government, he said, in the constitution which created it, could do nothing which interfered with the security of his person, with the security of his home, with the security of his family, or with the security of his effects—that is, of his business.

Lest there should be any mistake about this new state of man, the first 10 amendments to the Constitution, man's Bill of Rights, were immediately adopted to expressly put this matter beyond the realm of speculation.

The Government was to be one of limited powers, but in order that there be no mistake about that, the Constitution provided that "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people."

That still is the Constitution of the United States of America in 1939. These things have not been changed by the people who have lived under this form of government for 150 years. There is no provision in this Constitution, express or implied, which rightfully allows the Federal Government to dominate, to hold from action, to subject, or overpower the business of the Nation. And where attempts are made to exercise such powers, whether the courts uphold or reject these attempts, they are clearly at variance with the expressed purpose of our national charter to exalt the individual, and therefore prohibited by the charter of our Government itself.

However, within the last few decades, because transportation, communication, and information have all traveled with lightning-like speed; because society, once scattered in this Nation into sections, has been brought into a composite state; because transactions which once were purely local are now national in many cases, we are told we must reexamine the ancient foundations to see whether or not they are suitable to modern conditions and events.

This metamorphosis having taken place, there are those who say that government has not kept abreast of this march of progress, that the time has now come to scrap the old philosophy and end 150 years of American tradition, of the American system, of the American way, by having Government control the various ramifications of our business life.

These people contend that the old tenets of individual exaltation and free enterprise, if you please, are outmoded, archaic, and valueless, and, ergo, that if government only will exercise control and domination over business, there will be more prosperity, more of the abundant life, and more happiness for us all.

These are the men who, without any amendment of the Constitution whatever, seek to change its philosophy by indirection. They unhesitatingly, by precept and proposed legislation, attempt to have the Constitution embrace this right of government to dominate, subject, and overpower the business of the Nation. They do not take the trouble to amend the Constitution. If the courts say they cannot do what they propose, they attack the courts. In effect, they use every artifice of amending the Constitution except the way provided in it for an amendment to it.

They are, in truth, dissatisfied with the American system and with the American way. Their concept is that this is not a government of limited powers, but rather that there is no limit on the National Government's power whatsoever.

In pursuit of this philosophy they attempt to tell the farmer what he can plant and what he cannot plant; to tell the businessman whom he can hire and whom he cannot hire; what he can sell and what he cannot sell; when he can dig coal and when he cannot dig coal; and what price he shall charge for the products of his labor. These are not the measures of democracy.

These men, in effect, always claim they are doing this to save the American system and the American form of government—when, as I see it, really stripped of the camouflage, they are the vanguard of State socialism on the Russian model, or else are the vanguard of State socialism by the more gradual processes now in force in Germany and Italy.

They are neither Republicans nor Democrats. They do not wear the clothing of democracy, and their correct uniforms should be either red, brown, or black shirts, if they were truly ingenuous.

They preach democracy and free enterprise, while they set in force the machinery to destroy it, stating it is necessary to partly destroy it in order to save the remainder.

In one breath they abuse the governments of Russia or Germany or Italy, heaping their dislike upon these governmental systems of business control, and in the next breath they advocate the measures which will imitate them.

They are the enemies of the American system, of the American way, the saboteurs of American tradition, the termites of American democracy—in action, they are the real disciples of the Hitler, Stalin, and Mussolini form of government.

In their advocacy of economic policies, they embrace the identical systems which they in generalities frequently condemn. They proclaim that the American system of government under which we live, and which has brought us to the highest standards of living in all history, is a great failure, and must be discarded for systems that have proved over and over again to be a sure means of ruin.

They are the disciples of the new day that is dawning—or, as I see it, the new night that is falling—that is as old as Augustus in Rome, Louis XIV in France, and the N. R. A. and A. A. A. of the recent past.

They profess to believe in democracy, while pursuing none of its philosophy. The privileges of democracy they seem not to value; and what they would attack, were their administrative orders and decrees to emanate from another source, they can see no evils in if they emanate from themselves.

In short, "I have little fear," say they, "in driving my car at 100 miles an hour, if I am driving, but I would not want to ride in a car going that fast if anyone else were driving."

They are not concerned about the effect upon the car or of its direction, or the accidents and dangers along the roadway. Whether or not they take the ride is determined solely by "who shall drive?" rather than by the wisdom of the ride. They proclaim any change as progress.

These are the men who would dominate, withhold from action, and overpower what we might call the everyday business, the free enterprise, of the Nation. Control with them does not mean to regulate, as we used to use that word, but means to dominate. This was exhibited beyond argument by the operation of the N. R. A. in the field of business and the A. A. A. in the field of agriculture, as well as in other measures. Regulate is a poor synonym for control in their private dictionary.

But you are talking generalities, you say. My reply is, "No"; I am not talking generalities to even a small extent as compared to those who talk in support of the public control of private business.

But to meet your charge of generalities, let me present a few facts taken from history. Millions of people in America think that the N. R. A. was new, that nothing like it had ever been tried before by any nation, that it was a great forward step in human experience. How sad. It would be possible to dig up dozens of N. R. A.'s out of the pages of history and parade them and their consequences before you in proof of the general statements I have made. May I use just one example from history to illustrate my point?

Let us go back over 200 years to the time of Louis XIV, in France. Let us take down from the archives the four big dusty volumes and there on the 2,200 pages—think of it—read the regulations promulgated by the King, stating the conditions under which the textile industry could manufacture its products and how the employees therein must conform to the King's decrees.

For example, it was provided that textile fabrics made in the city of Dijon were to be put in reeds 1¾ ells wide, the warp to contain 1,408 threads. Now, in Samur, textiles were to have 1,376 threads, while in Chatillon none were permitted to be manufactured save those that had 1,216 threads.

Of course, you know that these regulations for textile manufactures—in 1934 called "codes"—were written by the then existing manufacturers themselves, under supervision of the King, just as they were frequently written in the days of the Blue Eagle. They were written 200 years ago by those who, having their machinery already set up, found the might of the King's regulations a handy device with which to forestall the competition of enterprising innovators and competitors. The Government threw the entire weight of its authority behind the established interests and in cases made death the penalty for the violation of these regulations.

The system had many years of trial. The Government spared no effort to enforce the regulations to the letter. The more the

regulations were violated, the more new regulations were multiplied. Thousands of lawsuits were docketed. An orgy of smuggling and bootlegging prevailed in the outlawed products, which, in spite of the King's regulations, had a very wide popular support in France.

As these violations occurred, the Government did not stop to temporize. It clearly said on every occasion and in every court that it meant business and that these regulations would be enforced to the limit.

Of course, all students of history know that these drastic measures of economic regulation cost the lives of some 16,000 French people, partly through executions, partly through armed affrays. Think of it. And this 16,000 figure does not reckon at all the certainly much larger number of Frenchmen who were convicted and sent to the galleys or punished in other ways.

It is recorded that on a single occasion in the city of Valence 77 were sentenced to be hanged, 58 were to be broken on the wheel, 631 were sent to the galleys, and none were pardoned. And the crime they had committed was that they preferred to make textiles, not as the Government wanted them made, but as the workers and inventors themselves wanted to produce them for public consumption. However, none of these punishments stopped the violation of the law. The greater the number punished, the greater the number of new violators. But in spite of this failure in France 200 years ago it was sure to work in the United States of America in 1934, we were told.

It is curious that even in a country like ours, where the overwhelming majority of the people are against State socialism and where the Socialists have never been able to poll a very large vote, that many groups support more or less actively, or regard with indifference, measures similar to the N. R. A. and the A. A. A., which added one by one arrive inevitably at the goal of State socialism.

In other words, people are opposed to State socialism as a whole but accept with complaisance the rapidly multiplying steps which lead directly to it.

Thus we have in America people who favor Government ownership of power companies but who are opposed to Government ownership of farms or Government domination of business generally. Without forming a clear-cut idea of the functions of government, they stand both in the camp favoring Government operation and in the camp opposed to it, at one and the same time. They tell you they are not Socialists and that they do not like the German, Russian, or Italian system, but they have no objection to arriving at that goal by inference if it is gradual. They are like members of recent legislative bodies who used to proclaim their faith in national prohibition on the floor and satisfy their appetites for John Barleycorn off the floor during the prohibition era.

Free enterprise on the one hand and State socialism on the other will not long survive together in the same country. One is sure to perish. We must make our choice. To put it differently: We must choose between voluntary cooperation on the one hand and compulsory operation on the other.

Still another way of looking at it: Do we want a highly organized body of officeholders attempting to run the private business of the Nation, or men who have spent their lives running the businesses of the Nation continuing to do it, under the condition where government only makes the rules, and leaves business to its own resources?

May I lift a paragraph I once read from the essays of a great writer, which might be apropos here? He said, "There is nothing more dangerous than hampering the power of the human intellect, nothing more dangerous than any legislation that puts a limit to the daring on the enterprise of men. In the ancient days the sailors dared not go out of sight of land, the wanderings of their ships following the coast line." The daring of Columbus, however, gave humans a new heaven on earth.

Any kind of governmental regulation which keeps our business navigators within sight of the shore hurts America and every man who works within it. The need is for more business Columbuses and less business land sailors.

All contact of government with business should be patterned with two general objectives in view; on the one hand, to protect the individual against the greed and cunning of others, and, on the other hand, to prevent interfering with the fullest development of human ingenuity and power. Between these two gateways lies the only real field for constructive government control, or, as I prefer to say, regulation of business.

We must not forget that often government is as vicious in its ruthlessness as are the objects against which it directs its regulations. Again let me resort to history. Congress passed the undistributed-profits tax under its taxing authority. Every informed person in America knows that in that case government used its taxing power not for the purpose of raising revenue, for which purpose it was given that power, but so it might in effect become a member of the board of directors of every corporation in the land and thus force each board to adopt policies of management which the real directors as a whole did not think it wise to adopt.

Thus under the guise of taxation government sought not to prevent acts which were wrong in themselves, but sought to assume administrative and management rights belonging entirely to those who owned the property. This action was not the action of regulation; it was the action of control in its dominating, overpowering, synonymous sense.

Again let us reflect on human nature in recent events. Our Government is one of three branches—the executive, legislative, and judicial. Each is an independent branch, beyond the control of the other two. Yet have you not seen the executive branch try to dominate, subject, and overpower another independent branch, the Supreme Court? Have you not seen the executive branch in recent elections try to dominate, subject, and overpower State elections wherein Senators were to be chosen for the legislative branch?

Consider what would be the state of your Government if the Court fight and the senatorial purge had been successful. Then you would have had executive control of both the Supreme Court and the Congress and three independent branches of the Government would no longer exist.

Next, consider the attempt to dominate the business of the country by the N. R. A. and the farms of the country by the A. A. A., as well as other recent acts.

When you are asked, therefore, to fix the degree of control that Government may have over business don't lose sight of these lessons from recent history, for they are as indicative of trends as was the illustration I presented from the reign of Louis XIV.

One may make a beautiful case for theoretical control, but in practice control is at variance with the theory presented to obtain it.

Remember, too, what we mean by business. Business is agriculture, mining, electric light, power and gas, manufacturing, construction, transportation, communication, trade, finance, services, etc. Only from these sources does government get the revenue upon which it exists. Only from these sources do the 50,000,000 normally employed obtain work and their daily bread. Business is not only the president and vice president of a particular concern, or its board of directors; business is also the thousands of people employed in that concern.

Under this very administration the United States Department of Commerce has issued two volumes entitled "National Income in the United States from 1929 to 1936, Inclusive." These volumes analyze what proportion of the business income dollar goes to labor and salaries. An average of 82 cents out of every manufacturing income dollar went to wages and salaries. An average of 81 cents out of every mining and quarrying income dollar went to wages and salaries. An average of 70 cents out of every transportation income dollar went to wages and salaries, and an average of 66 cents out of the income dollar of all types of business combined in this country went to salaries and wages.

Truly business is the lifeblood of this Republic. Therefore, when you begin to control business you begin to control the employment of the 50,000,000 people who work in business and who between them make up the entire national income of the United States.

When an automobile is manufactured in Detroit, cotton must first leave the plantation in Georgia, lumber the forest in Oregon, fish must leave the ocean at Cape Cod, coal the mines of Pennsylvania, cattle the plains of Kansas, and rubber must come from far-off Java and Sumatra.

Too often the workingman in a plant sees only his own labor in the fashioning of an article. He does not take into account all the labor outside of the plant that goes into the production, transportation, and processing of the component parts of his finished product.

It is my belief that if every workingman, every businessman, and every Member of Congress would read the two volumes to which I have referred there would be an entirely new conception of national income in this Nation, for all would realize how much is at stake in the survival of the system of free enterprises and of free institutions.

Of course, government has a proper field which it may enter in the regulation of business. There are, first, its own functions, its taxing policy, its tariff policy, its interstate-commerce policy, its policy in fixing the value of money, all of which directly and indirectly affect the business life of the Nation.

These policies, however, should be employed for the purposes of government only and not for the purposes of business management per se.

Again, government should regulate, as differentiated from control, the business of the Nation. It should outlaw dishonest practices. It should set up uniform standards of weights and measures and quality. It should declare what is not healthful. It should make rules for human conduct and fix penalties for transgression. It should regulate business so as to insure honest competition and to insure the continuance of competitive business. It is not necessary for it to enter business to accomplish any of these aims.

Government is there to define clearly the rules of the game and then let business have a free hand in the pursuit of free enterprise.

Government has no right to enter business of any kind except those which are clearly a part of government itself, like the Government Printing Office, Government hospitals for its soldiers and sailors, navy yards to build and repair purely Government property, dams to control the waters of its rivers and streams.

It was not conceived as a competitor to private business, either in the manufacture of women's dresses, of automobiles, moving pictures, electric light bulbs, or condensed milk. Government is there to govern and regulate and not to operate. It is there to regulate business and not to dominate, overpower, or subject it.

When government, in violation of the wisdom of sticking to its milder function of regulation, wherein it but defines the rules of the game of free enterprise and commences to dominate and overpower or to enter and operate some one business, inevitably that precedent will be used to permit it to embark in every business. And why not? If it is proper for government to be in one business, it will be argued that it is equally proper for it to be in another business.

The failure to comprehend that the workingman, the wage earner, the general public, the man in the street have more at

stake than anybody else in the continuance of free enterprise of this Nation and in the revival of business by allowing it to continue as a free enterprise is to drift farther and farther down the road on which we are now traveling, leading to conditions which threaten the home and fireside of every citizen, his job—whatever it may be—his income, and the free institutions of his country.

The present state of affairs should lead to a realization that business in every form should be encouraged, not discouraged; helped, not hindered; supported, not attacked; for in a revival of business—and it can only come by free enterprise and confidence in the right to free enterprise—there is work for the unemployed, a better market and better prices for the farmer, a decrease of the governmental burden of taxation, and a normal way of American life.

May I close by restating your question: How far should government control business?

My answer is, it should not control it at all. Control is too brutal a word, and in its accepted meaning, too brutal a remedy for the evils that may exist in free enterprise.

Well, then—how far should government regulate business? That cannot be answered in a sentence. Just as the airplane of today has outmoded the transportation of yesterday, so old regulations will from time to time be outmoded and new ones be made necessary. The degree of regulation cannot be fixed on any definite and permanent basis.

The task of government today is still what it was in the day of Aristotle—that is, to find the just medium, to avoid excess, to strive for the ideal for the common good.

Or, as Aristotle himself said of government, "not too much, not too little."

Generally in this restless world in which we live, there is more to be feared from too much control than too little, and hence I have devoted myself primarily to that fear in my answer.

I believe recent history supports my point of view. In bringing these answers to the question you have presented, I have done so in the hope that I might make some slight contribution here to the future of America, with the sole desire to make that future, insofar as I may influence it, as glorious and great as is its past. For truly its past is the greatest of them all, and its future will be only as great as we make it.

Cost of the World War to the United States

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 9, 1939

STATEMENT OF HON. RUSH D. HOLT, OF WEST VIRGINIA

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me on the subject of the cost of the World War to the United States.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Before we become too much involved in foreign entanglements, let us check the cost of the last World War. It is impossible to figure the cost of the conflict to include economic dislocation thereafter or even include the loss during the war, but the World Almanac prints an interesting summary of the estimated cost. It follows:

"WORLD WAR'S MONEY COST TO UNITED STATES GOVERNMENT

"The estimated money cost of the World War to the United States Government to June 30, 1934, was $41,765,000,000, as shown by the annual report of the Secretary of the Treasury for the fiscal year ending June 30, 1934.

"The Treasury has not made any further revision in the estimated money cost of the World War since that date.

"Necessarily, some of the figures included in these estimates represented approximations, since no cost records relating to the World War were maintained.

"The difference between the estimated money cost of the World War for the fiscal years 1917 to 1921, shown as $26,361,096,001.09 in the Annual Report of the Secretary of the Treasury, 1930, and in the revised amount of $25,729,000,000, shown in his 1934 report, represents an adjustment made during the period June 30, 1930, to June 30, 1934, in connection with the obligations acquired by the United States from foreign governments. During this period collections on accounts of foreign obligations amounted to approximately $322,000,000.

"In calculating the estimated money cost of the World War as of June 30, 1930 ($37,873,908,499), the obligations of foreign governments held by the United States were shown with a book value on the basis of the present value of the obligations as of that date. This present value increases from year to year and the balance of the adjustment referred to above represents an estimated increase in the present value of such obligations from June 30, 1930, to June 30, 1934.

"In computing the estimated money cost of the World War the Treasury has not attempted in recent years to adjust the estimated cost for the period from 1917 to 1921 to reflect other receipts representing the return of funds originally treated as war-cost expenditures, such as the receipts on account of the realization of assets of war emergency corporations and agencies.

"Between June 30, 1917, and June 30, 1921, the Government's net cost of certain World War activities (expenditures less receipts) was:

"European food relief, $94,942,645; vocational rehabilitation, $135,739,203; United States Housing Corporation, $28,695,182; United States Shipping Board, $3,072,526,532; United States Grain Corporation, $25,000,000; Bureau of War Risk Insurance, $504,773,249; expenses of loans (Treasury), $74,769,610; collecting war revenue tax, $69,617,965; hospital facilities and service, $73,109,957.

"Pay of the Army, $2,819,195,164; Army maintenance services, transportation, etc., $6,873,420,115; other War Department expenses, $88,737,159; Army Medical Service, $316,653,620; Signal Service, $965,008,551 (including $519,099,187 increase in aviation); Army ordnance supplies, ammunition, etc., $575,321,328.

"Armament of fortifications, $3,203,479,956; manufacture of arms, armored motor cars, etc., $469,919,700; all other ordnance expenses, $189,377,285; Army engineering costs, bridges, depots, etc., $633,271,952. The total War Department expenditures on account of the conflict was $14,849,593,666.

"The total war expenses of the Navy Department were $3,401,342,952 (aviation, $185,301,332; training stations, recruiting, etc., $95,514,380; ammunition, etc., $502,692,026; yards and docks, $212,751,628; fuel and transportation, $133,872,964; pay of the Navy, $613,134,005; provisions, $205,314,070; supply account fund, $143,276,476; construction and repair, $144,014,058; steam engineering, $134,095,304; United States Marine Corps, $165,049,397; new war vessels, $731,900,271).

"Increase of compensation of civilian employees, $147,416,619.

"Interest on war debt (1918–21), $2,746,640,992."

Far more important than cost in money are the casualties. The World Almanac shows the following:

"American Army battle casualties in World War.

"Killed in action, 37,568; died of wounds received in action, 12,942; wounded, not mortally, 182,674; total, 233,184.

"Battle casualties of the United States Navy and the United States Marine Corps are not included in the figures.

"Includes troops in Northern Russia and at sea.

"The casualties not included in the above table were: Died of disease, 62,670; died of accident, 4,503; drowned, 727; suicide, 965; murder or homicide, 318; executed, 35; other causes, 228; total, 69,446. Measles killed, 2,370; poison gas, 1,399.

"Marine Corps casualties were: Killed in action, 1,450; died of wounds, 1,007; died of disease, 304; accidentally killed, 28; died of other causes, 18; total, 2,807. Wounded, 7,714; total casualties, 10,521.

"United States Navy losses at sea in World War: Killed in action, 30 officers and 326 men; died of wounds, 6 officers and 52 men; lost at sea, 41 officers and 416 men; total, 77 officers and 794 men."

Add to that the terrible suffering. Add to that the wrecked bodies of our soldiers. Add to that the misery and pain. Those things cannot be reduced to figures but these facts are important to know:

The Veterans' Administration shows 45,320 World War veterans receiving hospital care and 15,057 veterans domiciled in homes on December 31, 1938. General Hines stated that there were 27,000 mental cases under treatment by the Veterans' Administration and that he expected this to be raised to 44,000 by 1949.

The World War was called a war to save democracy. Again, we hear the call to "police" the world to protect democracy.

Relief Appropriations

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 9, 1939

RADIO ADDRESSES BY HON. JAMES E. MURRAY, OF MONTANA, AND DAVID LASSER, JANUARY 29, 1939

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a discussion of the deficiency relief appropriation measure by David Lasser and myself over the Columbia Broadcasting System, Sunday, January 29, 1939.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

ADDRESS OF DAVID LASSER

On behalf of the Workers' Alliance of America I should like to express our appreciation to the Columbia Broadcasting System for making this time available to us.

On Friday, January 27, the United States Senate by a vote of 47 to 46 rejected the plea of the President for a deficiency appropriation for relief of $875,000,000. By that 1-vote margin it slashed the fund to $725,000,000. Yesterday, Saturday, January 28, in hundreds of cities, towns, and villages more than 500,000 men and women poured out into the streets in protest parades against the Congress' blow to their welfare. Unemployed and employed workers, small-business men, farmers, city, county, and even State officials joined in the public declaration that the action of the Congress was against the best interests of the Nation.

In the brief time I have before I introduce our speaker, I should like to point out the viewpoint of the organized unemployed and W. P. A. workers on the congressional action.

You all know how the President, after weighing the facts before him, after consulting with his experts in the field of relief, came to the conclusion that $875,000,000 was necessary to carry on W. P. A. until June 30, to provide useful work to the destitute unemployed, to increase purchasing power, to, in short, help restore recovery.

You remember how the House of Representatives by a majority vote cut this fund by $150,000,000. You may remember, too, that this cut was made possible only through parliamentary maneuvers which permitted the Congressmen—your Congressmen—to do this without their vote being recorded.

By the time the bill reached the Senate Appropriations Committee an avalanche of protest from the four corners of this Nation swept into Congress. The House action was vehemently protested and an overwhelming demand was made of the Senate that they restore the $150,000,000 requested by the President of the United States.

Day after day letters, telegrams, postcards piled up mountain high in congressional offices as the American people, aroused at the threat to their welfare, at the attack upon the recovery movement itself, made their indignation known to their elected representatives.

But the Senate did not heed their cry. Senator MURRAY will tell you himself how his own body responded to the almost united cry from the people for not one cent less than $875,000,000.

The struggle, however, is not over. The whole bill must now go to the House for conference, with the possibility that even this meager concession to the needs of the people will be wiped out and the original House provision for a straight fund of $725,000,000 restored to the measure.

If this original House provision for a straight fund of $725,000,000 remains, then W. P. A. must drop 200,000 workers every month starting February 1, until more than 1,100,000 have been eliminated from the program by June. If the President gets such a measure on his desk, he will be faced with the problem of either signing a bill which is impossible of administration or of vetoing the bill and sending it back to Congress for reconsideration.

If the Senate provision is maintained, a peculiar and dangerous situation will occur. The President must keep the rolls up during February and March. By April 1, he will be in a position of not knowing whether he will get more money, and, if so, how much. He cannot therefore schedule employment after April 1, for if he doesn't get any more money he will be forced to drop in April, May, and June 600,000 workers per month to make the money last.

Therefore, the President is clearly under the obligation if this Senate provision is retained, to come back to Congress on March 1 and make his request for additional funds. March 1 is only 30 days away, and in one short month we will have to go through this whole struggle again.

Isn't it harsh and cruel to keep these needy families in fear and terror for months to come awaiting the executioner's axe that may fall anywhere, cutting of their jobs, their only means of existence?

I personally believe that the politics played by the isolated few local W. P. A. officials as charged by the Sheppard committee, was small potatoes to the enormous political burlesque enacted on the floor of the House 2 weeks ago and on the Senate floor Friday.

And now I want to present to the radio audience a gentleman and statesman who is always found speaking and voting on the side of the underprivileged. His unbiased mind, his talents are ceaselessly employed to see that the interests of the majority of Americans are protected. I take great pleasure in presenting the Honorable JAMES E. MURRAY, United States Senator from Montana.

ADDRESS OF HON. JAMES E. MURRAY, OF MONTANA

I, too, wish to express my thanks to the Columbia Broadcasting System for this time made available to the Workers' Alliance and myself. I will try to be brief.

We have just finished in the Senate a struggle over the work-relief appropriation which has attracted Nation-wide interest. If the issue involved had been confined to the simple question of the amount necessary to carry the work-relief program as outlined in the bill, there could be absolutely no excuse or justification for the reduction of the amount requested by the President. The $875,000,000 sought by the administration to carry through the work-relief program for the period involved was the absolute minimum sum required to do the job without a cruel and arbitrary reduction of the relief rolls.

Today we have 11,000,000 Americans out of work. For practical reasons, the Government has been able to furnish employment to only 3,000,000. In addition to furnishing jobs, it has also been a program of recovery. It has been protecting small merchants, professional and business men from failure and bankruptcy throughout the country. The wages of these W. P. A. workers have been filtering into the cash registers of shopkeepers, being used to pay for food and clothes, rent bills, medical bills, and other items necessary for subsistence. Large sums were also being spent for building materials—cement, steel, lumber, and other items—thus stimulating manufacturing, transportation, and industry in general.

To reduce the appropriation to $725,000,000 would obviously affect this recovery program. It would mean that thousands of unfortunate workers would be lopped off the W. P. A. rolls commencing immediately. The leaders of the so-called economy bloc realized, therefore, that they were defeated on that straight issue and some plan or scheme had to be devised to escape it. To avoid that vital issue and the political consequences that would follow, a clause was inserted purporting to prevent a reduction of the W. P. A. rolls of more than 150,000 workers during February and March, and also authorizing the President to come before the Congress again and demand more money should an emergency arise before the end of the fiscal year. This, of course, was a very adroit legislative move and made possible the defeat of the President's proposal for the larger appropriation.

But it now appears to be a foregone conclusion that the President will be compelled, under that clause, to request Congress for a further sum. In fact, unless business conditions rapidly improve and reemployment expands, even the original estimate of $875,000,000 will not be sufficient. The issue therefore has not been decided, but merely evaded. The United Press, in reporting the proceedings on the bill, indicated that it was a "sham battle." The opposition simply side-stepped the issue and avoided certain defeat of the reduced appropriation.

I think it is most unfortunate that these disputes over relief occur. They create widespread dissension and ill will. They tend to create a class cleavage that ought to be avoided. The great mass of unemployed feel that they are being indicted as constituting an unworthy and unwholesome burden on the Nation. There is nothing accomplished by such an ill-advised course. On the contrary, much damage is done.

I, and all those who voted in the Senate Friday for the President's proposal, have always been for rational and sensible economy. No Member of the Senate wants to see waste or extravagance. All the provisions of the bill seeking to prevent dishonesty, waste, or extravagance were carried without a single dissenting vote. With our knowledge of conditions in the country, however, we felt that the President in requesting $875,000,000 for the next 5 months was reasonable and conscientious in his demands. His action was based upon the advice of experts and statisticians who worked out the very minimum requirements of the program.

Many of us felt that the President was overoptimistic about the possible decrease in need. He was prepared to have the rolls reduced 300,000 by June on the expectation that the upturn in industry would not only continue but would, indeed, expand. He based his request on the assumption that 1,500,000 workers would be reemployed in private industry in the next 5 months. I consider that extremely optimistic. I think we will surely find that the President will be forced to come back to Congress within the next month or two and request more money. This is poor practice. It creates a constant state of uncertainty, dissatisfaction, and complaint, and nothing is saved in the end. I think it is poor practice to keep a huge program such as W. P. A. going on a month-to-month basis and furnishing ground for constant political bickering and contention. It is wasteful, and certainly inefficient. In my judgment, the Senate action will prove to be poor economy.

In my own State of Montana only a few days ago one of our largest mines closed down, throwing a thousand men out of work. Smelting operations have also been cut, and general business conditions are unsatisfactory. Other curtailments in mining are occurring in various sections of the country. In the State of Utah the Kennecott Copper Co. has cut 10 percent. In view of the still unsettled condition of business and industry at the moment, it seems to me that the Senate, by its action, threw a cold chill on our American economy.

This unemployment situation presents the Nation's greatest problem. No threat of foreign armies can constitute half the danger to our country as the battalions of unemployed and hungry men at home.

It is all very well to say that we must balance the Budget. Of course, it is our patriotic duty to lay plans as early as possible to pay off the debts incurred by the Government during this dangerous period of economic distress and social upheaval. It is my view, however, that we cannot abruptly or drastically curtail this program of relief for the unemployed until private industry shows a reasonable capacity to relieve the situation. The program was undertaken to salvage our capitalistic system at a time when it was in a chaotic condition. It was intended to sustain the people during the period of adjustment. Indirectly, it was intended to preserve our democratic system. It has had universal approval from the Nation's economists and industrial leaders, and it has carried the country through the most dangerous period in its entire history.

The solution of these conditions depends on the utmost harmony and cooperation among the various groups that make up our economic system. Let us hope that we may accomplish a reasonable and proper adjustment of this relief problem in the Congress during the next few months, and thus avoid bitter controversy and dissension at a time when the country is going forward to better and more happy and prosperous conditions.

In closing I wish to compliment this organization for its constructive work on behalf of the unemployed and in bringing to the attention of the Congress the need and plight of the unfortunate and destitute millions of men and women in this country who have been suffering as a result of economic conditions. I consider it the essence of democracy that the unemployed should have the right to collectively express their situation and their needs.

Findings of National Temperance and Prohibition Council

EXTENSION OF REMARKS
OF
HON. MORRIS SHEPPARD
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 9, 1939

STATEMENT OF NATIONAL TEMPERANCE AND PROHIBITION COUNCIL

Mr. SHEPPARD. Mr. President, I ask unanimous consent to place in the RECORD the findings of the National Temperance and Prohibition Council.

There being no objection, the findings were ordered to be printed in the RECORD, as follows:

The American people will not long continue to tolerate the present intolerable liquor conditions. The great increase of drinking and drunkenness among both the adults and the youth of our land, the frightful toll of human life taken by street and highway accidents due to drinking drivers and pedestrians, the great increase in crime due directly and indirectly to the liquor traffic, the sucking of the lifeblood of legitimate business from the veins of industry and commerce, the prolonged delay in business recovery in which the liquor traffic is undoubtedly one of the major factors, the general break-down of moral standards and behavior brought by the liquor traffic—these things, one and all, with many others that might be named, make imperative the extermination of the traffic, and, at the same time, furnish the incentive and appeal for such extermination. That the American people will arise in their strength and destroy this traffic and redeem their honor from the shame and disgrace which it now bears, we do not for one moment doubt.

We appeal to the churches and pastors, to all denominational agencies, especially publishing houses and boards, to inaugurate and prosecute a most intensive and vigorous campaign of scientific and factual education concerning the evils and destructiveness of beverage alcohol.

We remind the citizens of the several States that nearly every State in the Union has statutes requiring the scientific teaching of the effects of alcohol in the public schools. We appeal to the citizens of the several States to see that these statutes are observed and that this teaching is carried forward in a regular, systematic, and efficient way. American youth are not naturally nor generally depraved. We have perhaps never had a finer generation of young people than we have at the present day. These young people must be saved from the scourge of alcohol, and one of the surest and best ways to save them and protect them is to give them the truth about alcohol. The public school ought to be, and is, one of the best and most authoritative agencies for the impartation of this truth, if it is wisely and honestly dedicated to this worthy objective.

One of the most vicious and inexcusable phases of the present liquor situation is the persistent and high-powered and conscienceless advertising campaign of the liquor traffic, particularly the interstate advertisements of beer, wine, and whisky, in magazines and newspapers, and the interstate advertisements of beer over the radio. The Federal Government has full power and authority to prohibit and suppress all interstate advertisements, whether by press or radio. We appeal to the Federal authorities to exercise this power and we pledge ourselves to give hearty support to any and all legislation introduced in Congress for the accomplishment of this purpose. Likewise, the States have full power to prohibit and suppress all intrastate advertisements of liquor in all forms. We appeal to the citizens of the several States to see that appropriate legislation is introduced in and enacted by the several State legislatures for the accomplishment of this end. All such State legislation will have the approval and support of the National Temperance and Prohibition Council.

We remind the American people that the powers embodied in the second section of the twenty-first amendment have hitherto been slightly understood and little appreciated by the friends of sobriety throughout the Nation. A careful study of this amendment reveals that the liquor traffic can be utterly exterminated if the several States can be induced to exercise their inherent police power, and if the Federal Government can be induced to face and meet the obligations and responsibilities entailed upon it by the delegated power of the second provision of this amendment. Under this amendment the Federal Government is charged with the responsibility of protecting each State against the importation of liquor in violation of any State law passed in the exercise of the powers and prerogatives of that State for the curtailment or abolishment of the whole nefarious liquor business.

In the spirit of love and devotion to our Government, our homes, our liberties, and all that is sacred and dear in life, and in love and devotion to our God and Saviour, we call upon all patriotic, right-thinking, liberty-loving citizens of the United States of America to join with us in sleepless vigil and in unremitting toil that our people may be saved from the doom and damnation of humanity's greatest foe.

Public Contracts in Pennsylvania

EXTENSION OF REMARKS
OF
HON. JOSEPH F. GUFFEY
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 9, 1939

ADDRESS BY HON. HAROLD L. ICKES ON NOVEMBER 4, 1938

Mr. GUFFEY. Mr. President, I ask unanimous consent that there be printed in the RECORD an address delivered by Hon. Harold L. Ickes, Secretary of the Interior, in Philadelphia, on November 4, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I do not come to Pennsylvania as an invader from Washington. I am a native of Pennsylvania, born on a farm in Blair County. And I am here tonight by special invitation of the Republican Party of Pennsylvania given me by Judge James, the Republican candidate for Governor.

His invitation asked me "to come to Pennsylvania before the November election and let us (you) know what has been going on in the general State authority."

I will tell him what I know about that.

But I like to do thorough jobs. So while I am here I will discuss the past and the future—as well as the present—of public contracts in Pennsylvania.

Judge James in his telegram seems suspicious because of the fact that, as Federal Public Works Administrator, I have insisted on the readvertising of certain contracts let in Pennsylvania and have conducted investigations of conditions in Pennsylvania. That isn't any particular reflection on Pennsylvania. Those cautions are my official and personal protective routine in all parts of the country in my administration of the public money committed to my care.

In his telegram Judge James was good enough to commend my "personal reputation for honorable conduct in office." That reputation is based in large measure upon the system of check-ups set up by the P. W. A. under my administration and upon the readiness of P. W. A. to make vigorous, unbiased, unpolitical investigations where charges of graft or favoritism are brought and, in most instances, without waiting for them to be brought.

I have always been investigating—continuously investigating—the general State authority of Pennsylvania, just as I am continuously investigating other agencies in other States. The sum total of my investigations does not disclose a perfect situation. There has been chiseling; architects and others recommended by contractors have been employed; these architects apparently have tried to favor the contractors who favored them. There has been carelessness, if not impropriety, with respect to certain change orders, the effect of which would be to add to the profit of the contractors. But these attempts at cheap corner cutting have been caught before it cost the Federal taxpayer a nickel. I can honestly say that everything we have found so far is of a minor character. I have discovered nothing like a Republican Teapot Dome in P. W. A. contracts in this or any other State, or anything remotely approaching it. What cheap corner cutting has been tried is chicken feed compared with the capitol construction scandal at Harrisburg, the Broad Street subway, or City Hall scandals in Philadelphia. These, like Teapot Dome, were Republican scandals.

Now, talking about Harrisburg and Philadelphia scandals of the past isn't just pulling out a red herring. It is an indispensable background to an understanding of present conditions. After all, we are talking about Pennsylvania with the Pennsylvania tradition of political corruption in public contracts. Pennsylvania contractors have learned their trade against the long, lurid

background of Cameron, Quay, and the Vares. The habits, the normal expectancies, indeed, the very routines of the business induced by that tradition, cannot be ended in a day even by the most scrupulously careful and honest administration, State or Federal. Not even a Pennsylvania Dutch housewife could scrub a sewer spotless overnight. I have no illusions about leopards changing spots, but I can assure you that so far as the P. W. A. in Pennsylvania is concerned, spots are temporarily out of style.

But unless you want the fashion to change back, you ought not to return Judge James' party to power. For if Judge James and his ticket are elected next week the future of Pennsylvania belongs to "Moe" Annenberg. On this point I intend to speak bluntly: I feel competent to protect Federal money against the corner-cutting amateurs I have so far met here. But it would put a terrible burden on the Federal Government, both as to men and dollars, to keep tab on Federal funds against the kind of operators who would foregather under the sponsorship of "Moe" Annenberg.

I have no desire to pry into or expose anybody's semipublic life. But we have long recognized that when a man runs for public office, or becomes deeply involved in politics, many things that he has done or is doing become a matter of public concern. The people are entitled to know not only the records of candidates for public office but the records of the men who sponsor them and stand behind them. The people of Pennsylvania are therefore entitled to know the record of Mr. "Moe" Annenberg, because he is today a dominant figure in the Republican politics of Pennsylvania.

I know something of that gentleman. It was in my adopted city of Chicago that he learned his present trade and helped the city to acquire a reputation that it has been trying to live down ever since.

I come here to tell Pennsylvanians what I know about "Moe" Annenberg, curse of two cities, because the prospect of turning the public contracts of Pennsylvania and the whole law enforcement machinery of this State over to a man of the record of "Moe" Annenberg is the most alarming thing that has ever threatened my native State.

For "Moe" comes from the world and from the lawless tradition commonly associated with Al Capone.

In the 1920's a rising wave of lawlessness began to sweep the United States. For the first time in the history of any land crime became big business. This movement, which reached it logical climax in the wave of kidnapings that finally aroused effective public resistance to it, had its center in Chicago. The rise of Chicago gangsterism and racketeering may be traced back to the bitter struggle for circulation between certain Chicago newspapers shortly before the World War.

The career of "Moe" Annenberg and the social history of organized crime in the United States meet at a point in time—1911—and a point in space—the office of William Randolph Hearst's Chicago newspapers, of which his brother was circulation manager.

What I am about to tell you is chiefly a matter of court record—the pleadings of Annenberg's own lawyers.

Annenberg assembled a gang of plug-uglies, including Dion O'Bannion, later a Chicago gang leader himself. Annenberg hired out the gang to Hearst to "sell" the Chicago Hearst papers. The "salesmanship" consisted of sweeping competing papers off the newsstands and pulling drivers from the seats of circulation trucks. Newsboys were beaten up for refusing to take more papers than they could sell. A trolley car was shot up by these newspaper "salesmen." During this prelude to Capone, several men were killed. The reign of physical terror instituted by these advocates of "freedom of the press" did not end until Chicago was ridden and ruled by racketeers. The hiring of "Moe" Annenberg by Hearst was the beginning of the subsequent flood of lawlessness that almost engulfed law enforcement in the United States.

How did Annenberg get away with it? By a simple cynicism which is most instructive to those who are impressed by Bertie McCormick's fears about the freedom of the press.

Annenberg then had and always since has been careful to have a newspaper tie-up. That is, he has always been careful to have such a relationship with a newspaper that it will give good publicity to his friends, bad publicity to his enemies. And most people in political life are so deadly afraid of the kind of publicity they may get that they will not lift a finger against the friends of those who control newspaper publicity.

As a friend of newspapers, and so able to control publicity, Annenberg had political protection, which, in turn, meant immunity from the law. A newspaper-political tie-up—this was the Annenberg formula for Chicago in 1911. This is the Annenberg formula for Pennsylvania in 1938.

With Annenberg's "salesmanship," the Hearst enterprise prospered, thus setting for America an unhappy example of crime that did pay.

Bertie McCormick's Chicago Tribune soon got the idea. Bertie is a direct person. He did not bother finding a man who could match Annenberg. He got Annenberg himself. More freedom of the press; more respect for law. Bertie has always been devoted to both.

"Moe's" older brother was employed on contract by Hearst as circulation manager of the Chicago American. For $20,000 a year McCormick induced him to break the contract. The Annenberg brothers and their men began to prey upon Hearst circulation workers as they had earlier preyed upon McCormick's. Hearst sued for violation of his agreement. Hearst lost. Why?

Because the courts held, as Annenberg's lawyers urged, that Hearst's contract with Annenberg was invalid because it was an agreement to commit unlawful acts.

Later "Moe" parted company with his brother and Bertie McCormick. The bloody newspaper-circulation war broke out anew in Chicago. Annenberg men were overpowering the Hearst thugs under O'Bannion. Hearst bought "insurance." He hired "Moe" Annenberg as circulation manager of all the Hearst papers on the theory that his brother would soften his methods. Hearst was right. The brothers kept the peace, relatively speaking. But the evil they had done lived after their "reform." By the time O'Bannion was shot dead in 1925 the Chicago gang wars were shocking the world.

"Moe" was branching out in other fields, too. Together with other veterans of the newspaper-circulation wars, he organized a service to give information about horse races to bookmakers who took race-track bets. You do not need to be told that no one can carry on an illegal business without the protection of the police

In this business he really got rich quick. Not even the great radio industry grew faster than "Moe's" business. In 1924 his operations were confined to Milwaukee and Chicago. Today his network covers the bookmaking establishments of the whole country. He has one of the largest personal incomes in the world. In my own city of Chicago alone in recent years there have never been less than 400 establishments taking the Annenberg services and there have frequently been as many as 700.

How does a man get a monopoly of an underworld business? Not by following Benjamin Franklin's precepts of thrift and industry. "Moe" did it sometimes with lawyers—and sometimes with gangsters.

In the early 1930's "Moe" and his crowd had 50 percent of the stock of General News Bureau, Inc., a horse-racing information service centering in Chicago. John J. Lynch, Chicago gambler, represented the group holding the other 50 percent of the stock of General News Bureau, but "Moe" managed to get control of the business. His associates charged that "Moe" let the printing contracts for the bureau to a firm which, in turn, paid "Moe," personally, over $1,200,000 in 5 years. Lynch demanded an accounting.

Annenberg beat Lynch in court. How? By denying that the funds were the bureau's funds? No. His lawyers pulled the illegal business stuff. They claimed that the bureau's business was illegal and that, therefore, the courts could not interfere between partners in it.

Here is what Annenberg's own lawyers, who happened to be also the Chicago Tribune's lawyers, said about the source of the fortune that Annenberg is now using in his attempt to control Pennsylvania:

"1. It appears on the face of the bill of complaint that the subject matter of the lawsuit is a division of the profits made by supplying gamblers and handbook operators with certain essentials which are necessary in the conduct of said gambling or handbook business.

"2. Equity will not take jurisdiction or order an accounting between participants in an illegal business, nor will equity aid and abet anyone engaged in an illegal business to obtain from others his fair share of the profits resulting from said illegal business (*John J. Lynch* v. *General News Bureau*)."

And "Moe" Annenberg's lawyer, in his argument to sustain this position, said:

"The General News Bureau is aiding and abetting an illegal enterprise. They (Lynch, etc.) come in here and ask the court to lend a hand to a division of profits in an illegal and unconscionable transaction."

Annenberg's lawyer then told the court the edifying story of the English judge who in 1725 had established a precedent by refusing to aid one highwayman in his attempt to make another highwayman divide the loot. Driving his point home, "Moe" Annenberg's lawyer said:

"There they wanted a division of spoils by robbers. Here they want a division of spoils by gamblers."

After hearing all the evidence, the court decided that "Moe" Annenberg was right in his contention that "Moe" Annenberg's business was so far outside the law that the courts could not handle a dispute between persons engaged in it. The Supreme Court of Illinois upheld this decision.

But an underworld fight doesn't stop with the courts and the lawyers. "Moe" Annenberg's fight to oust Jack Lynch and to win for himself a monopoly of the horse-race-information business went forward on another front where there were no legal niceties to protect either Annenberg or Lynch. In its issue of December 21, 1934, Hearst's Chicago American gave its readers an account of the Annenberg-Lynch feud. It said:

"Chicago's biggest gambling war—a colossal struggle for millions of dollars—will be fought with guns, unless a compromise is quickly made.

"Gangsters, gang weapons, and gang methods will decide the struggle between John J. (Jack) Lynch, veteran Chicago gambling boss, and 'Moe' L. Annenberg, national-racing-paper owner, for control of the vast system that disseminates racing news to the thousands of Chicago handbooks.

"Battle lines for the war have been drawn, the Chicago American has learned. Commander for Lynch and his General News Bureau is Dan Serritella, State senator and Republican first ward committeeman, and long friend of Al Capone.

"Leader for those supporting Annenberg and his Nation-wide News Service is Ralph O'Hara, quick-triggered organizer of the Chicago Motion Picture Operators' Union.

"Serritella has enlisted the support of Frank ('The Forcer') Nitti, who won his title enforcing the gangland of Capone.

"Also backing Lynch is Marty Guilfoyle, veteran chieftain from the Northwest Side."

Now that "Moe" Annenberg stands high with the "respectable" Republican Party in Pennsylvania, he has developed a fondness for suing people for libel who quote from his record. Cameron, Quay, and the Vares had more intestinal fortitude. But then their records were comparatively sweet smelling. However, it is notable that when the quotation above was published 4 years ago, "Moe" Annenberg did not sue the Chicago American for libel. Out in Chicago "Moe" hasn't much of a reputation to damage. Out in Chicago, "Moe" would not venture to try to control the Republican Party. Badly off as it is, badly as it needs his money, it knows that his kiss is death.

The same article in the Chicago American contained a passage of particular interest to Pennsylvanians at this particular time. It said:

"Now, the man in the street might wonder why the 'powers that be' who control politicians, policemen, and even judges, don't take a firm stand and force peace. The plainer answer is they can't.

"For both factions in the bookmaker's news squabble have been doing business with the politicians, the policemen, and judges for a long time. They have 'paid for this' and they have 'paid for that.'"

The significant point was the helplessness of the whole enforcement machinery of Chicago before the corrupting influence of a big business which was also an illegal business. A little bookie in a cigar store can bribe the cop on the beat. But a big shot whose network ties together the whole bookmaking business of the United States can't be bothered putting individual patrolmen under obligation to him. A man whose enterprises are of the size and kind of "Moe" L. Annenberg's is naturally tempted to seek control of courts, including high courts, legislatures, mayors, chiefs of police, and Governors—as now in Pennsylvania. He would want to impress law-enforcement officials by proving that he can elect judges or defeat judges; that he can have them appointed or not appointed. You Pennsylvanians have already seen the lengths to which this man will go when his paper twice boasted that it knew in advance what the Supreme Court of Pennsylvania would decide.

Three days after Annenberg's attempt to drive Lynch out of the bookmaking game, the Chicago American's prediction of a gang war was borne out by the murder of George Downs, an Annenberg lieutenant operating in Miami, Fla. Then and later, Miami was a focal point of Annenberg activity. His interest there reached the point where it became worth what it would cost to control the local government of Miami. This now Republican leader of Pennsylvania then took over the Democratic organization of Dade County, Fla., and elected his ticket. Again he used the familiar Annenberg formula—the racing interest, the newspaper tie-up guaranteeing immunity, the political organization. He bought the Miami Tribune.

The result, for a while, was what Annenberg wanted—an open town for the Annenberg racing interests—a closed town for Annenberg's rivals. With this achievement his march toward monopoly in his own unsavory business was almost completed.

There is one other episode in Annenberg's pre-Philadelphia career that is so disgusting that I hesitate to touch upon it. But the people of Pennsylvania ought to know about it for their own protection. On November 17, 1932, M. L. Annenberg was among those indicted by a grand jury in the United States District Court of Baltimore for sending obscene matter through the mails. The obscene matter in question was a weekly magazine called the Baltimore Brevities, a successor to the Philadelphia Briefs, which was driven out of this city. Needless to say, Annenberg did not suffer for his part in the publication of the Baltimore Brevities. Several of his employees on the Brevities took the rap of sentences in Federal prison. But not our "Moe." The case against him was nol-prossed. The district judge, William C. Coleman, described the Baltimore Brevities as the "most degrading and corrupting character of literature which could be circulated to the public."

The indictment of "Moe" and his partners in the Baltimore Brevities case had an interesting sequel. After the indictments were nol-prossed, "Moe's" associates—you guessed it—sued him. In summing up the evidence of this case, Chancelor Josiah O. Wolcott, of Wilmington, Del., said: "It is charged by Bannon and Murray that Annenberg tried to get rid of them as associates; that he sought to buy their stock; that they refused to sell and that he thereupon threatened to so manage the business that it would cease to be attractive to them and that then he would get their stock at his own terms." Judge Wolcott refused to appoint a receiver because Annenberg successfully argued that his enterprise was still prosperous. And this in spite of the malodorous Baltimore Brevities case.

Such was the background of the man who in August 1936 bought for $15,000,000 cash the Philadelphia Inquirer. Since he has been here you Pennsylvanians have had a better opportunity than I to judge him and a better opportunity to know his effect upon this city and State. Gambling and the police corruption which inevitably follows organized gambling, were on the wane here after the grand-jury investigation which began in August 1928. But within the past 2 years it has revived to the point where Jerome H. Louchheim, one of the chief contributors to Judge James' campaign and one of the biggest contractors in the State, took the witness stand in a Philadelphia court the other day and flatly testified that he had asked the mayor of Philadelphia for police protection for a gambling establishment.

Many of "Moe's" old associates died by gangster bullets. Many of "Moe's" old associates are in various penitentiaries. But "Moe" Annenberg himself is bidding for the domination of a State and the national domination of a political party.

Judge James was "Moe" Annenberg's candidate months before the Republican primary last spring, and it was Annenberg's power and influence, Annenberg's paper and Annenberg's money that were instrumental in persuading other Republican leaders to take Judge James.

Judge James has informed me by telegram that it is he and not "Moe" Annenberg who is running for Governor of Pennsylvania. Tush, tush, Judge James—that's only a technicality. Of course, you are the candidate. But the point is—whose candidate are you? There are some accusations so dreadful that you have no choice but to put yourself beyond suspicion or accept the accusation. To be called "Moe" Annenberg's political stooge is that kind of an accusation.

If you wanted to prove the red-headed independence of which you boast; if you wanted to protect decent Pennsylvania families from the fear of a repetition here in Pennsylvania of the gang wars of Chicago, you would long ago have appeased the consciences and put to rest the fears of those typical Pennsylvanians whom I have always remembered as sober, God-fearing people who are content to earn an honest dollar, by repudiating Annenberg.

Even at this late date I call upon you. Tell the people of Pennsylvania—do you or do you not accept the support of "Moe" Annenberg and all that that support implies?

As a candidate you are already under enough suspicion in being supported by the millions of the reactionary Joseph N. Pew. You cannot stand the stench of Annenberg on top of the gold of Pew. See yourself as others see you, Judge. Stand down wind—and just whiff. Pew-Annenberg. Or if you like it better, Annenberg-Pew.

Humanitarianism

EXTENSION OF REMARKS

OF

HON. MORRIS SHEPPARD

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 9, 1939

ADDRESS BY ROLLAND BRADLEY AT ST. LOUIS, MO., OCTOBER 19, 1938

Mr. SHEPPARD. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Hon. Rolland Bradley, honorary vice president of the American Humane Association and president of the Texas Humane Federation, before the sixty-second national convention of the American Humane Association held at St. Louis, Mo., on October 19, 1938. The subject of the address is "Humanitarianism Under New Methods and Purposes."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The humane movement in the United States should find one of its most effective vehicles in the State federation. It is very true that the authority of the Federal Government has constantly expanded, especially since the War between the States; but even today the great responsibility of administering the law and bringing our jurisprudence in line with modern conditions through legislation rests upon the States. For example, practically all of the administration of estates is carried on under that control, and the land-tax and title system is still exclusively within what is known as States' rights. In fact, the doctrine of States' rights is a fundamental part of American jurisprudence, although in the last few years, especially both Democrats and Republicans have been accused of exploding whatever was left of that theory.

It might be appropriate on this occasion, in emphasizing the value of State federations for the humane movement, to appreciate whatever real value there is in the southern doctrine of States' rights. The phrase sounds old to the ears of all of us; but many of our most used phrases, such as the brotherhood of man, convey concepts upon which the very hope of civilization rests. Let me quote from a current northern authority: "Insofar as the emphasis upon States' rights proceeds from a sincere concern to keep locally effective, a sense of informed civic responsibility, a vital aim is being envisaged." (Ordway Tead, The Case for Democracy, New York, 1938, p. 78.) You may be interested to know that this doctrine, so laughed at by some during the days of the American Revolution and compared with a rope of sand, is a refuge for one of the two cardinal principles of free government. In addition to the necessary authority of sovereignty, there is the tradition of liberty that is championed wherever we

find intelligent people. The civil rights safeguarded in our Federal Constitution are also fostered by the principles of local self-government.

History demonstrates that the ideas of authority always tend to centralize political power. This tendency has become a fad with several European nations and already is a problem that must be faced by modern political science. We can well serve in the defense of our free institutions, including possibly the humane movement, by appreciating the tradition of liberty and by strengthening all of the ties that uphold that tradition. We should be slow to ignore the wisdom of the past. We, in fact all of our people, even those who live in the North, have a great lesson to learn from the southern statesmen who championed the idea of local self-government in various forms. With some of them it was undoubtedly an expediency to foster the individual political career; but with others it was almost a matter of religion. I have in mind the great advocate, John Randolph, of Roanoke, than whom no man ever more loyally defended States' rights and the strict construction of our Federal Constitution. He is the patron saint of these commendable teachings. He even resisted acts by President Thomas Jefferson when he found that these acts were contrary to the letter of the Constitution. He paid a serious penalty for his idealism, but Randolph, of Roanoke, in that idealism lighted a torch that America must never allow to be extinguished. His doctrines should be fostered again in our generation. Yet those traditions are today formidable enough so that the humane movement in America must do most of its work under the jurisdiction of 48 States, sovereign within certain fields.

One of our objectives on this occasion might best be served by chronicling the events that resulted in the organization of the Texas Humane Federation. These facts may serve as an illustration of methods for organizing your respective States, at least those not yet organized. The State federation was accepted as the key to the problem of protecting the humane movement in the Lone Star State for several reasons. In the first place the political authority is the logical agency to whom we must look for the enforcement of humane standards. As the local State occupies a dominant place in American jurisprudence (something we demonstrated in our introduction), it was natural that we should turn to the State for protection. The Federal Government has never been in position to do much in this field. For instance, the only places in our country where the Federal law may be invoked to prevent bull fighting are the District of Columbia and probably a few other areas, the titles to which are in the Government of the United States. Naturally this does not take in very much territory within the 48 States. In former years the local humane society was of dominant importance for several reasons. Not only were our people not drawn together so closely as at present by modern means of transportation and communication, but also the humane problem was relatively much more acute in the cities than at present. I have in mind the fact that machine industry has supplanted beasts of burden more completely in our cities than in rural sections. Formerly, the horse and buggy was the common sight on any street. But we are constantly being reminded that the horse-and-buggy days are over. Later this afternoon I want to state a great challenge to the humane movement brought about by these changing times. At this point let me mention that, with modern conditions of life, especially because of present means of transportation and communication, the people of each State, as well as over the country at large, have been drawn together into one community.

These historical and scientific forces lead us to realize the need for the Texas Humane Federation. In addition to this, at your own convention held in Houston, Tex., 2 years ago, it was admitted by an individual who had served as president of a former Texas State humane society, that a new movement under a new organization was needed in that part of America. At that time there was no functioning State organization, and nothing such as "* * * a State Bureau of Child and Animal Protection * * *" provided for in title 74 of the Revised Civil Statutes of Texas. The title had become dead letter although the Bureau is supposed to be composed of 21 members, each of whom should be a director "* * * of the Texas State Humane Society * * *" (Ibid. art. 4597).

After consulting with officials of the American Humane Association while they were in Houston, I prepared a charter for the Texas Humane Federation, which was approved by the Secretary of State at Austin, Tex., under date of October 12, 1936. The next step was to make the federation a reality through organization. One of the principal factors in this connection was the success of the first convention, which was held in Waco, Tex., on January 19, 1937. We were fortunate in securing the presence, influence, and invaluable assistance of the field secretary of the American Humane Association. Mr. Craven already had assisted in many ways. For instance, he had helped in securing for us copies of the bylaws of State organizations in other parts of the country, which were found invaluable in drafting the bylaws that I prepared for the convention.

Forty-two individuals from nine cities scattered over Texas assembled for the first session of the convention at 10 o'clock in the morning. Mr. Craven acted as temporary chairman and read the charter and proposed bylaws. After their adoption, the election of a board of directors concluded the work for the morning. Following luncheon by the group and the election of officers by the board of directors, the convention reassembled at 2 o'clock in the afternoon. The day's work was concluded by a general discussion of humane problems with particular opportunity for full statements and questions from all delegates present. It will be noticed that the convention completed its work in 1 day.

One of the immediate problems confronting the Federation was to secure a strengthening of the law against bullfighting, for there was effort being made to introduce that spectacle into the United States. Because Texas adjoins Mexico, and with the Pan-American Exposition in Dallas that followed the Texas Centennial Exposition in 1936, it was seen that every safeguard should be taken against staging a bullfight in Texas at that time. So a bill was introduced in the house of representatives that added the offense of bullfighting to the list for which private citizens may secure injunctions. The measure passed in the house without much trouble, but the senate neglected the bill until the Texas Humane Federation, aided by the Houston Society for the Prevention of Cruelty to Animals, the Waco Humane Society, and certain individuals, communicated with State senators and was successful in getting the measure favorably acted upon by the senate. On May 12, 1937, the Houston S. P. C. A. wired the Senator from Harris County, Tex., and soon thereafter the bill was ready for the Governor's signature. In order to be sure the measure was subject to no further neglect, and to prevent any possible veto of the bill, as president of the Texas Humane Federation, I wrote the Governor on May 18, 1937, called his attention to the bill, and asked that he "* * * let me know if any doubt arises. * * *" It might be added that the legislative program of the Texas Humane Federation for 1937 was supported by my radio talk on April 9, 1937, over a network that covered Texas and stations in adjoining States. The occasion was the announcing of "Humane Sunday," and the week beginning then under sponsorship of the American Humane Association. Proclamations of "Humane Sunday" and "Be Kind to Animals Week" were issued by the Governor of Texas on March 12, 1937, and also by the mayors of various cities including Houston. Public matters are given better attention by organized sponsorship; and the proclamations, radio talk, and convention, all had their influence in securing favorable action by the State legislature.

The work of the State federation need not be confined to the boundaries of the particular State and the organization offers a great and effective force in assisting the humane movement everywhere. Particularly it can be helpful in supporting projects of the American Humane Association. I have in mind the letter sent out by Sydney H. Coleman, president of the American Humane Association, under date of March 19, 1937. On that occasion he asked for help in defeating certain inhumane legislation in Cuba, and he closed the communication by stating, "Your help will be of great aid and encouragement with the bando de piedad of Cuba." Letters were written in this connection by me to the President of Cuba and to the President of the Senate of that Republic.

Let us bring out one further project that the federation is making possible in Texas. Wildlife, especially in its migratory forms, is becoming more and more a concern of the Federal Government, but the State has the unique problem of requiring proper standards of humane trapping. During the first year of the history of the Texas Humane Federation we were fortunate in securing the interest of the Honorable Phillip L. Sanders in advocating laws that would require humane trapping in Texas. I had long known of his interest in wildlife. Having served with him in the House of Representatives of the State of Texas, there was little difficulty in securing his interest and in putting him in contact with the proper representatives of the American Humane Association. His influence in this regard may well be measured by the fact that he was chairman of the committee on appropriations in the house of representatives. This position is second to none below speakership. We are expecting real achievement through this vice president of the Texas Humane Federation, for Mr. Sanders was elected to that position for his district.

This brings us to the project of completely organizing the State of Texas. It was decided that a vice president should be elected by the board of directors for each of the 31 districts into which the vast State of Texas was divided. This was quite an undertaking, especially because we were anxious to secure competent leadership, which means everything to the humane movement. In this connection I would refer you to the paper on the Animal Protection Society by Richard C. Craven, presented at the Conference of Humane Workers at Amrita Island, Mass., last year. He emphasizes the necessity of securing individuals interested in the work, capable of influencing others and mixing with them, and possessing other needed qualities. The Texas Humane Federation was fortunate in this connection, for it enlisted the assistance of Congressmen, judges, university authorities, and other outstanding citizens as vice presidents. These officers are of especial value in organizing city or county humane societies. The problem of securing the 31 officials in Texas has not yet been completed. At present we have 26 vice presidents with promise of securing proper individuals to fill some of the 5 remaining vacancies before the end of the year.

The experience in 1937 indicated a need for change in organization. This was necessary particularly because of the large area covered by Texas. It was found advisable to reduce the board of directors from 15 to 7 in order to secure a quorum without delay. Furthermore, the minimum dues were reduced to $1 in order to encourage a larger interest as well as needed funds. These changes were effected at the second annual convention of the Texas Humane Federation held in Port Arthur, Tex., on January 22, 1938. In selecting the convention city for that year the board of directors had decided on Port Arthur because the convention would encourage the Port Arthur Humane Society, which had been organized on

November 28, 1937. In fact, the assistance of the Port Arthur Chamber of Commerce and influential citizens, including humanitarians, was enlisted in organizing the local society as well as planning for the convention. On one Sunday afternoon, i. e., November 28, 1937, I went to Port Arthur with several other State humane officials to meet with the local group. Representatives from Beaumont, located about 20 miles north of Port Arthur, were present and were influenced to secure the affiliation of the Beaumont Humane Society with the Texas Humane Federation. So on that day two new affiliations were obtained. In addition to these, affiliations during 1937 had been secured from the Houston S. P. C. A., the Waco Humane Society, the Texarkana Humane Society, and the Foundation for Crippled Children, of Marlin, Tex. In 1938 to these were added the Travis Humane Society, of Austin, Tex., and a number of individual memberships.

In Port Arthur the convention reelected all of its State officers. It might be of interest to mention the order of business, which is very essential to the proper functioning of any convention. The first meeting took place at 10 a. m., and after the invocation and report on delegates, the convention adopted a definite program. Following the reading of minutes by the general secretary and the report of the president, Mrs. Violet S. Greenhill, chief of the division of child welfare of the board of control of the State of Texas, addressed the convention. Following this the directors were elected for 1938, and after adjournment luncheon was served at the hotel in which the convention was held. The mayor of the city of Port Arthur made his address of welcome at this luncheon. At 2 o'clock the convention reassembled to hear the report of the board of directors, who had met during the noon hour. After the report of the treasurer was heard, representatives from each society addressed the meeting, and there was general discussion of humane problems. Again the convention required only 1 day.

The Texas Humane Federation has been functioning almost 2 years now without much in the way of finances. There are no salaries. In fact, I believe that these federations will do better on this basis as a general rule. Interest in the organization should be the controlling incentive. However, it would be a mistake if the work in Texas were not financed by the membership. To allow one or two individuals to pay all expenses would mean to place the federation in their hands. I think that a happy solution of the problem was reached in reducing the minimum dues to $1, for on this basis the federation has been able to pay all its bills. These, fortunately, include only such minor expenses as printing, stamps, and similar items.

In considering the use that can be made of a State federation, it may be of interest to mention some of the things proposed by the field secretary of the American Humane Association in March of this year. He recommended that Texas should secure a restatement of the statutes "* * * for the welfare and protection of animals * * *." He also recommended that incorporated humane societies be empowered to enforce humane laws. He suggested a State licensing system for dogs, to be made enforceable by local authorities, and advised municipal contracts with incorporated societies. Some of these proposals raise interesting constitutional questions, for Texas is very conservative on the issue of delegation of powers. However, I should add that Mr. Craven has done much good in Texas and is well qualified to speak on the humane needs of our State.

Let me mention the work of the Red Star Animal Relief in Texas. On April 19, 1938, the southern regional director of that department of the American Humane Association asked the president of the Texas Humane Federation to serve as State director of Texas for the American Red Star Animal Relief. The appointment was made on June 14, 1938. Local field agents were later appointed in Houston, Beaumont, and Waco, Tex.

It has been something of a problem in Texas to determine whether the emphasis should be placed on the work of organizing the State or in securing humane legislation. There is need for both of these projects in every State of the Union, and it is my opinion that the two responsibilities go hand in hand. A strong organization makes possible the enactment of new humane legislation; and when the humane requirements of a State are advocated by interested local societies and individuals, we have a definite cause to which we can call others in building a State federation. The duration of any institution depends on its usefulness, and that law applies to the humane movement and to humane societies as well as to other institutions. I repeat: Organizing your State and advocating an ambitious humane program are responsibilities that should go forward hand in hand.

This brings us to a position where we must see clearly the challenge now facing a greater humane movement. Let me delay no longer in presenting our major purpose here today. An illustration will show how the changing times are causing us to think through again the objectives of humanitarianism to see what purposes it can and must legitimately serve. For all of us realize that the humane movement today has had its field of activity seriously jeopardized by what has been called the machine age. A few years ago when I was talking with a district judge in Galveston, Tex., about the local humane societies, he became reminiscent. It seemed he had not heard the phrase "humane society" in a great many years, and he referred to the last generation or so as the era when these socities were flourishing. He took the position that in those days there was a real need for such a society in order to prevent cruelty to animals. But now that the machine has taken place of the animal, he wondered what the humane movement was doing in 1936.

Let me offer added proof concerning neglect of and ignorance about the humane movement. In securing vice presidents for the Texas Humane Federation, I received acceptances that demonstrated a complete lack of realization for many years that there has been a humane movement in America. One man wrote: "* * * but would like to be informed as to the duties I would be expected to perform." A second informed me, "* * * you will have to give me some instructions as to what you want me to do." Another asked: "Just what are the duties * * *?" While a fourth friend inquired about his, "* * * duties, responsibilities, etc." There were intelligent leaders with deep interest in the higher values.

We do not wonder what the humane society is doing. But it might be well for us, through new federations and otherwise, to adopt a program commensurate with the great purposes of the humane movement. When beasts of burden were more commonly employed and often forced to serve their masters and owners with galled shoulders, there were many cases of cruelty to animals that kept the humane societies busy. This properly kept them before the public in serving a major duty of society.

There is much good work that the humane societies can do in building pounds for dogs and cats, by securing the most humane methods of disposing of the surplus of small domestic animals, and in training the children to higher humane ideals. Of course, there are still many cases of neglect of the larger animals in both city and country. But I am sure all of us will agree this latter problem has been met in part by the use of machinery that is taking the place of the labor formerly required of beasts of burden. It is really humane to eliminate such labor, but this very process makes it necessary for us to look about for new problems of preventing cruelty. Some of you probably saw Charles Chaplin in one of his more recent pictures in which he showed great cruelty in modern machine industry. Will any of us challenge the statement that the speed-up system practiced in Mr. Chaplin's picture is inhumane? This is one of the humane problems, whether we can attempt to meet it or not as organization, that is facing our generation. It is a more serious humane problem than anything that we had in the long ago, for it relates to cruelty to human beings. We should resist all cruelty in loyalty to true humanitarianism. A slogan of the American Humane Association reads, "A federation of societies and individuals for the prevention of cruelty, especially cruelty to children and animals." I would urge that in our day the last phrase be omitted to widen our interest.

It may be that the humane movement has reached the crossroads, a place where it must become the champion of humane practices that it has heretofore neglected for very definite reasons. We realize that in undertaking to meet social problems we find a conflict of economic interests. This conflict often involves some of the highest values that we have and some of the strongest supporters of the humane movement. Whatever policy we may adopt during this era of change, let us weigh the liabilities on both sides. A movement that does not serve its cause loyally is on the road to decay. If we are not true to the ideals of humanitarianism, the humane movement is bound to suffer.

We cannot ignore the great issues of humanity, especially in our generation, when so much is as stake. An indication of what is at stake was evidenced in the paper by Mr. W. A. Swallow, assistant secretary of the American Humane Association, recently read before a convention of the Societies for the Prevention of Cruelty to Children and Animals in New York State. It is commendable for the humane movement to further education of young people in proper channels by the abolishment of toy guns, toy pistols, etc. That was the subject of Mr. Swallow's paper. I think that he is right when he says that "* * * I personally would like to see every humane society in the country declare itself, not only in favor of this program but ready to take an active part in it." He states further that "Federal legislation might effect complete disarmament in the course of time, but how much more quickly and satisfactorily we could accomplish our end by directing the juvenile mind into other channels than war and soldiery * * *." His conclusion may be correct, but probably we are not able to wait on this matter for the education of the children. The present generation will have to settle in the next few years the issue of war for the next generation. Mr. Swallow naturally could not predict the present condition in Europe, and these later developments are part of the basis for my statement. It occurs to me that the humane movement is vitally interested in seeing that children are not taught to glorify warfare, but I believe it should also be concerned in promoting the interests of peace. Nowhere is cruelty more in evidence than in modern warfare, and every institution in America is concerned with the prevention of this curse. Surely here is an issue that will call forth the best in the humane movement.

Let me emphasize the grave issue of international peace. You will be interested to know that the Honorable MORRIS SHEPPARD, United States Senator from Texas, has introduced the following resolution in the Senate of the United States:

"Whereas recent expressions from the administration here in Washington and by constituted authorities of certain other nations make it appropriate at this time to bend every effort to avoid another general war during the present generation because such a conflict would be so deadly and such a burden for all nations that eminent authorities agree modern civilization in its present form could not survive such a catastrophe for even a few years; and

"Whereas the United States of America has long pursued the policy of contributing to the furtherance of peaceful relations

between various nations through its activities in the establishment of The Hague Tribunal, the furthering of the success of the Washington conference called in this city in 1921, in its participation in the London conference in 1930, and in addition to other attempts, its action in the First General Conference for the Limitation of Armaments held in Geneva in 1932; and

"Whereas the Secretary of State should be commended for his efforts through Geneva recently in advocating a reduction of armaments on the part of the great powers as a part of the program for peace advocated by the present administration, which said reduction in armaments will not only promote the mutual safety of all nations, but also will avoid further vast expenditures of tax money for armaments by the governments of peoples already poverty-stricken and tax-ridden; and

"Whereas the experience of the World War as expressed at Versailles soon thereafter demonstrates that peace is also endangered most seriously by the inadequate restriction and control of the manufacture and sale of munitions of war, which matter was properly investigated by the Special Committee on Investigation of the Munitions Industry, authorized by the Senate; and

"Whereas it is to the interest of the safety of society and the avoidance of another world war in the near future that the program of the administration for peace mentioned above should include the problem of restriction of the manufacture and sale of munitions of war: Now, therefore, be it

"Resolved by the Senate (the House of Representatives concurring), That the Secretary of State be, and hereby is, respectfully urged to include in his commendable program for peace the matter of a mutual restriction and control of the manufacture and sale of munitions of war; and be it further

"Resolved, That the Secretary of State be, and hereby is, further respectfully requested to secure treaties with all the great powers under which there will be effected, among other needed provisions, a reduction in all phases of armaments and all types of armed forces and a concerted restriction on the manufacture and sale of munitions of war, so that this industry will be strictly regulated in the interest of preserving peace." (CONGRESSIONAL RECORD, 75th Cong., 3d sess., p. 11502.)

The document that I have just read to you may sound too ideal for the world in which we are living today, with Japan marching through China in defiance of humanity, with Spain the battlefield of various conflicting forces deriving their support from the whole civilized world, with all Europe ready to burst into flames overnight, and with a record of broken treaties and an abandoned League of Nations. The cold facts make it not only an ideal but also a necessity that civilization develop some humane way in which nations may live together in cooperation. It is essential that the promise of international peace be supported by western civilization.

The nations who advocate communism or the totalitarian state are on the aggressive. Democracy can meet the challenge only by aggressively promoting its higher and more humane program of international peace and other ideals, such as those of the humane movement. All our great institutions must work together to push forward these high and noble purposes. This cooperation, of great value in driving forward national aspiration, is lacking in the democracies. But in other nations undeserved success is being achieved by such forced cooperation for another order of civilization.

For instance, a few weeks ago I received a booklet from the Italian National Fascist Organization for the Protection of Animals. The Italian humane movement is controlled and dominated by the Italian Government, and the author of the publication is titled "The Commissioner for Italian Organization for the Protection of Animals." Humanitarianism in the corporative state is forced to use its high (shall I say sacred?) values as propaganda for fascism. Local Italian humane societies were forced to become allied with the Fascist Party on penalty of confiscation of their property (Guisseppe Orlando, Protection of Animals in Italy, Rome, 1938, pp. 19–20). In Italy the humane movement has been absorbed and dominated by fascism from the national capital to "provincial capital and * * * municipal district" (ibid., pp. 20–21). Should not the American humane movement state the case of true humanitarianism while it may?

Our institutions have a great weakness in this regard. On most of the vital issues of life it is hard to secure the help of organizations that, in order to survive, are required to avoid commitments on projects even when there is a moral issue involved. This is because they are dependent on private contributions for their support, and the private sources of income wield a terrific influence on the institutions that they maintain. How easy it is for us to say that a certain question must not be considered because there will be differences of opinion among us. This is wise counsel on many issues; but, when the issue goes to the very heart of the movement that should offer sponsorship, it is the institution's loss if support is not forthcoming. This is especially true in our day when such grave problems must be faced. I submit the issue before us is one the humane movement cannot neglect without loss of the opportunity to secure influence and achievement concerning which these remarks are directed.

On the issue of war there is no basis for our saying we are not concerned; for warfare commands, especially in our day and time, every resource of the nations involved. Every man, woman, and child is drawn into the influence of the power of government in its struggle for survival and victory; and therefore it is the concern of every institution of the land that sound policies be pursued. It is the legitimate concern of the humane movement for this reason and also because of the cruelty that is involved. Furthermore, the challenge to make peace permanent is the greatest challenge to the leadership of democracy and humanitarianism alike. We can avoid the pitfall of the extreme view which calls for peace at any price and can also help to place a proper curb on militarism. In fact, this sane position that embraces both preparedness and also the problem of promoting peace is the only method by which we may expect to make peace permanent. And if you will bear this position in mind, I do not believe there need be grounds for controversy among humanitarians on this question.

Now let me mention immediate reasons for our aid in preserving peace. Before the First General Conference for the Reduction and Limitations of Armaments was held in Geneva in 1932, under the auspices of the League of Nations, the records show that a violation of good faith was being committed by the Allied and Associated Powers. The promise in the peace of Versailles had been to the effect that this conference would reduce downward and place limitations on military and naval forces. However, some of the diplomats beforehand agreed among themselves that they would not include organized reserves but would limit their treaties to regular armies. Yet it is common knowledge that the chief military power of all modern nations rests in their reserves. However, the excuse was offered that some nations, such as France, have universal military training while America has reserves organized as the National Guard and otherwise. It was assumed that because of the difference in systems, in one of which classes of men enlisted by age came from the manhood of the Nation generally and in another system men volunteered and served for a number of years, it would be impossible to bring about a mutual reduction in these armed forces. However, we find demands made by certain European powers that in some other nations the classes of male citizens for definite years be no longer enlisted. This is proposed as a means of curbing national military strength. Evidently it would be no impossible mathematical problem to bring about a mutual reduction in organized reserves. It was after all fundamentally a moral and a humane problem. To leave this opportunity untouched in 1932 was to make that great conference, at least great in its original promise, a failure before it met.

Let me give an illustration of one other factor that helped to make that conference a dismal failure in a world that knew that success was vital to the welfare of every nation. A suit was brought sometime after the conference was held in which the plaintiff asked for a large fee that he claimed he had earned in serving steel manufacturers at the conference. His duty had been to prevent the curbing of the building of great navies, for his client desired to manufacture steel to be used in warships for those navies. This matter might never have become common knowledge had the client paid the fee without suit. After the conference in 1932 had become a failure, the world turned to the question of whether or not Germany should be allowed to rearm. The real issue should have been a reduction of armaments. But a vested interest blocked human progress in the field of morals.

With some of these matters in mind, as a member of the Texas House of Representatives, I introduced the following resolution:

"Whereas the highest purpose of America in participating in the World War was the establishment of permanent peaceful international relations by steps toward a better observance of international law, in part through reductions in the armaments in the various nations; and

"Whereas in compliance with said purpose the Washington Conference was held in 1921, and the London Naval Conference was held in 1930, both of which said conferences labored for mutual limitations on naval forces, and in compliance therewith in 1932 the first opportunity since 1914 for limitation on both military and naval forces will present itself at the first general conference for the reduction and limitation of armaments, in which said last-mentioned conference the United States will participate; and

"Whereas responsible statesmen agree that civilization cannot now survive another general war, that the poverty-stricken and tax-ridden peoples require an abandonment of competition in armaments and limitation on armed forces, and that without such limitation another general war will be inevitable within a few years; and

"Whereas there is danger that trained reserves will be omitted in whatever treaty may be submitted by said last-mentioned conference in limiting the armed forces of the various nations that will participate in said last-mentioned conference, although the major military strength of every modern nation is made up of its trained reserves; and

"Whereas it would be impossible for the contemplated treaty to weaken the present military strength of the United States; and

"Whereas the people of Texas and the people everywhere are vitally concerned in the success of said conference: Now, therefore, be it

"Resolved, That it is the earnest desire of the House of Representatives of the State of Texas, as the representatives of the people of this State, that the Senate of the United States do everything in its power to contribute to the success of said last-mentioned conference, and that, if possible, the Senate of the United States require that trained reserves be included in the armed forces of the nations participating in said last-mentioned conference as said armed forces may be limited under the contemplated treaty; and be it further

"Resolved, That a copy of this resolution be sent to the Honorable MORRIS SHEPPARD, senior United States Senator from Texas, for his presentation to the Senate of the United States" (Journal of the

House of Representatives for the second called session of the Forty-second Legislature of the State of Texas, p. 320).

Theretofore the following letter had been written:

SEPTEMBER 14, 1931.

Hon. ROLLAND BRADLEY,
House of Representatives, Austin, Tex.

MY DEAR MR. BRADLEY: I am pleased to have your letter of September 9, with resolution enclosed. I am in thorough sympathy with the resolution and will be glad to do everything I can in its behalf. It will be entirely agreeable to me for you to have the resolution contain a provision for its presentation by me to the Senate.

Trusting you have entirely recovered by this time, and are now engaged in your duties at Austin, I am,

Yours very truly,

MORRIS SHEPPARD.

P. S.—To be sure to reach you, I am sending a copy of this letter to you at San Antonio (ibid., 380).

The project was endorsed by the Texas Conference of the Methodist Episcopal Church, South, in 1935, at Henderson, Tex. It was also endorsed the same year by the Department Convention of the American Legion in Dallas, Tex., and in Beaumont, Tex., the next year. Later it became the subject of a request by the Texas Democratic State Convention addressed to the Senators and Congressmen from that State serving in 1936 and thereafter. I mention these matters in order that you may see the efforts that are required in order to promote any humane project. I do not want to go into detail of conferences with officials of conventions, hearings before committees, and preparatory action by their subordinate bodies. Yet these efforts must be made not only to make our institutions live and serve humanity but also as a means of a coordinated rejuvenation of our institutions. This includes the humane societies if they are to live, and State humane federations if they are to become established, and if they both thereafter are to flourish. Cooperation from all interested institutions should be sought for legislative projects.

In bringing to a close this consideration of the humane movement's proposed responsibility in strengthening world peace, let me mention that very often we must guard against being arbitrary in the request that we make for public action. A sound judgment on these matters generally makes the compromise harmless. In other words, we must undertake to meet the legitimate request for change in our program without endangering the vital thing that must be done. Just before Senator SHEPPARD introduced his resolution, he wrote me that he would submit my draft in a modified form, in which he proposed to omit reference to Organized Reserves and the claim there was neglect of this problem at the First General Conference for the Reduction and Limitation of Armaments. In regard to a reference to the manufacture and sale of munitions of war, he proposed to omit the clause that described present conditions as a "menace to society" and the suggestion that the industry be controlled and administered by public authorities. I do not mention these points to criticize the Senator, for I know from personal experience in Austin that he found it wise to smooth off the corners in order to avoid unnecessary objection to his project. The resolution still requests that our Secretary of State complete his program by asking for concerted restriction on the manufacture and sale of munitions of war. It still goes further in asking that treaties be secured, which would grow out of an international conference, under the provisions of which we would secure a mutual reduction of armaments and concerted restriction on the manufacture and sale of munitions of war.

In conclusion, the proposal for a greater humane movement is symbolic of the need in regard to many of the movements that give life to our institutions. We need coordinated action instead of a specialized sterility that is stultifying our very civilization. The change will be only that of coming abreast of our modern problems. Those problems (so far as the humane movement is concerned) must always center in the moral issue where cruelty is involved. We must combat cruelty in its every form. It will require great courage to support such an ambitious program, but herein lies the hope of humanitarianism in our generation.

The Dies Committee

EXTENSION OF REMARKS

OF

HON. JOSEPH B. SHANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, February 3, 1939

Mr. SHANNON. Mr. Speaker, I wish to offer an explanation of why I voted "no" on the question of continuing the investigation of un-American activities under the leadership of the gentleman from Texas [Mr. DIES].

First, I do not believe that the resolution authorizing the investigation originated in good faith. Second, I do not believe that the investigation was conducted fairly and impartially by the members who recently made a report to the House.

Going briefly into the history of the events leading up to the appointment of the Dies committee, the sentiment for an investigation was created by the untiring work of Representative SAMUEL DICKSTEIN, who is now serving his ninth consecutive term in this body. It was he who produced the evidence, through speeches made in Congress, indicating the necessity for an investigation of un-American activities. The object Mr. DICKSTEIN had in mind in seeking such an investigation was specific and vital. It was to investigate and uproot the agencies of a powerful existing and aggressive foreign government actively operating in this country in a manner subversive to our national interests.

Many Members of Congress felt that an investigating committee of this kind should not be headed by a foreign-born citizen. Hence the matter dragged until a new resolution authorizing an investigation was introduced by MARTIN DIES. The Rules Committee then came to life and certain of its members made an aggressive fight for the adoption of the resolution. By reason of his having authored the resolution that was adopted, DIES, under the usual custom, was appointed chairman of the committee.

From the standpoint of racial background, the appointment of DIES in lieu of DICKSTEIN was nip and tuck, for while Mr. DICKSTEIN is of foreign birth, having come to this country, however, when only 3 years of age, Mr. DIES is very closely related by blood ties to Mr. Hitler's country.

Of course, it is only reasonable and natural that blood ties such as these should exist. Investigations by the American Congress should not, however, be tinged with foreign sympathies. If Mr. DICKSTEIN was considered unsuited for the chairmanship of the committee because of his foreign birth, surely Mr. DIES was and is unsuited because of his strong racial feelings induced by the common bond of blood.

"HOG WILD" ON COMMUNISM

The procedure followed by the Dies committee in its investigations was un-American in principle. It bore a striking resemblance to the camouflage tactics of the Nazi movement in Germany.

Hitler seeks to camouflage the objectives of the Nazi movement by stressing, first, anti-Semiticism; and, second, anti-communism, while in truth and in fact the hand of nazi-ism is raised against all believers in God.

The Dies committee, on the other hand, seeks to camouflage its racial prejudices and antilabor feelings by going "hog wild" on the subject of communism.

Many citizens of my district, from all walks of life, have written me complaining about the conduct of the Dies committee, its handling of witnesses, and the statements which it caused to be issued.

A very eminent jurist of my community, Judge Brown Harris, wrote asking, "Has the Dies committee no knowledge whatever as to decent judicial procedure?"

At first I was inclined to answer him by saying, "Yes; certain members of the committee have some knowledge concerning rules of evidence and proper procedure, at least as gathered in what are commonly known as the kangaroo courts." But after reading some of the hearings before the committee, I concluded that even such an admission would be too charitable. I do not believe there is a kangaroo court in any jail of our larger cities that would be as unfair and as high-handed in its methods as was this committee in conducting its investigation.

I have found in my experience that the enemies of the common people always have names for the friends of the poor and the oppressed. I have seen men denounced as subversive Socialists because they were agitating for factory inspection, the 8-hour day, a living wage, and other enlightened legislation.

Today it is the friends of labor who are branded. They are called Communists, and the Dies pack is yelping on their trail.

DIES BREAKS LABOR-BILL CAUCUS

MARTIN DIES has an antilabor record unexcelled by any Member of this House. It smells to high heaven. And the

between various nations through its activities in the establishment of The Hague Tribunal, the furthering of the success of the Washington conference called in this city in 1921, in its participation in the London conference in 1930, and in addition to other attempts, its action in the First General Conference for the Limitation of Armaments held in Geneva in 1932; and

"Whereas the Secretary of State should be commended for his efforts through Geneva recently in advocating a reduction of armaments on the part of the great powers as a part of the program for peace advocated by the present administration, which said reduction in armaments will not only promote the mutual safety of all nations, but also will avoid further vast expenditures of tax money for armaments by the governments of peoples already poverty-stricken and tax-ridden; and

"Whereas the experience of the World War as expressed at Versailles soon thereafter demonstrates that peace is also endangered most seriously by the inadequate restriction and control of the manufacture and sale of munitions of war, which matter was properly investigated by the Special Committee on Investigation of the Munitions Industry, authorized by the Senate; and

"Whereas it is to the interest of the safety of society and the avoidance of another world war in the near future that the program of the administration for peace mentioned above should include the problem of restriction of the manufacture and sale of munitions of war: Now, therefore, be it

"*Resolved by the Senate (the House of Representatives concurring)*, That the Secretary of State be, and hereby is, respectfully urged to include in his commendable program for peace the matter of a mutual restriction and control of the manufacture and sale of munitions of war; and be it further

"*Resolved*, That the Secretary of State be, and hereby is, further respectfully requested to secure treaties with all the great powers under which there will be effected, among other needed provisions, a reduction in all phases of armaments and all types of armed forces and a concerted restriction on the manufacture and sale of munitions of war, so that this industry will be strictly regulated in the interest of preserving peace." (CONGRESSIONAL RECORD, 75th Cong., 3d sess., p. 11502.)

The document that I have just read to you may sound too ideal for the world in which we are living today, with Japan marching through China in defiance of humanity, with Spain the battlefield of various conflicting forces deriving their support from the whole civilized world, with all Europe ready to burst into flames overnight, and with a record of broken treaties and an abandoned League of Nations. The cold facts make it not only an ideal but also a necessity that civilization develop some humane way in which nations may live together in cooperation. It is essential that the promise of international peace be supported by western civilization.

The nations who advocate communism or the totalitarian state are on the aggressive. Democracy can meet the challenge only by aggressively promoting its higher and more humane program of international peace and other ideals, such as those of the humane movement. All our great institutions must work together to push forward these high and noble purposes. This cooperation, of great value in driving forward national aspiration, is lacking in the democracies. But in other nations undeserved success is being achieved by such forced cooperation for another order of civilization.

For instance, a few weeks ago I received a booklet from the Italian National Fascist Organization for the Protection of Animals. The Italian humane movement is controlled and dominated by the Italian Government, and the author of the publication is titled "The Commissioner for Italian Organization for the Protection of Animals." Humanitarianism in the corporative state is forced to use its high (shall I say sacred?) values as propaganda for fascism. Local Italian humane societies were forced to become allied with the Fascist Party on penalty of confiscation of their property (Guisseppe Orlando, Protection of Animals in Italy, Rome, 1938, pp. 19–20). In Italy the humane movement has been absorbed and dominated by fascism from the national capital to "provincial capital and * * * municipal district" (ibid., pp. 20–21). Should not the American humane movement state the case of true humanitarianism while it may?

Our institutions have a great weakness in this regard. On most of the vital issues of life it is hard to secure the help of organizations that, in order to survive, are required to avoid commitments on projects even when there is a moral issue involved. This is because they are dependent on private contributions for their support, and the private sources of income wield a terrific influence on the institutions that they maintain. How easy it is for us to say that a certain question must not be considered because there will be differences of opinion among us. This is wise counsel on many issues; but, when the issue goes to the very heart of the movement that should offer sponsorship, it is the institution's loss if support is not forthcoming. This is especially true in our day when such grave problems must be faced. I submit the issue before us is one the humane movement cannot neglect without loss of the opportunity to secure influence and achievement concerning which these remarks are directed.

On the issue of war there is no basis for our saying we are not concerned; for warfare commands, especially in our day and time, every resource of the nations involved. Every man, woman, and child is drawn into the influence of the power of government in its struggle for survival and victory; and therefore it is the concern of every institution of the land that sound policies be pursued. It is the legitimate concern of the humane movement for this reason and also because of the cruelty that is involved. Furthermore, the challenge to make peace permanent is the greatest challenge to the leadership of democracy and humanitarianism alike. We can avoid the pitfall of the extreme view which calls for peace at any price and can also help to place a proper curb on militarism. In fact, this sane position that embraces both preparedness and also the problem of promoting peace is the only method by which we may expect to make peace permanent. And if you will bear this position in mind, I do not believe there need be grounds for controversy among humanitarians on this question.

Now let me mention immediate reasons for our aid in preserving peace. Before the First General Conference for the Reduction and Limitations of Armaments was held in Geneva in 1932, under the auspices of the League of Nations, the records show that a violation of good faith was being committed by the Allied and Associated Powers. The promise in the peace of Versailles had been to the effect that this conference would reduce downward and place limitations on military and naval forces. However, some of the diplomats beforehand agreed among themselves that they would not include organized reserves but would limit their treaties to regular armies. Yet it is common knowledge that the chief military power of all modern nations rests in their reserves. However, the excuse was offered that some nations, such as France, have universal military training while America has reserves organized as the National Guard and otherwise. It was assumed that because of the difference in systems, in one of which classes of men enlisted by age came from the manhood of the Nation generally and in another system men volunteered and served for a number of years, it would be impossible to bring about a mutual reduction in these armed forces. However, we find demands made by certain European powers that in some other nations the classes of male citizens for definite years be no longer enlisted. This is proposed as a means of curbing national military strength. Evidently it would be no impossible mathematical problem to bring about a mutual reduction in organized reserves. It was after all fundamentally a moral and a humane problem. To leave this opportunity untouched in 1932 was to make that great conference, at least great in its original promise, a failure before it met.

Let me give an illustration of one other factor that helped to make that conference a dismal failure in a world that knew that success was vital to the welfare of every nation. A suit was brought sometime after the conference was held in which the plaintiff asked for a large fee that he claimed he had earned in serving steel manufacturers at the conference. His duty had been to prevent the curbing of the building of great navies, for his client desired to manufacture steel to be used in warships for those navies. This matter might never have become common knowledge had the client paid the fee without suit. After the conference in 1932 had become a failure, the world turned to the question of whether or not Germany should be allowed to rearm. The real issue should have been a reduction of armaments. But a vested interest blocked human progress in the field of morals.

With some of these matters in mind, as a member of the Texas House of Representatives, I introduced the following resolution:

"Whereas the highest purpose of America in participating in the World War was the establishment of permanent peaceful international relations by steps toward a better observance of international law, in part through reductions in the armaments in the various nations; and

"Whereas in compliance with said purpose the Washington Conference was held in 1921, and the London Naval Conference was held in 1930, both of which said conferences labored for mutual limitations on naval forces, and in compliance therewith in 1932 the first opportunity since 1914 for limitation on both military and naval forces will present itself at the first general conference for the reduction and limitation of armaments, in which said last-mentioned conference the United States will participate; and

"Whereas responsible statesmen agree that civilization cannot now survive another general war, that the poverty-stricken and tax-ridden peoples require an abandonment of competition in armaments and limitation on armed forces, and that without such limitation another general war will be inevitable within a few years; and

"Whereas there is danger that trained reserves will be omitted in whatever treaty may be submitted by said last-mentioned conference in limiting the armed forces of the various nations that will participate in said last-mentioned conference, although the major military strength of every modern nation is made up of its trained reserves; and

"Whereas it would be impossible for the contemplated treaty to weaken the present military strength of the United States; and

"Whereas the people of Texas and the people everywhere are vitally concerned in the success of said conference: Now, therefore, be it

"*Resolved*, That it is the earnest desire of the House of Representatives of the State of Texas, as the representatives of the people of this State, that the Senate of the United States do everything in its power to contribute to the success of said last-mentioned conference, and that, if possible, the Senate of the United States require that trained reserves be included in the armed forces of the nations participating in said last-mentioned conference as said armed forces may be limited under the contemplated treaty; and be it further

"*Resolved*, That a copy of this resolution be sent to the Honorable MORRIS SHEPPARD, senior United States Senator from Texas, for his presentation to the Senate of the United States" (Journal of the

House of Representatives for the second called session of the Forty-second Legislature of the State of Texas, p. 320).

Theretofore the following letter had been written:

SEPTEMBER 14, 1931.

Hon. ROLLAND BRADLEY,
House of Representatives, Austin, Tex.

MY DEAR MR. BRADLEY: I am pleased to have your letter of September 9, with resolution enclosed. I am in thorough sympathy with the resolution and will be glad to do everything I can in its behalf. It will be entirely agreeable to me for you to have the resolution contain a provision for its presentation by me to the Senate.

Trusting you have entirely recovered by this time, and are now engaged in your duties at Austin, I am,

Yours very truly,

MORRIS SHEPPARD.

P. S.—To be sure to reach you, I am sending a copy of this letter to you at San Antonio (ibid., 380).

The project was endorsed by the Texas Conference of the Methodist Episcopal Church, South, in 1935, at Henderson, Tex. It was also endorsed the same year by the Department Convention of the American Legion in Dallas, Tex., and in Beaumont, Tex., the next year. Later it became the subject of a request by the Texas Democratic State Convention addressed to the Senators and Congressmen from that State serving in 1936 and thereafter. I mention these matters in order that you may see the efforts that are required in order to promote any humane project. I do not want to go into detail of conferences with officials of conventions, hearings before committees, and preparatory action by their subordinate bodies. Yet these efforts must be made not only to make our institutions live and serve humanity but also as a means of a coordinated rejuvenation of our institutions. This includes the humane societies if they are to live, and State humane federations if they are to become established, and if they both thereafter are to flourish. Cooperation from all interested institutions should be sought for legislative projects.

In bringing to a close this consideration of the humane movement's proposed responsibility in strengthening world peace, let me mention that very often we must guard against being arbitrary in the request that we make for public action. A sound judgment on these matters generally makes the compromise harmless. In other words, we must undertake to meet the legitimate request for change in our program without endangering the vital thing that must be done. Just before Senator SHEPPARD introduced his resolution, he wrote me that he would submit my draft in a modified form, in which he proposed to omit reference to Organized Reserves and the claim there was neglect of this problem at the First General Conference for the Reduction and Limitation of Armaments. In regard to a reference to the manufacture and sale of munitions of war, he proposed to omit the clause that described present conditions as a "menace to society" and the suggestion that the industry be controlled and administered by 'public authorities. I do not mention these points to criticize the Senator, for I know from personal experience in Austin that he found it wise to smooth off the corners in order to avoid unnecessary objection to his project. The resolution still requests that our Secretary of State complete his program by asking for concerted restriction on the manufacture and sale of munitions of war. It still goes further in asking that treaties be secured, which would grow out of an international conference, under the provisions of which we would secure a mutual reduction of armaments and concerted restriction on the manufacture and sale of munitions of war.

In conclusion, the proposal for a greater humane movement is symbolic of the need in regard to many of the movements that give life to our institutions. We need coordinated action instead of a specialized sterility that is stultifying our very civilization. The change will be only that of coming abreast of our modern problems. Those problems (so far as the humane movement is concerned) must always center in the moral issue where cruelty is involved. We must combat cruelty in its every form. It will require great courage to support such an ambitious program, but herein lies the hope of humanitarianism in our generation.

The Dies Committee

EXTENSION OF REMARKS

OF

HON. JOSEPH B. SHANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, February 3, 1939

Mr. SHANNON. Mr. Speaker, I wish to offer an explanation of why I voted "no" on the question of continuing the investigation of un-American activities under the leadership of the gentleman from Texas [Mr. DIES].

First, I do not believe that the resolution authorizing the investigation originated in good faith. Second, I do not believe that the investigation was conducted fairly and impartially by the members who recently made a report to the House.

Going briefly into the history of the events leading up to the appointment of the Dies committee, the sentiment for an investigation was created by the untiring work of Representative SAMUEL DICKSTEIN, who is now serving his ninth consecutive term in this body. It was he who produced the evidence, through speeches made in Congress, indicating the necessity for an investigation of un-American activities. The object Mr. DICKSTEIN had in mind in seeking such an investigation was specific and vital. It was to investigate and uproot the agencies of a powerful existing and aggressive foreign government actively operating in this country in a manner subversive to our national interests.

Many Members of Congress felt that an investigating committee of this kind should not be headed by a foreign-born citizen. Hence the matter dragged until a new resolution authorizing an investigation was introduced by MARTIN DIES. The Rules Committee then came to life and certain of its members made an aggressive fight for the adoption of the resolution. By reason of his having authored the resolution that was adopted, DIES, under the usual custom, was appointed chairman of the committee.

From the standpoint of racial background, the appointment of DIES in lieu of DICKSTEIN was nip and tuck, for while Mr. DICKSTEIN is of foreign birth, having come to this country, however, when only 3 years of age, Mr. DIES is very closely related by blood ties to Mr. Hitler's country.

Of course, it is only reasonable and natural that blood ties such as these should exist. Investigations by the American Congress should not, however, be tinged with foreign sympathies. If Mr. DICKSTEIN was considered unsuited for the chairmanship of the committee because of his foreign birth, surely Mr. DIES was and is unsuited because of his strong racial feelings induced by the common bond of blood.

"HOG WILD" ON COMMUNISM

The procedure followed by the Dies committee in its investigations was un-American in principle. It bore a striking resemblance to the camouflage tactics of the Nazi movement in Germany.

Hitler seeks to camouflage the objectives of the Nazi movement by stressing, first, anti-Semiticism; and, second, anti-communism, while in truth and in fact the hand of nazi-ism is raised against all believers in God.

The Dies committee, on the other hand, seeks to camouflage its racial prejudices and antilabor feelings by going "hog wild" on the subject of communism.

Many citizens of my district, from all walks of life, have written me complaining about the conduct of the Dies committee, its handling of witnesses, and the statements which it caused to be issued.

A very eminent jurist of my community, Judge Brown Harris, wrote asking, "Has the Dies committee no knowledge whatever as to decent judicial procedure?"

At first I was inclined to answer him by saying, "Yes; certain members of the committee have some knowledge concerning rules of evidence and proper procedure, at least as gathered in what are commonly known as the kangaroo courts." But after reading some of the hearings before the committee, I concluded that even such an admission would be too charitable. I do not believe there is a kangaroo court in any jail of our larger cities that would be as unfair and as high-handed in its methods as was this committee in conducting its investigation.

I have found in my experience that the enemies of the common people always have names for the friends of the poor and the oppressed. I have seen men denounced as subversive Socialists because they were agitating for factory inspection, the 8-hour day, a living wage, and other enlightened legislation.

Today it is the friends of labor who are branded. They are called Communists, and the Dies pack is yelping on their trail.

DIES BREAKS LABOR-BILL CAUCUS

MARTIN DIES has an antilabor record unexcelled by any Member of this House. It smells to high heaven. And the

effrontery of a man with such a record asking respectable labor leaders to appear before him for a quizzing! His votes and activities in connection with the Fair Labor Standards Act, during the Seventy-fifth Congress, typify his antagonism toward progressive labor legislation.

There was a call for a Democratic Party caucus on the labor bill, to meet on August 19, 1937. When it met four or five members were lacking in order to have a quorum. In the cloakrooms and corridors adjoining the caucus room were some 25 or 30 Democratic Members of Congress who refused to enter the room. By their refusal the caucus was broken. Had there been a quorum without these members, they would then, of course, have entered and thrown their weight against committing the party to support a constructive labor bill.

The leader of this group of "corridor slackers" was MARTIN DIES. But for him, the Democratic Party would have gone on record in favor of the labor bill. There never was a goat herder who herded his goats more faithfully than Martin herded his congressional friends on that occasion and, by keeping them out of the assembly room, he prevented the presence of a quorum. To the group of Democrats assembled Speaker BANKHEAD, Leader RAYBURN, and Whip BOLAND gave assurance that at the next session a wage and hour bill would be brought forward.

It had been the intention of those who issued the call for that caucus to make the wage and hour bill a Democratic measure and to pass it before the adjournment of the first session of the Seventy-fifth Congress. But under the circumstances, thanks to Mr. DIES, Congress adjourned 2 days later without taking action on the bill.

FIGHTS WAGE-HOUR ACT AT EVERY STEP

Three months later Congress met in special session. One of the "extraordinary occasions" set forth by the President in his message to Congress of November 15, 1937, as requiring the Congress of the United States to convene in extra session, was the "need for immediate congressional action if we are to maintain wage income * * *." In response to that urgent plea Mr. DIES got in immediate action to block any wage and hour legislation.

On December 13, 1937, a vote was taken in the House on a motion to discharge the Rules Committee so that the Fair Labor Standards Act might be considered. Mr. DIES voted "nay" on that motion.

On December 17, 1937, Mr. DIES voted "yea" on a motion to recommit the Labor Act. It was this motion that killed the measure in the House for the special session.

Then, on May 6, 1938, in the third session of the Seventy-fifth Congress, a petition was laid on the Speaker's desk to discharge the Committee on Rules from further consideration of a resolution to make a special order for the bill to establish fair labor standards in employments. That petition was signed by 218 Members. Mr. DIES, however, was not one of the signers.

On May 23, 1938, on a motion to discharge the Rules Committee from further consideration of the rule to make the labor bill a special order of business, Mr. DIES voted "nay."

The following day, May 24, Mr. DIES voted to recommit the Labor Act to the Labor Committee, which would have killed the bill for the third session of the Seventy-fifth Congress. Fortunately, however, the motion was defeated.

Throughout the debate on the measure, Mr. DIES was constantly on his feet proposing amendments which, in the words of the sponsors of the legislation, were intended to emasculate the bill. While Mrs. NORTON, Mr. WOOD, Mr. WELCH, and other friends of labor were speaking of the "ruined lives of American children," of the plight of "12,000,000 workers who live in conditions under which you would not permit your pet dog to live," of people "who have suffered almost beyond endurance"; on that day, just before the vote was taken, MARTIN DIES was calling the act "miserable humbuggery."

In a last desperate effort to prevent the passage of a bill providing for decent wages for American workers, Mr. DIES voted, on May 24, 1938, against the Fair Labor Standards Act.

Just as Mr. DIES has consistently voted against enlightened labor legislation, his committee has consistently sought to discredit all militant labor organizations.

DIES DEFEATS MANY DEMOCRATS

There is another side to this DIES investigation which presented itself to me by reason of my own observations. I attended some of the hearings of the committee here in Washington, and found the committee engaging in a bit of buffoonery. In the first stage of the investigation the press, also, seemed to view the hearings in their true light, and the newspapers were replete with stories ridiculing the committee and calling attention to the absurd lengths to which it was going in an attempt to justify its existence. This criticism and ridicule on the part of the press continued for quite a while; then, suddenly, both the committee and the press changed; the committee took on the aspect of a first-aid agency in the movement to elect Republicans to office, and from that moment forward Mr. DIES had the press with him.

In political graveyards scattered through the United States can be found many valiant Democrats who were candidates in the 1938 elections. They were privates in the party ranks, seeking places of trust from their fellow citizens. These graveyards contain the political remains not only of former Members of Congress but of hundreds and hundreds of State and county officials who fell victims to the unjust stories emanating from the Dies committee on the eve of the fall elections. Other political parties, such as the Progressives and Farmer-Laborites, likewise suffered, as they, too, had supported liberal legislation sponsored by the Democratic administration. They went down to defeat, innocent sacrifices to the lowest form of political treachery. Whether this treachery was the outgrowth of cunning or stupidity, or both, the results remain the same.

Two members of the Dies committee, Mr. HEALEY and Mr. DEMPSEY, wired the chairman some 2 or 3 weeks before the 1938 elections to let the investigations go over until after the elections, but DIES refused. In fact, he selected this crucial time to bring forth the witnesses from Michigan who ruthlessly destroyed the Democratic ticket in that State.

I have been told also that the Republican candidate for Governor in the last election in Massachusetts in a single speech quoted 16 times from the sayings of MARTIN DIES, all to the injury of the Democratic Party.

EIGHTY-THREE OF EIGHTY-NINE REPUBLICANS OPPOSE LABOR

Today there is great joy in the haunts of the predatory interests because MARTIN DIES has been authorized to continue his so-called un-American investigation. Among the group so widely cheering the reincarnation of this committee, we find the Members who actively opposed the Fair Labor Standards Act in the Seventy-fifth Congress, as well as those who led the movement a few days ago to reduce the appropriation for the poor devils who are trying to get through the winter on the W. P. A.

The cooing that brought about this political miscegenation first took place when the combined interests defeated the wage and hour bill in the special session of the Seventy-fifth Congress by voting to recommit. The vote on that occasion illustrates just who was who. Mr. DIES was actively in charge of the forces hostile to all efforts to correct conditions adversely affecting wages and hours. He had almost unbelievable aid from the Republican Party. Of the 90 Republicans then in the House, 83 voted as DIES voted, while but 6 voted with the liberals.

Let it be said to the glory of the seven Progressive Members and the five Farmer-Labor Members of that body, they voted 100 percent for the bill.

A remarkable coincidence of the vote that day was that of the seven Members who later comprised the Dies committee, six voted to recommit the bill, and only one, Mr. HEALEY, of Massachusetts, voted with the liberals. However, in the next session, of the seven all voted for it save two, DIES and STARNES.

We may be sure the investigations of the Dies committee will continue to be inimical to the interests of labor.

PRESIDENT'S PASSPORT TO PEOPLE'S LOVE

The wage and hour law typifies what is in the heart of President Roosevelt, and will be his passport to the love and affection of future generations. I have said, and I here repeat at this most appropriate moment, that in every law and every proposal for the assistance of mankind coming from the head of this administration I find some humanitarian motive—some provision for equalizing opportunities in this country; some plan for taking care of the unemployed; some measures designed to take the children out of the death-dealing factories; some relief afforded to the farmer; some protection designed for the small-business man; some effort to increase the earning power of laborers and to provide them higher standards of living.

Just a word to the Republicans in closing. Beware lest the Dies torpedo which proved so useful to you in the 1938 campaign turn out to be a boomerang and hoist you by your own petard in 1940.

Results Under Reciprocal Trade Agreements Program

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, February 9, 1939

STATEMENT BY DEPARTMENT OF COMMERCE ISSUED FEBRUARY 8, 1939

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by the Department of Commerce, and issued under date of February 8, 1939, on the subject, "Nineteen Thirty-eight Results Under the Reciprocal Trade Agreements Program."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

During the year 1938 United States exports to both the group of 17 countries with which reciprocal-trade agreements had been concluded, and to the group of nonagreement countries, decreased, the rate of decline being slightly smaller to the agreement group than to the nonagreement group, according to an analysis of official trade returns of the past 12 months just completed by the Department of Commerce at Washington. Taking an annual average for the past 2 years, however, exports to agreement countries have shown a much greater rate of increase over the preagreement period 1934–35 than average exports to the nonagreement group.

The value of total imports into the United States during 1938 declined sharply from the relatively high level of the preceding year, with a lesser rate of decline from the agreement group than from the nonagreement country group. During the 2-year period 1937–38 the increase in imports from the agreement country group over the 2-year preagreement period was less than the average increase in exports to those countries.

RELATIVE CHANGE IN EXPORTS

While United States exports experienced a moderate decline in 1938 from the level of 1937, the exports from this country have been suffering smaller declines than those from most other countries. Exports from this country remained at high levels in 1938 because of the continued demand abroad for American aircraft, machinery, and metal manufactures, and because of the large surpluses of wheat, corn, fruit, tobacco, and other agricultural commodities, some of which were again available for export from this country. The demand for American machinery and metal manufactures has continued strong, due in a considerable measure to the heavy requirements of the rearmament programs of several European countries which have prevented those normally large exporting countries from supplying both export and domestic demands.

In 1938 there was a net decline of 6.8 percent compared to 1937 in the value of exports to the 17 agreement countries (not including the United Kingdom, with which an agreement became effective only on January 1, 1939), while the decline in exports to all other countries during the same period averaged 8.1 percent. In contrast to the general trend, exports to the Netherlands (including overseas territories), Switzerland, Czechoslovakia, Honduras, Colombia, and Costa Rica, of the agreement group, were greater in 1938 than in 1937.

That exports to the nonagreement group as a whole during the same period did not show a greater decline was due largely to the continued high level of exports to the United Kingdom and to increases in exports to Norway, the Union of Soviet Socialist Republics, and some other countries. Exports to the United Kingdom accounted, roughly, for one-third of the exports to the nonagreement group. Although United States exports of cotton to the United Kingdom declined in 1938, total exports to that country were well maintained for the year because of increased shipments of petroleum products, wheat, tobacco, and other agricultural products. Exports as a whole to the Union of Soviet Socialist Republics experienced a large gain in 1938 over the previous year, mainly because of the substantial gain in exports of machinery, particularly metal-working machinery.

The comparison of exports during the 2-year agreement period which closed on December 31, 1938, with the 2-year preagreement period of 1934–35 shows a definitely greater average rate of increase in exports from the United States to the group of agreement countries than to the nonagreement countries as a whole. Exports to the agreement group in the 2-year period, 1937–38, were greater in value by 61.2 percent than the average for the preagreement period, 1934–35, while exports to all other countries increased by an average of only 37.9 percent in value.

During the past few years there have been several powerful forces other than trade agreements which have served to increase and then to maintain American foreign trade above the levels that previously prevailed. However, it seems significant that, in comparison with the 2 preagreement years, 1934–35, during the past 2 years our exports have experienced a much greater rate of increase to trade-agreement countries which have reduced or stabilized their tariffs or other trade barriers on distinctive American products than our exports to the nonagreement group.

RELATIVE CHANGE IN IMPORTS

As previously indicated, imports into the United States during 1938 experienced a marked decline in comparison with 1937. This decline in imports is generally attributed to the recession in business and to the large domestic supply of agricultural products, which, in contrast to the previous year, was more than ample for this country's needs. While most categories of imports declined in 1938, the decline was particularly severe in imports of certain raw materials, notably, rubber, tin, wool, hides, and skins, and certain farm products such as grain, fodder, and oil seeds. Beginning in the latter months of 1937, the demand for certain imported raw materials lessened considerably with the decline in industrial activity in this country and, in the case of some products, prices decreased markedly. Also, beginning in the latter months of 1937, the domestic supply of certain agricultural products became substantial enough to eliminate the necessity for large-scale importations of these products. It so happens that imports of the raw materials and agricultural products in question had been obtainable mainly in nonagreement countries. Consequently, the percentage of decline in the value of imports in 1938 was greater for nonagreement countries as a whole than for the agreement group.

In 1938 there was a decline of 28.9 percent over 1937 in imports into the United States from the agreement country group, whereas imports during the same period of comparison from the nonagreement countries declined by 41.6 percent. In the broader comparison between the 2-year period 1937–38 and the preagreement period 1934–35, the increase in imports into the United States from agreement countries averaged 35.2 percent, while imports from the nonagreement group increased 37.0 percent. That imports from nonagreement countries during the 2-year period increased at a greater rate than imports from agreement countries, whereas a contrary tendency would normally have been expected, is due to the heavy imports of raw materials and agricultural products mainly from nonagreement countries during 1937, to which attention has already been called. In 1938 this abnormal tendency was reversed and imports from agreement countries showed a smaller rate of decline in imports than from nonagreement countries.

COMPARATIVE CHANGES IN EXPORTS AND IMPORTS

United States exports during 1938 to the agreement countries as a whole decreased about $86,000,000 from the levels of 1937, while the year's decrease in imports into the United States from the same countries was about $362,000,000.

Taking a broader view, a comparison of the past 2 years with the preagreement years of 1934 and 1935 shows an increase in exports to the agreement country group averaging about $465,000,000 annually, and an increase in imports from the same countries averaging approximately $280,000,000 annually.

PROGRESS OF PROGRAM—RECENT AGREEMENTS CONCLUDED—NEGOTIATIONS ANNOUNCED

With the conclusion of the trade agreement between the United States and the United Kingdom in November 1938, the reciprocal trade-agreements program assumed greater proportions as a trade-enlarging influence. At the same time a second agreement with Canada was signed, superseding the first agreement concluded at the end of 1935, and an agreement was concluded in the latter part of 1938 with Ecuador. The 19 countries with which reciprocal trade agreements are now in operation, together with their colonies, account for approximately 60 percent of the total foreign trade of the United States.

The trade agreement between the United States and the United Kingdom, which became effective January 1, 1939, covers not only the trade between these two countries, the largest trading countries in the world, but also the trade of the United States with Newfoundland and the non-self-governing British colonies. The importance of this agreement may be judged by the fact that the trade of the United States with the United Kingdom and the other areas covered by the agreement constitutes nearly one-fifth of our trade with the world as a whole. The United Kingdom is generally the largest market for our exports and ranks among the three leading countries as a source of our imports. Our trade with some of the more than 50 British colonies to which the agreement relates is also large.

The second agreement with Canada, which became effective January 1, 1939, considerably enlarged the undertakings by each Government, since the experience of both countries under the first agreement had been considered to have been highly satisfactory. In recent years Canada has closely followed the United Kingdom as the best customer for our exports, taking about one-seventh of the total. Canada is much the largest source of imports into the United States.

The agreement with Ecuador will enable the United States to retain its already favorable trade position in that country, as well as provide new opportunities for expansion.

During 1938 announcements were made of the intention to negotiate agreements with Turkey and Venezuela, and a limited, supplemental agreement with Cuba.

TABLE 1.—*United States trade with agreement countries and with countries announced for negotiation*

[Values in millions of dollars]

Item	Exports (1938)		Imports (1938)	
	Value	Percent of total	Value	Percent of total
Total United States trade all countries	3,094.1	100.0	1,960.5	100.0
Countries with trade agreements concluded [1]	1,784.7	57.7	1,181.2	60.2
Additional countries announced for negotiations	65.5	2.1	39.0	2.0
Turkey	13.2		19.0	
Venezuela	52.3		20.0	
Total, countries with agreements concluded or announced for negotiations	1,850.2	59.8	1,220.2	62.2

[1] Includes agreement with Ecuador which became effective Oct. 23, 1938. Also, the new agreement with Canada, and the agreement with the United Kingdom (including Newfoundland and non-self-governing British colonies), both of which became effective Jan. 1, 1939.

(Commerce Reports carries a section each week devoted to an up-to-date list of all countries with which trade agreements have been concluded by the United States together with the official texts of any current announcements as to new countries with which negotiations have been announced, and details as to dates and directions for presentation of views to the Committee for Reciprocity Information.)

TABLE 2.—*United States foreign trade with trade-agreement countries and with all others, 1938 compared with 1937, and 1937–38 compared with 1934–35*

[Values in millions of dollars]

	Comparison of 1938 with 1937				Comparison of 1937–38 with 1934–35			
	1937 value	1938 value	Change		1934 and 1935 average value	1937 and 1938 average value	Change	
			Value	Percent			Value	Percent
United States exports, including reexports:								
Total, all trade-agreement countries [1]	1,267.9	1,181.8	−86.1	−6.8	759.8	1,224.8	+465.0	+61.2
Total, all nonagreement countries	2,081.2	1,912.3	−168.9	−8.1	1,448.0	1,996.8	+548.8	+37.9
Total, all countries	3,349.2	3,094.1	−255.1	−7.6	2,207.8	3,221.6	+1,013.8	+45.9
United States general imports:								
Total, all trade-agreement countries [1]	1,254.7	892.5	−362.2	−28.9	793.9	1,073.6	+279.7	+35.2
Total, all nonagreement countries	1,829.0	1,068.0	−761.0	−41.6	1,057.4	1,448.5	+391.1	+37.0
Total, all countries	3,083.7	1,960.5	−1,123.2	−36.4	1,851.3	2,522.1	+670.8	+36.2

[1] Including the 17 countries (and colonies) with which agreements were in operation during the greater part of the last 12 months. Only 1 of the agreements was in operation throughout 1935, 6 throughout 1936, 12 by the middle of 1936, 15 by the middle of 1937, and 18 by the end of 1938. The last (with Ecuador) only came into force on Oct. 23, 1938 and is therefore not yet included in the above calculations as an agreement country. The new agreement with Canada, and the agreement with the United Kingdom (including Newfoundland and non-self-governing British colonies), which became effective Jan. 1, 1939, bring the number of agreement countries up to 19.

GENERAL NOTE.—Percentage changes have been calculated upon fuller figures in thousands.

The Cause of Negro Migration From the South—The Effect and the Remedy

EXTENSION OF REMARKS

OF

HON. ARTHUR W. MITCHELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1939

CORRESPONDENCE WITH DR. KELLY MILLER, FORMER DEAN OF HOWARD UNIVERSITY

Mr. MITCHELL. Mr. Speaker, at this time when there is a great deal of unemployment throughout the country and the Negro, who has been the backbone of agriculture in the South, is rapidly leaving the South to the detriment of both the permanent welfare of the Negro and the permanent welfare of the South, I think it is fitting that this Congress should make a special study of conditions in the South, and in the country at large, for the purpose of determining why the unrest and, if possible, work out the proper solution.

I am presenting herewith a letter on this subject which I have just received from Dr. Kelly Miller, former dean of Howard University, and my reply. These letters taken together give a rather dramatic picture of the Negro in the South, and might be used somewhat as a basis to begin a study of this problem.

HOWARD UNIVERSITY,
Washington, D. C., January 25, 1939.

THE FARM THE NEGRO'S BEST HOPE

Congressman ARTHUR W. MITCHELL,
Room 1215, New House Office Building,
United States Capital, Washington, D. C.

MY DEAR MR. CONGRESSMAN: I recall with great interest and pleasure our conversation the other day in which you expressed your lively interest and anxious concern about the industrial and economic status of the Negro in the United States. As the only Member of Congress belonging to this group, you by force of circumstances, have a superconstituency of 12,000,000 who represent a racial minority which labors under a heavy industrial and economic handicap. Both the rural and urban contingents of the race face a gloomy prospect; but under all prevailing circumstances and conditions the farm appears to be the most feasible way out.

The Negro was brought into this country over 300 years ago to assist in the rough and heavy work of the farm, which at that time constituted the chief occupation of the entire population. The industrial revolution, through invention and discovery, shifted the burden of production from human hands to machinery. Manufactury trade and transportation soon engaged the chief energies of the white workmen, leaving the bulk of the Negroes on the farm as a 10-fingered worker. His chief energies were engaged in cotton culture.

The invention of the cotton gin in 1792 made the production of cotton exceedingly profitable. As long as cotton remained king, there was an unlimited demand for Negro hand labor. But with the collapse of cotton the Negro's place in the industrial world became seriously affected. We should also bear in mind that the Negro's function in this industry is limited to the culture of cotton in the seed. When he hauls the seed cotton to the gin his function ends. At this point the white workman takes it from his

hands and separates the seed from the lint, weaves the fiber into fabric, makes the fabric into wearing apparel, and distributes it to the wearer. The Negro's part in the cotton industry, however, is primary and indispensable.

Broadly speaking, the Negro is engaged in agriculture and domestic service, which require a maximum of handwork and a minimum of machinery. These pursuits are less profitable than manufacture and mechanical processes, trade, and transportation, in which machinery chiefly figures. Even where he is engaged in mechanized pursuits which demand shorter hours and higher wages, he constitutes, in the main, a marginal worker demanding less skill and lower pay. Under the pressure of competition, even in agriculture and domestic service, the Negro is being pushed down to the bottom or pressed out at the side, and therefore is becoming less and less indispensable. The Pullman service represents the only pursuit in the entire list of occupations in which the Negro, by virtue of his civility, is regarded as all but absolutely indispensable.

Race prejudice as severely restricts the Negro's industrial opportunities in the North as it does his political and civil rights in the South. Booker T. Washington used to say that the Negro could earn a dollar in the South but could not spend it. On the other hand, he could spend a dollar in the North but could not earn it. The problem now is how he can earn a dollar North or South. The white man's lying in wait for his dollar before he earns it.

Notwithstanding the dispersing of the race throughout the North and West, the bulk still clings to the cotton States along the Atlantic coast and the Gulf of Mexico. This stubborn persistency of the Negro population clearly indicates that his future even as his beginning will be bound up in the cotton culture.

You, Mr. Congressman, were brought up on a farm in Alabama and sat at the feet of Booker T. Washington, the only commanding race statesman which the race has produced after 75 years of freedom. As a race statesman, you do well to perpetuate and carry forward the doctrine of this great teacher, who urged his race to seek their future on the farm rather than to be beguiled by the glitter and glamor of city life. A Negro family rooted and grounded in the agricultural life of Alabama has a much more promising prospect than if transferred to the sidewalks of New York. One shudders to predict the future of a Negro child brought up in a seven-story flat of a Harlem tenement house.

The invasion of the boll weevil and the coming of the World War threatened to shift the Negro population from the farm to the cities, both of the North and of the South. But the hegira was short lived after the boll weevil had ceased to threaten the production of cotton and the soldiers had returned to their places in the mechanized industries of the cities, the Negro looked around, and, like Othello, found his city occupation gone.

The depression for the last 10 years has emphasized the Negro's plight in the industrial and economic world. There seems to be an irreducible minimum of 10,000,000 unemployed. A disproportionate number of these falls within the Negro race. The Negro has been the chief victim of the depression and the chief beneficiary of the New Deal, which has kept him from utter starvation, especially in the cities. But the cities, North and South, have now as many Negroes as they can hold in solution without a dangerous precipitation. He must have a greater faith in the future than I can command, who can foresee any way out for the city contingent of the Negro race. It is unthinkable that they should continue forever, or for long, to live on charity and relief.

After all has been said and done, the farm holds out to the Negro not only his best chance but his only chance in face of prevailing conditions. The rural and urban contingents of the Negro race are now divided in the approximate ratio of 2 to 1. Neither of these can be increased at the expense of the other. No one in his senses will advise the city Negro to return to the farm, whose present output is adequate to the demands at home and abroad. The city Negro, with his sophisticated notion and fastidious standards of living and his disdain for downright hard work, would be of no value to the farm should he return. The chief stress of emphasis of the farm program should be to retain those already there and stop the cityward tide of fatuous migration.

The Negro is sufficiently well acquainted with the cotton industry that he can operate it under his proprietorship. Any ordinary Negro family can take 40 acres and a mule and extract a livelihood from the soil. Even the cotton picker, if perfected, cannot dispense with Negro labor. Although the Negro has never been successful in the cultivation of grain, grasses, fruit, cattle, poultry, and table vegetables, it now becomes necessary to diversify his crops in face of the collapse of cotton.

Farm ownership has greatly fallen off among Negroes during the past few decades because of agricultural depression. But farm tenancy has correspondingly increased. The cash tenant and even the sharecropper represent a stage in advance of the farm hand, for it constitutes the first step toward proprietorship. The fact that the Negro and the white farm tenant and sharecropper are partners in distress guarantees the Negro better treatment than would befall his lot if he alone filled the quota of this category.

The New Deal is calculated to relate the Negro to the best opportunities of farm life under auspices of the Federal and State Governments. The traditional policy of the South, due to unhappy memories of reconstruction, has tended to divorce the Negro from participation in government function. The governmental instrument with which the ordinary Negro is best acquainted is the policeman's club. But the public schools constitute the one redeeming exception. But now the New Deal is at great pains to acquaint him with the beneficent aim and purpose of government, national and local, and most especially in agriculture. It sets up a trained staff of county agents and local supervisors to drainage of soil, diversity and rotation of crops, care of livestock, and marketing produce.

As far as practicable, the farm policy of the Government operates without discrimination on account of race or color. Such discrimination as may creep in here and there, by reason of local custom and tradition, are promptly correctable when properly brought to the attention of headquarters in Washington.

The Bankhead Act has made it possible for the tenant farmer to secure a loan on his farm on easy terms of payment. The Rehabilitation Act enables him to borrow money to improve his farm home. A subsistence fund will enable him to purchase the necessary seed and equipment to start and stock his farm.

It is necessary to acquaint the Negro farmer with these provisions intended for his welfare. He has been so accustomed to being left out of all Government consideration that he has become intimidated and dares not ask for provision to which he is fairly entitled.

It does seem to me, Mr. Congressman, that the best advice which can be given to the Negro today is to reemphasize the advice of Booker T. Washington to plant their feet in the soil and let down their buckets where they are.

KELLY MILLER.

HOUSE OF REPRESENTATIVES,
Washington, D. C., February 7, 1939.

Dr. KELLY MILLER,
Howard University, Washington, D. C.

MY DEAR DR. MILLER: I have read your letter of January 25, in which you discuss "The Farm, The Negro's Best Hope" with great interest. All that you say on this subject interests me greatly. I have watched with great alarm the large numbers of colored people from the Southern States rushing from the rural district and crowding into the cities, both in the South and in the North. I, having lived in the South the greater portion of my life, and having been directly connected with rural life, know the great evil that attends this migration. And while I know the great problem, the migration of these people from the rural South to the congested city, I have not been unmindful of the cause.

Many of these people have left the South with great reluctance, but there were conditions in the South over which they had no control which made their abode in that section not only uncomfortable but unsafe. Many of them, under the leadership of educators and ministers, sought to follow the instructions of Dr. Booker T. Washington ("let down your buckets where you are") referred to in your letter, but to them the risk of life became so hazardous and so great they, like the oppressed of other nations of the world, sought safety and comfort and the the best possible opportunity to live and support themselves and their families by leaving their homes and going to other sections where they thought these things could be had.

You are familiar with the fact that the settlers of New England and other parts of our country crossed the Atlantic Ocean at the peril of their lives and set themselves up in this country in the fifteenth and sixteenth centuries because they wanted to escape injustice in their own lands, and wanted what is so often referred to in our Nation, freedom of speech and the right to live their lives without being unduly oppressed by those in power and authority. I am convinced that oppression, injustice, and the unsafety of life have always caused the oppressed to take refuge in some other part of the country, or some other country, where they thought they could live a safe, better, and fuller life. This, to my mind, is exactly why the Negro has left the South in such large numbers.

The more than 6,000 lynchings which have taken place in the South during the past 50 years, the disfranchisement of Negroes in the Southern States, the injustice suffered by Negroes in the courts of the South, and the unfair and inequitable distribution of educational opportunities, along with the despicable sharecropper system, have tended to drive the Negro from the farm. All of this has been said in no effort to deny or dispute anything set up in your letter. I merely feel that the cause for this rush by the Negro to the city should not be overlooked.

It is my opinion that the white South is gradually changing its attitude toward the Negro in the rural district. I know that this attitude must change or the Negro will continue to leave that section. His leaving is not solving the problem. It is rather aggravating it. I think if lynching in the South was stopped, if the Negro was given justice in the courts, and if he was permitted to sit on the juries of the South (which the Supreme Court of this country says he has a right to do), if he was given equal educational opportunity with the white children of the South, the almost wholesale migration of the Negro to the city would cease, because the South is developing a good road system, rural electrification is being extended to the South, thus making it possible for those living in the rural sections to have and enjoy many of the comforts and necessities afforded those living in the city and in other parts of the country.

I have recently made a rather careful survey of conditions in the South for my own information and satisfaction. I spent 7 weeks motoring leisurely through Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Texas, and Oklahoma. I saw white and colored people in all of these States. I saw them in all walks of life. I held conferences with governors of States, mayors of cities, editors of newspapers, college presidents, principals of high schools, teachers of rural schools, bishops, pastors of large city churches, and pastors of

small rural churches. I talked with workers on the farm, workers in the cotton mills, workers on the turpentine plantations, men in the sugarcane and cotton fields, and with people in all walks of life. It is my opinion now, as always, that the South, with its temperate seasons and agricultural possibilities, offers the Negro his greatest opportunity, but he, in order to enjoy the opportunity offered, must have the protection and the recognition already referred to.

From my careful observations made during this trip through the South, and observations that I have made over a period of years, I am confident that there is a growing tendency among the whites of the South to be more considerate of the Negro's rights in that section of the country. But there is still a tremendous amount of work to be done in the way of securing for the Negro those rights, the protection of life, liberty, and property, and the pursuit of happiness, guaranteed by the Constitution of the United States to citizens of the United States.

I agree with you, Dr. Miller, that the Negro's destiny in this country could be far more easily worked out in the South if those in charge of government in the South once made up their minds and determined to be fair and just to the Negro citizens. It is my opinion and observation that nowhere in the United States of America has the Negro been given equality before the law and equality in the economic affairs of the Nation. There is entirely too much stress (wrongly and foolishly so) put upon the statement that this is a white man's country. The first permanent white settlement in America was made at Jamestown, Va., in 1607, under the leadership of Capt. John Smith. Twelve years later the first permanent Negro settlement was made at Jamestown, Va., when a Dutch trading vessel came to that shore, brought and sold 20 Negro slaves. The white man preceded the Negro, insofar as the settlement of this country is concerned, by only 12 years. There is grave question in my mind now as to whether or not the white settlement at Jamestown would have been permanent had it not been reinforced and strongly backed up by the first permanent Negro settlement at the same place.

There are still designing and ill-informed white men here and there who argue that the Negro should be driven from America and transplanted elsewhere. I doubt if there are 50 Negroes in America who came from Africa. The descendants of the Negro, who settled at Jamestown, Va., in 1619 are as much American citizens as are the descendants of white men who preceded him by 12 years. The Negro has done his part to make this country what it is. He has shed his blood in common with white men to make this country free. He marched and fought with George Washington, Andrew Jackson, and practically all other great military generals, for the protection and welfare of this country. The soil has been enriched with his blood wherever American blood has been shed, whether in this country or in foreign lands.

All the Negro has asked in the past, and all he asks now, is to be treated like other American citizens and to be given the same right and privilege to make an honest living in the only country he knows and loves as a home. I believe that this administration is making serious and commendable effort to secure for the Negro his economic and citizenship rights in this country. I am conscious of the fact it will be a long, hard struggle. There is much to overcome. It requires patience, courage, and genuine statesmanship to handle the problem of the Negro in this country, and particularly in the South, with fairness and justice to all; but this must be done before the problem can be settled.

During my visit through the South I was much impressed by the resettlement projects I visited; one particularly in the State of Texas, where scores of families of Negroes are being aided by the Government in securing farm land, comfortable houses to live in, and proper stock, etc., with which to farm. This is being done under the supervision of trained agriculturists. Those engaged on these resettlement projects were the happiest and most contented people I met during my entire visit through the South. I believe that the Government should make a careful study of what has already been accomplished, and that special effort should be put forth to work out the problem of the Negro in the South through this movement.

I believe, once the Negro feels that his life is safe in the South, that he will be given the same consideration in the courts as is given all people, that he will be given the same economic opportunity to work and make an honest living, the same chance to exercise his citizenship rights at the polls, in the selection of those who govern the Southern States and the Nation, the same opportunity in the schools of the South to prepare himself for the duties and responsibilities of citizenship, the problem will in a large measure be solved, and the country will begin to prosper. On the other hand, I believe until this is done the South will continue to lag behind all the other sections of the country, and justly so.

You, of course, know the high regard in which I hold the late Dr. Booker T. Washington. I knew him most intimately, having served as office boy for him and having kept in close touch with him until he passed away. I believe that he made the largest single contribution toward the real solution of this problem. I believe now the work which he carried on so heroically and successfully must be carried on through the years to come, if the problem is to be solved. What I have set forth in this letter is exactly what Dr. Washington worked for during his day. I am working now, along with many others, trying to carry out the program which he worked out.

I think we should feel encouraged by what has been accomplished, but we should double our effort in this day when the economic affairs of the Nation are being reshaped. Not only must we urge upon the white man to be fair and just to the Negro, we must urge upon the Negro to be thoughtful, patient, industrious, and determined to make the largest possible contribution toward his own advancement, regardless of the handicaps which he is called upon to face.

I have noted, particularly in my contact with men in Congress, and with the large number of people I met on my recent trip through the South, that much of the bitterness between the races is passing away, and there is at present rather determined effort on the part of the younger generation, particularly white, to deal with the problem of the race in the South with more fairness and justice than that of the earlier days of the Negro's freedom in the country. I believe that with this broader understanding and tolerant approach on the part of the young of both races, we will get somewhere in our effort to change the South and make of it the New South that Henry W. Grady so eloquently spoke of and wrote about.

The program of Booker T. Washington is undoubtedly the program which should be followed. You can depend upon me to do all in my power to help in this struggle for human rights and proper race adjustment.

ARTHUR W. MITCHELL.

It is my purpose to bring before the House and the various committees of this House, in the form of bills and speeches, such facts as I think this body should know, with the hope of bringing about some further action on the part of this Government to render the proper aid, and to give the proper recognition to a group of its citizens who have always been loyal in every sense of the word.

Fiscal Policy

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, February 9, 1939

ARTICLE BY GEN. HUGH S. JOHNSON

Mr. BAILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a brief statement by Gen. Hugh S. Johnson.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ONE MAN'S OPINION

(By Hugh S. Johnson)

NEW YORK CITY.—Oliver Cromwell beseeched his "brethren in the bowels of the Lord to consider that they might be wrong." In matters of opinion, Oliver was certainly no "sissy-britches." Yet he admitted the possibility of error. Not so do the tax-spend-elect school of alleged thought and the disciples of unlimited debts and deficits. Neither Mr. Eccles nor the President himself seems to have the slightest doubt that the way to get an $80,000,000,000 income for the Nation is to keep on spending more than eight billions a year—or about double what we receive in revenue—and that when we have the $80,000,000,000 income we will get so much more in taxes that we can balance the Budget at the present rate of spending. If that is right, we can go on forever with all this wasteful extravagance and a tax burden on rich and poor alike running now at least 20 percent of all they can produce or earn.

No such fiscal policy has ever yet succeeded. On the contrary, debts and deficits, if continued long enough, have never failed to destroy the value of a country's money, boost prices too high for the poor to live, and eventually wreck its whole economy. High taxes have never before worked to activate business or improve the lot of labor. On the contrary, they have always been, as the President once said, a burden on production to be paid only out of production in "the sweat of every man who labors." Yet this invariable record does not make Mr. Eccles or the President pause in the attempt to put their theory into operation as the fixed policy of this country.

The argument for it is no more persuasive than the history of it. Mr. Eccles made that argument with candor and completeness in his letter attacking Senator BYRD's Boston speech. The Senator replied. I know how easy it is to be convinced by an argument expressing your own opinion, but I still believe that if ever a fallacy was taken apart, exposed, and demolished, that was done to Mr. Eccles' argument by the reply of Senator BYRD. It should be

printed as a primer for everyone who takes an interest in this most vital of all our national problems.

It isn't the point of this piece to continue that argument. It was begun in this place years ago. I want to go back to Cromwell's caution and ask these brethren in the bowels of the Lord to consider what might happen if they are wrong.

Not even they would deny that this policy is an experiment in the sense that it was never done before. It is a try-out of a theory. But suppose the experiment fails. It will have cost perhaps as much as sixty billions, which is more than the World War cost us. But that is a trifle compared with the fact that failure can only be registered by a runaway price inflation—a smashing of the value of money until it will take hundreds of dollars to buy a breakfast and the purchasing power of wages of labor will be reduced to next to nothing. This will be only a transition stage to complete collapse and the destruction of value of every savings account and insurance policy in this country. Could our political system and form of government stand that?

I don't know. But I know that the terrible cost and awful risk in this theoretical and highly improbable experimentation is the most reckless, audacious, and impertinent trifling with the welfare of a trusting people and the existence of a great Nation in the annals of human history. It is amateur gamblers shooting craps with destiny for the peace, prosperity, and happiness of 130,000,000 people. Brethren, in the bowels of the Lord, consider that ye may be wrong.

Free Education—At Expense of Hard-Pressed Taxpayers Who Earned Theirs

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1939

EDITORIAL FROM THE STEELE COUNTY PHOTO NEWS, OF OWATONNA, MINN., FEBRUARY 9, 1939

Mr. AUGUST H. ANDRESEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a very timely and forcible editorial written by Mr. Hugh H. Soper, editor of the Steele County Photo News, of Owatonna, Minn., entitled, "Free Education—At Expense of Hard-Pressed Taxpayers Who Earned Theirs." The editorial is as follows:

[From Steele County Photo News of Owatonna, Minn., February 9, 1939]

FREE EDUCATION—AT EXPENSE OF HARD PRESSED TAXPAYERS WHO EARNED THEIRS

Aubrey Williams, National Youth Administration head, wants a few more millions or billions—it doesn't matter which to him—to provide free education. It is heartbreaking to be young and eager for the knowledge that would point the way only to find that education is for those who, by some happy accident of birth or circumstance, have the money to buy it.

Mr. Williams, for whom he and others in high place have great regard as a mighty smart man, seems to have been deprived of a little of his own education for the reason he points out—or others. At any rate, he seems totally uninformed of the fact that thousands and thousands of American men and women were once boys and girls who earned their own education. Some of them were among our greatest leaders—Lincoln, among others. In fact, it seems that the earning of an education is the greatest part of that education and acquiring one because it is given—whether by the Government or by one's parents—is actually a great handicap to mental growth and ability.

Many of those who have secured their education through their own efforts are still close enough to that state to be still paying for portions of it. And yet Mr. Williams would tax them to issue free education to a lot of youngsters not proud, ambitious, or energetic enough to make their own way without making already overburdened taxpayers pay for it. The trouble with the Nation today is that it has too many Aubrey Williamses and too many who are his followers in the belief that all human benefits should be issued without being earned.

It would be fine if things could be so managed. But they cannot and someone has to pay for them. These youngsters will find, if they insist on free education, college and on up through life, that there will be no employers to give them jobs when they have gotten to the point where they are ready for them. Those potential employers will long since have been taxed out of existence. And having been taught by Mr. Williams and his ilk that one should not be expected to make his own way, they will not be fitted to establish their own means of earning a livelihood.

Public Salary Tax Bill

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1939

Mr. VAN ZANDT. Mr. Speaker, on the surface this proposed tax might appear to be a picayunish thing, since administration leaders concede the total revenue yield would be less than $16,000,000 a year. That may be a staggering sum to the ordinary mortal but it is a mere trifle to the Roosevelt administration. The free spenders of the taxpayers' money have become accustomed to shelling out billions of dollars a year—yes, billions of dollars more than the Federal income. That brand of Government financing and spending already has placed a public debt burden of almost $40,000,000,000 upon the Nation—a debt which future generations must pay.

The real danger in this new tax proposal does not appear on the surface. The real danger lies in the cleverly camouflaged motives behind it. That danger is the direct thrust at the very heart of the Constitution.

For the moment we will pass over the injustices and the inequities which would be imposed upon the States by such a tax policy. This proposal is a part of the New Deal program to encroach upon State sovereignty and home rule. That would lead to the ultimate destruction of the States if we yield now and allow this administration to get a foot in the door. With this measure as an opening wedge it would end with an all-powerful Federal bureaucracy at Washington and the once sovereign States as weak as impotent puppets.

This proposal is all the more dangerous because of its innocent appearance. Yet, it is another sly subterfuge on the part of the New Deal to circumvent the Constitution. It is at one with the President's unsuccessful effort to pack the Supreme Court. Two years ago, the President sought to scrap the Constitution and cripple the judiciary by a distortion of law, logic, and fact. Now, he is trying to add vast powers to the Federal Government without consulting the people. If any change is made in our Constitution, it must be done by the will of the people. And the only way that can be obtained is to submit a constitutional amendment to them. Since I am in favor of the people having the kind of government they desire, I would support the submission of a constitutional amendment to the people and abide by their decision.

Aside from the unconstitutional aspects of this measure, I am opposed to the imposition of any more taxes upon the great working class which is already overburdened. This proposal would lead inevitably to the taxing of State and municipal bonds. That, in turn, would force the working class to dig down in their pockets to pay increased taxes. That burden would fall heavily upon small real-estate owners.

This proposal would work a great hardship on Pennsylvania more than other States because Pennsylvania has no State income-tax law and therefore could not tax the incomes of Federal officials living within that State.

There is nothing personal in my opposition to this new tax proposal. It would not affect my income tax in any way. Since all income derived from the Federal Government already is subject to Federal income taxes, I pay at the same rate, and on the same scale, as every other citizen of this country.

Puerto Rico Sets Example for Latin American Labor

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1939

Mr. IGLESIAS. Mr. Speaker, Puerto Rico seems destined to become a cultural meeting place for the Americas, a role for which it is ideally suited because of its location midway between North and South America and because it still retains the Spanish language and Latin American traditions to a considerable extent, at the same time being a territory of the United States, in which many of the institutions and ideals of this country have been adopted.

The Interdepartmental Committee for the Improvement of Cultural Relations, in a report issued by its chairman, Mr. Sumner Welles, Under Secretary of State, recommended Puerto Rico for this important function in the promotion of the good-neighbor policy and stressed the contributions which Puerto Rico could extend along cultural and agricultural lines. But in addition our island can accomplish fully as much toward improving the welfare of the laboring classes in the Central and South American Republics.

Not many people in the United States, and few of my colleagues in Congress, realize the tremendous strides which labor has made in Puerto Rico during the 40 years our territory has been under the American flag. This may sound strange, in view of the frequent attention which has been called to our unemployment problem, but even though more than one-third of our workers are without employment, labor as a whole is in a far better position in Puerto Rico, from many standpoints, than in any of the neighboring Latin American countries.

Perhaps the best proof of labor's attainments in Puerto Rico is shown by the extent to which our labor party is represented in the island's government. The insular treasurer is a member of our party. Another member of the Governor's executive committee, the commissioner of labor, is a representative of the workingman's party. Several members of the supreme court of Puerto Rico are warm friends of labor. In the Puerto Rican legislature 9 of the 19 senators and 15 of the 35 representatives come from the ranks of labor, and I, Resident Commissioner of Puerto Rico in the United States Congress, have the honor to be president of the labor party.

The prominent part which labor plays in the administration of the island's affairs cannot fail to impress representatives of the various Latin American countries who already visit us in large numbers to study our various institutions, and who will be coming more frequently when the program for improvement of cultural relations gets under way. And they will be further impressed by the democratic privileges which labor enjoys in Puerto Rico and by the progressive legislation which the island has adopted in favor of the working man.

Forty years ago, when the American troops under Gen. Nelson H. Miles first landed in Puerto Rico, I, a leader of organized labor, was in jail for having advocated privileges which today are enjoyed by every Puerto Rican and every other American citizen—the rights to strike and to bargain collectively. Since my ideas were somewhat ahead of the times, I again was imprisoned a few years later, but was released following an investigation by President Theodore Roosevelt and the American Federation of Labor, which established forever the right of the workers in Puerto Rico to organize for the betterment of their conditions.

Today we enjoy every one of the privileges of democracy. Freedom of speech exists just as truly in Puerto Rico as in any State of the Nation. Our people enjoy to the fullest extent freedom of the press, freedom of public assembly, and freedom of worship. These privileges, of course, are taken for granted by the people of the United States, but remember that Puerto Rico is a Latin-American island, with a 400-year background of Spanish tradition, temperament and ideals. It is my belief that when hundreds of visitors from Central and South American republics observe the principles of true democracy working so smoothly and effectively among a people almost identical with their own, they will realize that labor in their own countries can and should enjoy the same privileges.

As for labor legislation, continental labor leaders have been surprised to learn that Puerto Rico has stepped out ahead of many of the 48 States. For one thing we have a child-labor law, which is strictly enforced. Our great sugar industry, which accounts directly or indirectly for two-thirds of the jobs in Puerto Rico, employs no children except perhaps on a few of the small privately owned sugar farms, and only a handful of women. Puerto Rico also has a workmen's compensation law which is held up as a model for many of the States and is unique in that it covers agricultural workers as well as factory employees.

Wages in our leading industries are now determined through collective bargaining, a modern, intelligent process which has brought about substantial increases for many thousands of our workers in the last few years. Our labor disputes, for the most part, are settled quickly and peacefully, with the aid of mediation and arbitration, when necessary. Even the protracted 5-week shipping strike of January 1938 was conducted throughout with an almost unprecedented lack of violence and disorder.

Faced, because of our dense population and growing unemployment, with the necessity for spreading the work among a maximum number of employees, Puerto Rico several years ago adopted an 8-hour day, which again applies to agricultural labor as well as to every industrial occupation. Our island, in fact, is the only sugar-producing area in the world with a compulsory 8-hour day.

It may be necessary, in view of restrictions placed on our major industries, to further reduce the length of the working day. One step in that direction already has been taken by placing Puerto Rico under the terms of the Federal Wage and Hour Act. Although certain of our industries, based on the processing of agricultural products, may be exempted from the terms of this legislation and Congress may see fit to change the provisions of the act with respect to Puerto Rico because of the peculiar conditions there, the Fair Labor Standards legislation undoubtedly will intensify unemployment. Thus, we shall be forced to exercise still greater ingenuity to find some means of livelihood for the individuals who may become unemployed in our needlework industry and other smaller businesses.

Wages in Puerto Rico have been relatively low compared to mainland standards and yet are considerably higher than they were in 1898 when the island first became a part of the United States, and substantially higher than in most of the other tropical areas of Latin America. Our party has worked unceasingly for a higher wage structure and will continue to do so, bearing in mind that too drastic increases in a short period of time might handicap our program instead of furthering it.

The visiting students and other observers from the good neighbor countries also will find that Puerto Rico has provided its laboring classes with an educational system and a public-health program which are not equalled elsewhere in the tropical world. They will be impressed by the low rate of illiteracy, the percentage of illiteracy among our working people having been cut almost in half during the last 40 years.

Living standards among our laboring people also will be found higher than in most other tropical places. Though the workers' homes for the most part are simple and often crude, the people collectively enjoy far more of the every-day necessities of life than the residents of neighboring countries. Electric lights, for example, are found in homes in all corners of the island, and many families now have radios.

These advantages are the result of the friendly aid of the Federal Government and of the resourcefulness of our own people. Since becoming a part of the economic life of the United States, our food supply has been increased greatly, so that the typical worker enjoys a more ample and more nutritious diet than he formerly did. We are able to buy more than 500,000,000 pounds of nontropical foods each year from the farms of the United States mainland and nearly $4,000,000 worth of clothing, together with $6,000,000 worth of building materials, in 1 year's time. Shoes are worn more generally in Puerto Rico than in other neighboring countries, the island's people buying nearly 3,000,000 pairs from our mainland manufacturers each year, more than the United States sells to all foreign countries combined.

The University of Puerto Rico, our School of Tropical Medicine, and our many civic and social organizations modeled on those existing in continental United States will accomplish much toward the development and improvement of cultural relations between the Americas. Moreover, the widespread use of mainland goods in Puerto Rico will thoroughly acquaint our Latin-American visitors with the products of mainland farmers and factories, thus helping to stimulate inter-American trade.

More than half the food supply of Puerto Rico, all of our clothing, all of our machinery, and most of our manufactured goods come from the States. Nearly 95 percent of everything Puerto Rico buys from the outside is purchased from businessmen in the States. Thus, in effect, we present a great permanent exhibition of American goods such as can be found nowhere else in Latin America.

In addition, our Latin-American neighbors will find a peaceful, orderly, and loyal community such as cannot always be observed in our part of the world. We have occasional disorder, to be sure, as does every city and State on the mainland, and some of our citizens are not in accord with the policies of the United States Government, which is equally true of many of their fellow American citizens within the 48 States. But the Puerto Rican people as a whole love the American flag and all that it stands for and look forward eagerly to the day when their relationship with the United States will be still closer than at the present time.

Contact with our American institutions and manufactures unquestionably will help greatly to cement relations between the United States and its good neighbors. A better understanding of American democracy and of the traditions and habits of the countries involved is certain to result when their peoples mingle on our progressive island. By adding to those desirable developments an impressive picture of Puerto Rican labor enjoying privileges almost unknown in some neighboring countries, Puerto Rico will have made a notable contribution both to the United States and to the laboring classes in Latin America.

Tax Measure Would Nullify State Rights—Congress Must Defend State Sovereignty by Submission of an Amendment to the People for Their Decision

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1939

Mr. FENTON. Mr. Speaker, under leave to extend my remarks, I wish to insert my further views on the Public Salary Tax Act (H. R. 3590), because I believe it is more important as a constitutional consideration than as a revenue measure.

Federal taxing authorities are taking the position that the Federal Government can tax States and municipalities without their consent.

The Federal Government, in raising the issue of taxing State and local employees' salaries, should do it in established ways, namely, congressional action on a proposal to amend the Constitution. Our people would not oppose taxation of salaries by the Federal Government and the States reciprocally if such taxation will build instead of destroy.

Administration leaders declare it is purely a matter of principle involved in the Public Salary Tax Act, because the tax will yield less than $16,000,000 annually.

We must defend State sovereignty or States' rights. There must be a balance of power between the States and the Federal Government.

This act is in my sincere judgment simply a trail blazer leading to a tax on State and municipal bonds and other securities by the Federal Government. There can be no grounds for belief that the Federal gain in tax revenue would be of such amount as to justify the penalties that such a program might inevitably inflict upon the States. Small income and small business would pay the bill.

There should be no radical change in our public financing without full consideration through the process of the submission of a constitutional amendment. The people of the States will thereby participate in authorizing and sanctioning a change which will be of great importance to them. The people of a sovereign State do not want such changes forced upon them as now proposed by the Treasury. This problem should be approached in an orderly and dignified manner.

I feel definitely that the Federal Government, if it wants to tax State and local employees' salaries, should so do in the well-established ways, namely, congressional action on a proposal to amend the Constitution.

I will go on record as favoring the prompt submission of an amendment to the people for their decision.

Taxation of State and Municipal Employees

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1939

Mr. OSMERS. Mr. Speaker, imposition of an income tax on State and municipal employees in a State like New Jersey will most assuredly mean additional taxation for all the people of that State.

New Jersey has no State income tax and wants none. But if the Federal Government imposes a tax on its State and municipal employees most certainly the State is going to take advantage of the opportunity offered by House bill 3590 to levy an income tax against Federal employees by taxing the income of all its residents.

The bill immediately raises the question of States' rights, and the right of the Federal Government to tax the employees and functions of the State, a right specifically prohibited by many decisions of the Supreme Court. It brings into immediate conflict the sovereignty of the States and the rights of the Federal Government. This bill would open the door to the absorption of the functions and the privileges of the States and local governments by the Federal Government. That, and not the comparatively insignificant revenues to be derived from the bill, is the motive behind its introduction.

There is more than a doubt of the constitutionality of the measure. When the income-tax amendment was passed there was no intent to tax the employees and functions of the States. No decision has ever implied that power to the Federal Government. If this form of taxation is to be imposed, it must be by constitutional amendment, not by congressional enactment. By the same token, we are depriving all State and local employees of their constitutional rights.

I am in agreement with the fairness of the taxation of public salaries. There is no clear reason why they should be exempt from the tax exacted from private income. The objective is right. The method is wrong.

American Liberty Threatened

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1939

Mr. SPRINGER. Mr. Speaker, we have observed from experience that our Nation cannot obtain any reasonable recovery or adequate prosperity by continuing to resort to a monumental program of spending, nor by adopting and adhering to policies of more centralized Government control, which degenerate into dictatorial forms of government. This plan and idea of government constitutes a myth, of which the average citizen realizes so little except as the same personally affects him or his business.

Again, we find when our people consent to mobilization by our Government under the apprehension that the same is essential either for peace or war, they yield much of their individual liberty for a fancied and suggested security. Not many years hence the American people will either individually decide for themselves the major problems or they will have those things determined for them by force of circumstances, and that major problem will be whether their system of free enterprise is to be continued and preserved or whether the same will be suppressed and supplanted by a centralized management of their lives and of their works.

Coupled with that plan of anticipated security there is proposed the plan to control prices of various commodities in our country. We must remember that the inevitable outcome of price control is that saving is made compulsory, labor becomes the subject of an order and consumption is the subject of command. Such control would not only imply but would make complete the monopoly of capital, production, employment, and consumption and that would mean the absolute and complete domination of the people's activities in both life and thought.

Since freedom and liberty have been subjected in large part to centralized control, the demonstrated result is that enterprise of every kind has been demoralized and there has been exhibited to the people an orgy of spending, hitherto unknown, which has hurled our country into an unprecedented debt! By reason of this condition, which is the creature of the New Deal, the capital and the savings of our people seek a hiding place instead of an entrance into productive enterprises and employment.

We will remember that any prosperity is wholly unsound if it is artificially based upon the constant increase of our national debt. Any recovery of business and industry which is purchased with borrowed money is resting upon quicksand. The restoration of public confidence and a well-balanced Budget must replace the unsound theory of pump priming and annual Government deficits if we are to enjoy prosperity in the future. The present course, which is blindly followed by the adherents of the New Deal, will mean disaster.

For a long time I have wondered if our country has not been drawing on reserves which have been built up through production and thrift of former years. The years when our farmers were constantly working and saving, and when our laborers were employed at productive employment and were laying aside a portion of their earnings for the rainy day, have made possible the surplus upon which the people have been drawing; that surplus is now exhausted, or nearly exhausted; the national debt is very near the fixed limit; the people are struggling to live and to pay their fixed charges and obligations, their taxes and their debts; yet no word of encouragement is offered by the national administration, now in power, to business or to industry which will, even in a small degree, stimulate their activities; and no word of encouragement has been offered to the people which will create confidence in them for their government. The radical policies promoted by the New Deal have been miserable failures; each one of them has been highly expensive and wasteful; the people's money has been frittered away with a reckless abandon; the plans of the New Deal have not been geared to any productive outline, and we find "they grind no corn" and "they bake no bread"; a politically planned economy means that all are plans and there is no economy in it. The entire economy of our country has been inflated by Government expenditures, and our people are being made to live desperately on the future without being conscious of that fact. It was under these unwise plans and uneconomic policies the depression has been continued, and by those same tokens it is now being augmented and continued into the future.

When incomes and profits, no matter how small the same may be, are fully protected from Government waste and extravagance then there will be a restoration of public confidence sufficient for business and enterprise to attract capital and be helpful to labor; with the restoration of confidence on the part of our people in our Government, the relief rolls will largely diminish and labor will again be employed at productive employment. But now, under the present plan, with confidence largely destroyed in our Government, business has been unable to attract capital and it has been of little help to labor. The result has been that the people have suffered and they are still suffering.

Therefore, we have the W. P. A. and the P. W. A. and various relief agencies with us. It is appalling for the people to read the press and to scan the CONGRESSIONAL RECORD of recent date, and to witness the statements made in the Senate respecting the confirmation of Harry Hopkins, quite recently appointed to be Secretary of Commerce, and who was the former administrative head of W. P. A.; these discussions show that politics were injected into that relief agency—an agency created to relieve misery; the people of this Nation know full well that politics have been played in the W. P. A. and the P. W. A. and every relief agency from the very outset of relief to this very hour by the New Deal; that politics should be injected into matters of relief is a most disgraceful thing; the people do not like it; those on relief do not countenance it; by reason of that unholy practice the freedom and the liberty of those on relief have been diminished to the extent that the independent right of franchise has been taken away from them.

Those men and women on relief are good American citizens; they are our neighbors; they have been unfortunate, that is all. Their condition has come upon them by reason of necessity, not by choice. The men and women, and the party, who dare to play politics with unfortunate people, when misery stalks in their homes, and to tamper with their freedom as American citizens at the ballot box, have committed a grave offense, one which should not be countenanced by the people of any nation. We must remember that every American who is able to work wants a job. They will never be satisfied without jobs. They want a job at a substantial and a saving wage; they do not want a mere pittance of a dole, and they certainly do not want to be the recipients of a political dole. Our Americanism rises to the point of condemnation when we think of the white-collared bosses and the political manipulators now drawing large sums from relief funds, who are not entitled to any relief whatsoever. This ruthless waste and spending of relief funds for political purposes must stop. Relief funds must be used for relief, and for relief only.

Our abundant life depends very largely upon productive work to obtain it. Years of experience has taught us that lesson. Any plan to the contrary is entirely unworkable.

Concluding, may I suggest that one way out of the present impasse is to relieve the burden as much as possible and to encourage business and industry to increase production, even with a smaller profit, but with some margin of profit to the producer. This will aid in taking up the slack and in relieving the relief rolls from the lengthening list now upon them. Production is the source of all wealth. When production is curtailed then labor suffers. If we are to create and maintain even a moderate degree of prosperity, we must do the things which will cause the wheels of business and industry to turn and produce the greatest possible output of useful goods and commodities of the highest quality and at the lowest possible price and with the greatest possible return to labor; this will permit capital to work; we will then enjoy prosperity. Any plan of scarcity in production is economic suicide; scarcity will never enhance prosperity in any degree.

May I therefore urge that liberty and free individualism stimulate self-confidence and ingenuity? These have never resulted from reliance upon State or National control of enterprise. As the powers of the State or Nation are increased, the freedom of the individual is decreased until the semblance of enslavement supplants liberty; the creative opportunity of the individual is entirely denied by that process, and the depressed condition of our Nation continues.

Taxation of Public Officers and Employees

EXTENSION OF REMARKS

OF

HON. CLARENCE E. HANCOCK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1939

Mr. HANCOCK. Mr. Speaker, everyone considering this bill or the general subject of governmental tax immunity is compelled to go back to the case of McCulloch against Maryland, which has been quoted and cited thousands of times. The case involved the validity of a Maryland tax on the notes issued by a national bank, chartered under Federal law and doing business in Maryland. It was a discriminatory tax and a destructive one. The tax was held to be invalid in a famous opinion written by John Marshall in 1819.

It was Marshall's great task and his great contribution to our struggling young Republic to strengthen and solidify the power and authority of the Central Government and to prevent the nullification of Federal laws or the destruction of Federal instrumentalities by State laws. He approached the question entirely from the Federal standpoint, and apparently the immunity of States from Federal taxation was not in his mind. His conclusion was based on no specific clause of the Constitution but on the implication of the supremacy of the Central Government arising from the declaration in the Constitution that the Constitution and the laws made in pursuance thereof shall be the supreme law of the land.

He took that occasion to write a lengthy treatise on the powers of the Central Government, in the course of which he wrote his famous aphorism, "The power to tax is the power to destroy."

Commenting on this phrase, the late Justice Holmes said:

> The power to tax is not the power to destroy while this Court sits * * *. The question of interference with government, I repeat, is one of reasonableness and degree.

No one would contend that a license to carry a gun implies the right to commit murder.

It was not until the renowned case of Collector against Day in 1870 that the tax immunity between the Federal Government and the States was held to be reciprocal.

The case of Pollack against Farmers' Loan and Trust Co., decided in 1895, held that a tax on income is invalid if derived from a source that is not taxable and that therefore an income tax on the interest on State and municipal bonds could not be sustained. That finding meant in effect that a tax on income is a tax on the source of the income, and a direct tax, which under the Constitution as it then existed had to be apportioned among the States in accordance with population. It led to the agitation for the sixteenth amendment. At the same time, public sentiment was growing in favor of shifting the tax burden onto those best able to pay, through the means of a graduated tax. The amendment was passed in 1916, and you know the wording:

> The Congress shall have the power to levy and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

The general public, the legislatures of the various States, and the Members of Congress who submitted the resolution to the States believed for the most part that the phrase "from whatever source derived" meant what it means in common everyday parlance. Among those holding this view was Governor, now Chief Justice, Charles E. Hughes, of New York. He opposed the resolution because in his opinion it subjected the income from State and municipal bonds to the tax. Thus the people themselves are on record in favor of the principle of the bill.

The Supreme Court held, however, in 1916, that the amendment merely removed the necessity of apportioning the income tax among the States and that it did not extend the power of Congress to tax income which prior to the ratification of the amendment it had no power to tax.

In later decisions, so far as I know, that doctrine has not been directly attacked, although the Court has steadily receded from the rule of absolute immunity to one of degree and reasonableness. The question of tax immunity has come before the Highest Court repeatedly, and the test now seems to be nearly this: Does the tax in fact burden, hinder, or destroy any governmental function or instrumentality? In other words, can the man trying to escape the tax show that his own personal tax immunity is necessary to the continued existence of the State? Of course, any tax is a burden on the individual who has to pay it, but the question for us to decide is whether the tax is a burden on government itself.

The latest case on the subject, at least the latest one I have seen, is Helvering against Gerhardt. The latter attempted to escape the Federal income tax on the ground that he was an employee of the New York Port Authority, therefore a State employee performing a governmental function and exempt from the tax. His salary was held taxable, and, although his case is distinguishable from that of a mayor or a Governor and other officials because of the nature of his employment, the decision gives a great deal of encouragement to those who believe as I do that a nondiscriminatory tax on all public officials' salaries would be sustained.

I think it is regrettable that under the Court's decision in 1916 the sixteenth amendment does not extend the taxing power of Congress to income not previously taxable. But in my own mind I can draw a clear distinction between the taxability of income from public securities and salaries of public officials.

It seems to me that a tax on public securities would place a serious burden on Government—Federal, State, and municipal. It would greatly reduce the market for such securities, increase the interest rates that would have to be paid, and therefore increase the tax burden, and in some instances might destroy the borrowing capacity of municipalities altogether. It would have a direct and immediate effect on fiscal policies. But that question is not before us in this bill and we are not required to pass on it. We can reserve decision.

It is being argued that this bill is merely a forerunner to legislation permitting the Federal Government to tax schools, parks, and playgrounds, as well as State and municipal securities. That I do not admit. So long as we have an independent Supreme Court and a Congress that is something more than a chorus of "yes" men, or either one, destructive proposals cannot become law. And if the time comes when the Court and the Congress become mere rubber stamps, our form of government as we have known it cannot long survive.

We must meet issues as they come up and decide them with such collective wisdom as we possess. The question presented by this bill, as I see it, is whether the taxing of public officeholders' salaries will in any material way interfere or hinder good government.

If we are realistic, I think we will decide in the negative and pass the bill. I cannot see that it is a party question at all, and I hope it will not be regarded as such. Although I often have some difficulty in coming to a conclusion on pending legislation, I have no doubt in my mind regarding the merits of this bill.

No Member of Congress is going to resign, nor any other public official anywhere, because of the passage of this bill. There will be just as many, and as good candidates for public jobs as there are now, and they will probably be the same men. Their efficiency will not be impaired, and this Government—any government—will not be crippled.

Some concern has been expressed for the public officials having small salaries. The vast majority of them will not be affected at all in my State, and that is all I know about. The New York statute exempts $2,500 of the income of married men and heads of families from the income tax and $1,000 in the case of others, as does the Federal income tax. But bear this in mind: This is not a discriminatory tax. Public employees will pay no greater tax than their neighbors in private employment with the same incomes.

In New York State a Member of Congress whose entire income is his salary and who has an exemption of $2,500 escapes a State income tax of $365. That is a hidden bonus to such a man which was not contemplated when the State income-tax law was passed or when Congressmen's salaries were fixed. Our constituents cannot see any just reason why the tax on our salaries should be different than the tax on theirs, and neither can I.

It seems to me that the basis of all the reasoning in the tax immunity cases is the law of self-preservation. If you will be realistic and face the actualities, I think you will come to the conclusion that this bill offers no threat to government, Federal, State, or municipal.

Equalizing the Burden of Taxation

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1939

Mr. LUDLOW. Mr. Speaker, I am willingly giving my support to legislation to allow the Federal Government to levy income tax on State officials and, contrariwise, to allow the States to tax Federal officials, because I believe with all my heart in the great Jeffersonian principle of "equal rights to all and special privileges to none." It is in the public interest that laws which levy the heavy burden of taxation should apply equitably and without discrimination. I should have to bear the same load of taxation that others in similar circumstances have to bear and vice versa, and there should be no discrimination between citizens in laying these burdens.

On January 3, the day the present Congress opened, I introduced the following bill:

Be it enacted, etc., That compensation derived from personal services rendered any State, or political subdivision thereof, or agency or instrumentality of any one or more States or political subdivisions, whether or not arising out of the exercise of an essential governmental function, shall be subject to the Federal income tax applicable to the period for which received.

SEC. 2. Consent is hereby given to each State and taxing authority thereof to subject to income taxation, at the same rate and subject to the same provisions of law as other compensation is taxed, compensation derived from personal services rendered the United States, the District of Columbia, or any Territory or possession thereof, or any agency or instrumentality of the United States, the District of Columbia, or any Territory or possession, if the person subject to such taxation is otherwise subject to the taxing jurisdiction of such State or taxing authority.

I would not support any measure, however strongly I might believe in its justice and merit, if I were convinced it was unconstitutional, as I have too much reverence for the Constitution to want to override it in any instance. However, before I introduced my bill I obtained opinions from the Department of Justice and the Treasury Department in regard to the constitutionality of the measure, and as my contribution to the discussion of this important matter I present to the House and the country the views of these two Departments, the one dealing with the administration of the law and the other with taxation. These letters follow:

DEPARTMENT OF JUSTICE,
Washington, D. C., November 29, 1938.

Hon. LOUIS LUDLOW,
Member of Congress, Washington, D. C.

MY DEAR CONGRESSMAN LUDLOW: This will acknowledge receipt of your letter under date of November 22, 1938, inquiring as to the power of the Congress to impose an income tax upon the salaries of State officials and employees.

In reply to your inquiry there is being forwarded under separate cover a copy of a study recently made by this Department entitled "Taxation of Government Bondholders and Employees; the Immunity Rule and the Sixteenth Amendment." You will observe that the conclusion reached by this study is that the Congress has the power under the present trend of decisions, wholly independent of the interpretation to be given the sixteenth amendment, to tax the net income arising from the compensation paid State officers and employees. In addition, in view of the material gathered in this study, it appears that the sixteenth amendment, under a proper interpretation thereof, grants the power to enact such legislation.

For the Attorney General.
Respectfully,

JAS. W. MORRIS,
Assistant Attorney General.

TREASURY DEPARTMENT,
Washington, November 30, 1938.

The Honorable LOUIS LUDLOW,
House of Representatives.

DEAR MR. LUDLOW: I am writing to reply to your letter of November 29, addressed to Secretary Morgenthau, in which you ask what obstacle there is now in the way of extending the Federal income tax so as to make it applicable to State and county officials and employees.

Both Secretary Morgenthau and several of his predecessors have favored the elimination of these exemptions. Consideration has been given to the desirability of a constitutional amendment, but in view of recent decisions of the Supreme Court it is believed that a constitutional amendment is not necessary but that on the contrary an amendment to the revenue act specifically subjecting these incomes to taxation would be sufficient.

The Attorney General has rendered an opinion on this subject, which because of the wide interest of the question, was issued in printed form. It is probable that you could obtain a copy from the Department of Justice.

I am enclosing mimeographed copies of addresses on the subject by officers of the Treasury Department.

Yours very truly,

HERBERT E. GASTON,
Assistant to the Secretary.

Aviation Legislation in the Seventy-fifth Congress

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1939

Mr. SHANLEY. Mr. Speaker, in a world where the chaotic cataclysm of international relations grows daily more terrifying, aviators as a class seem to escape the poisonous venom of these outrageous backgrounds. The camaraderie of aviators, their well-known absence of jealousy, and the spirit that brings them together regardless of race, creed, or factions is a redeeming feature of today's hectic hours. From their deeds, their intrepidity, and their glamorous way of living may come the quickening realization of the real brotherhood

of man. Historically the sublime example of those heroic men and women of the Middle Ages who made up the Crusades did more to bring better feeling and wider knowledge and acquaintance than any prior effort other than the universality of the Christian church itself. Modern air progress is a worthy successor.

May the 28th, 1937, to be exact, in speaking of the President's signature of the bill to make that day National Aviation Day, I ventured to say that "The newspaper of a future tomorrow morning printed on this side of the Atlantic may be read in the evening of that same tomorrow." Just the opposite has happened, for in a news dispatch the other day a paper printed the night before in London was within reach of our own breakfast arm the next day. That was the innovation of the pickaback British seaplane. But the pace is fast, and the humorous headline of a New York paper that "United States virtually cut off from Europe for a day" tells the speed.

The British, German, French now are vying in their efforts to catch world headlines to top the Achillean prodigiousness of Hughes and Corrigan. Our answer is Pan-American's 6,000-horsepower 74-passenger superclipper which will ride through the air lanes to Lisbon via the Azores. That is Pan-American Airway's pioneer in transoceanic air facilities—the concern which packs more wealthy men in its adventurous ranks than any similar enterprise. In that huge endeavor is Juan Terry Trippe.

Where wealthy Hughes devoted himself to scientific pursuits, Trippe, of an American tercentenary family of Maryland, gathered around him in his Morgan-fostered enterprise Cornelius Vanderbilt, Percy Rockefeller, and William Vanderbilt. From that group came United States air mail route No. 1 (New York to Boston) in 1926. Then to Florida, to the Caribbean, South American, the Far East, the Pacific, Alaska, and now to Lisbon. Their deeds opened American eyes to the absolute necessity of our possession or repossession of the Wake, Jarvis, Howland, and neighboring South Pacific islands—the stepping stones of the Pacific—the heritage of New England whaling captains and their gift to a twentieth century American youth on the wings of the air.

In the air the race belongs to the swift, for the essence of progress and success in the sky is daily marked by record-breaking performances in the annihilation of time. The innovation of traversing hitherto unchartered air lanes is giving place to those winged mercuries of the air above who cut down time. Records and safety supersede discovery.

Yet behind every breath-taking eclipse of time there must be the ever-present success in specialization in air mechanics. Constant tests, experiments, and free play of aeronautical imagination must come into the picture. Thus, behind every front-page achievement there are the unsung motor mechanics in cabin and pits and aeronautical engineers working in laboratories. My own State of Connecticut has had a proud part in the sensational triumphs of aeronautical engineering.

Legislation in the last Congress has recognized this to the fullest. Those of us who have the aviation industry close to our hearts and thoughts never cease to struggle to make our people aware of the titanic world struggle that is going on for world trade and world air supremacy. Every nation is seemingly intent on furnishing to the world the highest, most notable spectacles in aerial achievement. The highly scientific round-the-world flight of Howard Hughes and his crew should not cloud our realization as to what other nations did and may do next to steal our thunder.

It was no mean emblazonment on the records of mankind's progress in the air in 1937 for the Union of Soviet Socialist Republics to startle the universe with its accomplishment on that spectacular pioneering air transport of 4 Russian airplanes, with 42 scientists, radio technicians, and weather observers to the North Pole. They landed these ships on unprepared ice fields in the center of the bleak, dangerous Arctic Ocean.

Speed, the cry of the hour, in the air has its fullest counterpart in the animal kingdom during the aeons of time that have elapsed. Those animals who have survived the geologic ages have not only been strong, powerful denizens of the deep, but they were streamlined for speed, too. Scientists tell us they came first from the land where speed is the unalterable law of success except for slow-moving, hide-protected gargantuans.

From the rivers first came the fish, the reptiles, and other mammals. In their process of adaptation they became cigar-shaped with shorter necks, longer tails, their limbs became paddles or fins. From these natural developments man has learned much and from these "patterns of success," as J. H. Bradley calls them, air mechanics have profited.

Now all know our overpowering desire to cultivate South American friendship and trade, both embodied in the administration's good-neighbor policy. Let us take an example—Bolivia. There is no other country in the world, with the possible exception of Tibet, which has its trade impeded by more geographical obstacles than Bolivia.

When you get to the plateau your average height is 13,000 feet then you have two principal ranges of the Andean Cordillera, varying in altitude from 20,000 to 24,000 feet. But there is no seaport and the cost of constructing railways is prohibitive. Air seems the only salvation. Bolivia beckons as a challenge and a most perfect example of furthering the good-neighbor policy.

Let us skip from our own hemisphere to that of Continental Europe. In another field the lion and the lamb get together—France and German aviation cartels actually pool their resources to solidify their hoped-for success across the South Atlantic.

What is the act to aid us? It is the act which created the Civil Aeronautics Authority to promote the development and safety as well as to foster the necessary regulation of civil aeronautics all with the underlying thought of dual success in the modern international struggle of world air trade ways and possible military success.

It is the fullest attempt to bring order out of impending chaos that has ever greeted a new industry. It proposes to augment and intensify under favorable auspices the science and art of flight, which is termed "aeronautics." It seeks to place America as the primate in world commerce and postal service and national defense. It will stress safety and progress under sound economic conditions, but through it all will run the skein of reasonable charges, the absence of unjust discrimination, unfair preferences, or that kiss of death—destructive competitive practice. Yet it recognizes the dire need of competition.

It establishes the first bill of rights for the air—the solemn pronouncement "that there is hereby recognized and declared to exist in behalf of any citizen of the United States public right of freedom of transit in air commerce through the navigable air space of the United States."

The Civil Aeronautics Authority has five members appointed by the President by and with the consent of the Senate and there is in the Authority an Administrator appointed by the President by and with the advice and consent of the Senate. That Authority will cooperate with those great pioneers of air navigation—the State agencies, whose work has been of tremendous significance.

The preservation of areas for the establishment of civil airways, landing areas, and other air-navigation properties become the especial care of this set-up.

It is only a beginning but no infant industry has ever been blessed with such a comprehensive study as this act necessitates.

In the appropriations for the Military Establishment embodied in Public Law No. 590 we find an all-embracing item termed "Office of the Chief of Air Corps, $242,560." In the detailed study of the Air Corps we find the most illuminating discussion of the effort of the Army to keep pace with foreign competition. They need that sum.

In Public Law No. 787 there is an authorization of $2,000,000 for the development of rotary wing and other aircraft of which $600,000 must be taken and exclusively used in the

placement of contracts for the construction of improved and experimental types of the rotary wing and other aircraft by private industry. It is significant that these must be built by private industry.

Even in the personnel we have increased the enlistment allotment in the Air Corps. That is accomplished by Public Law No. 588. The increment now becomes 21,500 instead of 16,000.

Again in the field of experiment we resort to the Post Office, pioneer aids in air navigation. Under Public Law No. 486 the Postmaster General is authorized to provide for and supervise experimental services in connection with the transportation of mail by air, including the transportation of mail by autogiro aircraft shuttle service between outlying airports and central city areas. The Postmaster General must report back to us in the next Congress.

In addition, under Public Law No. 420 there is a further extension of air-mail service permitted.

The usual services of the Weather Bureau include aerology and constant observation of atmospheric phenomena. There is an item of $270,000 for the replacement of aircraft for the Coast Guard in the Treasury Department Public Law No. 453.

In the Navy we have given for an additional amount for navigational, photographic, aerological radio, all in the aeronautics branch, $2,000,000, plus another $3,000,000 under the Navy Expansion Act.

Aircraft carriers are increased to a tonnage of 20,000 tons, plus three large and seven small seaplane tenders and $3,000,000 for the construction of a rigid airship of American design and American construction. In Public Law No. 493 under the general Navy appropriations we find the most detailed assistance to their Bureau of Aeronautics of over $45,000.

These are outstanding efforts of the Seventy-fifth Congress to aid in maintaining our record in the air. Events of the past few weeks involving the sale of ships to foreign powers clearly indicate that that supremacy is admitted. Let us keep it there, and let us make it known by means of a national holiday as we did 2 years ago. We cannot expect a permanent holiday at present, but we can expect to honor the industry and the profession when the year permits.

Civil Aeronautics Act of 1938

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1939

ADDRESS BY COL. EDGAR S. GORRELL, OCTOBER 15, 1938

Mr. RANDOLPH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered by Col. Edgar S. Gorrell, president of the Air Transport Association of America, at the Eighth Annual Convention of the National Association of State Aviation Officials, at Omaha, Nebr., October 15, 1938:

Democracy stumbles and muddles. It is too slow for the man on horseback.

But now and then it takes a great stride forward to catch up with the times. Those strides confound its critics.

During the last session of Congress our democracy took one of those strides when it adopted the Civil Aeronautics Act.

To us in aeronautics that act means much. But it may prove of even deeper significance to the Nation at large. For it represents the first attempt by Congress to meet and master a fateful problem of modern democratic government.

Mr. Justice Stone has stated that the most striking recent change in our legal structure has been the rise of a system of administrative law. For a half century the Federal and State Governments have been adopting isolated measures which vest in administrative agencies combined legislative, judicial, and executive functions. This union of functions would no doubt have shocked the Constitution makers. But the insistent demands of civilized life in a machine age have spoken louder than voices from the grave. The sharp impact of the facts of life has shaped to new lines our ancient theory of the separation of powers.

While these new lines of constitutional doctrine have by no means destroyed, or even impaired, the liberty which it is the design of separated powers to secure, they have permitted the appearance of certain tendencies which, if pursued, might become dangerous. Notable is the tendency to make the same person both prosecutor and judge. Notable also is the tendency so to burden the judicial officers of an administrative agency with duties of an executive nature that the efficiency of those officers is threatened.

The fear that these tendencies would develop has led many eminent gentlemen vigorously to oppose the creation of administrative agencies of government. This opposition has, at times, verged upon hysterics. There are those who have insisted that we return to the conceptions of a simple society and transfer to the courts the judicial functions now vested in administrative bodies.

Such reaction would plunge us into hopeless confusion. Imagine if you can where aeronautics would be 20 years hence if there were no speedy administrative instruments for determining disputes and securing compliance with law. Under such circumstances aeronautics would be grounded in twisted wreckage.

The suggestions of extreme reaction should not, however, obscure the grievances which they represent. Let us examine those grievances more closely.

The tendency to make the same agency both prosecutor and judge quite properly evokes protest. Where the legislature simply creates an administrative agency charged with the regulation of an industry or of certain practices, without making provision for the separation of judicial and prosecuting functions, it is easy for the two to become blended. Administrative bodies have made notable efforts to avoid this union and the courts have elaborated rules of procedure designed to the same end. But even the familiar device, adopted by some agencies, of proceeding by an examiner's hearing, with proposed findings and argument on exceptions thereto, has not altogether avoided the difficulty. Too often we find that the same persons in an agency institute a case, prepare it for presentation, and then act as advisors to the administrative tribunal when it is finally decided. Where this occurs it requires a profoundly judicial temperament to advise without preconception.

The tendency to saddle executive duties upon administrative officers also presents a serious problem. This tendency springs not so much from the necessities of our machine age as from our Anglo-Saxon propensity to deal with problems one at a time as they arise. Upon only a few occasions in our history have we sought to anticipate problems by the laying down of general rules. Most of the time we eschew general rules, simply pouncing upon individual questions and dealing with them with no particular relation to other issues or to broad implications for the future.

As Dean Landis, of the Harvard Law School, recently said:

"The administrative agency came into being not as a single, comprehensive, philosophical conception but by a process of empirical growth. These agencies have always sprung from a concern over things rather than over doctrine."

This has resulted in the creation of a maze of agencies with the most bewilderingly different kinds of powers. An agency once created is vested first with one power and then with another until through the years the process of accretion produces a veritable potpourri of governmental functions, the administration of which would challenge the ingenuity of a Pooh-Bah.

The dangers of this development are patent. Chief among them is the fact that the officer charged with the task of determining rights and obligations between man and man and between man and society may likewise be burdened with so much administrative detail that he finds it impossible to maintain the atmosphere of detachment which is indispensable to judicial action. Equally serious is the danger that the agency will be forced to divide its duties among its members, with the possibility of creating the confusion which comes from the right hand's ignorance of the left hand's behavior. Finally there is the very real fact that human beings have limited capacities, and dissipation of their energies is a fatal blow at the quality of their labor.

I have referred to tendencies, and I want to be understood as meaning nothing more. I do not join those who protest that our governmental agencies have broken down or have been transformed into instruments of tyranny. I mean only that we have reached a point where dangers lurk if we continue blindly to bestow variant powers upon administrative bodies. I mean only that the warning signs are out, and our democracy will do well to heed them.

There is an additional factor which complicates the problem of government through administrative bodies and which makes it of particular importance that we take stock of our governmental methods.

Hitherto, when we have approached questions of governmental regulation, we have thought largely in terms of protecting the public from abuse of economic power in private hands. Until very recent years we have thought of government almost altogether as a policeman whose duty was done when it had swung its club upon the skulls of malefactors.

For example, the Interstate Commerce Act of 1887 was conceived in the belief that the power of the railroads required bridling in order to safeguard the interests of shippers. The need for gov-

ernment to take a hand in conserving and planning the development of our railroad resources found no clear expression in legislation until 1920, and then only modestly.

It is true that in certain restricted channels—such as lighthouse building and road building and the provision of a postal system—government has gone beyond the policeman's role to an important extent. But generally speaking, government's relation to industry has been regarded as that of the policeman on the beat.

That government should accept as a portion of its regular responsibility the function of assisting industry, and even assuming leadership, in the solution of industry's economic problems, would have seemed preposterous a few years ago. Thus when we created a Department of Commerce we felt that government had done its part when it was provided that the Department should "* * * foster, promote, and develop the foreign and domestic commerce, the mining, manufacturing, shipping, and fishery industries, and the transportation facilities of the United States * * *" (32 Stat. 826; 5 U. S. C. 596).

However, we are now aware that such a broad statement does not come to grips with the economic ills besetting many of our industries today. It is necessary for government to deal more specifically with economic diseases, the symptoms of which are idle plants rather than exploitation of the public.

To some extent government has already begun to respond to this need. The N. I. R. A. and the Bituminous Coal Act have given us examples of this response. But, particularly in the N. I. R. A., the emphasis was largely upon the so-called chiseler or cutthroat. This is important, but even with no chiseling there would still be basic and challenging problems which call for the cooperation and aid of the Government.

To illustrate, I quote from the recent report to the President, submitted by the Chairman of the Interstate Commerce Commission, upon the critical condition of the railroads:

"In recent years there has been a great and radical change in transportation conditions brought about principally by the rapid development of new forms of transportation, not all of which are subject to the (Interstate Commerce) Commission's jurisdiction. The railroads have lost much of their former dominance. Competition has become a continually increasing and often a profoundly disturbing factor. The present 'transportation problem' is very largely the product of that competition, combined with depression. It has created need for readjustments between and within the different branches of the transportation industry, for consideration of present tendencies and their probable results, for the avoidance of uneconomic and wasteful practices, for the survey and possible amendment of governmental policies, and in general for the determination, creation, and protection of the conditions most favorable to the development of a transportation system which will best serve the public interest. Much of this is planning and promotional work as distinguished from regulation.

"In view of the multitude of conflicting interests among those engaged in transportation, we believe that it is necessary for the Government to take the lead in this planning and promotional work. Probably the need has long existed, but it has been vastly intensified by the recent great change in conditions" (H. Doc. No. 583, 75th Cong., 1st sess., at p. 34).

The transportation problem is not the only one upon which government will probably advance in our lifetime with a new set of tools and with purposes differing vitally from those which have motivated the more traditional type of regulation. If, when government assumes these new functions, it simply vests new powers in the administrative agency as we have known it, our governmental machinery will approach a break-down. As I have said, there is already a tendency to bestow all sorts of varied functions upon the administrative agency which impair its efficiency as a judicial body, a tendency which even now calls for reappraisal of our machinery of government. If we further complicate the situation by plunging administrative bodies, as presently organized, into a new realm of planning and promotion we will have taken a fatal step.

The report to the President to which I have just referred had this to say of the ability of the Interstate Commerce Commission to handle the new governmental activity which was recommended:

"The Commission, however, is not suited to the purpose. It was constituted for an essentially different purpose. Its methods and organization were designed for regulatory work requiring quasi judicial procedure. We believe that planning and promotion are separate and distinct from regulation, can be separately pursued without interference, and require unlike procedures and methods" (ibid.).

To sum up, there is a problem developing respecting administrative machinery which has three aspects:

1. There is a tendency unduly to blend the function of judge and prosecutor.

2. There is a tendency to weigh down the members of administrative commissions with varied duties of an executive nature.

3. We are on the threshold of a new departure in governmental activity which the traditional judicial type of administrative body is not suited to handle.

The importance of meeting this problem is manifest. Chief Justice Hughes recently commented upon the function of the regulatory commission, stating that the spirit which should animate its action "must be the spirit of the just judge," and that it will succeed only to the extent that it performs its work "with the recognized responsibility which attaches to judges and with the impartiality and independence which is associated with the judicial office." (Address before American Law Institute, May 12, 1938, as reported in New York Times of May 13, 1938.)

For the judicial—or, more properly, the quasi-judicial—officers of administrative agencies to be able to discharge their functions in this spirit, they must be able to act as judges and should not be compelled to become likewise the prosecuting attorney, the chief of police, the supreme economic council, and the governmental jack-of-all-trades.

At the outset I said that the significance of the Civil Aeronautics Act was not confined to aeronautics. The reason is that in that act Congress has explicitly recognized, almost for the first time, and has sought to deal with, in a preliminary way, these problems of administrative government.

In adopting legislation for civil aeronautics, Congress faced a situation almost without parallel.

In the first place, the industry embraces not only commercial carriers but almost all other civil flyers. In the second place, the industry covers not only domestic commerce but also commerce with foreign countries in aircraft under both our flag and the flags of other nations. In the third place, the problems of the industry involve matters both of economics and of safety, intimately interrelated and of equal importance. In the fourth place, the industry, despite its present relatively modest size, is of peculiar significance to basic national interests in both our peacetime and wartime life.

Finally, and this is of first importance, the need for legislation springs not at all from a need to protect the public from exploitation, but, rather, from the need to assure to the industry itself opportunity for vigorous growth. The familiar reasons for regulation of other industries in the past, notably the need to assure that the public be protected from exorbitant rates and discriminatory practices, would not in this case have prompted a solitary vote in Congress.

The task of Congress in framing the Civil Aeronautics Act was, then to deal with a subject matter the scope and variety of which cannot be matched in the case of any other industry, with ends in view altogether different from the ends with which regulations has normally been concerned. Obviously Congress would have invited trouble had it simply provided for an independent commission equipped with a number of powers to deal with the civil aeronautics industry. Planning, promoting, regulating, experimenting, studying, policing—a cluster of powers to secure the accomplishment of all that was necessary—would have presented a new record of confusion.

Happily, Congress took steps to avoid this impasse.

The steps are four in number.

(1) The first will be disclosed in sections 201 (b) and 301 to 307 of the act. These sections provide that, in addition to an independent authority, there shall be an administrator, responsible directly to the President, whose duty it will be to undertake the promoting of civil aeronautics, to provide for the establishment and maintenance of airways and landing fields whereby air commerce can operate, and to engage in development work. These duties are not suited either to judicial officers or to a board, but should properly be discharged by one man in a position to work closely and without embarrassment with other executive agencies. The particular allocation of functions to the administrator may or may not be sufficiently exhaustive, but the recognition by Congress that these matters of an executive nature ought to be handled by an executive officer is a far-reaching and important precedent.

(2) The second step taken by Congress is disclosed in section 303 of the act. This section provides that the Authority may assign to the Administrator powers and duties other than those specifically vested in him by the act. In the statement of the House managers on the conference report it was said that under this section the Authority could assign to the Administrator "the executive duties which are incidental to the exercise of the quasi-legislative and quasi-judicial powers" conferred upon the Authority (H. Rept. No. 2635, 75th Cong., 3d sess., at p. 67). The Authority will thus be able to make use of the Administrator so as to relieve its members of much administrative detail, and to promote coordination in the extraordinarily varied work of the agency. Likewise it may be that, through appropriate use of the Administrator, the Authority will be able to avoid the undue union of judge and prosecutor. The opportunity offered by this device is as happy as it is unusual, and it may well be that through its wise use the Authority will be able once and for all to answer the polemics that have so frequently been directed at our administrative machinery.

(3) The third step taken by Congress is to provide, in title VII, for a safety board charged with the duty of investigating accidents and making recommendations for improved safety measures. Through this board the Authority will be able to secure criticism of its own work in a forthright manner which would be otherwise impossible. At the same time the Authority will be free of the responsibility—which should not belong to it—of investigating accidents and engaging in the studies incidental to the safety board's work. The board, on the other hand, is not permitted under the law to exercise any of the regulatory or promotional functions, so that it will not be placed in the untenable position of passing judgment upon its own work. It will stand apart, to examine coldly and dispassionately, without embarrassment, fear or favor, the results of the work of other people. In the Safety Board the Congress has established a truly academic agency, but it is academic with an intensely practical purpose: To discover what is wrong, and to suggest how the Authority and the Administrator can right wrongs. Thus Congress has recognized the virtue

of providing a regularly established medium for self-criticism in government and has at the same time avoided the danger of imposing upon an administrative body essentially contradictory functions.

(4) Finally, by sections 412 and 414 of the act, Congress has established the means of simplifying the Authority's task both in the immediate and distant future. In these sections it is provided that when agreements between carriers are approved by the Authority the execution of those agreements will be free of the antitrust laws. By this conditional exemption from the antitrust laws the industry is given a chance to govern itself, to eliminate abuses, to conserve its resources, and to forestall the necessity of further governmental regulation. The Authority, on its part, is to see that no oppressive or unreasonably discriminatory agreements are permitted. If the industry and the Authority make wise use of the privileges thus bestowed by Congress, we may have found a way to escape the growing danger of bureaucracy which each year threatens more seriously the success of our administrative machinery.

These features of the new Civil Aeronautics Act help to explain the unusual fact that the industry welcomed adoption of the legislation. The industry saw in the act promise of the advantages of sane and orderly democratic government with the opportunity of avoiding many of the dangers which hitherto have been thought inevitable incidents of so-called governmental interference. With a clear indication by Congress that it expects of the new agency a fresh approach to the difficult problems of administration which I have tried to describe, the industry feels that it is justified in anticipating with some confidence a regime of efficiency, dispatch, and impartiality which will prove a model.

The importance to the industry that its hopes be realized is obvious enough. In aeronautics expenses are enormous, and they must always be so because of the necessity for taking every possible measure to assure safety. If to the costs of day-to-day business there were to be added the incalculable expense caused by governmental red tape and delays and hasty judgments, the industry would face a dark future. If it were to prove necessary for every carrier to have constantly on hand lawyers and representatives to dog the footsteps of the Authority in order to see that things are done, if it were to prove necessary to spend hours of time in filling out forms and in seeking permits and approvals and authorizations, if it were to prove necessary constantly to revise practices and methods and to reeducate personnel in order to conform to multiplying regulations, then, indeed, this industry would have misplaced its confidence. But there is no reason to believe that any such fate is in store for us. For Congress has provided ample means for securing an administrative machinery which will rival the vaunted efficiency of private business.

In thus declaring my faith that democratic government can and will operate well and efficiently, I do not mean to leave the impression that I expect government to perform industry's own job. "Public regulation," the Interstate Commerce Commission recently said, "is necessarily an interference with management, but it is not management * * *." (Fifty-first Annual Report of the Interstate Commerce Commission, at p. 9.) A thorough appreciation of the implications of that statement is the only guarantee we have of maintaining a system of free enterprise.

My lawyer friends tell me that when a court passes upon the validity of the regulations or orders of an administrative body it ordinarily asks this question: Did that body have any reasonable basis for taking the action? In other words, the court does not substitute its judgment for that of the administrative body. It will interfere only if there is no possible justification for the administrative action, no matter what might be the court's own views of what it would have done had it been taking the action in the first instance.

An administrative body bears a relation to private management which, in a very real sense, is similar to the relation between a court and the administrative body. It is an administrative court, passing upon the validity of the decisions made by management in attempting to comply with the statutory duties laid down by Congress. And it should not penalize management, or interfere with its decisions, unless it finds that the decisions which management has made cannot be upheld by any reasonable view of the facts—even though hindsight may disclose those decisions to have been unwise and even though the administrative body may feel that it would have acted differently had it been standing in management's place.

In short, just as a healthy self-restraint must be exercised by courts in passing upon the validity of administrative action if our system of administrative law is to work at all, so administrative bodies must exercise self-restraint in passing upon the propriety of the conduct of management if our system of free enterprise and individual initiative is to be preserved. "Public regulation * * * is not management * * *." Upon diligent adherence to this principle rests hope of working out the problems of industry in a day when governmental participation in the affairs of business is necessarily increasing.

Therefore when I say that we may anticipate a new era of governmental activity and leadership, marked not only by regulation but also by a greater degree of planning and promotional work, and that the pressing problem of our democracy is to provide administrative machinery which will operate fairly and efficiently in a businesslike way, I do not mean that I expect our democratic state to do the work of industry. There remains for industry, so long as our system endures, its own task to be done by it and it alone—and the prerogative of performing that job should be as jealously guarded as the Bill of Rights.

Through the administrative agency Government provides the medium for a partnership with industry in the one enterprise which commands the unswerving devotion of all of us—the public service. Each partner has his own appointed function. In the Civil Aeronautics Act the Congress has made a new effort to facilitate the operation of that partnership by making it possible for government to keep abreast of the new duties and burdens of the modern era with a more efficient machinery. The Civil Aeronautics Authority, we may be sure, will put that machinery into operation in the spirit which motivated Congress. We may be equally sure that the other partner, the civil aeronautics industry, will rise to the occasion. In the successful administration of this act, and in the growth and development of this industry, we shall not fail.

Undesirable Aliens

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 13, 1939

RADIO ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA, FEBRUARY 1, 1939

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there may be published in the Appendix of the RECORD an address delivered by me on February 1, 1939, entitled "Undesirable Aliens," which address was broadcast by the National Broadcasting Co. over the red network.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, I wish to thank the National Broadcasting Co. for its courtesy in providing me with this opportunity to talk with you concerning undesirable aliens in America.

In view of the chaotic conditions existing throughout the world, and in particular view of the fact that the world itself is today arming, makes it necessary for America to consider now a program for adequate national defense.

In considering the subject of national defense we must of necessity consider the question of undesirable aliens. We no doubt will appropriate millions upon millions of dollars for the purpose of building up our Army and Navy and air forces to defend ourselves against a foreign attack. In case of an invasion from without, our Army observers can locate the position of the attacking enemy; but what about the enemies who will be attacking from within?

There are several million aliens in the United States. By that I mean foreigners who have come to America legally and remained here illegally, or foreigners who have come here illegally and have no legal right to remain here. How many of these aliens are here we do not know, because we have never made a check-up of them, and, as a matter of fact, we never will know exactly how many aliens there are here until there has been enacted a law making it mandatory for the registration and fingerprinting of all aliens.

In case we should become engaged in a defensive war, we would have within our midst several million potential enemies and spies in the form of these millions of aliens now here. The presence of these millions of potential spies and alien enemies within our gates during a war would, indeed, be equally as dangerous and destructive, if not more so, than attacks by the enemy from without, because the enemy from without could be observed and located by aviators, while these alien enemies within could not be located.

So, in order that we may ascertain the number, the whereabouts of the several million aliens in the United States, I have introduced in Congress a bill which would bring about the mandatory registration and fingerprinting of every alien here; and only by this means of registration and fingerprinting can we definitely ascertain the number of aliens in our country, and only by that means can we ascertain their respective locations, all of which is necessary for the safety of the American people, and particularly in relation to national defense, a subject in which the American people are thoroughly interested at the present time.

We keep no check upon aliens in this country, which is a most deplorable state of affairs. Every other civilized nation upon the face of the earth maintains a very close check-up of foreigners. However, I am happy to learn that the American people are interested in the passage of such a law as I have proposed, which favorable interest has been evidenced through a recent poll conducted by Dr. George Gallup, which showed that 84 percent are favorable to the enactment of such legislation.

Let us strengthen our national-defense program by the passage of this bill which I have introduced in the Senate, and which my colleague, the Honorable JOE STARNES, of Alabama, introduced in

the House, requiring registration and fingerprinting of aliens. You can aid us by advising your congressional representative as to your support of this legislation, and at the same time may I ask that you advise me, Senator ROBERT R. REYNOLDS, Washington, D. C., by letter of your support, as I would be greatly encouraged to personally know that the American people are behind me in my endeavor to bring about the enactment of this legislation designed for the benefit of the American people.

A paramount issue in the United States today is jobs. The 1939 session of Congress, which is the Seventy-sixth Congress, I hope will determine the question as to whether or not American jobs belong to Americans or aliens. There are today in the United States 12,000,000 unemployed, unfortunately, men and women who are walking the streets in search of employment. I think that these unemployed Americans should be provided jobs before any foreigners, refugees from any country, or additional aliens are permitted to enter the United States.

Immigration is a foreign invasion. Those coming to this country from foreign shores immediately seek employment, and it is a well-known fact that many Americans are thrown out of their jobs and positions to make room for refugees and others from foreign lands. This is not fair. It should not be countenanced. Americans should be given first consideration when there is employment to be provided. To the end that our 12,000,000 unemployed may be cared for before those from foreign shores are considered, I have introduced a bill in the Congress of the United States which would stop all immigration to the United States for a period in duration of 10 years or for such time as every employable person of our 12,000,000 unemployed has been provided with work. Why should we permit thousands upon thousands to enter the United States annually for the purpose of usurping jobs held by American citizens when we are now burdened with 12,000,000 unemployed?

No other country in the world will permit an alien to take the job of one of its citizens, and there is absolutely no reason why Americans should look after the interests of and provide for foreigners and refugees before providing for its own American citizens and unfortunates who are out of employment.

More "isms" are to be found in this country than any other political section of the entire hemisphere. We have nazi-ism, fascism, and communism, all of which are dangerous and all of which are boring from within. However, in this connection, astute and eel-like propagandists are directing and focusing the attention of the American people on nazi-ism and fascism for the purpose of creating a smoke screen for the benefit of communism, while the Communists are making tremendous headway throughout the length and breadth of the United States in their vicious and relentless endeavor to create class hatred in America, to bring about a revolution, and to establish the Stalin brand of destructive communism in this section of the Western Hemisphere.

The battleground between the Nazis and Fascists, on the one hand, and the Communists, on the other, is to be found right here in democratic America. Those proponents of nazi-ism, fascism, and communism have aroused so much interest and feeling in the United States that large groups of Americans are taking sides, and in so doing they are being divided among themselves and thusly real Americanism is being imperiled. These "isms" have been brought to our shores by undesirables from many corners of the globe, and the time has arrived when we must think only in terms of Americanism. The time has arrived when we should concentrate our thoughts first upon the citizens of America. Our slogan should be: "Our citizens, our country first."

After all, the question is, Shall we continue to harbor alien criminals, immigrants illegally entered, and also keep our gates open to unlimited unselected numbers while our roll of unemployed reaches 12,000,000? Shall we strengthen and enforce our immigration laws or shall we allow these laws to gather the dust of disrespect? Shall we feed our families, our American families, or foreign neighbors first? Those are a few of the questions I seek to have answered. What is American citizenship worth unless it gives first rights to Americans to fill the jobs with American industry and business? We cannot give away our jobs to foreigners and at the same time provide jobs for our unemployed. We haven't jobs enough for both. I might state at this juncture that if no further importation of foreign labor is permitted from this time on we will still be unable to give employment to every workman now here or who will be born here for the next quarter of a century. No other nation upon the face of the earth permits citizens of the United States or of any other country to enter their country and take jobs and enjoy relief belonging to their nationals, regardless of what the excuse for migrating might be.

I am distressed and unhappy to say that only America, our America, fails to protect its jobs and relief from foreign usurpation.

There are more noncitizens, aliens, employed in one Midwestern American city in one American industry than the total number of Americans employed in all the other countries of the world. Refugees are coming to our shores by the shipload and are being rushed into employment with as little delay as possible. They are coming under quotas. They are coming under the permits of temporary visits, the number of which has no legal limits. These temporary permits are extended time after time for the benefit of aliens who hold American jobs, and I am against this continued temporary extension.

More refugees have settled in the United States in the last year than the number who permanently settled during that period in the rest of the whole world. Refugees are at work everywhere in America and every time a job is filled by one of them an American is thrown out of work.

The press reports more influx of professional men and women than ever before from Europe—doctors, dentists, nurses—who are here to practice their respective professions. That means more competition for our professional men and women. That means less practice and less remuneration for our American professional men and women.

We should protest against continuing to make America the dumping ground for the surplus labor and the political agitators of the world. We should expel the undesirable aliens. We should deport the alien criminals. We should rid our country of those radical undesirable aliens who are preaching false doctrines and who are advocating the overthrow of our Government.

We should now adopt the slogan, "Our citizens, our country first."

Freedom of Science

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, February 13, 1939

ADDRESS BY HON. LEWIS B. SCHWELLENBACH AT THE UNIVERSITY OF PENNSYLVANIA, FEBRUARY 12, 1939

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from Washington [Mr. SCHWELLENBACH] before the University of Pennsylvania on Sunday, February 12, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Three hundred years ago science waged a desperate battle for its freedom. An Italian astronomer, Galileo, studied the stars in their heavenly courses. A burning issue arose over his right to tell what he saw. Many feared that if he told what he saw he would undermine religious faith. Galileo was himself a deeply religious man. He was so deeply religious that he had faith that religion had nothing to fear from the truth. He recognized, as all civilized men have come to recognize, that truth has nothing to fear from truth. That is why the freedom of science is the very basis of civilized progress. For it is the freedom of men of learning in the pursuit of knowledge to think and to declare the truth as it is given them to see it.

Since the days of Galileo until very recently this has been generally cherished throughout the western world. The martyrs in the struggle for freedom of science seemed to belong to an age of "old, uphappy far-off things, and battles long ago." The most cruel fate up to the present that had befallen the modern man of science was indifference or ridicule. By and large, he was permitted to go his way in peace. Society accepted gratefully, if sometimes belatedly, his contributions to the advancement of living.

But today in many parts of the world the scientist would count himself blessed if he were simply looked on with indifference. In some countries the scientist has become the bond slave of the ruling political party. He has been forced to lend the cloak of science to what is in fact stark brutality. There are many who could not remain in their scientific posts if they would, this because of the accident of their birth. There are many others who could remain if they chose to do so. They, however, have preferred exile and poverty in the cause of truth to personal well-being in the cause of deception. These scientists stood firm against intrigue, entreaty, and threats. They refused to lend the name and prestige of scientific authority to myths and pseudo-scientific propaganda. They chose rather to be homeless wanderers than to forsake the only aspiration that made life for them worth living—the aspiration for knowledge.

Some of these men of science we have welcomed to our own shores. We are receiving from them the priceless gifts of their genius. In laboratories, in hospitals, and in classrooms they are adding to our knowledge and well-being. To all of these modern martyrs, those who have found refuge and those who have not, we should bare our heads in the profoundest admiration and respect.

In our own country the man of science enjoys a liberty as great as at any time in the past. The spirit of intolerance, of bigotry, of brutality has not penetrated to the scientific laboratory. There are several reasons, I think, why we have preserved our scientific freedom. One is that as a people we have too strong a sense of humor to allow ourselves to be deluded by intolerance posing as a new gospel of science. Consider, for example, the racial theory now current in certain lands abroad, which is expounded in the following way in a recognized foreign textbook:

"We can advance the assertion at the base of all racial science; there is no concept of 'human being' man in contradistinction

to animals separated by any physical or mental trait; the only existing differentiation is between Nordic man, on the one hand, and animals as a whole, including all non-Nordic human beings, or subman, who are transitional forms of development."

We may not all be familiar with the scientific answers to this line of nonsense. However, we have enough humor, speaking of animals, to see the wolf of intolerance in the sheepskin of science, and to dismiss the whole thing with a laugh.

This meeting is held on Lincoln's birthday in the city of the birth of American freedom. The choice of time and place is propitious. More dramatically at least than any other man in history, President Lincoln demonstrated his belief in freedom and liberty. It is interesting that he should have had a dramatic part in our history. He was not a dramatic man. He was simple. He had a profoundly deep understanding of what American political democracy really meant.

Let me read you just a short excerpt from some remarks he made at Edwardsville, Ill., September 13, 1858:

"What constitutes the bulwark of our own liberty and independence? It is not our frowning battlements, our bristling seacoasts, our Army and our Navy. These are not our reliance against tyranny. All of these may be turned against us without making us weaker for the struggle. Our reliance is in the love of liberty which God has planted in us. Our defense is in the spirit which prizes liberty as the heritage of all men, in all lands everywhere. Destroy this spirit and you have planted the seeds of despotism at your own doors. Familiarize yourselves with the chains of bondage and you prepare your own limbs to wear them. Accustomed to trample on the rights of others you have lost the genius of your own independence and become the fit subjects of the first cunning tyrant who rises among you."

Last December more than 1,200 leading American scientists demonstrated that they did not propose to familiarize themselves with the chains of bondage when they said:

"We firmly believe that in the present historical epoch democracy alone can preserve intellectual freedom. Any attack upon freedom of thought in one sphere, even as nonpolitical a sphere as theoretical physics, is in effect an attack on democracy itself. When men like James Franck, Albert Einstein, or Thomas Mann may no longer continue their work, whether the reason is race, creed, or belief, all mankind suffers the loss. They must be defended in their right to speak the truth as they understand it. If we American scientists wish to avoid a similar fate, if we wish to see the world continue to progress and prosper, we must bend our efforts to that end now."

So long as that spirit remains indomitable science will assure its own freedom. So long as scientists are ready to refuse to yield to corruption or intimidation the future of science is safe. No country can afford in the long run to throw overboard the talents of its best minds. A country that is forced to get along with a second-rate science condemns itself in the modern world as being a second-rate country. That is an inexorable truth that we in America understand.

Freedom of science in the full sense can thrive only if economic and political democracy thrives. That is why I was glad to accept the invitation to this meeting which has as its purpose the protection of freedom of science in America.

But men of science must know that the perpetuation of their freedom depends upon the perpetuation of the political freedom of all our people. They cannot and they must not rest the future of this freedom they so much cherish upon the smug satisfaction that they are safe in the cloistered confines of a scientific laboratory. They cannot brush aside their responsibilities of citizenship with the curt rejoinder that government is not an exact science and that responsibility for its operation rests in the hands of politicians who are so unscientific.

I will be the first to admit that government is not an exact science. That is particularly true of a democratic one. But it is a process of trial and error. This, after all, is the ultimate in the procedure of the most careful scientist. We do not have opportunity to work under conditions favorable to accuracy which can compare with those of even the most meager laboratory. I will admit that since governments are political they must be operated by what are usually contemptuously referred to as politicians. We make mistakes. I do not attempt to defend them. I only say that we do try so much harder than people generally understand.

And in these troublous times we need the help and the understanding of those to whom has been given the opportunity of scientific training.

Political freedom has been much more difficult of achievement than freedom of learning. Indeed, it has been a much longer and harder struggle for the common man to achieve political freedom than for the scholar or scientist to acquire freedom to pursue knowledge whither the quest for truth led him. The common man, I believe, has always desired political freedom for himself. He has, however, been slow to learn that his own freedom ultimately depends upon the equal freedom of all, even those whose views of government he may, upon occasion, dislike and even profoundly detest. It was only after centuries of struggle that the common man realized that political democracy was possible only if the right of all men—without regard to wealth, race, or religion—to express their political opinions freely and publicly, was scrupulously safeguarded. Freedom of thought is the very cornerstone of a democratic society.

In Thomas Jefferson's original draft of the Virginia bill for the establishment of religious freedom we find these words: "The opinions of men are not the object of civil government or under its control." No one, certainly not I, can improve on that language.

We must have an atmosphere of free expression if we are to have the benefit of fearless political discussion. This is the surest guaranty of orderly change and the surest protection against the forces of disorder. Nothing is so dangerous as the belief that any part of our political society should be beyond criticism. No one generation's judgment as to the essentials of good government can be unerring. As the inquiring mind of Galileo made it possible for man to preserve his religious faith on an earth that moves, so political criticism today may point the only way of preserving tomorrow our democratic faith. The earth does move, and it is the spirit of free inquiry, whether in science or in politics, which enables man to adjust himself to its movements.

We must scrupulously maintain freedom of discussion if we are to develop our responsibilities as a people by choosing rationally the path we wish to follow. That is why freedom of thought and freedom of speech, with the resulting duty of making up our minds honestly and courageously, is at the very heart of the faith in democracy necessary to protect the pursuit of knowledge.

This faith in freedom of expression requires constant devotion. Perhaps more so today than ever before in modern times. All about us, and all too close at hand, we see the forces of intolerance at work—forces intolerant of democracy, of science, and even of religion. We have seen them in all too many shapes and forms. They preach a doctrine which is the antithesis of that spirit of tolerance which is so essential to the perpetuation of our institution—democracy. Fear, hatred, distrust, and bigotry—these are the tenets of their faith.

We must realize the grave danger to civilization that lurks behind these forces. They must be dealt with resolutely if the freedom and dignity of the common man is to be preserved. They must also be dealt with resolutely if the freedom and dignity of the scholar and scientist is to be preserved.

That resolute determination must carry with it an understanding of three basic principles of democratic machinery:

First, it must give to every citizen equality of opportunity to participate in government which is free from coercion or fear on the one side and free from impossible promises of reward upon the other.

Second, the minority in a democratic community must recognize the right of the majority to govern. At the same time, the majority must insure to the minority the same degree of justice which it demands for itself. Failing in this obligation, the majority becomes merely a mob. When the majority becomes a mob democracy fades out.

Third, a democratic government must be a government of law. A civilized democratic community demands that all classes within it respect its law. If respect for law is to be maintained the law must reflect the community sense of justice and not the demands of any class or group. If the law reflects the community sense of justice, no class or group may defy or set itself above or beyond the law without bringing upon itself the just resentment of the whole community. A civilized democracy demands patience and self-restraint from all its citizens.

These three, more or less mechanical requirements of democratic machinery, may all be summed up with the simple word tolerance. It is the very essence of democracy. If we are to preserve democracy here we must safeguard and protect the future pathway of our national life, lighted by the softened light of tolerance. Men of science are trained to be patient. Men of science are trained to give full faith and credit to the opinions of those with whom they disagree. The very training of men of science should make them more tolerant than the average citizen even of an American democracy. As one engaged with the problems of government I welcome you to this fight to preserve and protect freedom and liberty not merely for scientists but for all men in an enlightened America.

Federal-State Income Taxes

EXTENSION OF REMARKS

OF

HON. JOHN A. MARTIN

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1939

Mr. MARTIN of Colorado. Mr. Speaker, yesterday was a historic day in the House of Representatives. It witnessed what was called a revolution; perhaps I had better say another revolution. The pillars crumbled, or rather they crumbled again. The sacred and much-battered document got another dent in it.

After the smoke of battle cleared away, the House, by a vote of 269 to 103, passed a bill to enable the Federal Government to tax the incomes of State and local officers and employees and to enable the States to tax the incomes of Federal officers and employees. It shows how lightly the House of Representatives may treat the Constitution on occasion. Needless to say, I was on the majority roll.

The chief objection to the legislation was that it was unconstitutional and therefore should not be passed. The gentleman from Massachusetts, Mr. McCORMACK, handling the bill on the floor, pointed out in answer that a former distinguished President had vetoed an act of Congress on the ground that it was unconstitutional; that Congress had passed it over his veto; and that the Supreme Court had sustained it. The former distinguished President was William H. Taft, afterward Chief Justice of the United States.

Laying such a weighty instance aside, the view that appealed to me was that if the objective of legislation seemed desirable and its constitutionality was a matter of controversy, the legislation ought to be enacted and the question of its constitutionality left to the Court.

As the gentlemen argued vigorously the unconstitutionality of the legislation and urged submission of another income-tax constitutional amendment instead, the impression grew on me that what these gentlemen feared, and indeed were almost certain of, was that the Court would hold the legislation constitutional. The constitutional amendment route would indefinitely defer the evil day. Indeed, like the child labor amendment, it might never arrive.

Laying aside the legal question, an argument that had some weight with me as establishing the justice of the legislation was that it was not fair for a State, county, city, or district official holding a desirable office and paid out of the taxpayers' money to escape a Federal income tax, while a lawyer, doctor, merchant, truck driver, locomotive engineer, farmer, or any other citizen earning the same amount of income already has to pay a Federal tax on it. That was a hard one to overcome, and, frankly, I did not attempt it.

According to the opponents of the legislation, the school teacher was the horrible example of the injustice this legislation would work. Very often the widow and orphan is the horrible example, especially when the legislation proposes to tax large corporations or do something else to them. But the school teacher had his or her inning on the tax bill. It carried the flattering implication that they got pay checks big enough to tax after the exemptions had been deducted—$2,500 for a married teacher and $1,000 for a single one and the other exemptions allowed by law. I do not recall that it was specifically pointed out wherein a school teacher's pay differs in its relation to taxation from the pay of other groups who are paid out of taxes, but it made a good talking point against the bill.

One reason I was glad of the opportunity to vote for the bill is that its enactment and application may serve to clear up in some degree the Nation-wide impression that Federal officers and employees, and especially Congressmen, do not have to pay income taxes. Mr. BOEHNE, of Indiana, and other Members adverted in debate to this erroneous impression, even mentioning the fact that many editors persist in publishing such statements. The speakers were decidedly of the opinions that such editors were in error. In my opinion, an editor who would publish such a statement is either a fool or a liar. Apparently the gentlemen who mentioned the matter in debate took the more charitable view that they were in error—that they did not know any better. I have a much higher estimate of their intelligence, so I think the other term applies to them.

I may add that if a Federal employee, even a Congressman, acted under the impression that he was not subject to Federal income taxes he would promptly get his impression corrected by the Internal Revenue Bureau, plus interest on his delinquencies. While it may be impossible to clear up the national impression heretofore prevailing that Federal employees, and especially Congressmen, are now exempt from Federal income taxes, this legislation may serve to some extent to create the satisfying impression that the law has finally caught up with them.

Taxation of Public Officers and Employees

EXTENSION OF REMARKS
OF
HON. ALBERT G. RUTHERFORD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1939

Mr. RUTHERFORD. Mr. Speaker, I am opposed to the legislation as set forth in H. R. 3590, known as the Public Salary Act. At the outset of these remarks I want to state as clearly and as emphatically as I possibly can for the edification of a great many people in this country, including many editors, that every Congressman and every Federal employee whose salary is sufficient to come within the terms of the Federal income-tax law pays a Federal income tax. I pay an income tax on my salary as Congressman; and my State, Pennsylvania, having no income tax, the provisions of this bill under present conditions will not affect me one way or another. This bill provides for a Federal income tax on the salaries and wages of all State, county, city, borough, township, school district officials, and employees. It includes every person who receives wages or salary from such municipalities or municipal subdivisions for services rendered thereto. Of course, at the present time all such persons would not be subject to a tax if the bill were passed, but under the powers conferred in this bill there is nothing to prevent the Federal Government finally getting everybody.

As I stated before, Pennsylvania has no State income tax. Some 2 years ago the people of my State voted down a constitutional amendment providing for a State income tax. For that reason I am not going to approve of legislation which will compel Pennsylvania, in order to take advantage of this act, to pass an income-tax law which would tax me and thousands of other Pennsylvanians. I know at times we who pay Federal income taxes feel irked to think that someone whom we know, who is drawing as large a salary from the State as we get, does not pay an income tax. However, I am not going to cut off my nose to spite my face. I am not going to vote to compel myself and thousands of others in my State to pay another income tax simply to catch some State, county, borough, or school-district employee who at the present may be tax free. The proponents of this bill say that it is reciprocal. That it gives to the States the right to tax Federal employees residing in the State for the privilege of allowing the Federal Government to tax State employees. That sounds fine, but it is all one sided and strictly in favor of the Federal Government. In Pennsylvania the number of State, county, city, borough, and school-district employees probably outnumber the Federal employees residing in the State 5 to 1, so that under the provisions of this bill the Federal Government would receive tremendous benefits and the State government very little. We in Pennsylvania are paying out to the Federal Government tremendous sums of money for the benefit of the rest of the country, and this bill simply is another tax measure designed to make Pennsylvania contribute more. It is time for this administration to stop spending and spending and taxing and taxing. For 6 long years it has been following this policy and we still have over 12,000,000 unemployed and have increased our indebtedness over $20,000,000,000. I am not going to vote to further burden my constituents with taxes, even though by so doing some may get by without paying an income tax.

However, the real reason for my opposition to this bill is that I believe it to be unconstitutional. The administration is trying to do by statute what should be done by a constitutional amendment. It is the old New Deal trick.

This is simply another slick move on the part of the administration to change our form of government without letting the people of the country pass upon the change. As in the case of the original Guffey coal bill, which the President asked Congress to pass notwithstanding its doubtful constitutionality, so in the present bill he asks Congress to do the same thing. The President again asks every Member of Congress to stultify himself, disregard his oath of office, and vote to pass this bill even though the Member believes the bill to be unconstitutional. Again the old New Deal trick of deliberately passing unconstitutional laws and putting them up to the Supreme Court for decision and then, when the Court decides against the administration, to inflame the people against the courts. This is not the orderly procedure. Again I say if the President and his brain trusters want to change our form of government let them come out honestly with whatever proposition they have and submit it to the people of the country and let us have a full and free debate on the various propositions submitted. Then if after a careful consideration of the subject the people of the several States want to give away some of their rights to the Federal Government, all well and good, but the administration should not attempt to steal the rights of a sovereign State without giving all the people the right to decide. The law of the land stands today where it has stood since the case McCulloch against Maryland, which was decided away back in 1819. In the case of Collector against Day, which was decided in 1871, the Supreme Court held that Congress could not impose a tax on the salary of a judicial officer of a State. The law as stated in this case has never been overruled. The President and his advisers are of the opinion that the case of Helvering against Gerhardt, lately decided by the Supreme Court, has overruled the case of Collector against Day, but the United States Circuit Court of Appeals for the Seventh Circuit, as late as the 12th of January 1939, plainly stated that the law as laid down in the case of Collector against Day was still the law of the land. The principle of law decided in that case has been cited and approved by the Supreme Court in many cases. In Collector against Day the Court stated, in part, as follows:

> If the means and instrumentalities employed by that Government to carry into operation the powers granted to it are, necessarily and for the sake of self-preservation, exempt from taxation by the States, why are not those of the States depending upon their reserved powers, for like reasons, equally exempt from Federal taxation? Their unimpaired existence in the one case is as essential as in the other. It is admitted that there is no express provision in the Constitution that prohibits the General Government from taxing the means and instrumentalities of the States, nor is there any prohibiting the States from taxing the means and instrumentalities of the Government. In both cases the exemption rests upon necessary implication and is upheld by the great law of self-preservation, as any government whose means employed in conducting its operations, if subject to the control of another and distinct government, can exist only at the mercy of that government. Of what avail are these means if another power can tax them at discretion?

Counties, cities, boroughs, townships, and school districts are subdivisions of the State. The several officers of the various subdivisions are therefore, in fact, officers and agents of the State. They are the instrumentalities of the State to carry into operation the powers of the State, and when the Federal Government attempts, as it does in the present bill, to tax the salaries of the various municipal officers, it is attempting to tax the means and instrumentalities of the State, which the case of Collector against Day says cannot be done. The proponents of this bill continue to harp on the sixteenth amendment to the Constitution, which contains the words "from whatever source derived" as authority for the passage of this bill. That amendment was declared in force by the Secretary of State on January 25, 1913. The Supreme Court during the last 26 years have had many tax cases before it in which it could have upset the doctrine laid down in the case of Collector against Day, but it has never done so to date, and until it does I feel bound by the decision therein laid down.

In order to bring pressure upon the Members of Congress the administration has again relied upon its old system of class hatred. It has tried to stir up those who pay a Federal income tax against those who hold State positions and are therefore exempt. It is the old New Deal scheme of arraying neighbor against neighbor and friend against friend in order to put over something of doubtful constitutionality. The people of my district are lovers and supporters of the Constitution of the United States. They believe that if the Constitution is to be changed that it should be changed in an orderly manner, to wit, by constitutional amendment. While to many it may seem an injustice that their neighbors do not pay an income tax the same as they do, yet I am of the firm conviction that they would not sell the rights of the great sovereign State of Pennsylvania for such money consideration. I was elected in 1936 on an anti New Deal platform. During the sessions of the Seventy-fifth Congress I voted against every New Deal attempt to change our Constitution by the indirect method. During the campaign of 1938 I stated that I would continue to oppose all New Deal attempts to change our Constitution in this session of Congress by indirect methods. The people of my district evidently approved of my stand because I was elected by the biggest majority ever given a candidate for Congress in my district. On January 3 I stood with uplifted hand and swore to support and protect the Constitution of the United States. That being the situation and being clearly of the opinion under the decisions of the Supreme Court this bill is unconstitutional I will not stultify myself nor will I go against my sworn oath and vote for this bill even though it may be the popular thing to do at this time. My convictions and political creed are the same as they were in the Seventy-fifth Congress. I disapproved of the advice given by the President to Congress in a former Congress to vote for a bill whether it was constitutional or not. I disapproved of his attempt to pack the Supreme Court. I disapproved of his attempt to centralize all Government power in the Executive as was provided in his reorganization bill. I now disapprove of his attempt to curtail the legal rights of my sovereign State, Pennsylvania, by an act of Congress when I believe that it can only be done by a constitutional amendment.

The National Debt

EXTENSION OF REMARKS

OF

HON. PETER G. GERRY

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Monday, February 13, 1939

EDITORIAL FROM COLLIER'S

Mr. GERRY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial published in a recent issue of Collier's.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Collier's]

THE ANSWER IS YES, MR. ECCLES

Marriner S. Eccles, chairman of the Board of the Federal Reserve System, recently wrote a long and fire-fringed letter to Senator HARRY BYRD (D., Va.) in defense of Federal Government borrowing and spending for business recovery, a policy in which Senator BYRD has often urged caution.

Mr. Eccles eventually worked up to this snorting climax in his remarks to the gentleman from Virginia: "Finally, is it of no significance that as a nation we owe our debts to ourselves and not to a foreign country?"

The answer, Mr. Eccles, is, "Yes." It is of no significance, or of practically none, that we owe these debts to ourselves and not to a foreign country.

Somebody ought to put that down in black and white, and explain why, and a lot of Americans ought to paste it in their

hats or their scrapbooks for ready reference—which, of course, is what we're hoping a lot of Americans are going to do after reading this editorial.

In the first place, there is no magic about owing debts—this kind of debts—to ourselves. That doesn't make them any the less debts. We shall have to liquidate them some day. Up to now, only three ways of liquidating them have been thought of by anybody. Those three ways are taxation, inflation, or repudiation.

It is hard to say which of the three will be the most disagreeable, or the least. The main point to bear in mind, though, is that we can't escape those debts we have been rolling up in the hope of priming the pump for a long, steady flow of good business.

In the second place, it is not accurate to say flatly that "we owe these debts to ourselves." To be made accurate that statement needs to be qualified. And the qualification is so drastic as to change the whole picture which that "poof-poof" phrase about owing the debts to ourselves flashes into your mind.

The truth is that all of us owe these debts to a few of us.

To finance the deficits (cumulated to more than $21,000,000,000 in the last 9 years), the Government has borrowed. That means the Government has issued bonds. On those bonds it must pay interest to the bondholders. To get the money to pay this interest, it taxes the people—all the people, directly or indirectly. You help pay whether you know it or not.

The "owe it to ourselves" thinkers argue that the money is (1) taken from the people by taxes, and (2) returned to the people in bond interest payments, and that, therefore, no real economic jolt has been dealt out anywhere.

As a matter of fact, the people do not get all the money back in bond interest, or anywhere near all of it.

Here is the why of that: If the bulk of these bonds were taken by mutual savings banks and insurance companies, the money borrowed through those bonds would, indeed, be owed to large numbers of us, because large numbers of us own the savings banks and insurance companies by virtue of owning savings-bank deposits and insurance policies. But those bonds are in fact taken, most of them, by the commercial banks—and the commercial-bank stockholders among us are few and far between.

The commercial banks were holding $19,000,000,000 of this paper last September—latest figure available at this writing. Nobody but these banks' few stockholders collects the interest payments on the bonds held by these banks—interest payments which have been taxed out of all of us, directly and indirectly. So, as regards financing the deficits by stuffing the commercial banks with bonds, the Government is merely funneling widespread tax payments into a small number of pockets.

As the debt grows, more and more money has to be taxed out of all of us to service the debt. The economic consequences are many and serious.

But perhaps the most dangerous feature of the whole business is this persistent endeavor, by Mr. Eccles and persons who think as he does, to talk Americans out of worrying about the national debt. If they succeed, they will change us over from a nation of solvent-minded people to a nation of dead-beat-minded-and-proud-of-it people.

The national debt is something to worry about. The piling up of much of it seems to have been unavoidable, but even so it is damnably hard luck that it had to be piled up. It is going to have to be worked off somehow, sometime—and we mean worked off. It does cost us plenty in taxes now. It does ride like an "old man of the sea" on the back of our still staggering and weaving national economy.

These are facts, unless the arithmetic book has been repealed. All the happy thoughts and happier prattlings of the "owe it to ourselves" skull busters cannot soften those facts or conjure them away.

One thing we do owe though. That is a rich, ripe baritone Bronx cheer, and we owe it to the "owe it to ourselves" crowd every time they try to heap those horsefeathers over our intelligence.

Lincoln at Gettysburg

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 13, 1939

ARTICLE BY EMANUEL HERTZ IN THE NEW YORK TIMES MAGAZINE OF NOVEMBER 20, 1938

Mr. WAGNER. Mr. President, I ask unanimous consent to have inserted in the Appendix a brilliant and instructive essay entitled "At Gettysburg 75 Years Ago," written by Emanuel Hertz, outstanding authority on Abraham Lincoln. The article appeared in the New York Times Magazine on November 20, 1938.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times Magazine of November 20, 1938.]

AT GETTYSBURG 75 YEARS AGO—THE STORY OF LINCOLN'S IMMORTAL ADDRESS, WHICH ECHOES AND REECHOES IN THE BATTLE FOR FREEDOM

(By Emanuel Hertz)

Lincoln's Gettysburg speech has been quoted and repeated so many thousands of times and has become so much a part of our language that it is hard to realize that there ever was a time when it was not to be found in the school readers or among the world's supreme orations. But it was new once. Seventy-five years ago yesterday the words were spoken for the first time, at the dedication of the first 17 acres of the Gettysburg battlefield. Seventy-five years ago today the country had not yet discovered that something perhaps more important even than a battle had happened at Gettysburg.

The battle was a little more than 4 months back. At first Gettysburg's problem had been to get the dead decently buried—not monumentally interred. The plan for giving them due honor was stimulated by Gov. Andrew G. Curtin, of Pennsylvania, and much credit for carrying it out went to David Wills, who was Lincoln's host at Gettysburg. The project grew until the 18 Northern States whose soldiers had fallen in the battle were brought into cooperation. Hence the program of dedication, joined in by representatives of the State and Federal Governments.

Edward Everett, the designated "orator of the day," was as good a choice as could have been made. He had been a teacher, a Congressman, a Senator, briefly a Secretary of State under Fillmore. An opponent of slavery, he had been conciliatory toward the South. In 1860 he had run for second place on the Constitutional Union ticket, on which John Bell, of Tennessee, was the Presidential candidate. Subsequently he had lent his very considerable oratorical gifts to the Union cause. The Gettysburg speech was to be the supreme effort of a man now approaching 70 years of age, and destined to die before Lee's surrender.

We have eye-witness and ear-witness accounts of the ceremonies at which Everett was to be the main dish on the bill of fare and the President a perfunctory afterthought. The accounts do not agree as to details, but they build up a picture. We have some touching anecdotes of Lincoln's kindness and humility. Who would want to forget the story of an old couple who drove over from Ephrata to hear the speeches? Their names were Jacob and Lydia. Under the unseasonably hot sun and the press of the crowd Lydia fainted. A voice from the platform gave orders and she was gently lifted up and placed in the chair on the platform which has been reserved for Mr. Lincoln. We know that this happened, because we can see Lydia in some of the contemporary photographs. We have it on good authority that she grew embarrassed at her sudden prominence and wished to get down and that the President replied: "No, madam; you stay right where you are. It was hard enough to pull you out of there, and we couldn't stick you back into that crowd again."

We have many other stories which round out the picture of the day and help make it real. They seem to show that though the crowd went to Gettysburg with the usual curiosity to see a President it went expecting to get its oratory from Everett. Only a few understood that Everett's 2-hour flight would indeed not be "long remembered," but that Lincoln's few words were immortal. Lincoln himself was not sure that his speech would "scour."

Most of those who were present as Lincoln stood up to speak must have thought that he would be brief and casual. Some of them were so sure of this that they did not realize how far from casual he had been. The legend of a speech hastily jotted down on the back of an envelope during a railroad journey has persisted even to this day. Some still like to think that the Gettysburg Address just happened. We who study the record know better. Lincoln did not depend on the inspiration of the moment. He gave to this brief speech one of the supreme efforts of his life.

Let us consider briefly the circumstances under which the President spoke. Gettysburg, as we now know, was a turning point of the Civil War. With the fall of Vicksburg on July 4, 1863, this battle doomed the Confederacy. But this Lincoln could not know. The future was uncertain on November 19, 1863 The southern armies were still intact. Large sections of the northern population were sick of the war. There had been draft riots in New York City, treasonable movements elsewhere. Nearly a year later Lincoln was still uncertain that he had enough voters behind him to reelect him.

So the Gettysburg Address could not be a perfunctory thanksgiving for a general victory already won. It was not yet sure that democracy would not "perish from earth." Lincoln spoke with the deep fervor of a man in the midst of battle, knowing that much treasure and many lives—perhaps his own—must be sacrificed before his words could be made good. Could he, under such circumstances, jot down a few aimless thoughts and call them adequate? Certainly this was not what he did.

It might be romantic to believe that he slit open an envelope and wrote his speech on the top of his plug hat, or that he asked Judge Wills for some paper after dinner, on the night before the speech, and dashed off the undying masterpiece, or even that he did not prepare at all. But these are simply not the facts.

There can be no doubt that he had given prolonged and earnest thought to the preparation of this address. He had more than 2

weeks' notice that he was desired to speak, and despite the constant demands upon his time and attention he wrote and rewrote his 270 words until he had precisely what he meant to say. He had the proofs of Everett's speech for 10 days, possibly for 2 weeks, before he went to Gettysburg.

Evidently Lincoln was not disturbed by Everett's great effort, which the curious can still read if they care to make comparisons. Everett was a classical scholar, fond of decorative phrases, whose mind went naturally back to Greece and "the olive grove of Academe." But Lincoln was not thinking of Greece. He was thinking of America of the pain and woe which had struck down the South as well as the North, of the great host of the dead, so much more numerous than those whom Pericles had commemorated in his oration over the slain Athenians at the end of the first year of the Peloponnesian War. Lincoln's heart was wrung. He had to justify himself and through himself the great cause of democracy for the sacrifices that had been made and had still to be made.

He knew what he wanted to say. We can inquire, if we like, where the words came from. Had he seen the speech of Pericles—the greatest eulogy of ancient times? Perhaps, but his own speech shines in undiminished splendor when placed beside that of the Athenian. Did he take the magnificently simple words, "Government of the people, by the people, and for the people," from Theodore Parker? Two faint pencil lines in a copy of two Parker sermons found among the Herndon papers suggest to some that he may have done so, but Theodore Parker never used that phrase as Lincoln used it, nor any phrase like it—nor did Marshall, nor Webster, nor Adams.

Lincoln did not need other men's words. Unconsciously his mind may have been colored, his vocabulary enriched by many years of reading, but in his mind was the great idea, and the words he sought for were those most easily understood and most poignantly charged with the emotion that was in him. That emotion comes out in the cadence of the speech, as beautiful as a psalm. Consider the unmatched music of the concluding phrases:

"That we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, for the people shall not perish from the earth."

One altered word would spoil the music of this passage. Yet Lincoln did alter the original as he spoke it. He added, true to his sense of reverence, as well as to his sense of rhythm, the two words "under God." If we read the speech first without the words, then with them, we get what may be called the Lincoln touch—Lincoln's instinct for perfection.

Lincoln did not need to copy. If he had wished to go to foreign sources to make up his own confession of faith, he still could not have done so. The tormenting pressure of life in the White House was too great. He had only himself to turn to, and in the resources of his own mind and heart, in his own experience, he found what he sought.

The committee in charge of the ceremonies had come near not inviting the President at all. Headed by Judge Wills, it overruled those who had objected that Lincoln might make a stump speech or otherwise mar the dignity of the occasion. They then invited him in a letter signed by Judge Wills in which he was asked to "formally set apart these grounds for their sacred use by a few appropriate remarks."

There could not be time for more than "a few remarks" after Everett's long speech. But Lincoln knew how to keep within the limits of the occasion. He knew how to compress into a 2-minute speech the whole philosophy of his life as he neared the crest of his career. He wrote and whittled at what he had written. The words must have been running through his mind for days. He prepared as he had done for his "house divided" speech, his Peoria address, his Cooper Union speech, his first inaugural, the debates with Douglas. Only now every word had to tell; not one syllable could be false. He sensed the importance of the "few remarks." Gettysburg, he knew, would be of momentous significance. He went out of his way to be there, and he intended to be heard.

Lincoln would not take the risk of being late or of arriving tired. To the proposal of Secretary Stanton that the special train leave Washington at 6 in the morning and reach Gettysburg at noon on November 19 he replied: "I do not like the arrangement. I do not wish to so go that by the slightest accident we fail entirely; and, at the best, the whole would be mere breathless running of the gantlet." The plan was accordingly changed to meet his wishes, and the Presidential party left Washington at noon on the 18th, reaching Gettysburg that evening.

There cannot be the slightest doubt that Lincoln left the White House with the text of his speech, substantially as he delivered it, in his pocket—and also in his head. Somewhere or somehow the second page was lost. When he reached Gettysburg he went to the Wills house and had dinner. Then he asked Judge Wills for a sheet of white paper, and on it wrote out from memory the missing part. Having done so, he took the two sheets and went over to the Harper house, where Secretary of War Seward was lodged, and showed them to him.

He had a real regard for Seward's literary taste—the New Yorker had suggested the substance of the last paragraph of the first inaugural. But Seward either made no amendments or corrections or Lincoln did not accept them. We know this because the next day, after Lincoln had spoken, Seward said: "He made a failure, and I am sorry for it." Seward was not the man to consider anything in which he himself had had a hand as a failure.

That same night Lincoln asked Judge Wills: "Mr. Wills, what do you expect of me tomorrow?" "A brief address," Judge Wills answered. Lincoln must have smiled to himself, for he had precisely what was asked for. It would not take long to deliver. The audience, already wearied by Everett's long oration, would not have time to grow restive.

Already Gettysburg was crowded with visitors, and a throng assembled in front of the Wills house and called for the President. After a long delay Lincoln appeared upon the Wills balcony. The words he is reported to have spoken show that he had no intention of firing away any of his ammunition before the proper moment arrived. "You must bear in mind," he said, "that we are in a great historical crisis; that I am an official representative of our country; that whatever I say will be subjected to keen criticism. Therefore I should only utter sentiments that have been carefully prepared. So good night." He went to bed and perhaps slept as well as he ever did in those uneasy years.

In the morning the procession moved to the cemetery, where a speakers' platform had been erected on the site of the future battle monument. The little town was almost as full as it had been a few months earlier when the two armies had fought in and around it. Thousands had come from all the country round within a radius of 50 miles. With Lydia, of Ephrata, on the platform near him, Lincoln sat calmly for 2 hours, while Edward Everett delivered what he intended to be the masterpiece of a long and varied life. He had prepared it in 2 months, then had asked an additional month's delay. It was the best that this man of great fame and high abilities had to offer. It was a good speech, outlining the events of the battle and full of a noble patriotism.

Lincoln listened, his own speech in his pocket—not, as someone familiar with the habits of his days as postmaster and lawyer has suggested, in his hat. When Everett had finished, a new hymn by Benjamin B. French was sung. It ended with the lines:

"This be our prayer—'Father, save
A people's freedom from its grave.'
All praise to Thee!"

Ward Hill Lamon, of Illinois, once Lincoln's partner, introduced the President, who rose quietly to his feet and walked to the edge of the creaking platform. Throughout the crowd the hats came off, out of respect for the office, perhaps even more because of something solemn and impressive in the attitude of the man himself. There may have been a momentary stir as the audience settled itself to listen. A hapless photographer had his head under the hood of his camera adjusting his lens. He didn't have time to get his picture, and when he pulled his head out the speech was over.

Accounts of witnesses as to the manner in which the words were spoken differ greatly. There is a whole literature of recollections of those who were there and who heard and saw from splendidly located nooks and corners near the platform, under the platform, with a fine view between the boards. A little girl who leaned her elbows on the platform and looked up into Father Abraham's face noted and long remembered. Leading men from the 18 States which had made the ceremony possible were on the platform, and most of them later wrote out their versions of what occurred—no two alike.

Of one thing we can be sure: Lincoln may have carried the manuscript in his hand, but he did not read the speech. The man who could read a poem of many lines and repeat it verbatim 20 years afterward, who could quote entire chapters of the Bible and long passages from Shakespeare, Burns, Bunyan, and Byron, who memorized the hour-long Cooper Union speech and other important addresses, had no trouble with these 270 words, written almost literally in his heart's blood. The speech was over almost before people realized that it had begun.

There were compliments after the ceremonies were over. Everett turned to Lincoln, exclaiming, "Mr. President, how gladly would I give my hundred pages to be the author of your 20 lines." Wayne MacVeagh declared, "Mr. President, you have made an immortal address." Lincoln turned the subject. To Lamon he said: "That speech won't scour." He was depressed; and though he did not realize it then, he was suffering from an illness which would keep him in bed for days after he got back to the White House.

The newspapermen reporting the speech had trouble in getting accurate copies, and they printed one or two queer versions. Not all the papers published the Gettysburg Address. Some were satisfied with the brief legend, "The President also spoke," or "The President delivered a few appropriate remarks." Since they had Everett's speech in advance but not Lincoln's, it is possible that many editors simply set up what they had on hand.

Such comment as there was varied. The New York Times spoke of Lincoln's "loud, clear tone of voice" and of his "very deliberate manner, with strong emphasis and a most businesslike air." The Patriot and Union, of Harrisburg, an opposition organ, spoke of the President's "silly remarks." The Chicago Times, also in opposition, called them a "silly, flat, and dishwatery utterance." The London Times, thundering the opinions of Britons who were longing to recognize the independence of the southern Confederacy, said: "Anything more dull and commonplace would not be easy to produce."

The comment made by Jacob, of Ephrata, to his wife, Lydia, we fortunately have in Lydia's own words. "Mr. Everett's oration was grand, wasn't it?" he said, as the two drove home. "I was sorry when he stopped. I'm glad we went to hear it—but, do you know, Lydia, I've been thinking it all over, and I've just about made up my mind that that little speech of Father Abraham's was the best of all. Yes, I think it was the best we ever heard." In time the world agreed with Jacob.

Lincoln made, all told, seven copies of the speech. With the exception of the words "under God," already alluded to, the differences are minor. The questions of autobiographic copies and

of alterations in the text have their interest for the curious. What matters in the long perspective is that Lincoln went to Gettysburg with a message which he was under inner compulsion to deliver, and that the heart of this message was "that these dead shall not have died in vain" and that there should be "a new birth of freedom." He heartened the North to endure a year and a half more of ghastly fighting, and he gave human liberty and its dead heroes the noblest tribute that ever came from human lips. His words became armies which marched and still march for freedom.

Embargo Against Munitions Shipments to Spain

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 13, 1939

LETTERS PUBLISHED IN NEW YORK TIMES

Mr. NYE. Mr. President, during late January and early February a very interesting and informative series of communications was published in the New York Times, including letters from former Secretary of State Stimson, Mr. Martin Conboy, Mr. Charles C. Burlingham, Mr. Phillip Jessup, and finally a letter written by Mr. Conboy in answer to the last-named one. I count them as meriting a place in the CONGRESSIONAL RECORD. I have obtained an estimate of the cost of their publication, and I ask unanimous consent that they may be printed in the RECORD in the order referred to.

There being no objection, the communications were ordered to be printed in the RECORD, as follows:

[From the New York Times of January 24, 1939]

TEXT OF STIMSON LETTER ON EMBARGO

To the EDITOR OF THE NEW YORK TIMES:

I have been asked for my views concerning the present situation in Spain and the duties of our own Government and people toward that situation. The basic reasons which govern my views consist of simple and long-standing principles of American international conduct. They do not in the least depend upon ideological considerations which may or may not be involved in the conflict. On the contrary, they depend solely on the interest of our own country toward that conflict and its possible results.

First. The republican government of Spain (commonly termed the Loyalist Government) has been recognized as the true Government of Spain by our Government. The same decision has been reached by Great Britain, France, and a number of other countries. The principles upon which our Government acts in making such a decision have been well understood since the beginning of our history. They do not depend in any degree upon the internal structure of the government recognized or the domestic theories which control its relations to its citizens, whether they be Communist, Fascist, monarchical, or democratic.

SPAIN'S OWN AFFAIR

Such ideological internal relations are exclusively a domestic matter for Spain itself, into which foreign governments should not intrude. That is a fundamental rule of international relations. Thomas Jefferson expressed it well as long ago as 1792:

"We certainly cannot deny to other nations that principle whereon our own Government is founded, that every nation has a right to govern itself internally under whatever forms it pleases and to change these forms at its own will; and externally to transact business with other nations through whatever organ it chooses, whether that be a king, convention, assembly, committee, president, or whatever it may be." (Jefferson to Pinckney, Works, vol. III, p. 500.)

When our Government several years ago through our President determined that the Spanish Government in question had control of the administrative machinery of the state with the general acquiescence of its people and was able and willing to discharge international and conventional obligations, that Spanish Government became to us and all our citizens the true Government of Spain for the purpose of our respective international relations. By this decision we admitted it as a member of the family of nations which we recognized as our friendly neighbors in the world and vested it with all of the conventional rights and privileges which we accord to such friendly neighbors.

RIGHT TO FRIENDLY ASSISTANCE

Second. One of the most important of these rights which a state like Spain is entitled to expect from another government, which has recognized it as a friendly neighbor in the family of nations, is the right of self-defense against any future rebellions which may challenge its authority. History shows that almost every state, including our own, sooner or later in its history has to meet with the hazard of domestic strife within its borders, including an armed rebellion against its authority. In such a case the duty which the neighbor states owe to the member of the family whose authority has been challenged is perfectly well settled. It is that such a nation has the exclusive right to the friendly assistance of its neighbors by being permitted to purchase in their markets the necessary supplies and munitions for the purpose of putting down the rebellion; and, further, that no similar assistance shall be given to the rebels who have challenged its authority. Any such assistance to the rebels would be deemed a most unfriendly act—even a cause of war—against the mother state.

Third. No nation has gone further than the United States in sustaining this general right of a nation against which civil strife or rebellion has broken out. During our own great Civil War our Federal Government insisted that it alone had the right to purchase war materials in the world at large and made vitally needed purchases of war materials abroad.

"Had England undertaken to embargo arms to both the North and the South, the North might have lost the war." (Borchard, Neutrality for the United States, p. 337.)

In the case of rebellions among its neighbor states the United States has acted upon the same principle and has not only given assistance to their governments but has refrained itself from giving and has prevented its nationals from giving aid to the rebels. By the joint resolution of 1912, applying to this hemisphere and somewhat more widely extended in 1922, our President has been authorized to levy embargoes against supplying arms or munitions to rebels against the authority of friendly States. To mention only a few cases, such embargoes have been levied by our Government in the case of rebellions against Cuba in 1912, Mexico in 1912, 1923, and 1929, Nicaragua in 1921, and Brazil in 1930. In these and other cases we have recognized it as our duty to assist the government and to prevent assistance from our markets reaching rebels against that government.

Furthermore, in 1928 we executed and in 1930 ratified a general convention promulgated by the Sixth Pan American Conference between the American republics and covering generally this subject of the mutual rights and duties of states in the event of civil strife. This convention provided:

"ARTICLE 1. The contracting states bind themselves to observe the following rules with regard to civil strife in another one of them.

* * * * * * *

"3. To forbid the traffic in arms and war material, except when intended for the government, while the belligerency of the rebels has not been recognized, in which latter case the rules of neutrality shall be applied."

This treaty made the previously existing traditional practice a binding rule of conduct among its signatories.

MAINTENANCE OF RIGHTS

Fourth. During the Great War Secretary of State Lansing took occasion to point out why the United States was so insistent on maintaining this right of a government to buy arms and munitions in the markets of the world, whether in cases of domestic strife or of general war. As he pointed out, it was because our Nation, being a peaceful and generally unarmed nation, would have found any other rule of law most dangerous to its own safety.

"Secretary Lansing declared that the United States had from the foundation of the Republic * * * advocated and practiced unrestricted trade in arms and military supplies, because it had never been the policy of the Nation to maintain in time of peace a large military establishment or stores of arms and ammunition sufficient to repel invasion by a well-equipped and powerful enemy, and that in consequence the United States would, in the event of attack by a foreign power, be * * * seriously, if not fatally, embarrassed by the lack of arms and amunition. * * * 'The United States has always' Lansing said, 'depended upon the right and power to purchase arms from neutral nations in case of foreign attack. This right which it claims for itself, it cannot deny to others.' He contended that a nation whose policy and principle it was to rely upon international obligations and international justice to preserve its political and territorial integrity might become the prey of an aggressive nation whose policy and practice it was to increase its military strength during times of peace with the design of conquest, unless the nation attacked could * * * go into the markets of the world and purchase the means to defend itself against the aggressor." (Hyde, International Law Chiefly as Interpreted and Applied by the United States, vol. 2, at p. 752.)

BELLIGERENCY NOT RECOGNIZED

Fifth. Thus under the rules of international law governing cases of insurrection against a government whose status has been recognized by its neighbors, the government itself is the only party which will be permitted to purchase arms and ammunition abroad, and any assistance to the rebels would be a violation of such international law, an unfriendly act against their government. Until the insurrection has progressed so far and successfully that a state of belligerency is recognized by the outside nations, no rules of neutrality apply. The only party recognized as lawful is the mother government at which the insurrection is aimed. In the case of Spain no such belligerency has been recognized by us or by Great Britain or by France. Under such circumstances any attempt to treat the situation as embodying the duty of neutrality is based upon a complete misconception of the rules of international law.

Prof. Edwin Borchard, in his study on Neutrality and Civil Wars, Thirty-first American Journal of Law, at pages 304 and 305, has thus expressed the situation:

"International law requires the United States to treat the elected government of Spain as the lawful government of Spain, and, until the belligerency of the rebels is recognized, as the only government entitled to receive the assistance of the United States in suppressing armed opposition. * * * This embargo against Spain was thought to be neutrality legislation, but it seems more likely the precise opposite."

EXPERIMENTS REVERSED PRACTICE

Sixth. The foregoing was the well-established practice of the world governing rebellions which occurred in the family of nations, when on July 19, 1936, the present revolt in Spain broke out against the republican government which we had recognized. Instead of following the rules of law which had theretofore been established with practical unanimity, a series of novel experiments were attempted on both sides of the Atlantic. These have resulted in a complete reversal of the preexisting law and practice.

In Europe the conflict in Spain excited apprehension for fear that other nations might either be dragged in or voluntarily come in to fish in troubled waters. The totalitarian states, both Fascist and Communist, were apprehended to be aggressive and likely to intervene. In fact, rumor attributed to them a share in the instigation of the Franco revolt. Accordingly, in September 1936, under the leadership of Great Britain, a special agreement of nonintervention was engineered among the neighboring nations to Spain in the hope that the conflict might be localized and the danger of its spread prevented. The first thing to be said about this agreement was that it was a complete abandonment of a code of practice which the international world had adopted through preceding ages as the best hope of achieving the same purpose and minimizing the spread of disorder. International law is the product of the efforts and experience of the nations aimed to promote peace and stability.

In the second place, however well intentioned it may have been, an experiment based upon the promises of the totalitarian states was more wishful than sensible. Those states had already progressed too far along the primrose path of treaty violation and the nonintervention agreement at once became a mockery and a failure. The only nations which have observed the nonintervention agreement have been the ones from whom the danger of intervention was not apprehended—Great Britain and France. Italy and Germany, while ostensibly accepting the obligations of the covenant, have continuously and flagrantly violated it. At the present moment Italy is openly avowing its effective participation of the side of Franco. She is openly pushing every effort to bring the strife to a conclusion in favor of the rebels.

Thus the nonintervention agreement has simply resulted in closing to the recognized government of Spain those world markets for supplies and munitions which under the law of nations she had a right to depend upon and to have open to her purchases. It has not prevented supplies from going to the rebels who, under international law, have no right to them. Not only have the rebels been receiving arms and munitions but, as everybody now knows, they have actually received organized Italian troops in large quantities conducting for them a very large share of the fighting.

OUR INTERESTS REMOTE

Seventh. On our side of the Atlantic there has been even less excuse for a departure from law, for we have been far remote and our interests were very unlikely to be seriously affected by the war in Spain. If we had continued our former practice and permitted the Government of Spain to make purchases in this country of arms and munitions, as we had done in the many cases which I have cited, there was no real danger that those purchases would have aroused any resentment against us from which we need have any apprehension. As a matter of fact, our Government has continued under our silver purchase law to make large purchases of Spanish silver from the Spanish Government which undoubtedly have assisted that Government in its conduct of the war. Such purchases have not even attracted attention in the press, let alone aroused hostile acrimony against us.

In any event, we should have been following the law and could have given critics a perfectly good reason for our action. To assert that such a course of self-respecting adherence on our part to a historic policy of international law could have dragged us into war in Europe does not speak well for the balanced judgment of those who make the assertion.

But our Congress, not altogether unnaturally, may have been influenced by a desire to support the objectives of the nonintervention agreement which had just been entered into in Europe, and at that time Congress may not have foreseen that this agreement would not be faithfully observed. Congress may not have foreseen that instead of becoming a means of equal treatment toward both sides of the combatants in Spain, it would become an engine of glaring favoritism toward one side alone—the Rebels—and that the legitimate Spanish Government which by law was the only side entitled to buy arms would eventually become the only side which was unable to buy arms. At all events our Congress in January 1937 passed a temporary resolution applying an embargo to the sale of arms to both the combatants in Spain. And on May 1, 1937, this temporary resolution was superseded by Public Resolution No. 27. By the language of that resolution the exportation of munitions to any foreign State was prohibited on a proclamation by the President that "a state of civil strife exists * * * and that such civil strife is of a magnitude or is being conducted under such conditions that the export of arms * * * would * * * endanger the peace of the United States." On the same day, May 1, 1937, the President imposed the present embargo against Spain.

TRADITIONS ABANDONED

Eighth. The results have shown how futile as well as dangerous novel experiments in international law can be. The United States on its part has abandoned a traditional policy to which for a century and a half it had carefully adhered as a means of protecting the peace and stability of nations which, like itself, preferred to live not armed to the teeth. It is likely sorely to rue the day when that principle was abandoned and when it consented to a new precedent which may hereafter weight the scale in favor of a militaristic and thoroughly armed nation.

On the other hand, the progress of events during the past 2 years in Spain has served to demonstrate the vitality of the Loyalist Government and thus has tended to confirm the correctness of our Government's decision when we recognized that Loyalist Government as representative of the people of Spain.

To an extent which probably few anticipated, that Loyalist Government has succeeded in defending itself not only against a surprise attack by its own rebellious army, but against a powerful combination of aggressive interveners by land and sea and air. By so doing it has furnished strong evidence of its vitality and of the fact that it must be supported by the great mass of the people within its territory. Starting without an army of its own, forced to organize and train its raw militia, conspicuously lacking in the powerful modern guns, planes, and other munitions which have been available to its opponents, it has for many months been putting up a most surprising and gallant defense against opponents who have had every advantage in the way of land and naval organization and who are illegally aided both on land and on sea by powerful organized forces from Italy and Germany.

If this Loyalist Government is overthrown, it is evident now that its defeat will be solely due to the fact that it has been deprived of its right to buy from us and other friendly nations the munitions necessary for its defense. I cannot believe that our Government or our country would wish to assume such a responsibility.

POWER WITH PRESIDENT

Ninth. In short, I have come to the conclusion that the embargo imposed under the resolution of May 1, 1937, should be at once lifted by the President. By its terms I believe he has the power to take such action. The change in the international situation during the past 2 years would justify such action by him. The embargo, which by the terms of the law authorizing it was intended as a protection against conditions which would endanger the peace of the United States, is now shown by the events of the past 2 years to be itself a source of danger to that peace. Any danger that may come to the people of the United States from the situation in Spain would arise not from any lawful sale of munitions in our markets to the Government of Spain but from the assistance which our embargo has given to the enemies of Spain. It is the success of the lawless precedents created by those enemies which would constitute our real danger. There is no reason why we should ourselves facilitate and accentuate that danger. There is still less reason why we should violate our own historic policy to do so. The prestige and safety of our country will not be promoted by abandoning its self-respecting traditions, in order to avoid the hostility of reckless violators of international law in Europe.

HENRY L. STIMSON.

NEW YORK, *January 23, 1939.*

[From the New York Times of January 26, 1939]

MARTIN CONBOY'S LETTER IN REPLY TO STIMSON, OPPOSING EMBARGO CHANGE

JANUARY 24, 1939.

To the EDITOR OF THE NEW YORK TIMES:

In his letter to the New York Times published in your issue of today Mr. Henry L. Stimson presents his views "concerning the present situation in Spain and the duties of our own Government and people toward that situation." He adds that "the basic reasons which govern my views consist of simple and long-standing principles of American international conduct," and he advocates the lifting of the embargo on arms to Spain by Presidential proclamation. My own view of the matter differs in that I consider the American reason for keeping the Spanish embargo is that it conforms to our national neutrality policy, and further, that, irrespective of whether it should or should not be maintained, the embargo can only be removed by the repeal by Congress of a joint resolution of Congress adopted on January 8, 1937.

The neutrality policy of this country was established when the United States were formed as a separate nation. The policy was declared by the first President of the United States. It was enacted in one of the first laws adopted by the Congress of the United States. The policy has never been narrowed. Whenever there have been any modifications of it they have all been by way of enlargement to make it more effective.

The policy has been extended to include the prohibition of the sale of arms and munitions of war. Coming to recent instances, the neutrality law, passed August 31, 1935, made the export of arms, ammunition, and implements of war from the United States to any belligerent state unlawful whenever the President found that there existed a state of war between two foreign states. Within a month after this enactment the Italian attack on Ethiopia began. On October 5, 1935, President Roosevelt issued two proclamations, one forbidding shipment of munitions to the belligerents, the other

giving notice that American citizens could travel on belligerent ships only at their own risk.

PRESIDENT LACKED AUTHORITY

When civil war broke out in Spain, July 1936, the President had no authority to lay an embargo on the exportation of munitions and implements of war to Spain for the use of either side, because the then existing neutrality legislation did not apply to a condition of civil war.

Nevertheless, the established policy of the United States was opposed to such traffic and, accordingly, on August 7, 1936, the Assistant Secretary of State informed all American consular representatives in Spain that "in conformity with its well-established policy of noninterference with internal affairs in other countries, either in time of peace or in the event of civil strife, this Government will, of course, scrupulously refrain from any interference whatsoever in the unfortunate Spanish situation." No licenses were issued by the Federal Munitions Control Board and none, in fact, was sought, until December 1936. Then an American company applied for a license to export airplanes and engines to the Loyalist Government of Spain. The Board, which had refused licenses for the exportation of arms and munitions to Italy and Ethiopia during the war between those countries, was without authority in law to refuse licenses to ship such articles to Spain.

The editor of the British Year Book of International Law, 1937, commenting upon this situation, says:

"With evident regret, therefore, the board felt obliged to issue the licenses in the present case, and it did so. The President publicly expressed his disapproval of the action of the Cuse Co. in refusing to comply with the Government's nonintervention policy, although he admitted that the company was within its legal rights in shipping the airplanes and engines to the Spanish Government. At the same time he caused the various governments of Europe most directly concerned to be informed of his sincere regrets and of the intention of the Government of the United States to continue to pursue a policy of strict neutrality in the present civil war."

The President publicly characterized as "unpatriotic" such shipments as had been made and deprecated "the unfortunate noncompliance by an American citizen with this Government's strict nonintervention policy."

JOINT RESOLUTION

Thereupon, on January 8, 1937, Congress passed a joint resolution. This is a special act to stop the exportation of arms and munitions to Spain. It is founded on the well-established policy of the United States which had been violated by the shipments made before there was any statute prohibiting them. It reads—

"That during the existence of the state of civil strife now obtaining in Spain it shall from and after the approval of this resolution, be unlawful to export arms, ammunition, or implements of war from any place in the United States to Spain or to any other foreign country for transshipment to Spain or for use of either of the opposing forces in Spain."

The embargo specifically laid by this resolution can be lifted only upon proclamation by the President that the state of war has ceased to exist.

The next step in the expression by Congress of our well-established principle of neutrality was the writing into our neutrality statute by joint resolution adopted May 1, 1937, of a general provision relating to civil strife in any foreign country. The President was thereby authorized to establish an embargo by proclamation upon a finding by him that a state of civil strife existed in such country and "that such civil strife is of a magnitude or is being conducted under such conditions that the export of arms, ammunition, or implements of war from the United States to such foreign state would threaten or endanger the peace of the United States."

Upon the same day the President acting under the authority of that joint resolution issued a proclamation with relation to Spain admonishing all citizens and residents of the United States to abstain from the exportation of arms, ammunition, or implements of war from any place in the United States to Spain or to any other State for transportation to or for the use of Spain under the penalties provided for in this statute. This proclamation had no effect upon the embargo existing under the joint resolution of January 8, 1937, except to permit the President to invoke certain administrative powers given him by the later resolution which had not been contained in the earlier one.

Mr. Stimson, in his letter to the Times, refers to the joint resolution of January 8 as a "temporary resolution," which he says "was superseded" by that of May 1. Upon that assumption he continues by saying that "the embargo imposed under the resolution of May 1, 1937, should be at once lifted by the President. By its terms I believe he has the power to take such action." But Mr. Stimson ignores the fact that the President has not the power to lift the embargo which was imposed by Congress in its joint resolution of January 8, 1937, until the state of civil strife has ceased in Spain.

STATEMENT FROM HULL

Secretary of State Hull, undoubtedly with the advice of the eminent legal staff in his office, and probably also under the advice of the Department of Justice, wrote, on March 21, 1938, to the president of the Foreign Policy Association, New York, the following:

"It is manifest that the state of civil strife in Spain described in the joint resolution of Congress of January 8, 1937, has not ceased to exist. Accordingly, even if the proclamation of the President of May 1, 1937, were to be revoked (lifting the embargo under the general resolution of that date) the prohibition upon the export of arms, ammunition, and implements of war to Spain laid down in the joint resolution of Congress approved January 8, 1937, would still remain in effect."

This conclusion necessarily follows from the well-settled rule of statutory construction that when there are two statutes upon the same subject, the earlier being special and the later general, the special statute remains in force in the absence of an express repeal or absolute incompatibility.

Mr. Stimson stresses what he claims to be the duty of this country toward "the recognized Government of Spain." In his argument based thereon he ignores the purpose of our neutrality policy, which is to keep us out of European disputes. It does not make the slightest difference whether the situation is a state of war between two nations or a state of civil war, where aiding by supplying arms to either or both parties to the war will be productive of danger to our peace.

There is a condition of civil war in Spain. After 2 years of fighting the insurgents are in control of 35 of the 50 Provinces in Spain, and more than half of the population of the country is within the territory they control. Sympathy with one side or the other has no more to do with the invocation and applicability of our policy than would sympathy as between two warring nations. When two nations are involved in war it makes no difference, so far as our policy is concerned, whether we sympathize with one or the other. Our neutrality policy is to assist neither.

This is not the first time the United States has been urged to adapt its neutrality policy to the preference of some of our citizens for one or other of foreign combatants. Washington had to face exactly that difficulty. France had been on our side in the Revolution. France, at war with England afterward, presumed upon that friendship by acts inconsistent with our neutrality. And Washington refused to have our policy of neutrality so invaded.

So, likewise, when a condition of civil strife exists, our established policy of neutrality is equally applicable. The converse of neutrality is assistance to one or another of the belligerent parties. In short, the change demanded by those who favor the lifting of the present embargo under the circumstances would mean an affirmative act of aid and assistance in favor of one of the belligerent parties as against the other.

THREAT TO PEACE

In the present instance insistence upon maintenance of the integrity of our well-established policy of neutrality and upon the lack of power of the President to lift the embargo imposed by Congress in its resolution of January 8, 1937, need not preclude us from inquiring whether, if the matter were one of mere temporary expediency, the President was well advised in affirming that the export of arms and munitions does tend to threaten or endanger the peace of the United States.

Within limits there can be no complaint against those who hold that the cause of one of the parties to the civil strife in Spain is better than the cause of the other party. Those who are endowed with sight and hearing are aware that the minds of men and women are occupied with the relative merits of the various political cults now popular in Europe.

Where might this lead us? Congress knew by experience how easy it is for the acts of citizens to get us into a situation in which the peace of the United States would be endangered. How to avoid being led into a situation of that kind was a more difficult problem.

We had been in very much the same position 20 years before when the World War started in 1914. We knew the United States had no part in the maneuvers that precipitated the declaration of war. And we knew, also, that partly through what we did ourselves, and might have refrained from doing, we were drawn irresistibly into the war before it ended.

Just how and why the United States did get into the Great War has been the subject of innumerable volumes. But there were some facts concerning which Congress could not be in doubt.

We did take contracts for arms and munitions, and whether by our own choice or because the control of the seas left us no choice we did supply, without limit or restraint, arms, munitions, contraband of war, to one set of contestants. We did take pay for all this in securities of one set of belligerents. And we thereby exposed ourselves to the enmity of the other side. We had made ourselves in their eyes their potential enemies, and were exposed by our own acts to retaliation by them if the end of the war left them in position to retaliate.

WORLD WAR ACHIEVED NOTHING

When we had been drawn into the war by the inexorable logic of events and had come out of it as participants in victory, we found we were left with billions of debt. We paid, or we are still paying, a large portion of the cost of the war. What we lost in lives and in the wrecked lives of our wounded, and in the care of these latter, likewise go into the account.

We achieved nothing for ourselves, nor did we succeed in bringing peace to Europe as was evident in 1935 and is still more evident now.

Congress surely was justified in insisting that we must try to avoid like consequences of avoidable errors. They thought it well, while we could still do so without being under the influence of the passions that such a war in Europe must engender among us, even if we were not participants, to take thought about those actions of our own that could be identified as having in any considerable measure been contributory factors to our entry into that war.

The legislation that resulted in 1935, amplified in 1937, undoubtedly represented the sober judgment of the American people.

We made these enactments in development of our well-established policy to safeguard the peace of the United States. We made them because we concluded, by our costly experience, that our established policy had to be extended.

We abandoned the profitable business of selling arms and munitions. We abandoned the more deceptive expectation of profits from lending money on Government securities. We put behind us the indignation aroused by loss of lives that came from traveling on ships of belligerent nations. We cut clear of all the disputes that came when a neutral nation tried to maintain its place on the sea against the action of belligerents. And we decided that the favor and profit to be drawn from belligerents benefiting by our arms, munitions, and credits was too dearly bought at the price of the threat and danger to the peace of the United States involved in such transactions.

It is true that in the neutrality legislation of 1935 and 1937 the major preoccupation of Congress was directed to the possibility of a world war. But as long ago as 1912, having in mind the supreme desirability of peace in this hemisphere, Congress provided for embargoes upon the exportation of arms or ammunition "whenever the President shall find that in any American country conditions of domestic violence exist which are promoted by the use of arms or munitions of war procured from the United States."

ARMS PROHIBITIONS

By an amendment of 1922 the resolution was extended to include, in addition, "any country in which the United States exercises extra-territorial jurisdiction," and the President's authority was broadened by authorizing him to include cases where conditions of domestic violence "are or may be" promoted by the use of munitions procured from the United States.

Under this law proclamations have been issued prohibiting shipments of arms to Mexico, to China, to Honduras, to Cuba, to Nicaragua, and to Brazil.

On May 28, 1934, the sale of arms and munitions of war to Paraguay and Bolivia, then engaged in armed conflict in the Chaco, was prohibited.

When these laws were adopted the United States was not the only possible purveyor of arms and munitions. But the United States did not make its policy contingent upon adoption of the same policy by others.

Need we be surprised, therefore, that when the Spanish civil war developed Congress expressed no concern for the fact that arms and munitions could be purchased elsewhere by one or both of the parties to the civil strife. The peace of the United States was held to be of greater importance than the competition in manufacture and sale of arms.

We are to suppose that Congress had in mind something other than a theoretical gesture, and that the President when he said he found a condition that would threaten and endanger the peace of the United States if we sent arms to Spain meant just what he said.

There is no need for doubt on that point.

There were present all the elements necessary to "threaten and endanger the peace of the United States" sooner or later, and to threaten and endanger it not in relation to Spain alone but to the much more potent forces that have transformed all Europe into armed camps.

So far as the United States could go to avoid being drawn into danger by acts of its own, Congress and the President were bound to go, and the people of the United States resolutely desired them to go.

REBELS BOMB FOREIGN SHIPS

If we were to seek evidence that the precautions then taken were well advised, we have only to recall the bare outlines of what has happened since. A Norwegian ship had been sunk in December 1936; a French ship bombed in January 1937; three British ships in February, and two French ships in March. The bombing of French and British ships in the harbors of Barcelona and Valencia has been a frequent feature of the news during the past 2 years.

We in the United States can be well content to have no immediate interest in such news. Nor can we limit this consideration to the civil strife in Spain as a separate entity. We must recall that week in September last when peace and war hung in the balance and when the frontier between France and Spain was plainly marked as one of the battlegrounds included in the plans of the two great rival forces that from hour to hour seemed likely to be engaged in a conflict by which European civilization would have been destroyed.

The threat of general war has not yet passed. And yet, with that danger facing us, with the prospect that the utmost exertion may be required to maintain the security of the United States in the midst of a toppling civilization, there are those who seriously and with unaccountable insistence demand that our well-established policy shall now be reversed.

It is demanded that legislation designed to keep this Nation at peace shall be replaced by legislation that would lead to our again being trapped into war.

In my humble judgment, the people of the United States will have none of it.

Conditions that "would threaten and endanger the peace of the United States" are not to be lightly passed over, even if the desire of those who seek the change is to improve the chances of one of the contending elements in the Spanish strife.

Our preferences, either as to Spain or as to the world at large, may be as the poles apart, but when it comes to endangering deliberately the peace of the United States over the quarrels of other peoples, the solid good sense of the American people is certain to prevail.

Yours truly,

MARTIN CONBOY.

[From the New York Times of January 31, 1939]

TEXT OF REPLY OF BURLINGHAM AND JESSUP TO CONBOY'S LETTER

To the EDITOR OF THE NEW YORK TIMES:

Martin Conboy's letter, published in your issue of January 26, contains statements which cannot remain unchallenged as a basis for the immediate policy of the United States toward Spain or for the future policy of this country. Mr. Stimson's letter, which Mr. Conboy seeks to rebut, is in itself the answer to some of Mr. Conboy's arguments, but others of them are directed to points on which Mr. Stimson did not elaborate.

Mr. Conboy starts from the fundamental fallacy that the existing embargo on exportation of arms to Spain rests upon the historic neutrality policy of the United States. It is surprising that so able a lawyer should be thus misled by the popular misuse of the confusing and inaccurate label of "neutrality act" which has been pinned on the joint resolution of May 1, 1937. The joint resolution of January 8, 1937, dealing specially with Spain, is not even popularly called a "neutrality act" and cannot be so considered.

BELLIGERENCY UNRECOGNIZED

It is elementary that the historic neutrality policy of the United States formulated by Washington and Jefferson was designed to protect the rights and to enforce the duties of the United States when we were neutral during a foreign war. The Spanish arms-embargo resolution sought neither to protect neutral rights nor to fulfill neutral duties. Our neutrality statutes as enacted from the earliest days of this country down to the present do, of course, apply to civil wars, but, with the exception of provisions to prevent organizing hostile expeditions in our country, only when the United States has recognized the belligerency of the contending forces.

Neither the United States nor other governments have recognized the belligerency of the Franco or the Loyalist forces. We know that Franco has repeatedly sought to obtain such recognition and that it has constantly been denied to him. When there is no belligerency there is no neutrality, and when there is no neutrality there is no neutral duty or neutrality policy.

In 1895 Attorney General Harmon gave an opinion concerning the shipment of arms to Cuba, where there was then a rebellion against Spain. He told the Secretary of State:

"International law takes no account of a mere insurrection, confined within the limits of a country, which has not been protracted or successful enough to secure for those engaged in it recognition as belligerents by their own government or by foreign governments. * * *

"Neither Spain nor any other country has recognized the Cuban insurgents as belligerents. They are, therefore, simply Spanish citizens with whom Spain is dealing within her own borders, and the fact that, by common report, they are engaged in armed resistance to her authority is merely a circumstance of suspicion to be considered in any inquiry which may be had concerning the conduct of persons within the United States who may be suspected of hostile intentions toward Spain. * * *

APPLICABLE TO SPAIN

Substitute "Franco" for "Cuban" and that opinion is applicable to the existing situation in Spain. Similarly, when civil war was raging in Mexico in 1912, Secretary Bryan wrote to the Mexican Ambassador as follows:

"* * * I am constrained to call to your attention the obvious fact that since there is now no recognized state of belligerency in Mexico, the rules and laws governing warfare and the conduct of neutrals are not involved. In other words, under the present situation, so far as the commerce of Mexico with other countries is concerned, the status is one of peace and no interdiction of any kind exists against commerce in any form outside the jurisdiction of Mexico.

"The duties of neutrality under the law of nations cannot be either expanded or constricted by national legislation."

These statements represent the traditional policy and the sound legal position of the United States in regard to foreign civil wars. There have been a large number of revolutions and civil wars in European countries since the United States became a Nation, but in no one of them have we adopted an embargo act like the joint resolution of January 8, 1937. Far from being consistent with traditional American policy, it is a distinct departure from it.

In regard to Latin-American civil wars, our policy has been different; but it by no means fits the picture which Mr. Conboy paints. He refers to the joint resolution of 1912 which empowered the President to impose embargoes upon shipments of arms to Latin-American countries in which civil war existed. He refers also to the amendment of 1922, which extended this power to cover countries in which we have extraterritorial rights—notably China.

He apparently failed to notice Mr. Stimson's brief sketch of the actions taken under those resolutions. Nor did Mr. Conboy point out the fact that in most instances those embargo acts have been applied to help the recognized government to put down the rebellion.

President Taft used the joint resolution of 1912 shortly after its passage to help the recognized government of Mexico and to keep supplies from going to the rebels. In 1914 President Wilson raised the embargo when he found that it hampered the Carranza government from getting arms across the American border while his opponent, Huerta, controlling the Atlantic ports, was able to import them freely from Europe. This is a clear analogy to the present Spanish situation in which Franco, controlling the coast, imports his arms from Italy and Germany.

COOLIDGE PRECEDENT

Under President Coolidge the United States sold arms to the Mexican Government while forbidding shipments to the Mexican revolutionists. Secretary Hughes declared that "the refusal to aid the established government would have thrown our moral influence upon the side of those who were challenging the peace and order of Mexico and we should have incurred a large responsibility for the consequent disturbances. We were * * * exercising our undoubted right to sell arms to the existing government." Secretary Kellogg followed a like course.

In 1926 President Coolidge, when civil war broke out in Nicaragua, first embargoed all shipments to that country, but when he found that the revolutionists were obtaining arms from other countries, he informed the recognized Nicaraguan Government that licenses would be issued for shipments of arms to it. "It would be thoroughly inconsistent," he told Congress, "for this country not to support the government recognized by it while the revolutionists were receiving arms and munitions abroad."

In 1930 the United States followed the same policy in regard to Brazil, Secretary Stimson declaring that it was "our regular action under similar circumstances. * * * We are acting according to general principles of international law. Those principles declare that where we are in friendly relations, through diplomatic channels, with a government which has been recognized as the legitimate government of a country, that government is entitled to the ordinary rights of any government to buy arms in this country; while the people who are opposing and trying to overthrow that government and are not yet recognized as belligerents are not entitled to that right."

This action was justified by the Pan-American Treaty signed at Habana in 1928 and since ratified by the United States. This treaty is not mentioned by Mr. Conboy, although it was mentioned by Mr. Stimson. Spain, to be sure, is not a party to it and it therefore does not control the action of the United States with respect to Spain but it is nonetheless a convincing illustration of our policy on this subject.

ARMS FOR REBELS BANNED

By the treaty we agreed "to forbid the traffic in arms and war material, except when intended for the government, while the belligerency of the rebels has not been recognized, in which latter case the rules of neutrality shall be applied."

To summarize, it may be said that the policy of the United States in foreign civil wars has been—

When the civil war was in Europe, to do nothing in the way of restricting the commerce in arms;

When the civil war was in Latin America, to prevent arms from reaching the rebels but to help the recognized government to obtain them.

Why, then, did Congress pass the Spanish arms embargo resolution of January 8, 1937? Secretary Hull has authoritatively stated the reason in his letter to Senator PITTMAN on May 12, 1938. In that letter he referred to the formation in Europe of the Spanish nonintervention committee. The law of January 8, 1937, was designed to enable the United States to assist in this policy of nonintervention. As Mr. Stimson pointed out, the nonintervention agreement was "flagrantly violated" by Italy and Germany and "at once became a mockery and a failure." The specific reason for passing a law contrary to our historic policy has therefore ceased to exist.

Mr. Conboy also takes up the joint resolution of May 1, 1937, commonly miscalled the Neutrality Act. Mr. Stimson, in his letter, gave his opinion that this general law, which provides for all cases of civil strife that may affect the peace and safety of the United States, superseded the specific resolution of January 8, which applied only to the Spanish civil war.

SUPREME COURT RULING

This opinion Mr. Conboy sweeps away by invoking a canon of statutory construction that a general law does not repeal a special law "in the absence of an express repeal or absolute incompatibility." But canons of construction are not absolute rules of law; they are only generalizations designed to aid courts in determining legislative intent. Moreover, the canon invoked by Mr. Conboy cannot be stated in such sweeping terms.

The Supreme Court of the United States has said that "if the latter act covers the whole subject of the first, and embraces new provisions, plainly showing that it was intended as a substitute for the first act, it will operate as a repeal of that act" (*United States* v. *Tynen*, 11 Wall. 88).

The standard treatise on statutory construction quotes the following as a summary of the general principle touching implied repeals: "Where the later or revising statute clearly covers the whole subject matter of antecedent acts, and it plainly appears to have been the purpose of the legislature to give expression in it to the whole law on the subject, the latter is held to be repealed by necessary implication" (Sutherland, vol. I, p. 465).

It seems clear that the law of May 1, 1937, did cover the whole subject of civil strife in foreign countries which had been dealt with in a particular way in the preceding law of January 8.

The Supreme Court has also declared that "As a general rule it is not open to controversy, that where a new statute covers the whole subject matter of an old one, adds offenses, and prescribes different penalties for those enumerated in the old law, that then the former statute is repealed by implication; as the provisions of both cannot stand together" (*Norris* v. *Crocker*, 13 How., 429).

The law of May 1, 1937, changes the penalties prescribed in the law of January 8 by adding to them a provision for the forfeiture of the property exported in violation of the law and of the vessel or vehicle containing the same. It also, by section 6, makes it a penal offense for an American vessel to carry the arms, etc., enumerated in the President's proclamation. Furthermore, the law of January 8 empowers the President to put an end to the embargo only when he finds that "the state of civil strife now obtaining in Spain" has "ceased to exist." On the other hand, the law of May 1 authorizes the President to repeal the embargo if he finds that a state of civil strife still exists but that the character of that strife has changed.

INTENT OF CONGRESS

What is the evidence of the intent of Congress? The so-called Neutrality Acts of 1935 and 1936 dealt only with international wars, not with civil wars. When the Spanish War broke out, therefore, our statutory law was not applicable and for the reason already stated Congress passed the Spanish Embargo Act of January 8, 1937.

In reporting to the Senate the bill which became the so-called Neutrality Act of May 1, 1937, the Senate Foreign Relations Committe said that the new bill "does extend the provisions of the existing law to foreign states wherein civil strife exists of such a magnitude and conducted under such conditions that the export of arms, ammunition, and implements of war from the United States to said foreign state would threaten and endanger our peace."

The provisions of the resolution of May 1, 1937, were evidently designed to prescribe the rules to be followed in all cases of civil strife and those rules were different from those in the resolution of January 8. The President must have assumed that this law of May 1, 1937, superseded and repealed the law of January 8. That earlier law had itself imposed an embargo on shipments of arms to Spain and had specified the articles embargoed. Yet on May 1, the day the later act was passed, the President issued his proclamation under the law of that date. The proclamation declares that:

"Whereas section 1 of the joint resolution of Congress approved May 1, 1937 * * *" authorizes him to proclaim an embargo when civil strife in a foreign state is of such character as to make it necessary to preserve the peace of the United States, therefore, he finds that the civil strife in Spain was of the character contemplated by the law, and accordingly he proclaimed an embargo. He specifically enumerated, as required by the law of May 1, the articles which were covered by the proclamation.

If the embargo imposed by the law of January 8, 1937, was still in force after May 1, why should the President proclaim another embargo? And if the law of January 8 still controlled the situation regarding exports to Spain, how could the President add many new articles which that law did not ban when that law gave him no authority to change the lists?

AVOIDING INTERVENTION

The conclusion is inevitable that the President believed that the law of May 1 superseded the law of January 8, as Mr. Stimson claims that it did. No congressional voice was raised in opposition to that conclusion thus publicly evidenced. Great weight, says the Supreme Court, "will be given to the contemporaneous construction by department officials, who were called upon to act under the law and to carry its provisions into effect" (*United States* v. *Hill*, 120 U. S. 169). The President's action was contemporaneous and outweighs the contrary position publicly announced 10 months later by Secretary Hull.

One further point: The law of May 1, 1937, provides that "whenever, in the judgment of the President, the conditions which have caused him to issue any proclamation under the authority of this section have ceased to exist he shall revoke the same. * * *"

As already pointed out, the conditions which caused him to issue his proclamations were the existence of the Nonintervention Committee in Europe and the belief that the United States might become involved if it stood out against that cooperative effort and thus caused its defeat.

The effort has been defeated by Mussolini and Hitler; the basic conditions have changed and the revocation of the embargo by the President would be fully in accord with the statute. It would further mark a return to our historic policy of avoiding intervention in European civil wars by following a strict hands-off policy instead of taking affirmative action which, as events have demonstrated, inevitably affects the outcome of a struggle in which we profess not to be concerned.

CHARLES C. BURLINGHAM.
PHILIP C. JESSUP.

NEW YORK, *January 30, 1939.*

[From the New York Times of February 2, 1939]

SECRETARY HULL ON EMBARGO—HIS OPINION ON THE JOINT RESOLUTION IS CITED BY MR. CONBOY

To the EDITOR OF THE NEW YORK TIMES:

In their letter to the New York Times, published in your issue of today, Charles C. Burlingham and Philip C. Jessup seek to dispose of an enactment of Congress by the pronouncement that "the conclusion is inevitable that the President believed that the law of May 1 superseded the law of January 8, as Mr. Stimson claims that it did."

If the conclusion is inevitable, one would expect the Secretary of State so to regard it. If the belief of the President had been as stated, how could the Secretary of State have expressed the contrary belief?

And yet Secretary Hull is publicly on record with an unqualified declaration that if the proclamation of the President of May 1, 1937, were to be revoked, the act of Congress of January 8, 1937, would still remain in effect.

CHANGE CALLED UNWARRANTED

Secretary Hull wrote this in a letter to Raymond Leslie Buell. The letter was published in the New York Times of March 23, 1938. The following quotations from the Secretary's communication will suffice to dispose of the unwarranted assumption indulged in by Messrs. Burlingham and Jessup as to the President's belief. Secretary Hull writes:

"After careful consideration of all the facts, I am of the opinion that there has been no change in the situation in Spain such as to warrant the President in revoking his proclamation of May 1, 1937, prohibiting the exportation of arms, ammunition, or implements of war to that country.

"Furthermore, I desire to call your attention in this connection to the provisions of another joint resolution of Congress, approved January 8, 1937, which is likewise still in force."

And later in the same letter:

"Even if the proclamation of the President of May 1, 1937, were to be revoked, the prohibition upon the export of arms, ammunition, and implements of war to Spain laid down in the joint resolution of Congress approved January 8, 1937, would still remain in effect."

HOLDS RESOLUTION WOULD STAND

Therefore, we have Messrs. Burlingham and Jessup urging the President to revoke the proclamation of May 1, 1937, on the assumption that there then will be no Spanish embargo, despite the unequivocal declaration of Secretary of State Hull that in case of such revocation the joint resolution of January 8, 1937, "would still remain in effect."

In matters of foreign affairs the Secretary of State is at least the adviser of the Executive. The Department of State exists for the guidance of the President. The State Department prepares what proclamations the President signs. To the President's signature is added the official signature of the Secretary of State under the words "By the President," and the seal of the United States is affixed by the Secretary.

The Secretary of State has to be aware of the obligations and the restraints to which he, as well as the President, is subject under law.

As between the responsible authority of Secretary Hull, resting as it must on scrupulous concern for law and facts, and the detached, informal, and unofficial opinion of these gentlemen as to what was in the mind of the President, there is no difficulty of choice.

MARTIN CONBOY.

Reciprocal-Trade Agreements and Their Effect Upon American Dairy Farmers

EXTENSION OF REMARKS

OF

HON. HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1939

ADDRESS BY WOODBURY WILLOUGHBY BEFORE VIRGINIA STATE DAIRYMEN'S ASSOCIATION, OLD POINT COMFORT, VA., JANUARY 26, 1939

Mr. SMITH of Virginia. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by Woodbury Willoughby, delivered before the annual convention of the Virginia State Dairymen's Association, Old Point Comfort, Va., January 26, 1939. Mr. Willoughby is an economic analyst in the Division of Trade Agreements of the Department of State. The address is as follows:

Those of us in Washington working on trade agreements are well aware that some dairymen, particularly in the northeastern and north central parts of the country, believe that duty reductions on certain dairy products, granted by the United States in trade agreements, have affected their interests adversely. Individuals well known in the dairy industry have been among those who have criticized both specific concessions and the program as a whole. As this criticism has been given considerable circulation in papers and journals read by farmers, it will, no doubt, have come to the attention of some of you present today. I am, therefore, doubly appreciative of your courtesy in inviting me here. It is in keeping with the fine spirit of open-mindedness and fair play in the discussion of public questions which is traditional with our State.

Before I start a detailed discussion of trade agreements there are several things that I want to make clear. In the first place, I am not here for the purpose of trying to convince you the dairymen should be willing to make sacrifices resulting from reductions in our duties on dairy products in order to promote the general welfare. On the contrary, I am convinced that if you have a complete picture of the situation you will realize that the trade-agreements program as a whole is of decided benefit to the dairy industry; that critics have largely ignored the advantages of the program as a whole to the dairy industry and have grossly exaggerated the significance of the reductions that have been granted by the United States in its duties upon dairy products. In brief, these critics have failed to see the forest for the trees.

First of all, I am going to tell you briefly what these agreements are and how they are made. I shall then discuss what has been done in these agreements and how, in my opinion, they have affected the dairy industry.

A reciprocal-trade agreement is essentially an agreement between the United States and a foreign country providing for a mutual relaxation of excessive restrictions upon trade. Usually the commodities with respect to which we grant concessions are ones that we import chiefly from the country with which the agreement is made, and, similarly, we seek from the foreign country concessions with respect to commodities of which we are the chief supplier. Other provisions of the agreement are designed to insure that the foreign country will not discriminate against any of our commerce by making our products pay a higher import duty than is applied to the products of some third country, by inequitable allocation of foreign exchange or by any other means. We, of course, must offer the same guaranty with respect to the commerce of the country with which the agreement is made.

There is considerable misunderstanding about how trade agreements are made. Some people appear to think that these agreements are made exclusively by the State Department. This is entirely wrong. They are joint products of all of the great departments and other agencies of the Government which, because of their trained personnel and vast body of information, collected over a period of many years, are in the best position to know the probable effects of concessions obtained and granted in trade agreements.

As a result of this arrangement our negotiators have available very comprehensive information concerning the items under consideration. Representatives of foreign countries with which we have negotiated agreements have been amazed at the completeness of the knowledge that our negotiators have of trade in concession items. In fact, we find not infrequently that we know more about some aspects of the foreign trade of the other country than do its own negotiators.

Questions regarding agricultural concessions are referred to the United States Department of Agriculture. With respect to other aspects of the program the participation of other agencies, such as the Department of Commerce and the Tariff Commission, is equally helpful.

While exhaustive study of information accumulated and kept up to date by Government agencies is essential, it is of no less importance to know the views of interested producers, businessmen, and others outside of the Government. It is for this reason that, before negotiations with another country are initiated, public notice is given of intention to negotiate a trade agreement with that country. There is also made public a list of all products upon which the United States may consider granting a concession. All persons who believe that they may be affected by a concession in the proposed agreement are, therefore, in a position either to attend the public hearing which, in each case, is held in Washington prior to the opening of negotiations, or to state their views in writing. In either case, the information provided or views expressed are made available through the Committee for Reciprocity Information, established by the President especially for this purpose, to the experts of the Government directly concerned with the negotiations.

Before talking about the benefits to the dairy industry, I am going to discuss the concessions that the United States has granted to other countries on dairy products. In the negotiation of trade agreements it is, of course, necessary for us to grant concessions. It is obvious, moreover, that when the United States enters into agreements, as it has, with a large number of countries, accounting for more than 60 percent of its trade, and obtains many hundreds of valuable concessions, it in turn must grant concessions on a considerable variety of products.

In the course of our negotiations a few moderate reductions have been made in the import duties on dairy products. In agreements with European countries reductions were granted for Swiss, Edam, Gouda, Roquefort, Blue-mold, Bryndza, and Gruyère process cheeses. Except for Swiss-type cheese, which is produced in rather limited areas in this country in amounts too small to have an appreciable effect upon dairy farmers as a whole, these cheeses are virtually noncompetitive with domestic products.

Discussions with respect to dairy products have centered about concessions that the United States granted to Canada. In the first agreement with that country, which went into effect on January 1, 1936, moderate reductions were made in the duties on Cheddar cheese and on a limited quantity of cream. In the new agreement, which became effective on the first of this month, the duties on Cheddar cheese and cream were reduced somewhat further. Unimportant concessions were also granted with respect to limited quantities of whole milk and to skim milk and buttermilk.

It can be stated categorically that none of these concessions will have an appreciable effect upon the income of American dairy producers as a whole. Experience under the first agreement with Canada makes it safe to say that the concessions in the new agreement will not materially affect the prices received by dairy farmers for their milk, even in the border States where competition from Canada is most feared, and that for all practical purposes the prices received by producers in Virginia will not be affected at all.

From the standpoint of value of trade involved the concession on Cheddar cheese is the most important. The United States import duty established in the agreement is 4 cents per pound but not less than 25 percent ad valorem, as compared with 7 cents per pound, but not less than 35 percent ad valorem provided in the Tariff Act of 1930.

Practically all of the cheese imported into the United States from Canada is of the Cheddar type. Canada also is by far the leading source of our imports of that type of cheese. In most years since the World War imports have not amounted to as much as 1 percent of our domestic production of Cheddar, though in 1 year, 1927, the proportion rose to a little over 4 percent. In 1936, the first year under the earlier agreement, imports were equal to 2.2 percent of domestic production, and in the next year, 1937, fell to less than 1 percent. In 1938 imports dropped still further, being little more than one third as great as in 1937.

These figures dispose of the charge that imports are injuring our cheese industry. The simple fact is that imports always have been too small to have a substantial effect upon the price of Cheddar cheese in this country, and there is every reason to believe that this situation will continue.

From the standpoint of the dairy producer, it is obvious that the Cheddar concession can be entirely ignored. Only about one-twentieth of his milk goes into Cheddar, and imports of that product in terms of milk are microscopic in comparison with total milk production.

The other dairy concessions are even less significant to dairy producers. On cream the import duty was reduced to 28.3 cents per gallon as compared with 56.6 cents per gallon in the 1930 Tariff Act. To be absolutely certain, however, that the interests of American dairymen will be fully protected, the agreement provides that the lowered rate shall apply to not more than one and one-half million gallons. Imports in excess of that amount, which is less than one-fifth of 1 percent of our domestic production of cream, would have to pay the high rate established by the tariff act.

Some indication of what to expect from the new rate can be had from our experience under the earlier Canadian agreement, when the import duty stood at 35 cents per gallon (as compared with 56.6 cents in the 1930 Tariff Act). In no year was one-tenth of the quota of one and one-half million gallons filled. In 1936 imports totaled 44,000 gallons; in 1937, 137,000 gallons; and in 1938, three-tenths of 1 percent of the quota, or 5,100 gallons.

The concessions on milk can be dismissed as insignificant to our dairymen. The reduced rate of 3¼ cents per gallon on whole milk preserves considerable protection for domestic producers and, moreover, applies only to 3,000,000 gallons, as compared with our domestic production of more than eleven and one-half billion gallons. The binding of the present duties on skim milk and buttermilk and a reduction from 3 to 1½ cents per pound of the duty on dried buttermilk affect a trade of very small proportions.

Before leaving the subject of dairy imports there is one other point that I wish to mention. In addition to the duties, imports of dairy products, especially milk and cream, are strictly regulated by measures designed to insure that they will not endanger the health of consumers in this country. The Food and Drugs Act provides for the exclusion of all food products which are dangerous to the health of the people of the United States. Furthermore, the Federal Milk Control Act of 1927 provides for special sanitary regulations including inspection for milk and cream imported into this country. No fluid milk or cream may be imported unless the person by whom it is shipped or transported has a permit from the Secretary of Agriculture of the United States. In addition to this Federal legislation there are, of course, the various State laws and municipal ordinances which apply to imported dairy products, particularly milk and cream. Such regulations are in nowise modified by the trade agreements. The United States retains the right to enforce any sanitary regulation necessary to protect the health of its citizens and of its dairy herds.

As I have shown you the duty reductions which have been made on dairy products are so moderate and carefully guarded that dairy producers need not fear injury. I should now like to discuss the benefits which the dairy industry is receiving from the trade-agreements program and show you why, in my opinion, these benefits clearly outweigh any possible disadvantages resulting from the duty reductions made by the United States.

The profitableness of dairying in the United States depends largely upon the purchasing power of the American public. I need not dwell at length on this point, which is doubtless well known to most of you. The price that the farmer obtains for his milk is in the long run determined by supply and demand. The supply, of course, depends upon a number of things, such as the number of milk cows on farms, the cost of feed, conditions of pastures, and so forth. Imports, as I have shown, are unimportant as a factor affecting the supply.

Consumer demand, on the other hand, depends largely upon general business conditions. When business is active and employment and pay rolls large, the demand for dairy products is correspondingly strong, and increased quantities can be sold at profitable prices. When business is depressed the demand for dairy products falls off and prices drop.

It follows that a tariff policy which contributes to the improvement of economic conditions in the United States is obviously advantageous to the dairy industry. A tariff policy which contributes to the economic depression is just as obviously disadvantageous to the dairy industry. The trade-agreements program, through the reduction of trade barriers and the restoration of foreign trade, is a major force promoting recovery in the United States and therefore is a major force stimulating purchasing power for dairy and other products.

The trade-agreements program has been in effect for 4½ years. During that period we have negotiated agreements with 19 countries, accounting for nearly 60 percent of our total foreign trade. In the course of these agreements concessions have been obtained for many hundreds of commodities entering into our export trade. Substantial benefits have been obtained for such important Virginia products as tobacco, apples, textiles, and lumber. In 10 of the 19 agreements now in effect concessions have been obtained for tobacco and tobacco manufactures. Especially valuable are concessions obtained for apples in all but two of the agreements.

As most of you probably know, our export trade, like our import trade, in dairy products has never been large in comparison with the total domestic production. Nevertheless, concessions have been obtained in the agreements thus far concluded which are of considerable value to the industry.

Prepared milk—condensed, evaporated, dried, and malted—is the principal item in our exports of dairy products. In recent years such exports have moved chiefly to Caribbean countries and to the Philippine Islands. Concessions on prepared-milk products exported from the United States have been obtained from trade-agreement countries, which include some of our important customers for these commodities.

Brazil, Colombia, Guatemala, Haiti, Honduras, Nicaragua, and Costa Rica reduced their duties on various American dairy products, in some cases by as much as 68 percent. Through the extension of most-favored-nation treatment to the products of the United States through the trade agreements, Canada has given more favorable treatment to American butter and certain types of cheese, and France has given improved treatment to condensed milk and infants' milk foods from the United States.

Several of the British colonies bound against increase the existing margin of preference in favor of evaporated milk produced in the British Empire. Ceylon assured that a margin of preference would not be established on milk foods. Newfoundland assured that no margin of preference would be established on preserved, sterilized, or condensed milk. Bermuda bound the margin of preference on fresh cream. Bahamas bound the preference margin on unsweetened milk.

Of course dairy farmers are interested not only in concessions obtained for dairy products but, indirectly, in all other concessions obtained for American products. When producers of other products obtain foreign markets for their goods, their purchasing power for dairy products and all other goods is increased. As I pointed out earlier in my talk, the prosperity of the dairy farmer depends upon the prosperity of the country as a whole. By promoting domestic recovery, trade agreements are benefiting the dairy industry.

There is another benefit to dairy producers which is often overlooked. By expanding market outlets both at home and abroad for the great staple crops of this country, trade agreements tend to check a shift to dairy production. If the cotton, corn-hog, and wheat producer cannot market his great surpluses abroad he will use his land for forage, meat, and dairy products, thus further aggravating the already keen domestic competition in these branches of agriculture.

An indication of the extent to which trade agreements are aiding general recovery is provided by trade trends since the program was adopted. Since 1934 our exports have increased about $1,000,000,000, from $2,100,000,000 in that year to an estimated $3,100,000,000 in 1938. Imports have increased from $1,700,000,000 to an estimated $2,000,000,000 in the same period.

Unfortunately it is not possible to measure precisely how much of this is due to trade agreements. There are too many other

factors that affect foreign trade to be able to isolate the effects of one factor. It can, nevertheless, be said with absolute certainty that our trade is very substantially greater than it would have been without the agreements. Not only is this evident from the fact that the reduction of duties and other trade barriers must necessarily make possible greater trade, but also from the fact that trade with the countries with which agreements have been concluded has expanded more rapidly than trade with other countries.

In the 12 months ending June 30, 1938, our total exports to trade-agreement countries were 66 percent higher than the average of the 2 years immediately before trade agreements were effective, while our exports to nonagreement countries, on the other hand, were 48 percent higher. If we consider farm products alone the situation is even more striking. Our exports of agricultural commodities to trade-agreement countries in the 12 months ending June 1938 were 55 percent higher than in the preceding year, while exports to nonagreement countries were but 3 percent higher.

Another aspect of the trade-agreements program which is all too often overlooked, but which is nonetheless important, concerns consumer benefits. So far as concerns their immediate economic interests, there is, for farmers, just one final purpose and test of the trade-agreements program. It is the same test that applies to every other group in our population. That test is whether, and if so how far, the program increases what the economists call "real income"—that is, income in terms of purchasing power. All of us, whether farmers or not, are accustomed as a matter of habit to think first of all in terms of money income; but we all know that what really counts in the end is what that money will buy.

As a means of increasing real farm income the trade-agreements program has advantages which are unique. It is a double-edged instrument. On one edge it enhances agriculture's gross income by hewing a path through the wilderness of trade barriers throughout the world which has so greatly restricted market outlets at home and abroad for farm and other products. On the other edge it increases agriculture's net income by hewing down excessive tariff rates in our own tariff act, thus increasing the purchasing power of all consumer incomes, including those of farmers. In short, the interests of agriculture as a whole are aided from both the producer and the consumer standpoint.

Abraham Lincoln's Birthday in 1864

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 13, 1939

ARTICLE BY EMANUEL HERTZ IN NEW YORK TIMES MAGAZINE OF FEBRUARY 12, 1939

Mr. WAGNER. Mr. President, I ask unanimous consent to have inserted in the Appendix an article by Emanuel Hertz, entitled "Lincoln's Grim Birthday 75 Years Ago," appearing in the New York Times magazine, February 12, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times magazine of February 12, 1939]

LINCOLN'S GRIM BIRTHDAY 75 YEARS AGO—THE ANNIVERSARY, UNNOTICED AT THE TIME, FOUND THE WAR PRESIDENT IN THE MIDST OF GRAVE TRIALS

(By Emanuel Hertz)

It is one of the ironic facts of history that the anniversary we celebrate every year on February 12 seems not to have been celebrated or even remembered by Abraham Lincoln himself. In all his writings, among the thousands of Lincoln items which I have examined, I find no reference to any of his birthdays.

Four times while he was in the White House his birthday came and went without ceremony. As we examine the records for the week of February 12, 1864, 75 years ago, we find no congratulatory messages, no list of gifts received, no evidence of birthday cakes and candles. Lincoln was 55 years old—at the height of his powers. We find him engaged with affairs of varying importance.

A fire broke out in the White House stables on the night of February 10, and the President watched vain efforts to put it out. The damage was heart-rending to little Tad, whose pony was burned to death, together with Mrs. Lincoln's black carriage horses and a riding horse belonging to Secretary Nicolay. Next day both Houses of Congress passed a bill appropriating $12,000 to rebuild the stables.

We have the record of a serious question that Lincoln had to deal with at this time. John A. Andrew, the famous war Governor of Massachusetts, had written him regarding the refusal of Federal officials to permit "persons of color, both freemen and refugees * * * seeking to better their fortunes and support their families by reaching Massachusetts," to "pass northward from Washington." "I am at a loss," Andrew protested, "to understand by what color of pretended authority people not charged with crime are thus subjected to hardship and wrong."

Massachusetts had sent a large part of its working population into the Union armies. At the same time it was furnishing a large part of the wool with which the armies were clothed and of the shoes on which they marched. The result, as was to be the case during the World War more than half a century later, was a labor shortage which it was hoped the liberated blacks would help to fill. At the same time, as Governor Andrew pointed out, the Federal Government would be relieved of the cost of rationing so many refugees.

Lincoln inquired of the Unionist Governor Pierrepont, of Virginia, whose authority ran in that part of the Old Dominion not held by Confederate troops, and got a letter from him stating that there were numbers of Negro refugees who desired to go North. The President then endorsed Pierrepont's letter as follows, under the date of February 12, 1864:

"I understand from the within that there are a hundred colored men in Alexandria who desire to go to Massachusetts and enlist in the united service. Let them go."

Since obviously more than a hundred colored men were involved in the refugee problem the probable purpose of the letter was to establish a precedent. This it undoubtedly did, and the real meaning of the Emancipation Proclamation was brought home to officials who had not previously realized its scope. The colored race, as Governor Andrew had urged, was as free to move into Massachusetts as German and Irish immigrants were to "buy land in the great land States of the West."

There were plenty of diarists in high office in Washington in 1864 who might have elaborated on the details we have. John Hay, Edward Bates, Salmon P. Chase, Gideon Welles, and a host of others were setting down their thoughts and actions for what they assumed would be an eager posterity. But none of these gentlemen said anything about the birthday. Hay was absent from Washington during the entire week of February 7 to 13, and his privately printed diary has a gap at this point. Bates, ever ready to record any social or political recognition that came his way, says nothing that throws light on our problem. Chase, who would at least have had ready a well-phrased sneer if the President and his family had indulged in any innocent merriment, likewise says nothing.

Gideon Welles resumed his diary on Friday, February 12, after a lapse of a week which he ascribed to "incessant employment early and late." He mentions that Postmaster General Blair had told him that his (Welles') enemies "are making me great." Of the Friday cabinet he writes: "Little of particular interest in the Cabinet meeting. Seward left early and Chase soon followed."

Lincoln may have caught cold on the night of the 10th, as he stood watching the burning stables, or he may have been suffering from one of his periodical attacks of illness. At any rate, he wrote Chase on February 13: "I am unwell, even now, and shall be worse this afternoon. If you please, we will have an interview Monday." It is a reasonable guess that Lincoln was feeling below par all week and would not have been in a festive mood even though some kind of observance of the 12th had been arranged.

But in any case Lincoln had preoccupations enough to take his mind off purely personal matters. The military campaign of 1864 was certain to be a crucial one, and closely tied up with it was the political campaign. Lincoln did not want reelection for motives of personal glorification but he was deeply anxious lest the policy of vigorous action against the seceding States should be reversed. In February 1864 it still seemed possible that Grant or Chase would run against him, and the McClellan candidacy was already taking shape.

The Chase candidacy was perhaps more an annoyance than a worry, for Lincoln knew how impossible as well as how impolitic it was. He treated Chase with great consideration—as we might be able to testify if any one had listened in at that Monday interview. Once he said of his rival: "He is at least one and one-half times as great as any man in the public service at this time." Then he told the story of the chin-fly.

"My friend," he began, "you know what a chin-fly is. My brother and I were once plowing on a Kentucky farm. I was driving and he held the plow. The horse was lazy, but on one occasion he rushed across the field so fast that I, with my long legs, could scarcely keep pace with him. On reaching the end of the furrow I found an enormous chin-fly fastened on him and knocked it off. My brother asked, 'Why did you do that?' I told him I did not want the horse bitten in that way. 'Why,' said he, 'that's all that made him go.'"

For a time it seemed that the chin-fly might have bitten Grant, who would have been a more dangerous competitor than Chase. With his customary taciturnity, Grant had little or nothing to say on the subject. Indirectly, word came that Grant was not interested in the nomination. Finally a direct message came from Grant through one of his intimate friends, Col. William S. Hillyer, to the effect that the general had no other ambition at that time than to remain at the head of the Army.

"Grant's whole soul, Mr. President," said Hillyer, "is bent on your reelection as President to conquer the Rebellion and aid you in restoring and rebuilding the country and perpetuating the Union."

"Ah, Colonel," Lincoln replied, "you have lifted an awful load from my mind. I was afraid of Grant, because we are human; although I would rather be beaten by him than by any living man. When the Presidential grub gets inside of a man it hides itself and burrows deep."

Another friend said to Lincoln that nothing could defeat him but Grant's capture of Richmond, in case that event were followed by his nomination and acceptance. Lincoln laughed. "Well," he remarked, "I feel very much like the man who said he didn't want to die particularly; but if he had got to die, that was precisely the disease he would like to die of."

In order to get at Lincoln's state of mind, we have to remember that he could not know in February 1864 what was to be written in the histories later on: That Grant would indeed capture Richmond, though in 1865, not 1864; that the Chase candidacy would peter out, and that Chase would be glad to accept Lincoln's nomination to the Supreme Court; and that General McClellan, running on an end-the-war platform in the fall of 1864, would be decisively beaten.

He was, in fact, facing one of the gloomiest periods of his career on this fifty-fifth birthday. The military situation was not promising. Sherman's march to the sea was still a gambler's chance. Farragut was not to capture the forts of Mobile Bay till August. Grant was closing in on Richmond, but at a terrible cost in human life. As Lincoln himself expressed it, "There were too many weeping widows throughout the North."

The draft riots in New York City in July 1863 had been suppressed, but popular discontent and unrest in the northern cities had not died down. Confederate sympathizers, making their base in Canada, kept northern communities jittery with rumors of explosions, incendiarism, and sabotage of every nature. Lincoln was meeting with plenty of criticism from warm, even fanatical friends of the Union. One of them was Horace Greeley, who as late as the middle of August 1864 thought Lincoln could not possibly be reelected, and proposed calling another convention to select a more promising candidate.

Lincoln then, as always while he was in the White House, was pestered by the interminable run of appeals, petitions, and demands for office. "I feel," he declared, "like a man letting lodgings at one end of the house while the other end is on fire."

The division in his Cabinet added to the strain. There seemed to be no reconciling of the partisans of Seward and of Chase. Ultimately Lincoln solved that problem by accepting one of Chase's numerous resignations—much to the latter's surprise and indignation. Then, in October 1864, he appointed the former Secretary of the Treasury to the Supreme Court in a remarkable letter in which he explained that he acted with full knowledge of Chase's faults as well as his virtues. "I have," he added, "a Biblical precedent for making this nomination. The mere fact that Aaron helped in the making of the golden calf did not interfere with his receiving his commission as high priest."

The years in the White House had worn Lincoln down. Once the Presidency had been a fairly leisurely position. Now it was a torment not only because of its incessant demands on the incumbent's time and strength but because of the terrible responsibility for human suffering which he had to carry. Even Lincoln's great shoulders once so strong in the wrestling and weight-lifting of the early Illinois days were beginning to bow. If one compares the photograph taken in New York after the Cooper Union speech with those made by Brady and Gardner in Washington about the beginning of 1864 one sees a man aged by 20 years instead of 4.

He remained a curious combination of genius and humility. Perhaps he never knew his own stature. Standing beside Seward while a detachment marched by in review on its way to the front he remarked that there were 100 people in that regiment who could do his work and Seward's work as well as they did. Seward by this time knew better, for the patronizing attitude he had once adopted toward the President had long since passed. But Lincoln had not yet won the victory which was to clinch his greatness in the public's mind and heart for all time to come.

Lincoln was moving toward victory, but the cloud of uncertainty had not yet lifted. The war grew more horrible day by day. The President applied himself to military as well as political problems. He was keeping in constant touch with his commanders in the field, displaying a real native genius in sensing military problems, in determining the ability of generals as well as of statesmen, in knowing when to urge a man on and when to let him alone. When Stanton brought Grant to him, practically charging the general with insubordination, he listened first to the War Secretary, then to Grant, to whom Stanton said, "General, you may now state your case." Grant answered tersely, "I have no case to state." Then the President turned to the Secretary. "Stanton," he said, "you and I have been running this machine for 3 years and we have not made a success of it. Let us give Grant a chance." They did give Grant a chance. Richmond was to fall and Lee was to ride sadly to Appomattox Courthouse. But this was a year ahead in the invisible web of time.

Lincoln took refuge in common things and humble tasks. The British Minister, shocked when he found the President blacking his shoes, stammered that in England gentlemen did not polish their own boots. "Whose boots do they blacken?" Lincoln asked blandly. Once he kept a delegation waiting while he "repaired the damages"—sewing a button on his coat. He went with his Cabinet to inspect a new hospital and sat down on the floor to eat a good slice of strawberry shortcake which Mrs. Stanton had sent for the occasion. The Cabinet looked apprehensively at its clean coattails but finally followed suit.

But the joking—some severe critics called it clowning—was the momentary release of a man who was laden almost beyond human endurance. In big and little he dealt with the fates of men and nations. In the agony of this period he exclaimed: "I have been called upon to pass upon cases of life and death to a greater extent than all my predecessors." He would tell a story at one of the unavoidable formal receptions he had to give, or, with a pathos we can now understand, would try to collect a new anecdote. "What was the point in that yarn you told me the last time?" he would inquire of some diplomat or official. But all the time, and more during this late winter of 1863–64 than ever before or afterward, the vultures were gnawing at his heart.

Stout friends were predicting victory. Henry J. Raymond, editor of the New York Times and Member of Congress, wrote an editorial a few days after the 1864 birthday in which he drew a macabre comparison between the Confederacy and the weird story of the Empress Juana, of Austria, who watched for many days over the body of her husband, Philip the Handsome, in hopes of returning life. "A king died here," wrote Raymond, "struck through the inwards one April morning by a cannon ball fired by certain lunatic subjects of his in Charleston Harbor. He was a king not handsome like Philip, but as hideous as sin. And yet not for 3 weeks but for almost 3 years has his disconsolate relict hung over him, refusing to make him dead.

King slavery was dying, but in his struggles it seemed during 1864 that a nation might be dying, too. The year would end with Sherman in Savannah and Grant with a bulldog grip on Lee's capital, which he was never to release. But it was a year of sorrow and apprehension. Even victory could not bring the dead back to life nor lift the burden of grief that overwhelmed an entire generation in the North as well as in the South.

But if Lincoln's birthday could not be celebrated in 1864 we can be the better satisfied that a tribute can be paid by a united nation in 1939.

A Century of Progress in Applying Jefferson's Philosophy of Education

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, during the weekend just passed I made an excursion into the Middle West to the State of my nativity, the great State of Missouri. While there I was a guest and interested spectator at two centennial celebrations at Columbia, the seat of the State university. Seldom have I been so informed and inspired in the same length of time as by these programs.

The University of Missouri was the first State university founded west of the Mississippi River, and that was exactly 100 years ago this month. Also the Geyer Act, the first effective school legislation, was passed exactly a century ago in that State. Both of these significant events were appropriately celebrated on Thursday, Friday, and Saturday of last week. It is not that the University of Missouri is my alma mater—which I regret to say it is not—that I am calling particular attention to this matter; it is not that the Geyer Act was the first legislation for elementary schools; it is not that I am a native of Missouri—although I am, and proud of my birthplace—that I am referring thus publicly to these programs of last week. Rather it is the meaning to the cause of American education which all this implies, and also because both celebrations indicate a practical outgrowth of the views and philosophy of Thomas Jefferson put into practice in the great Louisiana Territory, which the immortal Jefferson brought under our flag.

The university authorities took me to a hallowed spot on their campus and showed me the first monument erected over the body of Thomas Jefferson and with it the famous inscription dictated by Jefferson himself for his gravestone. Of more than a dozen historic deeds done by Thomas Jefferson, any one of which would have made him immortal, at the end of a long life he wanted to be remembered for three only. Author of the Declaration of American Independence, of the statute of Virginia for religious freedom, and father of the University of Virginia.

Thus, this great exponent of freedom indicated the threefold nature of that liberty—liberty of the body of man from the lash of the tyrant, liberty of the spirit of man from religious dogma and intolerance, and liberty of the mind of

man from ignorance and superstition. Truly, Jefferson was a great liberator.

The important things impressed on my mind by these programs on the campus of the University of Missouri and by the discussions of the school men present were these: That the University of Missouri is a direct descendent of Thomas Jefferson's "brain child"; that the first effective legislation promoting public education in Missouri was a practical application of Jefferson's desire for schools for all the people, and lastly, that education is a public function which should be under the control of the State.

Throughout the many speeches enumerating the educational achievements of the first 100 years in Missouri ran a note of gladness and of praise for Jefferson and later workers who made his inspiration a reality; but also a note of sadness because of partial failure along the way. After 100 years of progress Missouri today has educational high grounds and low grounds, and the total spent for education is inadequate and its distribution inequitable. While stoutly maintaining that the education of all the children in the Commonwealth is a State responsibility, the leading schoolmen expressed a hope that Federal aid in larger and larger portion might be granted without Federal dictation and control. And that, Mr. Speaker, brings me to another matter to which I wish to call your attention.

An assessment of the gains of 100 years of educational progress in Missouri raises the question, What of the situation throughout the Nation? The unsolved problems found yet in Missouri are common to many of the other States. Inadequacy of financial support and inequality of educational opportunity prevail throughout the country and call for action. Let us look at the picture in general.

Someone has rather appropriately said that if the American people have a religion it is education. That may sound a bit queer; but if the American people are united in thought and desire on any one subject, it is the subject of education. High or low, rich or poor, all alike desire that their children shall be properly educated, and it is pathetic to see what efforts and sacrifices are frequently put forth to that end. It is the fundamental philosophy of our democratic society that equal and extensive education shall be available to all; that is, as equal and extensive as individual capabilities will permit.

There have been numerous efforts in the last 20 years made toward emphasizing the importance of education in our national scheme of things. Perhaps it was the startling fact discovered as we entered the World War, regarding the inadequate earlier care of our young people, which aroused thoughtful men and women to the Nation's educational needs. There were many at that time who said that we should have a department of education, with a secretary, in the President's Cabinet. Recall such measures as the Smith-Towner bill, the Towner-Sterling bill, and the Reed-Curtis bill, which were a few among the several proposals during this period, widely discussed, but never enacted. In those days educational leaders called for a Federal appropriation, beginning with about $100,000,000, to take care of four or five educational needs of greatest concern.

The National Educational Association and other powerful forces have favored such a national program consistently, but many leading educators and some other powerful forces have fought these proposals. In a long series of battles to promote education in this country—most of which struggles have been won—the battle for Federal support of schools is the last, and is as yet indecisive. Because I have been a school man and am now in the National Legislature, some of my school friends regard me as a "watchman on the tower." They are saying to me, "Watchman, how goes the battle?"

Before I attempt an answer, let me review some of the facts to bring this story up to date. The present struggle is but the last phase of a mighty battle for education in America. Let me enumerate some of the earlier skirmishes and battles by which the cause of education has been advanced thus far. Let me remind you that when this Nation was founded education was the privilege of a few and those few were educated at private expense. Such little education as the general run of people received was a pauper education, mostly at the hands of the church. Thomas Jefferson was the leading exponent of education in his day and Horace Mann carried the work to new frontiers at a later time, paving the way for our battle of today. We are proud of our free, public, nonsectarian schools but what we have now, even in their inadequacy, have been hard to obtain.

It was difficut to bring about the idea that education is a public function and should not be left to the church or to charity. The church had played the part of a great saving and regenerating force in society for so long that once it held virtually a monopoly on education as well as on many other social services. However, the time came when a majority of our people began to recognize education as a public function, and one great battle had been won.

So long had education been paid for by parents that the idea of a man of property paying to educate another man's children in the same small neighborhood was hard to establish, but ultimately, it was established, and tax-supported schools took the place of the private-rate schools. Nevertheless it took a great battle to accomplish this, and Horace Mann preached strenuously the doctrine that "the money should be raised where the wealth is and spent where the children are," and finally the idea had general acceptance.

The fight over organization was almost as bitter as that over the nature of the control. But once the idea of control by the public had been accepted, the matter of organization was easier. Beginning with the earliest possible unit, the district school, we have seen our education organized on larger and larger units, on the county basis and the Statewide basis, and there are some, though I am not one of them, who would have our schools organized on a national basis. If that is ever done in America, it will cause a bigger battle than any of the skirmishes that we have thus far had in the history of American education. However, this is not the battle now raging, for the battle today is to secure Nationwide financial support for our schools without national control. To my mind this is an imperative need and cannot longer be postponed.

Under the present administration there has been a renewed effort, encouraged by the great spending programs which we have had in recent years, to get support for public education. The need is as great today as it has ever been; in fact, it is greater right now, and the encouragement of a liberal government has given friends of education much hope. I entered the Seventy-fifth Congress with the fixed determination to support the Harrison-Fletcher bill, which did not call for a department of education at Washington, but did call for larger and larger appropriations from the Federal Treasury. When the Harrison bill was reported unanimously by a Senate committee in 1937 some schoolmen thought the victory was about won. Not so.

The chairman of the House Committee on Education has already introduced a bill—H. R. 3517—which would provide an appropriation of $40,000,000 for the first year and a $20,000,000 increase each year for the next 5 years to be divided among the several States according to each State's needs. A formula for determining the States' educational needs is interesting and deserves close study. Plainly our bill aims to iron out some of the inequalities in educational opportunity now found in this country. In the main this bill follows the suggestions of the President's Advisory Committee reporting last year.

The President's committee found rural schools much poorer than city schools in general and that rural areas with 13 percent of the children have only 2 percent of the Nation's wealth. While rejoicing in Missouri's century of educational progress, we are concerned with another finding of the committee that even though Missouri is the fifteenth State in the matter of wealth, she is the thirty-third in the matter of school expenditure. Or to put it another way, Missouri is about average in its ability to support adequate schools, but needs to increase its per capita expenditures by

$10 per child to come up to the average of the whole Nation in schooling.

Some men working at the University of Missouri, such as my good friend, Dr. W. W. Carpenter, and my former classmate, Dr. A. G. Capps, have been studying this problem intently. These men and others have pointed out that the American people are moving about more and more. It is a fact that there is a constant migration of young people from the farms to the city. If this were not true, our cities would become depopulated through the cities' declining birth rate. It is a matter of vital concern to our cities that their future inhabitants and business folk shall get the right kind of schooling today out in the country. Not only do people move from the country to the city, but they move from one State to another in this automotive age. The studies made by Carpenter and Capps furnish convincing proof that no State of this Union can be indifferent to the schooling of the children of the other States. The only logical answer is that the task of proper education is too heavy for certain areas and certain States, so it must be supported in part by Federal funds.

It is obvious that the future prosperity and stability of our country depends upon national aid for our schools. It is equally obvious that the chief burden of schooling must rest upon the States, and that the local control must not be disturbed. There are obstacles to be overcome and serious problems to be solved before wise legislation of this sort can be properly and justly enacted, and such enactment calls for the most liberal, constructive statesmanship available. Let all the friends of our public schools ponder this problem.

New Frontiers—Rapidly Increasing Productive Capacity of the United States—Ample Resources and Credit to Finance Full Utilization—Technological Trends

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1939

RADIO ADDRESS BY HON. MARTIN F. SMITH, OF WASHINGTON, FEBRUARY 13, 1939

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following radio speech which I delivered over the national network of the Mutual Broadcasting System from station WOL, Washington, D. C., on Monday evening, February 13, 1939:

Friends of the radio audience, I deeply appreciate the courtesy of the Mutual Broadcasting System in making it possible for me to address you this evening. When President Roosevelt delivered his annual message to Congress he stated: "We want to get enough capital and labor at work to give us a total turnover of business, a total national income, of at least $80,000,000,000 a year. * * * This Nation has the men and resources sufficient to make it at least an $80,000,000,000 Nation," and the President referred to "technological improvements" as one of a number of factors rendering such a result possible. Our national income for 1938 has been estimated at $64,000,000,000, so an increase to $80,000,000,000 would represent an increase of $16,000,000,000 or 25 percent. This substantial increase would clearly provide much better times and happier economic and social conditions for all the American people. However, it would still fall far short of the national income which we could and should have in this country.

AMERICA'S CAPACITY TO PRODUCE

The Brookings Institution, in its exhaustive study entitled "America's Capacity to Produce," stated—and its conclusions have not been questioned—that additional goods and services to the extent of approximately $18,000,000,000 could have been produced during 1929, our all-time peak in production, which was $94,000,000,000, if our machinery and unemployed labor had been utilized to capacity. According to their conclusions, we produced only 81 percent of our industrial and agricultural capacity. In other words, we deprived ourselves of 19 percent of our productive capacity which we did not utilize, and could have produced $112,000,000,000 worth of goods and services.

NATIONAL SURVEY OF POTENTIAL PRODUCTIVE CAPACITY

The National Survey of Potential Productive Capacity was conducted in 1934 by the Federal Government under the auspices of the Civil Works Administration to study this very problem. Federal funds were used but the survey was not made by relief workers. Thirteen experts were employed and selected from our outstanding engineers, sociologists, and economists. The completed study consisting of 358 closely printed pages indicates that in 1929 we could have produced $135,000,000,000 worth of goods and services, or $41,000,000,000 more than the estimated ninety-four billions produced that year. Some of our leading manufacturers, engineers, and economists have estimated that due to the tremendous "technological improvements" in the past decade our full productive capacity has increased to such an extent that in 1939 it is probably 50 percent greater than it was in 1929.

LOSS CAUSED BY CURTAILED PRODUCTION

Idle factories, idle farm lands, idle labor, and idle capital are causing a terrible pecuniary loss to the American people. The Brookings Institution has estimated the direct loss of wealth which could have been created since 1929 at $200,000,000,000. Members of the Temporary National Economic Committee at Senate hearings have recently estimated the loss at $178,000,000,000. What this sum represents in loss of physical, moral, and spiritual values, human misery and suffering, poverty and blighted hopes and ambitions cannot be measured in terms of dollars. The loss is incalculable and the sad pity is that it could all have been avoided by the intelligent utilization of our natural, mechanical, and human resources.

TECHNOLOGICAL TRENDS—NATIONAL RESOURCES COMMITTEE

The National Resources Committee appointed by President Roosevelt has submitted its report on technological trends, and it is the most complete study and investigation of modern and current scientific discoveries and technological development which has ever been made. It charts the further increased production possibilities and potentialities of innumerable inventions and processes which are in course of perfection and which will revolutionize industry and agriculture.

The report describes the cotton-picking machine, air-conditioning fabrics made from cellulose, synthetic rubber, synthetic gasoline, plastics, photoelectric cell, prefabricated houses, television, trailers, and the far-reaching possibilities of tray or tank agriculture—the growing of farm products in water instead of earth. Of course, the social import of these inventions which are in the offing can hardly be imagined.

NEW FRONTIERS

We frequently deplore the passing of the old frontiers and assert that on that account the period of expansion in our country is past. We lament the fact that we have no more geographical frontiers to exploit and no more wilderness to explore and develop, and consequently assume an attitude of defeatism and despair. The fact, as pointed out in technological trends by eminent national authorities, is that science and research are presenting limitless new frontiers for the production of increased wealth, material progress, and industrial and social development which far surpass the opportunities which were offered by the vanished frontiers of bygone days. The scientists with their test tubes are bringing out of the laboratories new products and new improved processes which are tending to alter and vastly enhance the entire status of society. The achievements of industrial chemistry and metallurgical research are transforming life itself by continuously making available to mankind benefits, comforts, and conveniences which were not even dreamed of a few decades ago.

These new frontiers of science are still in their inception and present untold possibilities for infinite advancement and boundless exploration. Indeed, the amazing progress of recent years is but a meager beginning of the developments which are uncircumscribed. The editors of Chemical and Metallurgical Engineering point out that the chemical industry more than any other is converting luxuries into articles of common necessity at prices within the purse of everybody. I quote:

"New industries which are constantly being created and developed through advances in science, invention, and technology, offer important new opportunities for employment. Fifteen of the major industries of today have been developed since 1879 and it has been estimated that these 15 industries have created, directly or indirectly, 15,000,000 new jobs. * * * Research is, therefore, our most promising source of future jobs—as well as profits. From the laboratories come the new products, new uses, and improved processes that make better goods available at constantly lower prices."

THE QUESTION OF FINANCING

The all-important question logically suggests itself: How can we finance the stupendous cost of applying and taking advantage of these numerous discoveries of science and invention? How are we going to defray the huge expense of modernizing our present social and industrial structure and thereby bring about the enormous employment of labor required to convert the plans, blue prints, specifications, models, formulas and chemical compounds into serviceable realities and products for the use, benefit, and enjoyment of our citizenry? Fortunately we are in a position to finance successfully all the essential and multitudinous activities of the most progressive construction and development program which could be conceived.

Gold is piled high in the Treasury of the United States—over 14½ billions of dollars worth—nearly two-thirds of the whole

world's supply. The precious metal serves as the base for currency and credit. In 1929 the country held $3,900,000,000 in gold, and based thereon were $58,474,000,000 in bank loans and investments. In other words, about $15 in credit was based on each $1 in gold, a ratio which had prevailed for many years. The action to reduce the gold content of the dollar and gold stocks that had totaled four billions, by Government edict became $6,800,000,000. Since then nearly $8,000,000,000 more of gold has flowed into the Treasury of the United States from the four corners of the earth. However, the volume of credit has substantially decreased. Today over 14½ billions of gold support but $48,304,000,000 in loans and investments and the ratio that has been normally 15 to 1 between gold and credit is less than 3½ to 1. If loans were to get back to the 15-to-1 ratio, loans that today are 48 billions could increase to 210 billions—nearly four times the 1929 total, so we possess the largest potential supply of credit that this or any other nation has ever seen in the history of mankind.

We possess the raw materials and the natural resources, we have the inventive genius and manpower and also the money and supply of credit to here in America create and enjoy the greatest era of peace, prosperity, and happiness in the history of the human race. Do we lack the intelligence? I refuse to believe that we do and in future presentations I shall further develop my theme and discuss the wonderful future of America.

Thank you, and good night.

Our National Defense

EXTENSION OF REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1939

RADIO ADDRESS BY HON. RALPH E. CHURCH, OF ILLINOIS, FEBRUARY 13, 1939

Mr. JOHNSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by Hon. RALPH E. CHURCH, of Illinois, under the auspices of the Washington Star in its national radio forum Monday evening, February 13, 1939, on the subject, Our National Defense:

It is my privilege to address you tonight as a member of that special committee of the Republican conference in the House of Representatives which submitted its report last Thursday on the whole question of national defense.

My purpose tonight will be to expound that report and to explore the historical background which guided our committee to the conclusions it reached concerning the rearmament program now under debate in the House.

Briefly, the committee's conclusion was that the national-defense policy of the United States should be based upon a clear definition of the area to be defended; and, secondly, that the physical machinery of our defense—the military equipment required—should be created with rigid regard to this definition of the defense area.

And may I say at the outset, and with all the emphasis at my command, that this question of national defense is in no sense a partisan issue.

Republicans and Democrats alike in the House and Senate have approached the whole problem from the standpoint of patriotism; and I am privileged to say at this point that in every phase of the legislation the minority Members of the House will be guided, not by partisan considerations, not by sectional interests, but by the fundamental dictates of enlightened and informed patriotic responsibility.

War or peace is the great issue of our day.

Upon the determination of that issue depends not only the future of the United States but in large measure the maintenance of our western civilization. Another general war, with its inevitable dreadful toll of economic destruction and social and moral disintegration, might lead easily to a social break-down of a magnitude and sweep which appalls the imagination.

Moreover, the American people recognize, as a matter of peculiar national interest, that a declaration of war from Washington would mean the instant suspension of balanced constitutional government and the establishment of a practical dictatorship in the United States.

The deliberative processes of democracy are immediately demoralized by the prosecution of a war.

Thus the issue before us bears, first, upon the preservation of civilization itself. Secondly, and more intimately, it bears upon the maintenance of democracy and representative government in the United States.

For these reasons, if for no other, it is of urgent importance that the American people arrive at their national policy through the process of open and candid discussion.

Secret diplomacy, as the whole world learned at such terrible cost in the great World War, has no place in this age of democracy.

And in this connection I am happy to acknowledge the great service which the Washington Star National Radio Forum renders the American people in providing this far-reaching vehicle for the free discussion of our defense policies and programs.

Just a month ago, on January 12, President Roosevelt submitted to Congress his special message on national defense, recommending substantial increases in our military and naval establishments.

On January 23, pursuant to unanimous action by the entire Republican membership of the House of Representatives, a special committee on national defense was established. It was my honor to serve as a member of that committee.

The committee began its labor with certain clear conceptions of its task.

National defense involves the safety and security of a free, liberty-loving Nation of 130,000,000 people, united in a deep-seated desire to live in peace.

This is why our analysis of our defense needs and of our foreign policy must be dispassionate and patriotic.

We must be free from all emotion, all hysteria, and all narrow considerations of partisanship.

It was in this spirit that the Republican membership of the House of Representatives established its special committee on national defense, and it was in this same spirit that the committee set itself to the labor of examining the whole field of foreign relations and American security.

The Republican Party is definitely committed to the proposition that the American people are determined to maintain their national security and equally determined to direct their energies toward peace and not toward war. We thus feel we have a definite responsibility and a definite task to perform.

In these discussions our objective is threefold: First, to invite a clear definition of the fixed foreign policy of the United States on which to base our defense program; second, to obtain a maximum of efficiency and economy through the sound integration of the land, naval, air, and industrial segments of our defense program; and third, to make certain that the increased armaments are designed solely for our defense and security and not for dangerous interventions in foreign affairs.

The size, nature, and extent of our armaments must necessarily be dependent upon the foreign policy they are to sustain. What armaments are essential for our national security can only be determined by what our foreign policy is. Our foreign policy must necessarily be the basis of our whole scheme of defense. If we are to continue safe and secure within our borders, this is the only true measuring rod for determining our armament needs.

Clearly, armaments that would be wholly adequate for the defense of the Western Hemisphere would prove wholly inadequate for a policy of intervention in the foreign conflicts of Europe and Asia. Armaments which would be wholly adequate for the enforcement of the historic Monroe Doctrine of "America for Americans" would prove sadly insufficient for a foreign policy based on the doctrine of collective security.

It is thus imperative that we have a clear understanding of the principles of our foreign policy. Unless we have such understanding, there will be confusion in our thinking, uncertainty as to the course we are following in extensive rearmament, and fears and apprehensions on every hand lest we shall, through confused statesmanship, be led into another war.

We must be ever mindful, in this connection, that it is the people who in war make the supreme sacrifice. They send their sons to the battlefields. They also are the ones to carry the load, spiritually, physically, and financially, of increased armaments. It is ominous to note that in 1916, the year preceding the entrance of the United States into the World War, our military expenditures amounted to $318,000,000. For the present fiscal year the estimated expenditures amount to approximately $1,500,000,000. In other words, the American taxpayers are paying today four times what they paid in 1916 for their Military and Naval Establishments. Where $1 was spent in 1916 for national defense, $4 are to be spent during the current fiscal year.

Such expenditures for armaments represent an enormous burden on the people. They represent a burden in the form of increased national indebtedness and increased taxation. And not only that; expenditures on armaments represent a burden in the form of productive loss to the entire economic system. The money thus spent is taken out of productive channels, where it would contribute to increasing our national wealth and to a higher standard of living for all the people, and spent on wholly unproductive instruments of war.

We are confident, however, that whatever the economic loss and however great the burden may be, every American will willingly bear it if he is satisfied that the expenditures are absolutely necessary for our national defense and security. Every American is prepared to sacrifice whatever may be necessary in order that his country may be impregnable from foreign aggression.

But the people are entitled to know, clearly and unequivocally, what represents the foreign policy of those in charge of the affairs of this Government.

Naturally and rightly we look to the President of the United States for such guidance. We look to him to furnish us with a clear definition of the foreign policy which this scheme of rearmament is to implement.

He is the Chief Magistrate of the Nation. He is Commander in Chief of our Army and Navy. And under the Constitution the President is supreme in the conduct of foreign relations, save only on the declaration of war, and the ratification of formal treaties.

The President determines what new governments will be recognized. He carries on diplomatic negotiations with foreign powers. And in his hands rests the power to break diplomatic relations with any foreign government.

It is obvious that with this power the President can make war inevitable.

It is thus not in a spirit of partisanship, but as a matter of constitutional right in a free country, that we insist upon a clear statement of the principles of our foreign policy from the President of the United States.

Does he propose to depart from the traditional principles of American foreign policies of 150 years? Does he propose to expand our policy to one of "collective security" and coercive action against aggressor nations? We do not know.

I think part at least of our uncertainty and misgivings as to what the President may conceive to be the foreign policy of the United States is understandable. On October 5, 1937, in a speech at Chicago Mr. Roosevelt declared that the democratic nations should join in a "quarantine" of disturbers of the peace. Carried to its logical conclusion that declaration can only mean that the President believes that we, the United States, should adopt the policy of economic or military sanctions against aggressor nations. Such a policy is utterly contrary to our historic doctrine of noninterference in the affairs of other nations.

On January 4, the day following the opening of this session of Congress, the President delivered his address on the state of the Union. In the course of his remarks the President stated:

"They (referring to the United States and the other democracies of the world) cannot forever let pass, without effective protest, acts of aggression against sister nations."

With that we are indeed in agreement. It is in keeping with the traditional foreign policy of the people of the United States to register their protests against acts of aggression and in violation of treaty obligations. America has always respected the sanctity of treaties and always has lent its moral support to preserving that doctrine.

But in his address on January 4 the President said more than that. He went on to indicate in what form our protests should be made. He said:

"Words may be futile * * *. There are many methods short of war, but stronger and more effective than mere words, of bringing home to aggressor governments the aggregate sentiments of our own people."

What are these "methods short of war" that the President has in mind to employ as "protests" against aggressors? These "methods" can only be such as implied in the word "quarantine." They can only mean the application of economic sanctions in the form of embargoes and boycotts, which inevitably provoke reprisals, resistance by force, and ultimately open warfare.

If such is our foreign policy as conceived by the President, then truly we fear that our area of defense will not continue to be the Western Hemisphere. If such is the President's foreign policy, then no wonder we hear heated discussions concerning extension of our line of defense to the River Rhine and the island of Guam in Asiatic waters.

Because of these statements of the President indicating a possible expansion of the traditional foreign policy of the United States, there are thus understandable fears on the part of all of us lest we become entangled in foreign conflicts.

Only 3 weeks ago at Los Angeles an Army experimental plane crashed during a test flight. Inquiry disclosed that an official French military observer aboard the plane escaped with only slight injuries. Further inquiry by the Senate Committee on Military Affairs disclosed the extraordinary circumstance that this French military observer had been granted permission to board the plane by the highest official authority.

These unanticipated disclosures appeared to require further inquiry by the Senate Committee on Military Affairs, which indicated that certain informal conversations had been carried on between this country and the Government of France, looking to possible sale to the French Government of American military planes under conditions not available to all other prospective purchasers of American aviation equipment.

The legality or propriety of the sale, or projected sale, of airplanes to France is not here in question.

But Congress does mark well the fact that the fragmentary disclosure of this arrangement to the American people was a mere accident.

And we hold that the American people should be kept constantly well informed of our relations with foreign countries and that the people should be given warning well in advance of any change, whether real or even contemplated, in our traditional foreign policy.

The question also logically arises whether it is the aim of this new armament program of the administration to make the United States a part of the European balance-of-power system.

If such a far-reaching policy even has been considered in official quarters, the American people are entitled to know it.

In this connection may I point out that neither has there been as yet any convincing explanation of why the administration proposes to extend our Pacific line of defense to the island of Guam, 5,500 miles from our home shores, 3,800 statute miles west of Hawaii, and well into the area of Asiatic control. This proposal, which reaches about 2,500 miles beyond the generally approved geographic limit of our defense area in the Pacific, was quickly rejected by the minority committee on national defense. In its report the committee emphasized that the maintenance of the Monroe Doctrine, "more than any other single aspect of policy, involves the safety of the Nation and its vital interests."

And the committee added this significant observation: "Especially is this true now that, by an act of Congress, we are withdrawing from the Philippines and shall not be expected to defend those islands."

Another segment of our report worthy of emphasis in this discussion is that which specifically defines the area of national defense for the United States. It is as follows:

"For our defense in the Pacific we believe the mission of our military establishment is the maintenance, impregnably, of the line following roughly the 180th meridian, commencing at the Alaskan islands, passing somewhat westward of Hawaii, and thence generally southeastward to include and cover the Panama Canal. With comparatively slight additions our presently authorized military strength, both Army and Navy, is equal to that particular task.

"We conceive the disposition of our military forces in the Atlantic and the Pacific as having a common objective, the enforcement of our defense policy. We should look upon Oahu as an outpost not only of our Pacific coast, but of the Canal. We should look upon Guantanamo and Puerto Rico and our naval and aviation establishments along our Atlantic coast as likewise outposts of Panama. Everything should be done to extend and strengthen such outposts in the areas of defense, whether they be in the hands of the Army or the Navy."

That is the definition of our defense area under the traditional and generally accepted foreign policy of the United States.

It is true that the President, within the past 10 days, under extraordinary pressure was forced to reaffirm the great American tradition of "no entangling alliances." We are compelled to observe, however, that some of the recent actions and recommendations of the administration at least point in the direction of a basic and fundamental departure from this guiding concept of our foreign policy to which he gave lip service.

The Republican Party does not take the position dogmatically that national policy never may be changed.

But we do take the position, and we are prepared to maintain it, in the forum of public discussion, that if such fundamental departures are contemplated the American people are entitled to know all about them, where they lead, and when they are to be consummated.

And we take the position further that these revelations should not come to the people by mere accident, but by a clear and unequivocal declaration of official policy from the White House.

To have national safety and security we need a positive official reaffirmation of the established principles of American foreign policy as it has evolved over the last 150 years. First, that there will be no entangling alliances and no interference, by aggression or otherwise, in the affairs of other nations. Second, that our security lies solely in the Western Hemisphere, and we will enforce the Monroe Doctrine against any foreign aggression. And third, that untiring efforts will be made for the promotion of world peace.

Parenthetically, may I mention at this point that it is significant that after almost 5 years of drifting away from our limitation of armament treaties, there are now before both the House and Senate resolutions urging American leadership toward a new international conference for naval limitation. The Senate resolution was presented last week by Mr. KING, of Utah, a veteran Democrat, and the House resolution by myself, a Republican member of the Committee on Naval Affairs. I regret to report that the King-Church resolution has thus far received little attention from the administration, but I promise you that our efforts to procure peace, by such resolutions or other methods, shall not cease.

Three fundamental principles of our foreign policy, then, have been emphasized again and again throughout our history. Let me repeat them: No entangling alliances; the enforcement of the Monroe Doctrine; untiring efforts for world peace. In this day of world unrest, militarism, and warfare, these three principles need to be restated and reemphasized.

They represent the only assurance to our people for continued peace and security. Upon them our whole scheme of national defense should be based.

Government Expenditure

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1939

Mr. MAGNUSON. Mr. Speaker, the eyes and minds of the Nation today are focused on Government expenditures.

Recently there was brought to my attention some figures which I feel should interest all of us. These figures show, on

a percentage basis, how the Budget for the fiscal year ending June 30, 1940, will be spent, as compared with the fiscal year ending June 30, 1929:

	1929	1940
General government	16.9	11
Protection	60.7	35
Economic development	17.6	14
Social welfare	4.0	37
Miscellaneous	0.8	3

It seems to me, Mr. Speaker, most significant that for the general expenses of Government the item of "protection" and the item of "economic development" under the New Deal have shown a consistent reduction in costs. There have been a slight increase in the costs of "miscellaneous" items, but the only increase of any import is that for the item of social welfare, which shows an addition of 33 percent over 1929.

We are charged, Mr. Speaker, with the duty of promoting the general welfare of our people. At no time in our history has that general welfare been more endangered than during the past decade. It is, in my opinion, Mr. Speaker, most significant that the past three Congresses have seen fit to recognize this fact. It is to me significant that they have reduced the costs of general government, the costs of protection, and the costs of economic development, in order that the general welfare of our people may be properly considered.

This, I believe, Mr. Speaker, is our soundest answer to the critics of the New Deal.

Industrial Conditions in the United States

EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1939

ADDRESS BY GEORGE H. METTAM, FEBRUARY 8, 1939

Mr. EATON of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by George H. Mettam at the fourth annual congressional dinner under the auspices of the New Jersey State Chamber of Commerce, Washington, D. C., February 8, 1939:

A quick survey of conditions in other sections of the world where there are bitter civil wars, cruel racial oppressions, strange and ruthless dictatorships, and widespread lowering of the standards of living, makes us realize that after all the United States has come through its 150 years of history pretty successfully.

It is not an idle boast when we remind ourselves that we are the richest Nation in the world in the degree of freedom and in the good things provided under the American system. Let us remember that the rest of the world—about 2,000,000,000 people—envy us for our opportunities, our shorter working hours, our higher wages, our modernized services, our higher standard of living, our educational advantages, and our Constitution which guarantees a free press, free speech, freedom of religion, and an unmatched degree of personal liberty.

An hour's work in an American factory will buy more food, more clothing, more luxuries than an hour's work anywhere in the world; 12 times more than in Russia; 9 times more than in Italy; 4 times more than in Germany.

I maintain, and am confident that all businessmen, as well as our guests who serve in Congress, will agree with me when I say that nowhere in the world has industry contributed so greatly to the economic security and happiness of its people than right here in the United States.

But there are disturbing factors in the picture. Let's look at just a few.

1. With the greatest material wealth in the world, we probably have half of the unemployed men and women of all the important industrial countries put together.

2. Our Federal debt has jumped $22,000,000,000 since 1930.

3. Taxation absorbs about 25 percent of the national income.

4. The amount of new private capital risked in corporate enterprises has shrunk from about four and one-half billion dollars per year in 1926, 1927, and 1928 to one and one-half billion dollars in 1937.

5. The aggregate resources of American business have been reduced tens of billions since 1930.

As Americans who believe in the American system of free enterprise and industrial growth, we must look deeply into this situation to find, if we can, what sound and proven steps there are which we can take to assure a renewed development throughout the Nation. I mean a development which will serve the entire people in every section of the land.

There are a few observations which I want to make.

1. In the first place, if we are to encourage industrial growth, our Government must not be a competing but a cooperating force. Government and industry must place the utmost emphasis on increased production to enable the unemployed to return to work in productive enterprises and to assure a security for those already employed.

2. Next, government should be willing to overhaul the tax structure. Is it not reasonable to ask, in the interest of increased industrial growth, that taxes be imposed only for necessary revenue and not for a multitude of regulatory interests and nonproductive activities?

3. Furthermore, government should help to remove fear from our investing public to assure industrial expansion, invention, and even bold pioneering into new fields which may well revolutionize the employment possibilities for our people and the standard of living for all.

4. The time has come when there must be a united effort on the part of government, the employing interests, labor, and the general public itself to encourage industrial expansion not by legislation, by public charity, by wild attempts to redistribute the wealth, or by borrowing ourselves out of difficulties, but by the opening of new factories and the creation of more jobs.

More smoke in more smokestacks is one good and sensible way of solving our problem.

The time has come when we must stop dreaming of some impractical solution. True it is that no system is perfect, but I still maintain that the American system of free enterprise with government and industry cooperating for the common good and welfare of all our people is the only system which has been found to work successfully.

In conclusion, let me plead for a continued and renewed faith in the contribution which industry can and must make in our economic progress.

Right in our own State of New Jersey, in our 7,800 industrial concerns, we employ approximately 500,000 men and women who have an annual industrial pay roll of nearly $600,000,000. You know what these pay rolls mean to the people of our State.

Furthermore, New Jersey industry furnishes tremendous sums in taxes for local, State, and Federal Government to help provide schools, parks, playgrounds, relief, and old-age security and protection and service for all the citizens.

I could expand the illustration on and on with every phase of our life, but it all boils down to this one great fact: As industry grows and prospers, so will the general welfare of all our citizens be lifted and improved. On the other hand, what retards industrial development must hurt and seriously affect the lives of our people.

We have the wealth in natural resources.

We have the money—billions of dollars are idle in our banks.

We have the manpower—millions are unemployed.

We have a pent-up consumer demand for more and more of the goods of the world.

We have the scientific knowledge and the tools of industry.

Therefore let us have the confidence to push ahead in a united effort to encourage an industrial growth which will regain the losses we have suffered and reach the new goal of prosperity which we believe is ours under our American heritage.

This is a challenge worthy of the best leadership which America can produce in both industry and Government.

Abraham Lincoln

EXTENSION OF REMARKS

OF

HON. FRED J. DOUGLAS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1939

ADDRESS BY HON. BRUCE BARTON, OF NEW YORK, FEBRUARY 11, 1939

Mr. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by

Hon. BRUCE BARTON, of New York, before the Oneida County Republican Club annual Lincoln Day dinner, Utica, N. Y., Saturday evening, February 11, 1939:

On April 15, 1865, a young country doctor, who was also the village pharmacist, stood on a stepladder in front of his drug store in a little town in central Illinois and tacked black muslin across the doorway. At the foot of the ladder his 4-year-old son held the carton of tacks. Years later when the boy had become a man he looked back on that event as his first clear and permanent memory. It was etched deep by his father's hot tears. Never before had he seen his father cry. The man on the stepladder was my grandfather; the boy was my father. The news had come to Sublette, Ill., that Abraham Lincoln was dead.

As a clergyman my father was called upon to make many Lincoln Day addresses. His interest in Lincoln deepened steadily. In his reading and study he found himself confused and disturbed by conflicting reports as to Lincoln's religious belief. Some biographers stated positively that Lincoln was an atheist; others held with equal conviction that he had a deeply religious spirit and, while never a church member, accepted fully the Christian creed. My father set himself to discover the truth, and after years of research he published a volume entitled "The Soul of Abraham Lincoln," which is now accepted as authoritative. In the explorations incident to the preparation of the book he was repeatedly confronted with the story that Lincoln's birth was illegitimate. It seemed to my father that this widespread and growing assumption which, according to at least one of Lincoln's biographers, was accepted even by Lincoln himself, ought to be probed to the bottom. There were seven different versions of the story, each attributing Lincoln's paternity to a different man. One of these was John C. Calhoun. Traveling hundreds of miles, ransacking musty records in county courthouses, father finally unearthed the marriage certificate of Thomas Lincoln and Nancy Hanks. It was filed, not in the courthouse of the county in which the marriage had been performed, but in an adjoining county. When father's second book, The Paternity of Abraham Lincoln, appeared, the scholarly reviewer of the New York Times concluded his comment with the statement that Dr. Barton's tireless research had so completely destroyed this ancient calumny that it could never raise its ugly head again.

By this time Abraham Lincoln had become father's deepest interest. He set for himself the task of tracing Lincoln's every footstep from the site of the log cabin in Kentucky to Indiana, to Springfield, from courthouse to courthouse around the circuit, through the Douglas debates, and finally to the White House. By personal visit and correspondence he interviewed hundreds of old people who cherished first-hand memories of the great President, including the last surviving sister of Anne Rutledge. He unearthed more new material than any previous Lincoln scholar. Two outstanding biographical works were the result and scores of smaller books, pamphlets, and addresses. Lord Charnwood, the English biographer of Lincoln, introducing my father to Lady Charnwood, said: "I want you to meet the only man in the world who knows more about Abraham Lincoln than your husband does."

You will, I know, pardon this informal and perhaps too personal introduction. My purpose is to have you know that for 20 years Abraham Lincoln was almost a member of our household. He was more real to my father than any living man. He was the unseen guest at our table. As father's researches extended further and deeper we children shared their progress. We heard Lincoln stories at breakfast, luncheon, and supper. We heard the laughter of the great story teller; we knew the burdens of the lonely President; we felt the weight of his sorrows. I could no more make a Lincoln address than I could make an address about a member of my family. But I can talk to you about Lincoln, and that is what I propose to do—just talk to you of some of the elements of his character that impressed themselves indelibly upon our minds as my brothers and sister and I heard our father talk about him day after day.

I once asked H. G. Wells, who had just completed his Outline of History, to tell me the six greatest names in the annals of the human race. He named Jesus of Nazareth, Buddha, Aristotle, Asoka—an Indian ruler who, according to Wells, was the only monarch in history who, having waged victorious war, renounced conquest and devoted his whole energy to the improvement of his people—Roger Bacon, and Abraham Lincoln. Perhaps no two historians would ever agree on the same list, but the choices of Wells are striking and provocative. Millions of men through the centuries have lived and struggled and died for money and power; yet these, according to Wells, left no permanent imprint. The six immortals whom he named achieved their immortality not by self-seeking but through self-sacrifice and abnegation. They gave, and are remembered; while those who seek only to get are buried in forgotten graves. That an English historian should put one American in the list of the world's greatest is significant. Looking across the 3,000 miles of the Atlantic Ocean, and down through the corridors of time, Wells saw Lincoln towering above the rest of humanity as a high peak before the foothills. There can be no more doubt in our minds than in his that Abraham Lincoln is our greatest American.

Yet the interesting fact which we children began to comprehend, as we listened to our father's table talk, was that Lincoln's greatness was neither a gift nor an accident. He did not spring full-fledged into majesty. The Lincoln of 1860 was not the Lincoln of 1845. God gave him talent; events and circumstances gave him opportunity, but his character was his own creation. In these days when the problems of America are almost as complex and difficult as they were in his, we can think profitably for a few minutes about four influences which contributed to his strength and his triumph.

It is notable, in the first place, that he kept growing steadily throughout his whole life. William James, the eminent psychologist, remarked that the average man is an old fogy at 25. Each of us has had enough observation of our fellow men to understand what he meant. At 25 the ordinary man has acquired his little stock of skills and prejudices; he has chosen or been thrust into his particular groove; he has accustomed himself to functioning by habit rather than thought. He may advance a little or even a good deal through the lifting force of seniority, but he no longer thinks along new lines nor imposes additional measures of self-discipline. He has attained his mental and spiritual stature; he has ceased to grow.

Lincoln's continuing growth is marked in every aspect of his character. You may trace his progress in his speech and writing. His early style was rhetorical, almost ridiculously so, full of pretentious, high-sounding phrases. He then developed the controversial style of the stump speaker, sometimes with rude jokes and boisterous gestures. In those days he spoke with little preparation and indulged in all the platform tricks that were popular with the crowd. From these crude beginnings he developed, out of rigid self-control and the hot fires of spiritual conflict, a style whose simplicity, calm dignity, and exalted tone have made his words immortal.

The style was an outward symbol of a mind and spirit that had been brought under complete self-discipline. Plenty of evidence to this effect has been left by his biographers. Nicolay and Hay, referring to the period following his return from his single session in Congress, said: "It was at this time that he gave notable proof of his unusual powers of mental discipline. His wider knowledge of men and things, acquired by contact with the great world, had shown him a certain lack in himself of close and sustained reasoning. To remedy this effect he applied himself to such works on logic and mathematics as he fancied would be serviceable. Devoting himself with dogged energy to the task in hand, he soon learned by heart the six books of the propositions of Euclid, and retained through life a thorough knowledge of the principles they contain."

Ten years later, following the most important lawsuit in which he was ever engaged, the McCormick Reaper case, he left the Cincinnati courtroom deeply dejected. Walking up the street in silence, he suddenly turned to a young companion, Ralph Emerson, and exclaimed:

"Emerson, I'm going home." (A pause.) "I'm going home to study law."

"Why," exclaimed Emerson, "Mr. Lincoln, you stand at the head of the bar in Illinois now. What are you talking about?"

"Yes, yes," he said. "I do occupy a good position there, and I think I can get along with the way things are going there now. But these college-trained men who have devoted their whole lives to study are coming west, don't you see. * * * They have got as far as Ohio now. They will soon be in Illinois."

Another long pause. Then stopping and turning toward Emerson, his countenance suddenly assumed a strong look of determination, and he cried:

"I'm going home to study law. I'm as good as any of them, and when they get out to Illinois, I will be ready for them."

Forty-seven years old, the leader of the bar in his own State, a public figure honored in his community, he was not too proud to set himself doggedly at the task of making his mind and spirit the fit instrument of whatever responsibility might come. This was the first element in his greatness; it is his first lesson for us.

But something more than will power and study are required for greatness. There must be the fire of moral earnestness. Here again there is inspiration and thrill in knowing what happened to Abraham Lincoln.

To get the perspective we must look back to December 6, 1847, when he took his seat in the House of Representatives for his first and, as it turned out, his only term. The record of the succeeding 2 years is quickly told. A few days after the Congress convened he delivered what he himself described as "a little speech * * * of no general interest." Subsequently he made a number of purely partisan speeches, and attended a party convention. His only important action in Congress was to introduce a resolution, which promptly died, for the abolition of slavery in the District of Columbia. He spent a good deal of time around the House post office and his boarding house, regaling the loiterers with his frontier stories. The term closed with no accomplishment, no evidence of serious purpose; he went back home, filled with the politician's hope that there would be a popular demand for his renomination. There was no popular demand. Denied elective office, he tried for an appointive position and again with no success. In the words of one of his most understanding and sympathetic biographers, "he was disappointed, humiliated, and burdened * * * Wearily and sadly he took up again the practice of law."

His dreams of national influence were at an end; he was out of politics and out of power forever.

So he thought sadly in 1849. But there were forces at work which neither he nor any other man could measure, whose future influence none could predict. If he was out of politics, human slavery was not. Five years after his retirement from Congress

the Missouri Compromise was repealed. On October 3, 1854, Senator Stephen A. Douglas, seeking to defend his own part in the repeal, spoke in the statehouse at Springfield, Ill. The following day, from the same platform, Abraham Lincoln replied. Horace White, then a young reporter, heard the speech and has left this vivid description of the speaker:

"Gradually he warmed up to his subject, his angularity disappeared, and he passed into an attitude of unconscious majesty. * * * His words began to come faster, and his face to light up with the rays of genius, and his body to move in unison with his thought. Sometimes his manner was very impassioned and he seemed transfigured with his subject. His listeners felt that he believed every word he said, and that, like Martin Luther, he would go to the stake rather than abate one jot or tittle of it."

Here, then is an extraordinary happening. A defeated politician, a thwarted office seeker, is politically dead in 1849. Five years later, in 1854, he leaps into new power, no longer a politician but a prophet able to move the hearts of the multitude. What has happened? A force greater than himself has enveloped and possessed him. Having forgotten himself he finds himself. Stirred by the hatred of human slavery, the passion for freedom, he has opened unsuspected reservoirs of feeling and power. He no longer thinks about Abraham Lincoln for office or talks of party politics. He thinks and talks of the rights, the hopes, the eternal dignity, and worth of men and women. And the people, lighted by the fire of his spirit, make him their leader and raise him on high.

What our Nation needs today more than anything else is to be on fire with a great moral purpose. Our spiritual senses seem blunted; our spiritual muscles are soft. Our sympathies are not so active as they used to be in the days when a famine in India or a massacre in China melted our hearts. Our moral indignation does not flame. We take lying down the news of betrayal in high places which would have unloosed the destroying wrath of our fathers. We are not passionate in our love of country or our anger at its false friends. There is too much of the insipid talk of human rights and too little high devotion to human duties. What we need in the party of Lincoln is the thing that changed him from a small-town politician to a national savior—the transforming power of a spiritual fire.

We need, too, what he developed in exalted measure—a passionate love for America and an unswerving faith in its capacity to survive as a government "of the people, by the people, and for the people." Born in a rude cabin, denied anything but the most rudimentary education, he moved up through the strata of society until he occupied the highest place in the Nation and one of the most commanding in the world. Such a career could not have happened in any other land; it was in itself the sign and symbol of our democracy, a living promise to American boys and girls of every time. His love for America was like the love of man for a woman—tender, self-sacrificing, passionate, indestructible. To America he knew that he owed all he was or had; for America he was willing to lay down even life itself. This pride and this faith grew in him steadily through the years. They were the third element of his spiritual progress.

And the fourth and final element was a growing and deepening religious faith. Raised in a theological atmosphere of hellfire and eternal damnation, his boyish heart promptly and vigorously rejected the conception of a God who could hate and condemn to eternal torment the children of His creation. For this revolt young Lincoln was termed a heretic and by some an atheist. He never did find a church whose theology met his own ideals, and so he never joined the church, though attending regularly and reverently. But the terrific burden of his responsibilities and the tragedy of the Nation's suffering drove him irresistibly toward dependence on the Eternal Source of all wisdom and power. He never formulated a written creed, but my father, taking Lincoln's own words out of his speeches and letters, and with no additions or changes except in the tense of the verbs and the addition of the words "I believe," set down this

CREED OF ABRAHAM LINCOLN IN HIS OWN WORDS

"I believe in God, the Almighty Ruler of Nations, our great and good and merciful Maker, our Father in Heaven, who notes the fall of a sparrow, and numbers the hairs of our heads.

"I believe in His eternal truth and justice.

"I recognize the sublime truth announced in the Holy Scriptures and proven by all history, that those nations only are blest whose God is the Lord.

"I believe that it is the duty of nations as well as of men to own their dependence upon the overruling power of God, and to invoke the influence of His Holy Spirit; to confess their sins and transgressions in humble sorrow, yet with assured hope that genuine repentance will lead to mercy and pardon.

"I believe that it is meet and right to recognize and confess the presence of the Almighty Father equally in our triumphs and in those sorrows which we may justly fear are a punishment inflicted upon us for our presumptuous sins to the needful end of our reformation.

"I believe that the Bible is the best gift which God has ever given to men. All the good from the Saviour of the world is communicated to us through this book.

"I believe the will of God prevails. Without Him all human reliance is in vain. Without the assistance of that Divine Being I cannot succeed. With that assistance I cannot fail.

"Being a humble instrument in the hands of our Heavenly Father, I desire that all my works and acts may be according to His will; and that it may be so, I give thanks to the Almighty, and seek His aid.

"I have a solemn oath registered in heaven to finish the work I am in, in full view of my responsibility to my God, with malice toward none; with charity for all; with firmness in the right as God gives me to see the right. Commending those who love me to His care, as I hope in their prayers they will commend me, I look through the help of God to a joyous meeting with many loved ones gone before."

My friends, in these days of national and international problems and discouragements no one of us is in a position to exert very wide influence. The events are beyond the reach of most of us. Ours is not the voice to command, nor the power to decide. But we can do, each of us in his small way, the things that Abraham Lincoln did so greatly. We can impose upon ourselves a discipline which will promote mental growth, a better understanding of our country's problems, clearer vision, and wiser judgment. We can have in our own hearts the fire of a moral purpose. We can cherish a pride in America and a devotion to her interests which express themselves not in words but in a passionate love that will endure any sacrifice, even if necessary, the sacrifice of life itself. And we can believe as he believed, and as our fathers before us believed, that Almighty God has set this land apart for the special purpose of establishing here a higher degree of human welfare, a finer tolerance and mutual respect than has ever before existed in the world. And that each of us has his own eternally important part to play in that divine plan.

We can make ours the motto which he set forth for himself: "I do the very best I know how, the very best I can, and I mean to keep doing so until the end."

Lincoln—Exponent of Democracy

EXTENSION OF REMARKS

OF

HON. WILLIAM B. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1939

RADIO ADDRESS BY WILLIAM D. BOSLER, FEBRUARY 12, 1939

Mr. BARRY. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following radio address by William D. Bosler, LL. B., on February 12, 1939. Mr. Bosler has spent 15 years in the study of Lincoln and we regard him as the foremost authority in the country upon the life and era of the Great Emancipator.

The address is as follows:

It was a chilly afternoon in November 1863. The sun sinking in the west cast its shadows over a throng of people gathered upon a vast battlefield to dedicate it to the men who made a supreme sacrifice upon its broad spreading fields but a few short months before.

Every walk of life was represented on the occasion, all mingled together on the browning fields of autumn so lately consecrated by the blood of the North and South. Edward Everett, of Massachusetts, delivered a lengthy "classical" oration, regarded as his greatest polemic effort. Today it is forgotten, buried in oratorical libraries.

The dedication was about to close, when a tall man, dressed in an ill-fitting black suit, rose slowly from a chair in which his body was slumped, stepping forward upon the platform, drawing from his pocket two small sheets of paper, adjusting his spectacles, proceeded to read in a shrill monotone voice, yet charged with deep emotion and sincerity of expression.

His words were barely audible a hundred feet from the platform. In less than 3 minutes he had finished. The "dedicatory remarks" made by the President consisted of only 267 words. Little or no applause followed. The audience did not grasp nor comprehend their meaning or importance. None of those present were conscious of the concenter of ideals expressed in the simple sentences which were later to become like the resonant notes of a trumpet, echoing down to future generations.

Lincoln stood there an embodiment of the reborn democracy of a nation baptized in the blood of a fraternal struggle.

His speech was brief, yet comprehensive, tense, and elegant, linking the past to the then present, with the hopes of future mankind. In quality of composition, literary merit, music of its poetry, modulation of its rhythm, its nearest approach is the lofty tribute of Pericles, delivered in Athens 2,300 years before, in tribute to the

soldiers who died in the Peloponnesian wars. Lincoln seemed to have foreseen visions of an embattled democracy of a future time, menaced by the autocracy of those who would substitute arbitrary powers to destroy its attributes and functions.

He did not appreciate, and it is doubtful that during his life he clearly comprehended, that the short, simple utterance was the summation of American ideals, and had impregnated in them the aspirations of the spirit of America, the consecration of its purposes upon the altar of humanity; that these utterances would be to future mankind a flaming torch for all of the peoples of the world who sought the blessings of a real democracy. Let us analyze a portion of this sublime utterance.

It opens with a superstructure of only five lines.

"Fourscore and seven years ago our fathers brought forth upon this continent a new nation, conceived in liberty and dedicated to the proposition that all men are created equal."

These introductory lines in substance contain the basis of the entire history of the struggle of mankind for human liberty for nearly a thousand years.

From Runnymede, where the English barons established the principle of "no taxation without representation" in the Magna Carta forced from King John, followed by the axiom of liberty wrested from King Edward half a century later, "What concerns all must be approved by all," which later was to become a part of the unwritten constitution of Great Britain. These two axioms were the inspiration of the founders of the Colonies, the beacon light of the settlers of Massachusetts and Virginia, the torch that illuminated the path of the leaders of the colonial era, the Continental Congresses, the makers of the Declaration of Independence, the War of the Revolution, the drafting of a constitution, its adoption, in fact, the birth of a new nation dedicated to freedom and justice for all.

Now, in our era we are facing a supreme struggle in world democracy, to determine if these and like principles, planted upon our shores over 300 years ago, shall perish from the earth.

In the midst of a critical period of our Nation, with democracy on the defensive throughout the world, serious thought and consideration must be given to the forces opposed to it.

Government by dictatorship is not new. It is a reincarnation in form of the age-old doctrine of the "divine right of kings," which "for centuries held men in bodily slavery and spiritual degradation."

Its modern method of application is to dominate the people so that they are deprived of a freedom of choice, thereby becoming coerced to such a degree that they permit their individual liberty of action to become submerged into a party or group, who in turn become the instruments that dictate the policies of the state by force, in disregard of all of the fundamental rights belonging to the people.

Lincoln's theory of government was that all of the people had a freedom of choice in the selection of those who governed them, and in the directing of the policies of the state; further, that such choice was an inviolate privilege and right which could not be abridged, because the people alone were the sole and ultimate arbiters of their own destinies.

To Lincoln the welfare of the individual was of the greater importance. The state was only an instrument created by the people for the purpose of carrying out their prerogatives. All this is true democracy.

He insisted that if the majority of the individuals comprising the state were right, then the government would be right, provided always that minorities were protected in their rights by the majority.

Lincoln's five opening lines at Gettysburg embodied all of the hopes, dreams, and ideals of the great majority of peoples, seeking a new freedom in a new world, where they could exercise a freedom of religion, speech, or of the press, together with all of the attributes of justice and equality of opportunity, belonging to them.

The President next proceeded to state briefly the purposes of the dedication in terms remarkably applicable to present world conditions:

"Now we are engaged in a great civil war, testing whether that Nation, or any nation so conceived and so dedicated, can long endure."

To the speaker the supreme question was the survival of popular government, not only ours, but, as he added, "any nation so conceived and so dedicated."

Here in the New World he was striving to preserve an ideal of government by the people founded in the Old World, not for its ideals alone, but because he believed under its principles the greatest number of the common people were and would be able to obtain the greater blessings of life, liberty, and happiness. He stood for a democracy because under it the people in the largest sense would and do enjoy the greater privileges of the heritage of equality and could find the widest doors for the freest self-expression and self-development of their capabilities.

His voice still echoes down to us to inspire us in the struggle against the destructive doctrines that have impregnated some of the nations of the Old World and are knocking at our and others' doors, seeking to sap the vitality not only of our Nation but of all others who believe in and support a democratic form of government.

The democracies of the world are now faced with the problem of adjusting their economic and social problems so that the rights of minor nations and individuals may be preserved without a sacrifice of the freedom, dignity, and lives of those living under its tenets.

The dictatorships of the world are all engaged in extinguishing the beacons that light the pathway of freedom. We are facing the last frontiers of individual liberty, freedom, free expression of religion, speech, and press. They represent to us the ideals of a government, the antithesis of those who live under the fundamentals of a free democracy such as expressed by the nations of the Western World.

They govern by the weapons of oppression. Their peoples have no voice in the policies of their governments. The state is supreme. The masses are but vassals to the will of a dictator whose voice must stand unchallenged against that of the people. By vast armaments they apparently seek to impress their purposes upon the world by force of arms. Their aim appears to be to crush the democracies of the world. Democracy, challenged, can yield nothing to these destructive means and ends of government.

Lincoln's Gettysburg speech is climaxed by a plea for a lasting democracy in these words:

"That from these honored dead we take increased devotion to that cause for which they here gave the last full measure of devotion."

Devotion to the cause of democracy was the uppermost thought in the President's mind—devotion to the cause that made necessary the supreme sacrifice for a revival of the principles of a true democracy for all.

Lincoln loved these ideals. It was a second nature to him.

He was familiar with the growth of intolerance by groups having in view the purpose to limit and restrict the rights of other men, both black and white. It was prevalent in his own State of Illinois. Lincoln denounced it as un-American and contrary to all of the principles upon which the Nation was founded. And the masses of our people have come to accept this view.

His philosophy was grounded in a belief that, if we cannot give freedom to every creature, let us do nothing that shall impose slavery upon any other creature. This typified the logic behind the public expressions of the mature Lincoln. He believed that the charter of the fathers must be kept sacred in spirit as well as in form. Both to him were correlated and were dependent upon each other.

To preserve the principles of our democracy from the encroachments of legislative invasion, as well as from usurpation by judicial bodies, was a basic element of Lincoln's political philosophy. He disapproved of courts substituting judicial dicta as law instead of legislation passed by legislative authority.

He believed such a course perilous; that it would deprive the people of being their own rulers and resign their rights into the hands of tribunals turning "their decisions to political purposes." He espoused freedom of individual initiative as the best means to preserve a free government. He opposed centralization of power into the hands of special groups, fearing it would destroy the fundamental ground work of our democracy and imperil the liberties inherent in the people. He believed in a policy of utilizing the resources of government for the welfare of the people, a proposal more than two generations in advance of his era.

He was one of the few men who foresaw that old formulas did not meet the changing economic and social problems confronting the people.

Lincoln, were he living, would deprecate any movement to suppress or limit the privileges set forth in the Bill of Rights; he would favor rather an enlargement than a limitation of the freedom of the press, of speech, or radio.

Jefferson said, over a century ago, that "America is the world's best hope." Lincoln believed in that hope and gave his all to restore it to its greater luster.

Then in his speech followed a clause of only 14 words:

"That we here highly resolve that these dead shall not have died in vain."

It was the leitmotif of the address, a dedication to the eternal and inalienable rights of men.

The closing peroration is like a chant from an inspired god. The graves of the fallen lay before him, silent witnesses to his resolve:

"That this Nation shall, under God, have a new birth of freedom; and that this Government of the people, by the people, for the people shall not perish from the earth." These words disclosed the widening horizon line of Lincoln's thought, disclosing that his aspirations for a democracy for all men went far before the then present moment. In 420 B. C., Cleon, a tanner, announced to the men of Athens: "I am in favor of the democracy that shall be democratic; that shall give us the rule which shall be of the people, by the people, for the people." The thought and hope had been born and lived in the hearts of men for ages past. Lincoln had linked the hopes of mankind of the ages to the reawakened needs and hopes of his own day.

We are facing much the same struggle that Lincoln faced in his era, "to guard and maintain the freedom of men's souls and intellects" in a war-torn and distracted world, and by our example and through our precept, cooperation, and help, if possible, to reestablish a "better world order," among all nations, which will inure to the preservation of the ideals of Lincoln now a part of our country's heritage, and extend to all humanity the benevolence of a true democracy, as rededicated by Abraham Lincoln upon the battlefield of Gettysburg over 75 years ago.

Communism

EXTENSION OF REMARKS
OF
HON. LYLE H. BOREN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1939

Mr. BOREN. Mr. Speaker, the Workers' Alliance of America, with the aid of the Communist Party in Oklahoma, is attempting to organize in the State. I have publicly condemned the Workers' Alliance as a Communist organization and have advised the people of Oklahoma not to be misled into joining this organization, pointing out it was not a legitimate labor organization; that it was not affiliated with either the A. F. of L. or the C. I. O.; and I have also submitted to people in Oklahoma evidence that the organization is communistic in its background and motives.

After seeing a press comment with reference to my stand, David Lasser, national president of the Workers' Alliance, called at my office. I wish to submit for the record a transcript of the conversation between Mr. Lasser and myself on the morning of February 9. I also wish to present a copy of Mr. Lasser's letter to me, which was given to the press on the evening of February 9, which letter reached my office on the morning of February 10.

Mr. Lasser's letter released to the press was an evident attempt to evade and distort the truth. I want to charge every Member of Congress with the responsibility to acquaint himself with the background, motives, and extent of the Communist organization known as the Workers' Alliance. I feel that every man here who loves America, who believes in the American system of government, and who has the welfare of his constituents at heart will advise his people not to be misled by the Communist organizers of the Workers' Alliance. I want to point out that the national leadership of this organization has in it a number of avowed Communists. I want to urge the people of Oklahoma and other States to send these carpetbagger Communists back where they came from when they invade our States to organize.

I call attention of all Americans to the fact that the alien element is noticeable among the organizers of this Communist front. I want to point out to you and to the workers on W. P. A. and to all those unemployed people who are becoming members of the Workers' Alliance, that the Workers' Alliance has nothing to do with the administration of the W. P. A., and cannot influence national legislation, and that their attempt to leave such impressions as reasons for belonging to this movement is utterly ridiculous and totally false. The Workers' Alliance cannot get one cent of money from the Federal Treasury. The Workers' Alliance cannot put anyone on or off the W. P. A. The leaders of the Workers' Alliance are collecting dues under these false pretenses. If members only pay 10 cents a month and their figures are correct that they have 200,000 members, they take in $20,000 a month, or almost a third of a million dollars a year under false pretenses.

Let me point out that they (the founders, the leaders, and organizers) are Communists and not the rank and file. These overfed organizers are taking the dimes from unemployed and underpriveleged. Look around for yourself and see what they are taking from you and try to find something they are giving to you. If you can find one Communist in America who is unemployed, I will show you three who are potbellied and benefiting from the depression circumstances which are the causes of your problems.

I put an amendment in the W. P. A. bill to cut all the aliens off the W. P. A. so that American citizens would reap all the benefits of that program. That amendment would remove something like 30,000 aliens from the W. P. A. The Workers' Alliance viciously opposed my stand. In their paper, Work, they repeatedly condemned that amendment. Of course, these Communists want the aliens to stay on the W. P. A., because many of these aliens are their associate Communist workers.

I want every American citizen who is on the W. P. A., or who wants to get on the W. P. A. rolls to decide for himself if it is fair to leave him, an American citizen, unemployed with his family hungry while aliens and Communists are holding and enjoying the benefits of the job he deserves. Do you believe that aliens should be on the W. P. A. pay roll while American citizens are unemployed and their families starving? If you do believe that the aliens should have these jobs, then support the Workers' Alliance, because that is what they believe. If you believe these jobs belong to American citizens, call the hand of these organizers of the Workers' Alliance.

I want to call your attention to page 12 of the Workers' Alliance paper called Work. In that editorial column these Communists say:

> We must begin at once. Pressure from the American people for the continuance and extension of a Federal public-works program, must be so overwhelming * * *, there must be millions of signatures on petitions * * *

Now let me say to the good and honest people who, through no fault of their own have been unemployed and those on the W. P. A. rolls, you have methods of presenting your cause yourself. Do not let these parasite Communists take the dimes from the little hands of undernourished children or from the pocket of workingmen where we in Congress have intended these dimes should go. There is not a single citizen in the Fourth District, rich or poor, black or white, on or off the W. P. A., who has ever found my door closed to him. The latchstring is always on the outside. You have come to my office and to my home from 5 o'clock in the morning until midnight. No one was ever turned away. No telephone call was refused an answer. No letter came to me that did not get a reply. I have always listened to your problems and your viewpoints and attempted to aid you in the solution of those problems and have always worked hard and earnestly for what I believed to be to your best interests. You do not have to go through anyone to take up your cause with me. I am telling the world that no damned Communist can influence me one iota on any vote or action that I will ever take as your representative in Congress. The Workers' Alliance cannot represent you to me. You can represent yourself, but I want this issue clearly, definitely, and finally known that I believe that Communists should be kept out of Oklahoma. I stand ready to do my part without fear or hesitation to keep them where they belong, outside Oklahoma, outside America.

And so, Mr. Speaker, I am constrained to say that the American system of government was good enough for Washington and Jefferson and it is good enough for me. Abraham Lincoln led this Nation in a course of preservation of American liberties and American union and urged that we accept the task of preserving American democracy for the generations yet unborn. I am going to fulfill my part of that task. I love America. I despise communism, fascism, nazi-ism, and all "isms" built on the theory of dictatorship by individual groups or classes. I believe in the American Constitution and condemn the Workers' Alliance, the Communist Party, and all of these damnable forces that parade under the guise of worthy causes in an attempt to inoculate America with the diseases of destruction.

It is in the spirit of love for and faith in the American system of government, Mr. Speaker, that I condemn the Communist Workers' Alliance and call on America to stand guard against these alien forces.

TRANSCRIPT OF CONVERSATION BETWEEN HON. LYLE H. BOREN, OF OKLAHOMA, AND MR. DAVID LASSER, PRESIDENT, WORKERS' ALLIANCE, FEBRUARY 9, 1939

Mr. LASSER. Our organization in Oklahoma forwarded up to us a newspaper clipping that hurt us very much. I thought I would come up here and find out what this is all about. This is from the McAlester paper.

Mr. BOREN. Yes; that is an accurate account of the comment which I made. I have publicly condemned the Workers' Alliance.

Mr. LASSER. Just why and for what reason did you have to condemn it?

Mr. BOREN. Because I am convinced it is a Communist organization.

Mr. LASSER. Well, now, there are undoubtedly some Communists in the organization, as there are undoubtedly Communists in the C. I. O., A. F. of L., and other organizations, but do you know of any subversive activity, because if you do, we would certainly put a stop to it and sever connection with those people who are responsible.

Mr. BOREN. I have no definite knowledge of subversive activity if you mean any particular action that could be defined as an attempt to destroy something by violence, and so forth, but I do know that when your organizers came to Oklahoma they began their attempts with the aid and consent and constant association with the head of the Communist Party in Oklahoma.

Mr. LASSER. Well, now, I am concerned here with the action we are going to take as an organization. We wanted to be certain, because, of course, what you have said is an attack on us which we will be compelled to answer.

Mr. BOREN. Certainly. You would be justified in making any answer that you see fit to make, because my condemnation was certainly no half-way matter with me. I don't do things by half. When I believe a thing I believe it. I don't straddle fences or pussyfoot around about it. When I fight for or against a thing I fight for or against it. There is no Mr. Milquetoast about me. I just decide what is right as best I can and then act in accordance with that conviction. You can be certain that the statement in the press that I directly and fully condemned the Workers' Alliance is an accurate account of what I said, and that is my attitude. Now, your organization has begun to build up a pressure group in the Fourth District, and from the similarity in the contents from the letters that reach me the pressure tactics that you use are unquestionably illustrated. Undoubtedly I would come in conflict sooner or later with the Workers' Alliance or any communistic, Fascist, nazi-ism, or such groups, because at all times I am unalterably opposed to any "ism" inimical to Americanism.

Mr. LASSER. Now, Congressman, Mayor Hague and a number of others have taken this sort of attitude because they either respected or feared our power and they sought to destroy us.

Mr. BOREN. As for me; I neither respect nor fear your power. I am interested in destroying the existence of the Workers' Alliance only because I believe it to be a Communist organization. I am not concerned about the political significance of the organization as it might be reflected in my personal campaigns for reelection, because, as I say, I neither respect nor fear your organization.

Mr. LASSER. I have brought out a copy of our constitution and a membership book with me which I am going to leave with you. Just because there might be some Communist in our organization does not mean we are a Communist organization.

Mr. BOREN. Why, I do not believe that all your members are Communists. I don't know just how many members you have in Seminole County, but I doubt if there are a half dozen Communists amongst that number. All of the rest are good people; but I do say your organizers are Communists, and I have read where the secretary of the Communist Party in America, Mr. Browder, says that all Communist activities are welded together in a popular front called the Workers' Alliance of America. That statement is in a published book by this avowed Communist leader. Undoubtedly you have read it. Why haven't you challenged the truth of that statement?

Mr. LASSER. Well, now, we can't just go around challenging every statement that is made about us. I don't know what Mr. Browder had in mind; maybe he wanted to prove he was a great guy, or something.

Mr. BOREN. I have no disposition to be unfair about anything. I have made considerable investigation of the Workers' Alliance. I have made a careful study of the activities and associations in Oklahoma. I have called on the C. I. O. and the A. F. of L. to inquire of your affiliations. I have had unofficial information from the Department of Justice and many others, and, of course, I have the record of the Dies committee and many other sources of information. I intend to pursue this investigation as long as there is a member of the Workers' Alliance in the Fourth District of Oklahoma. If I could be convinced you are not a Communist organization, then I would change my position; but, on the contrary, I am convinced that the Workers' Alliance is a Communist organization; and even as long as I had any doubt about whether it was a Communist organization or not I would be opposed to its spread in my State, because I feel that an organization that even has the stigma of doubt on it as to whether it is Communist or not is an organization that good citizens will have nothing to do with. Before I would join or want any of my family or friends to join such an organization I would want to know it was not communistic. But, as I say, all the evidence convinces me that the Workers' Alliance is a Communist organization.

Mr. LASSER. Well, the workers down in Oklahoma feel like you are trying to intimidate and threaten them because you say they should be fired from the W. P. A. if they are Communists, but, of course, we are no more communistic than we are Democrats. We are a nonpartisan organization.

Mr. BOREN. My statement was that every man in a supervisory capacity who was a member of the Workers' Alliance ought to be fired, and I hope that it will be done in my district. I made no reference to the man who was a relief client and I do not propose to take any action that would disturb anyone on relief. I just don't intend to see the W. P. A. administered or run by members of the Workers' Alliance. There are plenty of good Democrats with unquestionable American citizenship and American ideals who can administer the W. P. A. or any other governmental program, and I propose to see to it that Government programs in my district are kept in the hands of just such believers in American democracy and the American Government.

Mr. LASSER. Congressman, you are familiar with the law which prevents discrimination in the W. P. A. because of political affiliation or membership in labor organizations, and you realize that if you remove someone because they are a member of a labor organization you are breaking the law, and this last law is more strict than the other one about that?

Mr. BOREN. I am not removing anyone because I do not have the power to hire or fire anyone, but I am recommending their dismissal, but if I had the power I certainly would do it. It is my personal opinion that since this is a Democrat program it should be administered by Democrats. My attitude toward the Workers' Alliance hasn't anything to do with politics; it has to do with what I consider treason. I believe that anyone who promotes communism is guilty of treason against our Government and certainly has no place on the Federal pay roll.

Mr. LASSER. Certainly if you try to intimidate people by firing them if they join the Workers' Alliance, you will be breaking the established law and laying yourself open to serious legal charges.

Mr. BOREN. I am not attempting to intimidate anyone. I am just telling the folks down in my part of the country the truth—that the background of the Workers' Alliance is communism and that its ulterior motives are to spread communism, and as a private citizen I would be taking that action in or out of Congress.

Mr. LASSER. But don't you see that you can't separate your private actions from your public actions because what you do is public action because you are a Member of Congress?

Mr. BOREN. That is true in a sense, but I believe it is my duty, both as a citizen and a Member of Congress, to fight the spread of "isms" inimical to our system of government.

Mr. LASSER. You indicated some pressure methods and that we might be influencing the course of action of legislators.

Mr. BOREN. Oh, no; I said "pressure tactics" and, so far as I know, you are not influencing any legislators. I do believe your movement is an opportunist movement and that you are taking advantage of the desperate circumstances of unemployed people in holding out false hopes to them. I understand that these people on the W. P. A. and unemployed people pay a dime a month into your national fund, and I presume that if you have 200,000 people that you take $20,000 a month from these people.

Mr. LASSER. You wouldn't deny the right of underprivileged citizens to organize and improve their conditions, would you?

Mr. BOREN. Most certainly not. I am friendly to all other organizations that exist in my district. I have condemned only the Workers' Alliance. There are a lot of substantial organizations that exist in my district—legitimate labor organizations, religious organizations, veteran organizations, and political organizations, etc. I believe in the right of any group to organize, and I do not believe that communism is confined to any underprivileged class in America. I think there are more people in America who are drawing high salaries that are Communists than there are on relief rolls. I think there are more potbellied and overfed Communists than there are underfed Communists.

Mr. LASSER. The growth of our organization speaks for itself. Public opinion will decide and are you the one to determine whether we should organize in Oklahoma or not?

Mr. BOREN. I am the one to decide my own attitude and actions. I have decided and made public my stand.

Mr. LASSER. You mention the Dies committee. I wanted to testify before the Dies committee and hope I will get a chance, and this Mr. Steele who testified before the Dies committee—surely to God you are not getting your information from him?

Mr. BOREN. I have read his statement, but as I told you, I have made a very thorough investigation and my information comes from many sources and all of it shows the Workers' Alliance to be a Communist organization. I think you should have your day in court and I will try to make arrangements for you to appear before the Dies committee.

Mr. LASSER. You made your attack without calling on me. I will send you a copy of the letter which I will send out to our people in Oklahoma in reply to your charges so that you will have an opportunity to answer if you choose. I think you should have called on me before you made any charges against our organization.

Mr. BOREN. You probably have some right to that feeling, but you are not a citizen of my district and I have no interest or responsibility toward you.

Mr. LASSER. Don't you believe in a democratic country—that a fellow is entitled to believe in communism if he wants to?

Mr. BOREN. My attitude in this is entirely impersonal; I am interested only in Americanism. I think we are going through a dangerous period in which the future of our country will be determined and I am going to do everything I can to preserve the American system of government. If it could be absolutely proven to me that you were a Communist and had designs of setting up in America a dictatorship, either of an individual as dictator or of a class as dictator, or any such change in our Government, then I personally would be convinced that your attempts were treason against the Government and that you should be condemned and executed for treason. That attitude is impersonal and applies to nazi-ism, fascism, as well as to communism, or applies to any other thing that attempts to destroy the American system of government.

Mr. LASSER. Why don't you call up Colonel Harrington or McIntyre down at the White House and ask them about me?

(Mr. BOREN called both the White House and Harrington and then commented:)

Mr. BOREN. I am informed that they had asked you as an individual to see to it that no demonstrations were made around the White House and that you had cooperated, but that they are not informed at all as to the background and motives and connections of your organization.

Mr. LASSER. I have talked to the President several times.

Mr. BOREN. The President talks with all kinds of people. The fact that you are talking to me now does not indicate my attitude toward your organization.

It is past time for me to go to my committee and I am sure you have other duties perhaps; we have discussed this matter fully enough already.

Mr. LASSER. Yes; yes, indeed. I am glad to have had this talk with you, Congressman.

Mr. BOREN. Well, I am glad you had this talk, too. At least we understand each other, and I take it that there is no doubt in your mind as to my attitude. I have been quite frank with you and have no hesitancy to be frank about all of my actions, because everything I do is straightforward and I always do what I believe to be right even though it is possible that sometimes I might be wrong.

Mr. LASSER. Oh, yes; just one other question I want to ask you, because a lot of members are asking and I asked the C. I. O. if they had a record on it, but they didn't. How did you vote on the W. P. A. bill?

Mr. BOREN. I voted to pass it and have so informed all of the members of your organization who have written me.

Mr. LASSER. But how did you vote on the Cannon amendment to raise the amount of the appropriation?

Mr. BOREN. I voted to sustain the committee, and I have also informed all the members of your organization who have inquired what I did about that, too.

Mr. LASSER. I am glad to get this information; it was not a record vote.

Mr. BOREN. No; it was not. As far as I am concerned, I would be glad if everything would be a record vote, because I never cast a vote that I would not be glad for the world to know how I voted. I always vote my honest convictions of what is best for the people I represent and for what is best for the Nation, regardless of the attitude of pressure groups or minority interests.

Mr. LASSER. I am glad we both understand each other, Congressman.

Mr. BOREN. Yes; I am glad you came out. We both know where we stand. I know your attitude and you know mine.

Mr. LASSER. Yes; and thank you for your time, Congressman.

WORKERS ALLIANCE OF AMERICA,
Washington, D. C., February 9, 1939.

Hon. LYLE H. BOREN,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN BOREN: I am writing you this open letter in accordance with my conversation with you today regarding a statement in the press in Oklahoma on your attitude toward the Workers Alliance.

You will remember I called your attention to a press clipping in which you declared you had written to the State administrator of W. P. A. in Oklahoma asking the removal of any supervisor or nonrelief employee in your district who is a member of the Workers Alliance.

I informed you at our meeting that I desired to check this press clipping with you to ascertain whether or not it was accurate before we took any action regarding it.

You informed me that you had sent a letter to the W. P. A. administrator as quoted in the press, on the grounds that the Workers' Alliance is a Communist organization. You further informed me that not only would Workers' Alliance members not be given supervisory positions on W. P. A., but that no Republican could get a supervisory position in your district. You further informed me that you would do everything possible to see that the growth of the Workers' Alliance is stopped in your congressional district, and you would exert your influence to get members of the organization to drop out.

If you will remember, I warned you about this course of action, calling to your attention the fact that not only the 1938 Relief Act but the provisions in the deficiency appropriation act as well include very severe penalties for discrimination against W. P. A. workers because of their political affiliation or membership in a labor organization.

I called to your attention, specifically, section 19, title I, of the 1938 Relief Act, which says, in part:

"Any person who intentionally * * * by means of any fraud, force, threat, intimidation, or boycott, or discrimination on account of race, religion, political affiliations, or membership in a labor organization, deprives any person of any benefits to which he may be entitled to under any such appropriation, or attempts so to do, or assists in so doing, shall be deemed guilty of a misdemeanor and fined not more than $2,000 or imprisoned not more than 1 year, or both."

I called to your attention also section 3B of the deficiency appropriation bill just passed, which uses substantially the same language but makes the crime a felony. This new provision is "in addition to and not substitution for any other section of existing law."

Certainly you must be giving serious thought to a course of action which is placing you in clear defiance of the established law of the land and in defiance of the desire of the American people to prevent any political or other discrimination in employment on the W. P. A. program.

If you will remember, I replied to you on the charge that our organization is politically controlled. I denied this statement emphatically and asserted that any person who made such a statement, whether he be within the alliance or without, would be guilty of deliberate falsehood.

I called to your attention the fact that it is not the province of any Congressman to determine whether or not a certain organization has the right to exist, and that if you were attempting to coerce people in your district to become, or not become, members of the Workers' Alliance, you were laying yourself open to serious legal charges.

You declared that you were alarmed by the growth of the Workers' Alliance in Oklahoma, and you feel that if we continue our growth we will be able to influence the course of action of legislators. If you will remember, I informed you that our activities would have to meet the test of public opinion.

I asked you to cite any instances of any of our activities, of any of our literature, that were subversive, and you admitted that you had no such material or information.

Is it not significant that you got your chief information on the Workers' Alliance from Mr. Walter Steele of the National Republic—an organization which, if not fascist-minded, is certainly very close to it? Is it not significant, also, in determining where you stand, that displayed in your outer office is a large picture of the S. S. *Bremen* of the North German Lloyd Line and that this picture hangs there at a time when the overwhelming majority of the American people are boycotting everything that is German and fascist?

Is it not significant, in your attitude toward the Workers Alliance, that you admitted that you voted for the $150,000,000 cut in the W. P. A. appropriation in the House, and that if this cut had been sustained in the manner that the House wanted, reductions in the W. P. A. rolls would have started on February 1 and continued at the rate of 200,000 a month, necessitating in Oklahoma the throwing off of some 30,000 American families on to the local relief rolls or the breadlines?

If you remember, I invited you to call the White House and find out what they know about the Workers' Alliance. I invited you to call the Works Progress Administration and find out what they know about us. You subsequently called the White House and were informed that their knowledge of our activities reflects nothing but credit on the Workers' Alliance.

If you will remember, I informed you further that we have no desire to enter into any hostilities with you or to have any ill-will existing between yourself and the Workers' Alliance, but are solely determined to protect the rights of Americans who are unemployed or on W. P. A. to organize, to express themselves through organization and to get the benefits of the laws of the land.

If you will remember, you did express regret that you had not consulted with the Workers' Alliance before you sent your hasty letter to the W. P. A. Administrator and issued your hasty statement to the press.

Judging by your recent attitude and actions, it would appear that your charge of communism is actually only a smoke screen to help carry through the plans of those who want to entirely dismantle the W. P. A. program and throw hungry and starving people on the streets, and that in order to successfully accomplish this end you apparently feel it is necessary to prevent the growth of the Workers' Alliance because the Workers' Alliance has been so active and effective in helping to preserve the program.

It would also appear that you wish to exert political control over the W. P. A. program in your congressional district until it is disbanded.

I am in hopes that you will have perceived that you have acted unwisely in this whole matter and that you will make no further attempts to intimidate any American and prevent him from determining what organization he shall or shall not join. We hope that you will recognize that it is your duty as a Congressman—even more than any American—to support the laws of the land; and that you are subject to the same penalties if you attempt to discriminate against or to get others to discriminate against any American because of his political affiliation or membership in a labor organization.

As for us in the Workers' Alliance, we are going to continue our activities in a constructive, orderly, American way, to make sure that the essential needs of the underprivileged not only in your own State but in every State are protected—and in this way helping to bring recovery for America.

We hope you will see fit, in all honesty, to retract the statements you have made about us and to cease any actions which can be construed as unlawful.

If there is anything in this letter which is not a matter of fact concerning our conversation, I would be very happy to be corrected.

Very truly yours,

DAVID LASSER, *National President.*

The Refugee Problem

EXTENSION OF REMARKS
OF
HON. JOAQUIN M. ELIZALDE
RESIDENT COMMISSIONER FROM THE PHILIPPINE ISLANDS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1939

STATEMENT BY HON. MANUEL L. QUEZON, PRESIDENT OF THE PHILIPPINE COMMONWEALTH

Mr. ELIZALDE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statement by President Manuel L. Quezon, of the Philippine Commonwealth, read at the London Conference of the Inter-Governmental Committee on Political Refugees, February 13, by George Rublee, American delegate:

The Government of the Commonwealth of the Philippines will be happy to cooperate with the United States Government and other governments concerned in an effort to find a solution of the refugee problem, which it is realized must be approached upon broad humanitarian grounds. The Commonwealth government is willing to continue the plan in operation since May 1938, which permits the entry into the Philippines upon advance approval of a limited number of refugees whose maintenance has been previously guaranteed by interested persons. The foregoing plan is naturally subject to existing and future immigration laws and regulations. The Commonwealth government believes that under this plan there may be admitted as many as 1,000 persons annually.

The Commonwealth authorities are furthermore favorably inclined to a plan which would permit the settlement of refugees on the island of Mindañao and in other sparsely populated areas of the Philippines. The island of Mindanao, the southernmost of the Philippine Archipelago, has an area of some 37,000 square miles, is sparsely inhabited, is in the main favorable climatically, and is believed to be capable of supporting a very considerable population. The large-scale colonization of Mindanao by Filipinos and substantial sums are available for general development purposes. It is believed that this program could be materially aided through the use of refugee specialists, engineers, technicians, doctors, skilled and semiskilled artisans. The Commonwealth government would favor the settlement of refugees in Mindanao in accordance with the following conditions in such numbers and at such a rate as may be found to be within the interest of Philippine national economy:

1. That a responsible committee representing the refugees or acting on their behalf shall submit a satisfactory plan to finance such settlements;
2. That the settlers will agree to engage in subsistence farming or such other activities as may be compatible with the best interests of the Philippines;
3. That they shall take out naturalization papers as early as possible, thereby expressing their intention to become Filipino citizens;
4. That until they become Filipino citizens they shall reside in the land reserved for them;
5. That the number of refugees to be admitted as settlers shall be fixed for the time being by the Commonwealth government acting upon the recommendation of the committee in charge of the settlement in course of preparation, having in view the committee's ability to take care of the settlers and the consequences of large-scale settlement upon the national economy of the Philippines; and
6. That the plan contemplated and its execution shall be subject to the immigration laws now in force or which may hereafter be passed by the national assembly.

Taxation of State, County, and Municipal Employees

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1939

Mr. JENKINS of Ohio. Mr. Speaker, what I have already said on the floor of the House in opposition to the bill proposed to tax the salaries of State, county, and municipal employees is supported by the report made a few days ago in the Joint Committee on Internal Revenue Taxation by its highly competent staff. This joint committee is, beyond any doubt, the highest authority in the Nation on all internal-revenue tax matters, and its staff, which makes this report, is also beyond question the most efficient of its kind in the country.

The following excerpts from this exhaustive report will support my contentions. On page 1 the following appears:

Part I. Whether the Congress has the power to apply the Federal income tax directly to the interest on State and local securities: It is the opinion of this office that a constitutional amendment is the only effective way by which the Federal income tax may be applied to this interest.

Part II. Whether the Congress has the power to apply the Federal income tax directly to the salaries of officers and employees of the States and their political subdivisions: Existing revenue laws tax the compensation of State and local officers and employees to the fullest extent permitted under the Constitution. This office does not believe additional legislation is necessary to afford to the courts the fullest opportunity to define the limits to which the Federal Government may go in subjecting their compensation to the income tax.

Any decision of the Court extending this power to include the salaries of employees who have theretofore been considered exempt will require legislation to prevent the imposition of retroactive taxes. While it is likely that the Court will in time substantially extend the Federal power with respect to the application of the income tax to certain classes and types of State and local employees, it is the opinion of this office that in order to effectively reach the compensation of all State and local officers and employees an amendment to the Constitution will prove necessary.

On pages 2 and 3 the following appears:

In consideration of this question, an exhaustive study was made by the Department of Justice in June of 1938. The conclusion reached in that study is that "the Congress apparently has the power, under the present trend of decisions to tax the net income arising from the interest paid on State bonds." With this conclusion, we are unable to agree.

On page 47 the following appears:

It appears that the only way all of the salaries of State and political subdivision officers and employees could be reached by the Federal Government, and all the salaries of Federal officers and employees could be reached by the State governments, is by a constitutional amendment.

This whole controversy has arisen from a study made by the Treasury Department. This study is met head-on by this report of the staff of the joint committee of Congress, appointed by Congress to keep Congress and the country advised with reference to internal-revenue matters. The study made by the Treasury Department acknowledges that they are going into new fields. They are not certain as to the ground. The staff of the Joint Committee on Taxation are positive of their position because they have been over the ground many times.

The membership of the Joint Committee on Taxation and its staff are as follows:

Chairman, Robert L. Doughton, Representative from North Carolina; vice chairman, Pat Harrison, Senator from Mississippi; William H. King, Senator from Utah; Walter F. George, Senator from Georgia; Robert M. La Follette, Jr., Senator from Wisconsin; Arthur Capper, Senator from Kansas; Thomas H. Cullen, Representative from New York; Allen T. Treadway, Representative from Massachusetts; Frank Crowther, Representative from New York; secretary, Bryant C. Brown, 1916 Colonial Terrace; chief of staff, Colin F. Stam, 3940 Livingston Street; assistant chief of staff, Gaston D. Chesteen, 2515 Thirteenth Street; technical assistants, Lynn L. Stratton, 6403 Ridgewood Avenue, Chevy Chase, Md., David C. Longinotti, 214 Massachusetts Avenue NE.; statistician, Walter L. Price, 2407 Fifteenth Street; attorneys, Weaver Myers, 211 Delaware Avenue, William L. Wallace, 2409 Thirteenth Street, Walter L. Tucker, Harvard Hall Apartments, Carl A. Phillips, 1348 Jefferson Street; stenographers and assistant clerks, Irma Crisler, 214 Massachusetts Avenue NE., Evelyn Hall Turner, 1445 Otis Place.

Legislature of Montana

EXTENSION OF REMARKS
OF
HON. JAMES F. O'CONNOR
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1939

RESOLUTIONS OF LEGISLATURE OF MONTANA

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following memorials passed recently by the Legislature of the State of Montana:

House Joint Memorial 7

Memorial to the Congress of the United States of America requesting it to assist the beet-sugar industry in Montana

Whereas only 29.5 percent of domestic sugar sales are allotted to domestic producers at present. Cuba has practically the same amount and our insular possessions 41.5 percent. American producers are rightfully entitled to all of the domestic market that they are able to supply; and

Whereas the import quotas of raw sugar as set at the present time have brought the farmers, the workers in the beet-sugar factories, and the laborers in the beet fields in direct competition with the poorly paid labor in the sugar-producing territories outside of continental United States; such competition has the direct result of lowering the standard of living of these farmers and laborers to a level incompatible with the American way of life; and

Whereas sugar beets can be effectively grown at a reasonable profit in this State and there is no food more valuable to the consumer in nutritive worth, even at a much higher price than at present; and

Whereas the production of sugar beets provides employment at good wages for many times as many workers as the same acreage of other crops adapted to this latitude and any control of the expansion of sugar-beet acreage means more unemployment and more relief clients, who could otherwise make a living in this industry; and

Whereas there is grave danger that the present policy, if continued, will result in many now employed in this country losing their means of livelihood, thereby further increasing the already tremendous burden of unemployment; and

Whereas our beet growers, if permitted to make a reasonable amount of money, are, due to their higher standard of living, many times better customers for eastern industry as are foreign sugar laborers and planters; and

Whereas an orderly and sound expansion of beet plantings in accordance with the development of suitable land and the building of new factories to take care of the increased production is a reasonable and necessary process to the building up of this State and should be encouraged; and

Whereas the expansion of the domestic production of sugar should be encouraged as a problem of national economy and defense; the acute shortage of sugar during the World War demonstrated our need for a much higher domestic sugar production in time of emergency; and

Whereas because of the high altitude of this region there are practically no substitute crops for sugar beets, and the restriction of the beet industry means the throttling of our agriculture by elimiating the best cultivated crop in a proper rotation for maintaining soil fertility and weed control; and

Whereas the development of profitable agricultural operations is so vital to the business of all of Montana as well as of the entire United States and should be given most serious consideration by all individuals and lawmaking bodies; and

Whereas the Beet Growers' Association of Montana, supported by the Montana Federation of Labor and Montanans, Inc. (the State Chamber of Commerce), have given serious and careful consideration to the present sugar quotas, and the above facts have been definitely established: Now, therefore, be it

Resolved, That it is the prayer of your memorialists, the Twenty-sixth Legislative Assembly of the State of Montana, that the Congress of the United States should, by proper legislation, right the wrong suffered by the farmers, processors, and wage earners engaged in the growing and manufacturing of beet sugar by immediately raising the domestic sugar quota to permit the unrestricted production of sugar within the continental limits of the United States, and to maintain the protective market by quota reductions and adequate tariffs on foreign sugar; be it further

Resolved, That a copy of this memorial, duly authenticated, be sent by the secretary of state to the Senate and House of Representatives of the United States and to each of the Senators and Representatives of Montana in Congress.

House Joint Memorial 3

Memorial to the Congress of the United States of America requesting an investigation of the wrongful destruction, removal, and failure to replace the fairground buildings of the county of Musselshell, and thereafter cause restitution of the same, said buildings having been wrongfully destroyed and removed by authority of the National Parks Service

To the Honorable Senate and the House of Representatives of the United States in Congress assembled:

Whereas the National Parks Service, under the Secretary of Interior, having been authorized by the Congress of the United States to aid the several States and political subdivisions thereof in planning and developing adequate park, parkway, and recreation area facilities for the people of the United States, set up C. C. C. camps in Montana to aid in developing our State parks; and

Whereas in 1935, under and by virtue of said authority, a C. C. C. camp, designated by the National Parks Service as "Roundup Peaks Camp," was established for the purpose of reconstructing the Musselshell County Fairgrounds; and

Whereas said camp having been set up, the exhibit building, grandstand, and certain other buildings were torn down, and, in spite of and contrary to the definite assurance and promise to the county of Musselshell of new buildings of superior quality, the C. C. C. camp was removed prior to the construction of any buildings whatsoever; and

Whereas all subsequent efforts of the county of Musselshell to secure replacement of said buildings have been of no avail: Now, therefore, be it

Resolved, That the Twenty-sixth Legislative Assembly of the State of Montana (the senate and house concurring) does hereby respectfully petition and request the Congress of the United States to cause a thorough investigation to be made of the destruction, removal, and failure to replace the fairground buildings of the county of Musselshell, and thereafter to provide for restitution of said buildings and structures; and be it further

Resolved, That copies of this memorial be transmitted by the secretary of state of the State of Montana to the Honorable B. K. WHEELER, and the Honorable JAMES E. MURRAY, United States Senators, and to the Honorable JAMES F. O'CONNOR, United States Representative of the Second Congressional District of the State of Montana.

House Joint Memorial 1

Resolution memorializing the Congress of the United States for the passage of the legislation for the creation and establishment of the Townsend recovery plan, and for benefits to be paid to all persons over the age of 60 years

To the Honorable Senate and House of Representatives of the United States in Congress assembled:

Whereas there exists among employers of labor a widespread policy by which persons of over 45 years of age, willing and anxious to earn their livelihood are deprived of the opportunity of receiving employment; thus placing many such persons in a position of depending either upon friends or relatives or on public charity; and

Whereas many of the persons thus deprived of an opportunity to earn their support are, because of this policy, adopted and enforced by employers of labor unable to support themselves by means of their own effort; and

Whereas our social and economic welfare demands of the American people as a whole that those who, through no fault of their own, are thus deprived of the opportunity to earn a livelihood be placed in a condition where their morale be sustained and they be neither indigents or partakers of public charity; and

Whereas the burden of creating and maintaining the social and economic welfare is of greater magnitude than the State of Montana in common with other States is able to carry on; and

Whereas there exists not only a widespread demand of persons over 60 years of age for the passage of legislation which will permit them to maintain their self-respect, but there also exists an unusually strong demand of persons under the age of 60 years, that those who have pioneered in the building and development of our country be justly and adequately provided for in their declining years: Now, therefore, be it

Resolved by the House of Representatives of the State of Montana (the senate concurring), That we do hereby petition the Congress of the United States of America for the passage of the Townsend recovery plan into law, the said plan being deemed just and equitable to all persons over the age of 60 years; be it further

Resolved, That a copy of this memorial be transmitted by the secretary of state of Montana to the Senate and House of Representatives of the Congress of the United States and to the Senators and Representatives in Congress from the State of Montana and they and each of them be requested to use all honorable means within their power to bring about the enactment of the Townsend recovery plan into law.

Philippine Independence Act and Cuban Trade Treaty

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1939

Mr. CRAWFORD. Mr. Speaker, Thursday of this week the Senate Committee on Territories and Insular Affairs will begin hearings on bill S. 1028, carrying proposals submitted in the Report of the Joint Preparatory Committee on Philippine Affairs. The chairman of the Insular Affairs Committee of the House, Mr. KOCIALKOWSKI, has introduced H. R. 3330, and I understand hearings will open before the House Insular Affairs Committee under date of March 6 next.

The Joint Preparatory Committee has filed its report consisting of 4 volumes and covering some 3,010 pages of essay matter, statistical tables, and other data. The Philippine Independence Act of March 24, 1934, carries a provision to the effect that the President shall bring about the creation of this committee for the purpose of making a study looking forward to a revision of the trade relations between the United States and the Philippine Islands. The committee has submitted its report, which in turn has been placed before Congress through the President's message of some days ago, and now the Congress is to again consider the question of duty, excise taxes, imports, and exports, and other Philippine questions.

Particular attention is directed to section 6 of the Independence Act and the changes suggested therein by H. R. 3330. The committee report and the suggested changes in the independence act are of vital concern to the industrial structure of the United States. The proposed changes are of such a nature as to give concern to the domestic sugar industry, consisting of continental beet, continental cane, and the offshore areas located in Hawaii, Puerto Rico, and the Virgin Islands. The proposed changes materially alter the provisions of the independence act. Instead of a full duty applying against Philippine imports to the United States, immediately independence is granted, as provided in section 13, we now have to consider the question of deferring the application of full duties until 1961.

Section 13 of the independence act provides that there shall be collected, levied, and paid upon articles coming into the United States from the Philippine Islands, the rates of duty which are required to be levied, collected, and paid upon like articles imported from other foreign countries. This provision, however, is qualified to the effect that a conference of representatives of the two Governments shall reconsider the trade relations that shall exist subsequent to independence. Section 13, however, provides that nothing in the proviso shall be construed to modify or affect in any way any provision of the independence act related to the procedure leading up to Philippine independence or the date upon which the Philippine Islands shall become independent. The proposed reduction in the duty on sugar coming into this country from Cuba; the proposal materially altering the economic provisions of the Philippine independence act; and the situation which now governs on the price being received by the domestic sugar industry for the sale of its products under the controlled powers of the Secretary of Agriculture are all interwoven. Indeed, a combination of circumstances brought about by all of these proposals has created a chaotic condition throughout the domestic sugar industry. Straight thinking is required, and the domestic sugar industry must keep on its toes.

DISASTROUS PRICE DECLINES

When the Secretary of Agriculture announced the 1939 quotas on sugar, there followed a considerable decline in sugar prices. Since the Secretary of State proposed reduction in duty on sugars coming into this country from Cuba, the price on sugar has been further declining. Also, while the 15 cents per hundred pounds duty reduction has not actually become effective, the duty-free prices on sugar produced in our insular possessions and continental beet and cane sugars have all suffered price reductions. Within recent weeks the duty-free price has been about 10 cents per hundred pounds of the proposed 15-cent reduction. Under the quota system, Cuba can withhold her sugars from the United States markets and let the duty-free sugars supply trade demand at the reduced price, reflecting two-thirds of the proposed reduction in duty, and then later on Cuba can benefit by her full quotas and thereby put in the purse of the Cuban sugar industry the 15-cent reduction in duty, when granted, and all at the cost of the American taxpayer. In this manner Cuba does not have to sell her sugar on the greatly depressed market of today, while uncertainty as to the action to be taken on the reduction in duty is in control of the market. In this manner Cuba benefits greatly and competitively as against the American growers of sugar produced in the continental United States and our insular possessions of Puerto Rico, Hawaii, and the Virgin Islands.

CUBAN RECIPROCAL-TRADE AGREEMENT

Along with the Philippine relations now about to be reconsidered, it is well for us to keep in mind our relations with Cuba. After all, Cuba is a very vital part of our sugar problem. Our relations with Cuba will affect, not only now but in the future, our relations with the Philippine Islands.

A number of statements have been made in connection with the Cuban agreement pointing out how Cuba's trade with the United States declined from a peak in 1929 to a low in 1933 and subsequently underwent a rapid recovery. These statements often associate the decline in trade with a decline in Cuba's income from sugar and ascribe the subsequent increase in trade to the reciprocal-trade agreement. Among those who have expressed opinions is Mr. H. S. Patton, who, in Commercial Policy Series, No. 27, United States Department of State, writes as follows:

> Although the United States and Cuba have accorded each other preferential tariff treatment ever since 1902, the raising of sugar duties under the Hawley-Smoot Tariff Act of 1930 had brought virtual ruin to the Cuban sugar industry, whose exports to this country fell from 4.15 million tons in 1929 to 1.58 million tons in 1935. Under these conditions Cuba had so restricted its purchases of American goods that our exports to that island declined in value from $129,000,000 in 1929 to a mere $25,000,000 in 1933.

Now, Mr. Speaker, let us look at some comparative figures and see just how clearly Mr. Patton presented the facts in giving us this illustration.

While it is true that Cuban purchases of American goods declined precipitously from 1929 to 1933, it is also true that exports to other Latin-American countries, which are not primarily sugar-producing areas, underwent an equally sharp reduction. Thus, while exports to Cuba dropped 82 percent, exports to Chile fell 91 percent; those to Uruguay, 87 percent; and those to Argentina, 83 percent. Similarly, purchases of American goods by Peru declined 81 percent; purchases by Mexico, 73 percent; and those by Venezuela, 71 percent.

It is evident, therefore, that the loss in purchasing power sustained by the Latin-American republics between 1929 and 1933 was not attributable to collapse of the sugar market alone but was rather the result of world-wide depression and constriction of trade in general.

Moreover, it is interesting to note that, during the subsequent recovery period, certain of these same countries—with whom no trade agreements were then in effect—showed a gain in

purchases of American goods as great as, or greater than, that showed by Cuba. Between 1933 and 1937, Cuba increased its purchases from the United States by 292 percent. On the other hand, Chile increased its purchases from this country by 350 percent; Peru by 287 percent; Uruguay by 264 percent; and Venezuela by 255 percent. Thus it appears that the most important factor in increasing trade was the improvement in business conditions which occurred throughout the world between 1933 and 1937.

United States exports to Cuba and other Latin-American countries, 1929, 1933, and 1937

Country	1929	1933	1937	Change, 1929–33	Change, 1933–37
				Percent	*Percent*
Cuba	$127,051,000	$22,674,000	$88,847,000	−82.2	+291.8
Chile	55,776,000	5,278,000	23,742,000	−90.5	+349.8
Uruguay	28,245,000	3,597,000	13,105,000	−87.3	+264.3
Argentina	210,288,000	36,801,000	93,532,000	−82.5	+155.0
Peru	26,176,000	4,888,000	18,898,000	−81.3	+286.6
Mexico	133,863,000	36,343,000	105,700,000	−72.9	+191.0
Venezuela	45,325,000	13,024,000	46,254,000	−71.3	+255.1

Source: Compiled from reports of the U. S. Department of Commerce.

NOTE.—"Other Latin-American countries," represent leading American republics with which no reciprocal-trade agreements were in effect during the years indicated

The Relief Problem

EXTENSION OF REMARKS
OF
HON. JOHN G. ALEXANDER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1939

Mr. ALEXANDER. Mr. Speaker, as I have previously stated in this House, it is high time that Congress take notice of the critical situation which exists in this country with reference to our relief problem, and that it meet the need for a sound and constructive substitute program, which will eliminate the continuous drain on State and municipal financial resources which is now occurring throughout the land and which can end but in one way, namely, the destruction of orderly democratic representative government and which can likewise result in but one thing, namely, the advent of dictatorship. As a growing and direct example in point, I submit to the House the following telegram just received from O. A. Pearson, superintendent of the department of public relief of the city of Minneapolis:

MINNEAPOLIS, MINN., *February 13, 1939.*

Hon. JOHN G. ALEXANDER,
House Office Building:

Persons on relief: October, 39,450; November, up 3,041; December, up 3,125; January, up 2,190 over previous month. Commitments in dollars, State and local funds: October, $480,000; November, up $52,852; December, up $45,062; January, up $33,630 over previous month. Anticipate increase in relief load next 2 months due to W. P. A. lay-offs. Sharp increase after April 1 in W. P. A. carries out proposed cut. Minneapolis only available resource is bond issue. City now forced to refund maturities because of abnormal relief bond issues in past 6 years. Requirements for refunding aid for direct relief and sponsor's share of W. P. A. will exhaust city's debt leeway before December 31, 1939, or earlier if W. P. A. retrenchment increases direct relief intake. Over-all case load with all categories of aid now the highest in history of Minneapolis. Anything that you can do to help relieve the situation will be greatly appreciated.

O. A. PEARSON,
Superintendent, Division of Public Relief.

This wire describes in a graphic way, with the increase of 8,356 cases in 3 months in one city, the growing plight of our local governments and their destitute citizens and indicates to any live and conscientious mind that there is great need to take immediate steps to formulate a program such as that suggested in my remarks in this body on January 13 last, looking to the absorption of our unemployed people in real jobs, and their removal from further doles, direct relief, and starvation. They deserve it, the spirit of democracy demands it, and we must give it here in Congress.

General Welfare Act—The Townsend Plan

EXTENSION OF REMARKS
OF
HON. MARTIN F. SMITH
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1939

STATEMENT OF HON. MARTIN F. SMITH OF WASHINGTON BEFORE THE COMMITTEE ON WAYS AND MEANS

Mr. SMITH of Washington. Mr. Speaker, under permission granted to me by unanimous consent of my colleagues of the House, I am extending my remarks by inserting the statement which I made before the Ways and Means Committee, February 15, 1939, in support of H. R. 2, the General Welfare Act, which embodies the principles of the Townsend old-age pension and national recovery plan.

The statement is as follows:

Mr. Chairman and gentlemen of the committee, I deeply appreciate being granted this opportunity to appear before you today in support of H. R. 2, introduced by our colleague, the gentleman from Florida [Mr. HENDRICKS], which is known as the General Welfare Act and embodies the principles of the Townsend old-age pension and national recovery plan. A companion bill, I am advised, has been introduced in the Senate, S. 3, by Senator PEPPER, also from the State of Florida. Many of my constituents are interested in this legislation as are millions of other citizens throughout the country, and I feel certain that they deeply appreciate the action of your great committee in granting hearings on this important bill at this time.

My interest in this legislation is known to the members of this committee and to the people not only of my district and State but also to the entire Nation. I first became interested at a time when there was not a single Townsend club in my district, and I placed in the CONGRESSIONAL RECORD on April 4, 1934, the first statement and explanation of the Townsend plan which was made in the Congress of the United States, and the first official notice which it received here in the Capital. I have studied it continuously since then and was one of a small group of House Members who drafted the first and second and all subsequent bills, including the present bill, and have taken an active, prominent part in the campaign waged in its behalf in and outside of Congress.

H. R. 2 is comparatively simple in its terms and provisions. Briefly stated, it provides for the payment, financing, and compulsory expenditure of a Federal monthly old-age pension of not to exceed $200 per month to all law-abiding citizens 60 years of age and past by levying a 2-percent transactions tax.

It is thereby proposed to retire our senior citizens from gainful employment and utilize their services in placing in circulation the purchasing and spending power of the pension money. This will make it possible for their jobs to be filled by younger citizens who are now unemployed.

GOVERNMENT INVESTIGATIONS AND REPORTS FAVOR LEGISLATION

Despite all the worthy, splendid efforts of President Roosevelt and the present national administration we have not solved the one big problem of unemployment. It is still the fact, as President Roosevelt has oft stated, that one-third of the people of America are ill-fed, ill-clad, and ill-housed.

In other words, there faces the Nation a dearth and total lack of buying and purchasing power on the part of 40,000,000 of our fellow citizens which is depriving us of one-third of the productive capacity of the farms and factories of America. This latter fact is corroborated and conclusively established by the official report of the National Survey of Potential Product Capacity, prepared under the auspices of the Civil Works Administration by Harold Loeb and a corps of sixty-odd engineers, technicians, statisticians, economists, and experts specially trained and qualified for the task assigned to them.

This report and survey, financed by the Federal Government, discloses that if the productive facilities of our country in 1929 had been fully utilized, sufficient could have been produced to provide every family with goods and services equivalent to $4,370 per year, and that even in the halcyon year of 1929 we produced only two-thirds of our capacity, and 42 percent of our population were at that time inadequately fed, clothed, and sheltered and did not enjoy "a decent or healthy standard of life." They established by a mass of figures, facts, and data that the national in-

come in manufactured goods, foodstuffs, and services in 1929 of $94,000,000,000 could and, to properly meet the needs of the American people, should have been the sum of $135,000,000,000, or approximately $41,000,000,000 greater than it was. The conclusion reached in this Government report is that we are deliberately and purposely restricting production and the creation of wealth and income to the extent of one-third of the capacity of our farms, factories, mines, and forests and not providing the abundance of food, clothing, and housing which is available for all our people and deliberately keeping one-third of our lands and factories idle and nonproductive in order to secure an artificial scarcity to conform with the insufficient buying and purchasing power of our people.

I quote from the final page (p. 161) of this most important document, of which we are going to hear much in the months to come:

"This is the dilemma * * * as exposed by the study of the National Survey of Potential Product Capacity. It would seem that the simple and obvious way out, that of giving a buying power adequate to procure desired goods and services to the limit of our ability to produce them might well be tried. It is simple in principle but has not been attempted."

This is exactly and precisely what we propose to do under the General Welfare Act, H. R. 2, the Townsend plan. We propose to invest approximately 8,000,000 United States citizens of the age of 60 or over—veterans of the battle of life and certainly the most deserving—with buying power to the extent of a maximum of $2,400 per annum at the rate of $200 per month (there has never been a guaranty of $200 per month; that has always been and still is the maximum), which they must expend for the necessaries of life within 30 days, or during the calendar month it is received, thus placing the money in immediate circulation by the purchase of the products of the farm, factories, and mines of the Nation, which will amount to $19,200,000,000 of new buying and purchasing power per annum.

We propose to raise the required funds to finance this investment in new buying and purchasing power and thereby consume that much of our present unused productive capacity by means of a 2-percent transaction tax on the gross business turn-over of the United States.

THE TRANSACTION TAX

A transaction tax is a tax on business transactions. It is not a tax on profits. To illustrate: During 1933 and 1934 the United States Government collected a tax of 2 cents on each bank check. This was a transaction tax applied to check transactions only. The tax was 2 cents on a $1 check and only 2 cents on a $1,000 check. The small bank depositor paid the major portion of this tax.

The United States Treasury, during 1933 and 1934, collected from this tax over $79,000,000, according to the Secretary of the Treasury. During these years the Federal Reserve Board reported that its branches and agencies alone handled over $76,000,000,000 worth of checks. To further illustrate: If the tax had been 2 percent of the total check transactions, instead of 2 cents on each check, the Government would have collected from Federal Reserve agencies alone over $1,500,000,000 instead of a total of only $79,000,000.

To further illustrate: All the corporations in the United States paid income taxes in 1934 of $397,000,000. The users of tobacco alone (chewing, cigars, and cigarettes) paid a total tax into the United States Treasury in the same year, of $425,000,000.

The Townsend plan proposes to apply a 2-percent transaction tax on both big and little business alike—to develop business and prosperity in America. A dollar transaction will be taxed 2 cents; a thousand-dollar transaction will be taxed $20. The man selling a hundred-thousand-dollar yacht will pay $2,000, while a man selling a $10 rowboat will pay 20 cents. Everybody will pay according to the volume of business that prosperity brings to them. The tax will apply to speculative transactions in Wall Street, as well as on the sale of a box of face powder.

The transaction tax was endorsed in principle by the largest business organizations in America in 1921. I respectfully refer this committee to the extended hearings held that year before the Committee on Finance, United States Senate, internal revenue hearings, May 9–27, 1921, on the then proposed Revenue Act of 1921, as printed by the committee and now on file in the Congressional Library, for a very complete discussion of this entire subject.

NATIONAL INCOME VERSUS NATIONAL BUSINESS TURN-OVER

Some people fail to differentiate between national income and national business turn-over. They confuse the two and assume that the pension payments must be deducted from the present national income and without any increase of the latter. They confine the volume of the Nation's business to the national income and consequently place themselves in the position of claiming that every time a dollar of national income is spent that dollar ceases to exist, that it stops right then and there and can never be spent again. No other conclusion can logically follow for they can point to no year in which the amount of business transacted in the United States did not exceed many, many times over the amount of national income. The national cash income in 1929 was $81,000,000,000. The national business turn-over for the same year was $1,200,000,000,000.

A manufacturer may do a gross business—turn-over—of $1,000,000 and have an income of $100,000. Another manufacturer may do a business of $10,000,000 and have an income of only $10,000. Another manufacturer may do a business of $200,000 and have no income—in fact, may lose money. The transaction tax is not based on income or profits, but upon the gross volume of all business transacted.

The cigarette tax is not based on the profits or income of the cigarette manufacturers; it is based on the volume of cigarettes manufactured. The gasoline tax is not based on the income or profits of those engaged in selling gasoline; it is based on the volume of gasoline sold. Likewise, the transaction tax is not based on the national income, it is based on the volume of all business transacted—measured in dollars—hence it is called a transaction tax.

To illustrate further: If a small merchant did a $50,000 business at a net profit of $5,000 in 1935; then, because of increase in sales because of the Townsend plan going into effect, he did a $100,000 business in 1938 at $10,000 profit, the Government would collect 2 percent of the $100,000 or $2,000, leaving a net profit for 1938 of $8,000 as against only $5,000 in 1935. Thus, by paying $2,000 tax to support the Townsend prosperity plan, the merchant increased his business and profit. And his income was not taken or taxed to support the Townsend plan.

PENSIONS WILL NOT BE PAID FROM NATIONAL INCOME

The fallacy most often used against the Townsend plan is the statement that the monthly pensions will be paid from the present national income.

Economists know full well that money of itself has no value whatever; that it simply is a symbol used in registering the amount of labor or goods involved in a transaction. I know little about poker and never play poker but know enough about the game to know that each poker chip on a gambling table simply represents something, and that something in that case is a definite amount of currency, which is no more than a due bill on the world for something. There may be only 500 chips on the table, yet any amount of winnings, from $1 to $1,000,000, may change hands in one evening, passing those chips back and forth in the process.

Russell Leffingwell, of the firm of J. P. Morgan & Co., recently declared: "Money is not an end to itself, it is a means to an end."

Henry Ford, in the American Magazine, October 1934, said: "The function of money is not to make money but to buy goods. Money is only one part of our transportation system. It moves goods from man to man. A dollar bill is like a postage stamp, it is no good unless it will move commodities between persons. If a postage stamp will not carry a letter, or money will not move goods, it is just the same as an engine that will not run. Someone will have to get out and fix it."

The records show that our national income has increased in the face of increased taxes; or, putting it the other way, increase in taxes does not decrease the national income.

The administration levied a processing tax on farm commodities, better known as the A. A. A. tax. It was a transaction tax on processing. This tax exceeded over a billion dollars before it was nullified by the Supreme Court. Who paid this tax? The highest authorities are in disagreement. Some say the farmers paid it, some say the processors, and others say the consumers paid it. But that is beside the point.

The point is that in the face of this new billion dollar transaction tax, collected by the Federal Government, the farmers' income increased; the railroad income increased; business income increased; deposits increased in banks; and the national income increased.

So much for the claim that the Townsend plan pensions being paid out of national income—or "involving one-half of the national income."

Walter E. Spahr, of New York University, in a radio address on January 3, 1936, said: "Thus to pay the annual cost of the Townsend pension scheme would require 40 percent of the national income." This, of course, is untrue. The Townsend plan will not "rob Peter to pay Paul," which is another oft-repeated statement made by opponents of the plan.

A man without income in 1935 may in 1938 invest his money, or credit, employ idle men, buy unused raw products, turn out new goods, and sell the new goods thus produced to men heretofore unemployed. Thus taxes can be paid, idle men employed, business and freight receipts increased, and a profit made in addition without taking a single penny from the present "national income"—or from any person now employed.

It is, therefore, possible to increase taxes, increase freight income to railroads, increase pay rolls, increase the buying of life insurance, increase medical and dental service, increase the consumption and production of food, clothing, and luxuries—and increase the expenses of operating and building bigger and better mills and factories—without taking anything from those who now have property or from those now employed.

This is possible because we have unused materials, unused money and credit, idle men and idle machinery. These will create new wealth without taking wealth or income from others.

BUSINESS TURN-OVER IN THE UNITED STATES

Many confuse the "national income" with what the United States Department of Commerce calls "national business turn-over." For the purpose of clarification, the Department of Commerce reports the national income for 1929 as $81,000,000,000, while the business

transactions for that year were approximately $1,200,000,000,000, according to the research department of the Federal Reserve Board at Washington.

A. E. Goldenweiser, director of research and statistics of the Federal Reserve Board, testified before the Ways and Means Committee of Congress May 2, 1932 (long before the Townsend plan was proposed): "The total volume of transactions in this country in 1929 was about $1,200,000,000,000, and it decreased by 1931 to about $600,000,000,000. This is a decrease of $600,000,000,000, largely due to decline in velocity."

The Dow-Jones organization, leading business statisticians of New York, December 5, 1934, reported $1,165,000,000,000 in business in 1929.

The United States Department of Commerce, Division of Economic Research, gave out "partial data on business transactions in the United States." This report says that the check transactions in 141 principal cities, "estimated by the Board of Governors of the Federal Reserve System to represent, roughly, 70 to 75 percent of all checks drawn in the country," was $935,000,000,000 in 1929. Adding 25 percent for the balance of the country, the total check transactions that year would total $1,245,000,000,000. This report says "that around 10 percent of all transactions are settled by currency payments." This brings the total transactions to approximately $1,380,000,000,000. This, of course, includes transfer of funds from one account to another by corporations, which could not be classified as "business transactions." But, on the other hand, this report says: "If security purchases are considered a 'business transaction,' it may be noted that such purchases are often settled by adjustment of balances or by debits on brokerage accounts," which are not included in check transactions, but which would be subject to a transaction tax.

Taking the foregoing authorities, it is, therefore, conservative to say that the business transactions in the United States in 1929 amounted to $1,200,000,000,000.

Dr. Goldenweiser's testimony tends to corroborate the figures set forth in an authoritative work, Business Cycles and Business Measurements, by Carl Snyder, published in 1927, pages 144, 148, and 180, respectively, in which it is stated that at that time (when business was normal) the total of all business transactions in the United States amounted to $800,000,000,000 a year.

It is a reasonable assumption that with the improvement and increase in business which has taken place since the recession last year, the present volume and amount of business transactions and gross business turn-over are now probably close to $800,000,000,000 a year. Upon the basis of the figures of Dr. Goldenweiser and Mr. Snyder, this sum taxed at the rate of 2 percent would yield a revenue of $16,000,000,000 per annum, or sufficient to pay 8,000,000 citizens the sum of $167.67 per month. Or we can take the figures of expert witnesses before the House Ways and Means Committee on February 12, 1935. Their estimate of the money that could be raised by a 2-percent turn-over or transactions tax is $336,000,000 for the first month, increasing 25 percent monthly until the eighth month. The income is estimated at $1,601,000,000—sufficient to pay the 8,000,000 citizens the full sum of $200 per month, which is the maximum annuity to be provided.

The concluding parts of my statement will appear in the RECORD tomorrow, February 16, 1939.

Banquet of National Republican Club of New York

EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1939

ADDRESS BY HON. HARLAN J. BUSHFIELD, GOVERNOR OF SOUTH DAKOTA

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Lincoln Day address by the Governor of South Dakota before the National Republican Club of New York:

As Governor of South Dakota, I come to you tonight upon this anniversary of the birth of Abraham Lincoln with a message from the great Middle West, a message of congratulation to those responsible for this Lincoln Day celebration, a message of faith in the future of our American Republic.

Coming as I do from the far-distant prairies, representative of an agricultural and mining State, I come fully conscious of my own rural background and of the metropolitan atmosphere in which I now stand, but I come nevertheless steeped in the conviction that I am one of that immense cross-section of our population listening at millions of fireside radios tonight who constitute and are the voice of America.

As the first citizen of South Dakota to be thus honored by the National Republican Club, may I express the appreciation of my people for this honor and at the same time note my own diffidence in attempting to occupy the few minutes of time allotted to me.

The fact, however, that I believe I voice the opinion of the vast majority of middle westerners lends me the courage necessary to express briefly our views.

WE CAN SEE THE NATIONAL GOOD

Out there in South Dakota, where the sky seems a little bluer, where the prairies seem a little fairer, and the mountains a little more entrancing, we are far enough removed from either seaboard so that our people are not swayed by fears of invasion nor lulled into fancied security by reason of our location. And we do not subscribe to the preachment that "our frontier is in France."

But whether in South Dakota or in New York, we are all citizens by birth or choice of the United States of America. What is good for one section of our far-flung country is good for every part of it. What works ill upon one part is detrimental to all.

With a fervency that will brook no denial, our people want peace. We do not want armed conflict forced upon us by those seeking a personal profit, nor by emotionalists whose patriotism is taken from dictionaries, nor by political leaders whose thirst for power or whose unsensible alliances have placed us in a position from which we cannot retreat.

Our duty is to defend liberty on this continent. We went to war once to make the world safe for democracy. From the ruins of that war rose the brutal theories of nazi-ism and communism. Another war would be a mortal blow to civilization. Liberty cannot survive another great war. And if liberty dies in America, it is gone from the world.

NOT ISOLATED FROM RESPONSIBILITIES

Either deliberately or ignorantly there is misrepresentation or confusion as to the possible service of the United States in world affairs. No sane person believes the United States is isolated in either dangers or responsibilities. But there are two widely divergent directions of cooperation. Their destination is as far apart as the two poles. One builds for peace, the other for war.

The first of these is strict neutrality wherein we use our influence to lessen the causes of war. The second is to abandon neutrality and to exert the physical force of the United States on one side. That course of action leads to war.

The first is traditionally American. The second is definitely un-American.

George Washington warned us to avoid entangling alliances. "It is," he said, "our true policy to steer clear of permanent alliances with any part of the foreign world."

That doctrine was taken west by the men of New York and New England in covered wagons to be nourished by the sons of those hardy pioneers who homesteaded the prairies. And it is as firmly rooted in the hearts of the Middle West today as it was in the people of George Washington's time.

Combinations of minorities that have for their purpose the attainment of ends not for the general welfare, encroachment by one department of the Government upon the functions of other departments, destruction of State lines and usurping the liberties guaranteed by the Constitution, granting emergency powers to the Executive which inevitably lead to entangling alliances, are the weapons that will destroy free government.

"New instruments of power" have been forged by those in authority, but the people of the Middle West look with disfavor upon them.

WARS NEVER END WARS

Toughened and hardened in the fires of pioneer adversity, mindful of the background from which we sprang, reared in the atmosphere of individual endeavor and accomplishment, we in South Dakota are as set against war as was Abraham Lincoln.

Twenty-two years ago we marched away to the battlefields of France to make war to end war. It did not end war and never will.

Europe has teetered on the brink of war for months, and the tread of marching armies is heard throughout the world. One false step, one careless challenge, one thoughtless outburst by those in authority may ignite the fire that will sweep us into the maelstrom.

We of the West never shirk a duty. When the time comes you will find us marching shoulder to shoulder with the men of New York in defense of the common cause, in defense of the Government that has given humanity more of opportunity, of progress, of wealth, and of personal liberty than any government since the beginning of time. But the West does not want war. Our mothers pray that it will pass us by. Our fathers curse at the thought of it, and our young men confusedly ponder what the morrow will bring.

My message to you tonight is that we want this government of, by, and for the people to continue its time-honored policy of peace on earth, good will toward men.

U. S. Battleship "Maine"—Memorial Day Tribute

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1939

ADDRESS BY HON. MARTIN F. SMITH, OF WASHINGTON, DELIVERED AT U. S. BATTLESHIP "MAINE" MEMORIAL DAY SERVICE, HELD AT FORT MYER, VA., FEBRUARY 15, 1939

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks, I insert the address which I delivered at the U. S. battleship *Maine* memorial service, held at Fort Myer, Va., February 15, 1939.

The address is as follows:

Comrade Commander-in-Chief, distinguished guests, and comrades, 41 years ago today, on February 15, 1898, 266 brave sailors of the U. S. battleship *Maine* lost their lives in the service of our beloved country and found watery graves in the harbor of Habana. We are, according to annual custom, gathered here to pay loving tribute to their memory and to reverently join in a ceremony in which we esteem it an honor and a privilege to participate.

A state of rebellion had existed in Cuba for some time and President William McKinley had pointed out in his message to Congress in 1897 the unfortunate and miserable conditions to which the Cuban people were subjected and the menace to American interests. Upon his return from a mission of investigation, Senator Thurston, of Nebraska, addressed the Senate and described the suffering and agony of the natives in Cuba, particularly the women and children, and denounced the cruel and inhuman policy of the Spanish Government.

On the 24th day of January 1898, in order to protect American interests, and with the consent and approval of the Spanish Minister, the U. S. battleship *Maine* was sent to Habana Harbor, arriving there on January 25, 1898. The crew consisted of those brave men who then, as now, had volunteered to serve their country in the outposts of civilization and to protect and render safe and secure the lives and property of the American people. They were ever ready to respond to the clarion call of duty. They were defenders and not aggressors, and were there upon a friendly call. Many visitors, both Cubans and Spaniards, came aboard and mingled freely with the officers and men.

In his personal narrative, Captain Sigsbee relates that on the fateful night of February 15, 1898, he completed a report called for by Theodore Roosevelt, Assistant Secretary of the Navy, on the advisability of continuing to place torpedo tubes on board cruisers and battleships. The cabin mess attendant had brought him, about an hour before, his civilian's light coat, because of the prevailing heat; he had taken off his blouse, and was wearing this coat for the only time during the cruise. In his pocket he found an unopened and undelivered letter which his wife had written to one of her friends and given him to mail 10 months before. He then wrote a letter home in which he apologized to his wife.

In his vivid description of the scene, Captain Sigsbee says:

"Pinckney, the mess attendant, a light-hearted colored man, who spent much of his spare time in singing, playing the banjo, and dancing jigs, was for some reason in an especially happy frame of mind that night. Poor fellow, he was killed, as was also good old John R. Bell, the colored cabin steward, who had been in the Navy, in various ratings, for 27 years.

"At taps (turn in and keep quiet), 10 minutes after 9 o'clock, I laid down my pen to listen to the notes of the bugle, which were singularly beautiful in the oppressive stillness of the night. The marine bugler, Newton, who was rather given to fanciful effects, was evidently doing his best. During his pauses the echoes floated back to the ship with singular distinctness, repeating the strains of the bugle fully and exactly. A half hour later, Newton was dead.

"I was enclosing my letter in its envelope when the explosion came. The impression made on different people on board the *Maine* varied somewhat. To me, in my position, well aft, and within the superstructure, it was a bursting, rending, and crashing sound or roar of immense volume, largely metallic in character. It was followed by a succession of heavy, ominous, metallic sounds, probably caused by the overturning of the central superstructure and by falling debris. There was a trembling and lurching motion of the vessel, a list to port, and a movement of subsidence. The electric lights, of which there were eight in the cabin where I was sitting, went out. Then there was intense blackness and smoke.

"The situation could not be mistaken; the *Maine* was blown up and sinking. For a moment the instinct of self-preservation took charge of me, but this was immediately dominated by the habit of command. I went up the inclined deck into the starboard cabin, toward the starboard airports, which were faintly relieved against the background of the sky. The sashes were out, and the openings were large. My first intention was to escape through an airport, but this was abandoned in favor of the more dignified way of making an exit through the passageway leading forward through the superstructure. I groped my way through the cabin into the passage, and along the passage to the outer door. The passage turned to the right, or starboard, near the forward part of the superstructure.

"At the turning, someone ran into me violently. I asked who it was. It was Pvt. William Anthony, the orderly at the cabin door. He said something apologetic and reported that the ship had been blown up and was sinking. He was directed to go out on the quarterdeck, and I followed him. Anthony has been pictured as making an exceedingly formal salute on that occasion. The dramatic effect of a salute cannot add to his heroism. If he had made a salute, it could not have been seen in the blackness of that compartment. Anthony did his whole duty, at great personal risk, at a time when he might have evaded the danger without question, and deserved all the commendation that he received for his act. He hung near me with unflagging zeal and watchfulness that night until the ship was abandoned.

"I stood for a moment on the starboard side of the main deck, forward of the after-superstructure, looking toward the immense dark mass that loomed up amidships, but could see nothing distinctly. There I remained for a few seconds in an effort to grasp the situation, and then asked Anthony for the exact time. He replied: 'The explosion took place at 9:40, sir.' It was soon necessary to retire from the main deck, for the afterpart of the ship was sinking rapidly. I then went up on the poop-deck. By this time Lieutenant Commander Wainwright and others were near me. Everybody was impressed by the solemnity of the disaster, but there was no excitement apparent; perfect discipline prevailed."

America and the whole world were shocked, and war between the United States and Spain inevitably followed, and "Remember the *Maine*" became a national slogan. To avenge the death of the heroes of the *Maine* and to end the reign of tyranny and terror in the islands, the largest volunteer Army in the history of mankind responded to President McKinley's call. One of the most glorious chapters in American history was written, and in the conflict more than 6,000 men and women sacrificed their lives. Nearly half a million men served honorably in that great volunteer Army and wrote upon the pages of history imperishable records of valor and bravery. They fought to liberate an oppressed people and to vindicate the honor and integrity of our Nation throughout the world. We remember with gratitude upon this occasion more than 200,000 of these veterans who have since passed away, and we gladly pay tribute to those veterans of that most important conflict who are still living, and some of whom we rejoice to have with us today. We recall in reverent memory our leaders in that memorable contest: President William McKinley, Col. Theodore Roosevelt, Admiral George Dewey, Gen. Nelson A. Miles, Gen. Joseph Wheeler, Gen. W. H. Lawton, Gen. Leonard Wood, General Chaffee, Gen. Arthur McArthur, Gen. Elwell S. Otis, Gen. Fred Funston, Gen. Charles King, Gen. Lloyd Wheaton, Gen. John R. Brooke, Gen. Fitzhugh Lee, General Shafter, General Merritt, Admirals Sampson, Schley, Bob Evans, and that intrepid hero, Admiral Richmond Pearson Hobson, who was the last to go to his eternal rest.

As long as our Republic endures, the American people will continue to express their gratitude and affection and honor the memories, as we do today, of the noble heroes of the Battleship *Maine* and of the Spanish-American War.

National Defense

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1939

Mr. SPRINGER. Mr. Speaker, in discussing this important problem, may I say that I believe that all our people are in favor of an adequate national defense, but they are likewise opposed to an inflated or excessive national defense. In other words, the people are in accord with a defense program which is necessary to fully protect our shores, our homes, our people, and our institutions; but they are opposed to the unnecessary expenditure of money in quickly building an army, air corps, and navy of great proportions, as if war were immediately threatened, which would inevitably result

in waste and the squandering of large sums of money on the part of our Government; the rush of the plan would result in the loss of a part, at least, of the appropriation, and the further fact that war material and munitions become obsolete in a very short space of time would result in the further loss to our taxpayers.

Obviously, our Military Establishment must be adequate in order to fully carry out the obligation which is clearly expressed by the Monroe Doctrine—the obligation to prevent the expansion of foreign political domination, through military action, in the Western Hemisphere. This duty may well be considered as a part of the obligation resting upon us to defend the continental United States.

However, the people cannot understand the reason for the "urge" to immediately start a huge spending program under the guise of national defense when the apparent situation among the world powers is not different than that in which we have found it during the several years last past. In fact, the world powers want peace—they do not want war.

Do we appreciate, as a people, that our national security today costs us four times what it cost before the United States entered the World War? The Budget estimates of $1,336,000,000 for national defense, to be expended in the fiscal year beginning July 1, 1939, submitted to this Congress, should be compared with the military expenditures of $318,000,000 only in the year 1916, the year before the United States declared war on Germany.

However, we must admit that our borders are no longer now than they were in the days of Woodrow Wilson; it is just as far across the oceans to Europe and Asia as it was in 1916; the area of the continental United States and our outlying possessions have not been increased; all these remain the same. But the cost of patrolling and safeguarding that patrimony has, however, increased fourfold. Just 22 years have intervened, and the American taxpayers are now asked to spend $4 for defense for which they spent only $1 in 1916. It may be argued that the cost of various commodities have increased, and by that same token the cost of national defense has increased. Yet let us remember the cost of living has increased some 25 percent, while the cost of national defense has increased 400 percent.

There is another element involved in this highly controversial question which, to my mind, is worthy of our calm deliberation—that is, if we meddle in foreign affairs that will certainly entangle us in controversies abroad. If and when we learn the lesson that our duty is to adequately prepare to defend our shores, and ourselves, at home, and permit Europe and Asia to govern their own controversies and fight their own battles without intervention on our part, except to protect our own, then we will have largely solved our problem of national defense. We must agree that it is a difficult task to keep out of war through our most guarded neutrality laws and diplomacy. But it will be impossible to keep out of controversies and, perhaps, involvements if secret negotiations and agreements are permitted between our Chief Executive and Ambassadors, on the one hand, and the representatives of foreign powers, on the other hand—all of which are unknown to the Congress and the people. Our last war cost too much in lives and money and economic destruction for us to forget. Let us profit by that unholy experience.

We are in favor of an adequate national defense, but if that word "adequate" is hard to define in this particular, and looking into the state of our staggering national debt at this moment, I for one would prefer that the percentage of our preparedness would fall slightly below that shadowy and undefined standard rather than to have it increased and inflated to a point above it; in other words I firmly believe the people are definitely opposed to a defense program now which is greater than the necessity of the situation requires.

When we reflect upon our national defense we must consider that the first line of defense in any nation is a treasury which is filled with money with which to carry on such defense. Here, with an indebtedness of approximately $40,000,000,000 and with a spending program which is without precedent anywhere, we wonder whether the vast amount of supplies and materials which are proposed for defense could be used, if necessary, in the future. If and when we spend a huge sum for defense, such as is now proposed, we will to that extent increase our national debt and further curtail our ability to finance our defense in case of necessity.

The report submitted with H. R. 3791 shows, on page 3, that the increase of planes will raise the total in 1941 to approximately 5,500, of which number it is contemplated that about 2,100 will be held in reserve, without personnel, of which "reserve planes" more than 1,300 will be of the combat type.

If any of the planes are to be held in reserve, then why build them? In order to partially relieve the overburdened taxpayers, let us eliminate the 2,100 planes from the program at this time and let them be constructed hereafter as and when the same are needed.

Let us only adequately prepare to defend ourselves in case of attack, and let us save the overburdened taxpayers the excess. In this Nation we want peace, not war; we want men in this country, not disabled veterans; we want profitable enterprise to exist that men with will may work, not the granting of annuities to the maimed; and in the face of this vision, which recurs to every comrade of my own in this body, I want to say for myself that I will never cast my vote in this House to send any American boy across the ocean to help fight some European war in which we have no concern.

Let us prepare adequately but sanely.

Lincoln Day Address

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1939

ADDRESS BY HON. CLARENCE J. BROWN, OF OHIO, FEBRUARY 13, 1939

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the fiftieth annual Lincoln Day banquet, Germantown, Pa., February 13, 1939:

My fellow Republicans, I am grateful to your splendid organization for the honor you have bestowed upon me in extending the invitation to address you tonight. It is indeed an honor to be selected to address any gathering held in respect to the memory of Abraham Lincoln. It is an especial honor to be chosen to speak at the golden or fiftieth Lincoln Day banquet of this fine organization, situated as it is in historic surroundings in a community and a State that gave its strength and support to the immortal Lincoln during the dark days of the Rebellion and in after years to the Republican Party to which he left such a priceless heritage.

But the greatest honor that has been bestowed upon me by your invitation is the opportunity you have given me to visit the home of my good friend and your splendid Congressman, GEORGE P. DARROW. What a fine gentleman he is; what splendid service he has rendered to the Republican Party. Stalwart, true, firm in his republicanism, he has served you, his constituents, and his country well. You may be justly proud of the gentleman from Pennsylvania who represents your district in the Halls of Congress.

I saw him just before leaving Washington. His one great regret is his inability to be here tonight. Yet we all know that he is here, not in person but in spirit. While his physicians advised and counseled him against making the expenditure of energy that the trip here would entail, I am happy to report that Mr. DARROW is fast regaining his health following his recent illness, and that he is now able to appear on the floor of the House each day and participate in the counsels of his party and the work of the Congress. I am sure that he will soon regain his old-time vigor, for there is work to be done by men of the character, ability, and experience of GEORGE P. DARROW.

I feel somewhat at home myself here tonight, for this is the Seventh District of Pennsylvania, and I have the honor of representing the Seventh District of Ohio in Congress. Then, too, there

is a community of spirit and understanding that has always existed between the people of Pennsylvania and the people of Ohio that makes you of Pennsylvania seem almost like "home folks" to me.

It is good that we have gathered here tonight, just as American citizens are gathered in like meetings all over this broad land at this hour—to pay tribute to a man of the common people, to Abraham Lincoln, and the principles for which he stood.

Yes, it is fitting and proper for us as a people to pause for a moment in the rush and hurry of these modern days to reflect upon the life and the works of the sad and humble man of the prairies who gave his life that a nation might survive and that a great people might remain united.

The life story of Abraham Lincoln is so well known to every man, woman, and child of America that it is unnecessary for me to repeat it here. God molded his life that a great Nation might have leadership in time of crisis. Pioneer hardships gave him strength. Lack of opportunity gave him the desire to learn. Disappointments and failures made him humble. A great loss gave him compassion. The faith learned at his mother's knee gave him courage. But it was from God that came the soul and the inspired leadership that made Abraham Lincoln a man of destiny.

Abraham Lincoln was called to the Presidency in time of great stress and strife. A nation was being torn asunder by internal dissension. Democracy was on trial. The question of the hour was whether or not a nation of free people could be held together or would disintegrate because of disagreements among themselves. Lincoln had the courage and the faith to champion and to fight for an indissoluble union of States. He gave his life for the principles in which he believed. He saved the Nation that our forefathers founded.

Today America seeks a second Abraham Lincoln. From somewhere must come another leader of the people to cope with the internal dissensions and the forces from within which once more threaten our American form of representative government. Today we are not threatened with sectional warfare, but we are seeing develop a struggle of class against class and group against group that bodes no good for our national life. Today demagogy is rampant.

We are being assailed on every hand by the proponents of various "isms," false prophets, demagogs, well-meaning but misguided citizens and plain "crackpots." In our pulpits, our colleges, our public press, our Government, and other high places are those who teach and preach that our present society is poorly constituted and that here in America we are badly in need of reform and change. We are being told that we must forget our old way of doing things; that we are living in a new age and must have entirely new procedure and new methods to meet the new conditions. It is being argued that the past belongs to the "horse and buggy" days; that the economic practices of past decades were all wrong; that business and industry can no longer be continued by the same methods as before; that our form of government, as we have known it from its inception, is no longer workable and that drastic changes therein are absolutely necessary for the welfare of the people. Some tell us that we must adopt the programs and the theories of the peoples across the seas and embrace either communism or fascism.

It is my belief that before accepting any of the new doctrines, following any of the new leaders, or changing that which we have, it might be well for us to look at the record. Let us pause for a few minutes and see just what sort of a country and society we have here in America. Let us also estimate what gains we may make or what betterment we may expect by following any of the governmental and social policies now existing in other countries or now being advocated by the loud-mouthed. What are the facts?

First of all let us recall that here in the United States we possess only 6 acres of land out of each 100 of the earth's surface, and that in population we have only 7 out of every 100 persons in the world. Yet somehow or other, as a result of the old system, which we are now being told must be completely changed, we have been able to amass more than 50 percent of the world's gold and nearly one-half of the world's silver. In a little over 300 years since the settlement of this continent we have developed the richest, most powerful nation in the history of all time. Out of a wilderness we have carved an empire and established the highest plane of living for our citizenship ever known to mankind.

Despite our sad lot, as described by the long-haired and wild-eyed, we are today producing more than 40 percent of all goods manufactured in the world. Our people have and are using 80 out of every 100 motorcars, 60 out of every 100 radios, 90 out of every 100 electric ice boxes, 90 out of every 100 electric washing machines, 60 out of every 100 telephones, and 33 out of every 100 miles of railroad. Our people—7 percent of the world's population, with only 6 percent of the land—are producing 60 percent of the world's wheat and cotton, 70 percent of the corn, 70 percent of the oil, 50 percent of the copper and iron, 40 percent of the lead and coal. We are consuming 72 out of every 100 pounds of silk produced in the world, 56 out of every 100 pounds of rubber, 53 out of every 100 pounds of tin, 47 out of every 100 pounds of copper, 42 out of every 100 pounds of pig iron, 36 out of every 100 tons of coal, 60 out of every 100 gallons of oil.

Under our American form of government, as we have known it, the United States since 1776 has alone produced three times as much wealth as the entire world produced in all the ages before that time. This has been accomplished without the abuse or mistreatment of the masses, and as the direct result of the American policy of free competition and free labor. We have had, and now have, in America the highest paid labor on earth. Exclusive of raw material costs, 65 percent of the national income of business and industry in the United States goes for wages and salaries. Less than 5 percent of such income goes to capital for dividends or interest.

In spite of this fact we are being told by the demagogs that the worker is abused and mistreated in America. Let us make a few comparisons for the moment. In continental Europe today the average worker receives each month for his services an amount equal to from $10 to $20 in American money. Here in our country the worker has an income of from $80 to $90 per month. In Italy the brick mason today gets 23 cents an hour, while in the United States he gets $1.50 for the same hour. In construction work the Italian laborer gets 19 cents an hour; in America he gets 94 cents for the same labor. The Italian baker draws 24 cents for each hour's work; the American, 95 cents. The printer in Italy gets 27 cents per hour and in the United States $1.25 per hour. Even in Great Britain, where the wages are higher than in any other European country, the compensation of the worker is only about one-third that paid here.

The average wage rate in the United States has increased five times since 1860. In the last 50 years the number of gainfully employed out of each 1,000 population has increased 25 percent. Under our form of government the hours of labor have been constantly reduced. Since 1900 the normal workweek in industry has been reduced from 56.8 to 40 hours per week. At the same time we have seen the purchasing power of the American family grow consistently. The American table furnishes the best food in the world and yet only costs 32 percent of the family income against 43 percent spent by the European family for food of a much poorer grade. The American workman is better housed and better clothed than any other on this old globe of ours.

Then, too, we have a more equitable distribution of the worthwhile things of life here in our country than anywhere else. The employment of child labor has been reduced by more than 70 percent in the last 20 years. Today only slightly more than 1 percent of the children of 15 years of age and under are employed in industry or business. We have seen the attendance in high schools increase eight times since 1900. Five times as many of our boys and girls now have the benefit of a college education as those of 40 years ago. The number of books read and the circulation of our newspapers and magazines have multiplied six times since 1900, with a far wider distribution among all the people than ever before.

All of such things are really worth while, but we have even more fundamental values here in America. Here we have freedom of speech. Embrace either communism or fascism and such a right is immediately lost. Here we have freedom of the press. Tell me, please, in what European country, outside of Great Britain, is the press free to express itself for the benefit of the people? Here we have freedom of worship. In how many countries in Europe is religion uncontrolled today? Here we have the right of free enterprise—although I must admit that business and industry are becoming more and more hampered by governmental regulations. In Europe most of the business and industries are controlled absolutely by the state. Here we have personal liberty and the right of facing our accuser and of trial before a fair jury. In other lands, so often held up to us as perfect examples, the life of the individual is ordered and controlled in every detail by government. Trials—if held at all—are but mockeries and justice depends upon the whims of those in power.

The American form of government, with its checks and balances, has been worth while to its citizenship. Capitalism may have defects, but as a whole it has proven advantageous to the average man and woman. American industry and business, under the rule of free enterprise, and under the protection of a free and representative form of government, has been the greatest contributing factor to the progress of our people. No other people—no other nation operating under any other form of government or any other social theory—has accomplished nearly as much as have we here in America. Let us not cast off or barter away our heritage until we are certain that that which we receive in exchange is worth its cost.

Our greatest danger comes from within. Our greatest problem is whether or not we can continue as masters of our own Government. Gradually, but continuously, we have seen government encroach more and more into our private lives, our business, and our homes. Our burdens of taxation have grown amazingly in recent decades, and especially within the last few years, until some of us are beginning to wonder if government is working for us or we are actually working for the Government.

Today 28 cents out of every dollar of national income goes to the support of government in some form or other. At every family dinner table in America tonight there sits an unseen, unbidden guest—the tax collector—consuming more than one-fourth of the substance of that household.

In 1931 our Federal Government spent $4,220,000,000. Five years later it spent $8,880,000,000. The administration Budget for the coming year is nine and one-half billion dollars. In 1931 our Federal deficit was $903,000,000. In 1936 it was $4,764,000,000. In 1900 our governmental debt per capita was $40. In 1936 that debt had risen to $415 for each man, woman, and child in America. The Federal Government is now spending nearly $2 for every dollar collected in taxes; in spite of the fact that we are all today paying one-third more in taxes than we paid 2 years ago.

Let us remember that more governments have fallen and more civilizations have been destroyed because of impossible burdens of

taxation and the inability to self-govern than from the invasion of armed foes.

For more than a quarter of a century I have been in close touch with the affairs of State government in Ohio, most of which time I served as a State official. During those years I had many contacts with the Federal Government, but it has only been since the 1st of January that I have had the opportunity to take part in the affairs of the Federal Government. The part taken by me has indeed been a small one—for a new Member of Congress, especially if he belongs to the minority in these days of the New Deal, can play but a small part. However, I have had the opportunity to observe our Federal Government as it is now constituted. Bureaucracy has been piled upon bureaucracy until our Government today is a mammoth thing spreading like an octopus over our great Capital City and reaching its tentacles out into every farm and community of our Nation. Expenditure has been added to expenditure until appropriations are made by the hundreds of millions and the billions. Legions of Federal employees are on every hand. Federal Government is playing a part in every human activity.

The Government of Lincoln's day was a simple, understandable thing. Federal Government today is of such gigantic size, so widespread in its activities, that it is almost beyond comprehension. Yet the Chief Executive, and his bureaucrats who serve under him, seek more and more power. We are told that the Federal Government must continue to expand and that it is necessary to spend more and more of the taxpayers' money. This, my friends, we are told, is a liberal government.

Franklin D. Roosevelt and his New Deal satellites are not liberals, as they claim, but are the worst type of reactionaries. The only thing liberal about them is their liberality with other people's money. Under the guise of doing something for the common people, Mr. Roosevelt is leading them to their destruction. He has been a smiling promiser and a crafty evader, but the people of America are fast awakening to the fact that in the 6 years of his administration he has failed miserably to do that which he has pledged. When Mr. Roosevelt was inaugurated in 1933, approximately 9,000,000 people were out of work in the United States. He blamed the Republican administration for this condition and promised that the American people would be put back to work. Yet today, by the Government's own figures, approximately 12,000,000 Americans are still out of employment. Any progress made by Mr. Roosevelt in connection with the unemployment problem has certainly been in the wrong direction.

Weeping noisily over the condition of agriculture, he pledged his administration would bring back prosperity to the farmers of America. Yet what do the records show? Today wheat is selling for 60 cents a bushel and less. Corn is selling for 45 cents a bushel. Hay is bringing but two or three dollars a ton on the farm. Yet everything that the farmer buys is much higher in price than at the beginning of the Roosevelt administration. The farmer is being regimented. Government is telling him how much to plant and raise, and where to store and sell his crops. Heavy tax burdens are being placed on these farmers who fail to comply with a plainly unconstitutional and un-American act. The farmers of America today are no better off than at the very depth of the depression, despite the expenditures of billions of dollars of the taxpayers' money.

Mr. Roosevelt promised economy in his administration of governmental affairs, pledging reduction of at least 25 percent in the cost of operating the National Government; but today the cost of the Federal Government is almost three times as great as that when Mr. Roosevelt assumed the Presidency. Year after year he solemnly promised that the Budget would be balanced within a short time. Instead, the deficit each year grew in size. However, let it be now said in defense of Mr. Roosevelt that this year, in his annual message to Congress, he did not promise a balanced Budget but instead took up the new theory that a balanced Budget is unnecessary and means nothing in the fiscal affairs of the Nation.

Mr. Roosevelt assured us he would bring about a reduction of the public debt. Instead, the debt has grown to be the largest in the history of our country and the greatest of any people in all the history of the world. No one knows exactly what we do owe, but our national debt is now somewhere around $45,000,000,000 and the New Dealers are beginning to tell us that a fifty, and even a sixty, billion dollar debt will not be at all dangerous.

Mr. Roosevelt swore to defend and uphold the Constitution of the United States. Yet he has advised the Congress to pass legislation in disregard to its provisions and his administration has continuously attempted to evade the Constitution in the furtherance of their plans. Mr. Roosevelt has talked of tolerance and understanding among men; yet never in the history of our country have we had a more intolerant President. Never have we seen a Chief Executive his equal in setting class against class; in creating dissension and misunderstandings between the different groups within our citizenship. He has loudly boasted of his belief in democracy and of the right of the individual to be represented in government; yet he has demanded that the Congress vote his every whim and will, regardless of the content of the measures he has sponsored. Those who have refused to become his subservient rubber stamps he has attempted to purge from public life. Let it be said to the glory of the American people that they saw to it that he failed miserably in most of these attempts.

Mr. Roosevelt pledged the American people that he would be the first to admit his own mistakes. Yet when the Supreme Court of the United States, by overruling some of his administration measures, called his attention to his mistakes, he attempted to gain control of the judiciary and to bend it to his will. In his administration he has prated against the power of money and yet, through the relief administration, has used the power of the taxpayers' money to control elections, to help his political friends and punish his political enemies.

Mr. Roosevelt calls himself a great liberal. His friends and supporters he designates as liberals. All those who oppose him are tories, reactionaries, and copperheads. Yet he is intolerant of the rights of others. His is a rule-or-ruin policy.

Perhaps a few of the most recent examples of this intolerance have been his actions in connection with the appointment of Judge Roberts, of Virginia, to the Federal bench and Congressman Amlie, of Wisconsin, to the Interstate Commerce Commission; his message sent to the Congress following the reduction in W. P. A. appropriations; and his charges against Members of the Senate and the press of the country following the exposé a short time ago of some of his secret agreements made with foreign countries.

The people of America can be thankful for the attitude now being taken by the American Congress. The Seventy-sixth Congress of the United States is not a rubber-stamp Congress. A strong Republican minority is fighting the battles of the people. Strong men of the Democratic faith on the other side of the aisle are now voting their own judgment and convictions. Appropriation bills are being scanned and honest attempts are being made to reduce governmental expenditures. The serious problems that confront us as a government are being studied and will be met by the leadership that now exists in the legislative branch of our Government.

We must turn back to safe and sane thinking and to the American principles of thrift and patriotism as enunciated by the great Lincoln. We must appreciate and protect our American form of government and the free economic system that has made our Nation great. We must continue to govern ourselves by making our Government serve its citizens, rather than the citizens serve the Government. We must be determined to eliminate waste and extravagance wherever we find it; to balance our governmental Budget at the earliest possible moment; and to live within our income without too great a burden of taxation. We must simplify our laws and repeal restrictions now endangering free enterprise in business and industry. We must rid ourselves of demagogues and false prophets and return once more to the sound and simple principles of Americanism that have made this Republic the greatest, most progressive nation in all the history of mankind. We must protect and retain the freedom for which our forefathers suffered and died and pass on that priceless heritage to our children undiminished.

These are the solemn responsibilities that confront us—not as Republicans but as Americans—if, in the words of Lincoln, this is to remain a "government of the people, by the people, and for the people."

Our Foreign Policy and the National Defense

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1939

RESOLUTION OF NATIONAL STUDENT LEGISLATIVE COUNCIL ADOPTED DECEMBER 10, 1938

Mr. LAMBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the National Student Legislative Council:

House Resolution 12

In relation to the establishment of a foreign policy and national defense policy for the United States in order to maintain peace

Whereas peace is imperative for the general welfare; and

Whereas under an ill-advised foreign policy the United States would be involved in the next war; and

Whereas it would be the generation now in college who would sacrifice their lives: Therefore be it

Resolved by the Student Legislative Assembly:

SECTION 1. That the United States Government should build an Army and Navy sufficient, and only sufficient, to protect from any and all unfriendly nations, the area inside a line running from Wake Island to Ross Island, thence to Ascension Island, thence to Cape Alexandra, thence to Cape Shelagsky, and thence back to Wake Island.

SEC. 2. That the United States should use its political and economic influence to maintain peace among nations and it should refrain from interfering in the internal affairs of other nations.

SEC. 3. That Congress should pass legislation to—

(a) Compel belligerent nations to pay in metal at the time of purchase for all goods bought in this country, and

(b) Prohibit belligerent nations from borrowing or soliciting funds in this country, and

(c) Prevent the American merchant marine from carrying goods destined for use in a belligerent nation, and

(d) Enable the State Department to form agreements with foreign nations to prohibit economic relations with aggressor nations.

SEC. 4. That the Congress of the United States should pass a law which would give the Government ownership of patents for munitions and contraband of war, and, in time of war, the manufacture of these should be completely nationalized.

Balanced Representative Government

EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1939

ADDRESS BY HON. THOMAS E. MARTIN, OF IOWA, FEBRUARY 13, 1939

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. THOMAS E. MARTIN, of Iowa, delivered in Albany, N. Y., February 13, 1939:

Fellow Republicans, I want to express my appreciation of the honor and privilege of coming before this splendid Republican group on so important an occasion as the forty-first annual Lincoln Day dinner of your Albany County Republican Committee. This is my first visit to Albany since one very memorable day in August 1927, when Mrs. Martin and our two children and I enjoyed one of the most picturesque trips we have ever made, when we took the boat down the Hudson from Albany to New York City.

I wish also to express my appreciation of the privilege and pleasure at that time of spending a delightful and most interesting year attending Columbia University.

It has recently been my good fortune to be elected to Congress from the First Congressional District of Iowa and it is in that capacity that I return to New York State tonight to bring to you of the Empire State a message of good cheer and Republican fellowship from the very heart of the agricultural Middle West.

I have had the personal good fortune of appointment to the Committee on Military Affairs; and in that field I have enjoyed close association with Mr. WALTER G. ANDREWS, of the Fortieth New York District, ranking Republican member of the Military Affairs Committee of the House; Mr. JAMES W. WADSWORTH, of the Thirty-ninth New York District, chairman of the Republican Special Committee on National Defense; and Mr. HAMILTON FISH, of the Twenty-sixth District of New York, ranking Republican member of the Committee on Foreign Affairs, all of whom have very patiently and generously accorded me the utmost cooperation and assistance in my preparation for service on the important Military Affairs Committee.

At the outset let me express my delight at the informality and general good fellowship so manifest here tonight. I am, indeed, reminded of a party in my home town of Iowa City, Iowa, once upon a time, presided over by the mayor. When my turn came to talk, I was somewhat startled when the honorable mayor whispered to me, "Shall we let the people enjoy themselves a little longer, or had we better have your speech now?"

As we look to the questions uppermost in our minds today, let us ever keep our sense of humor, the better to understand and to appreciate our good fortune in living in this Nation of fearless thinking and speaking free Americans. We have no Dr. Goebbels to expel public speakers or entertainers because of flippancy toward the party in power, and then be forced to follow with a joke contest by some state-controlled newspaper to prove that "we still really have humor."

I would be remiss in my duty did I not on the occasion of Lincoln's Birthday recall that it was the Young Men's Central Republican Union of New York City that brought Abraham Lincoln into national prominence and proved to the East that he was a real statesman, capable and worthy of their support for the Presidential nomination that year. The date was February 27, 1860; and the meeting was one of the now famous landmarks of party history, when Lincoln spoke before a huge throng of highly cultured, well-educated, and patriotic citizens at Cooper Institute in Manhattan. It was on that occasion that Lincoln called out to America, "Let us have faith that right makes might; and in that faith let us to the end dare to do our duty as we understand it."

With your kind indulgence, I shall now refer briefly to some of the current issues confronting party workers today. As to my method of approach to these issues, may I say at the outset that I find myself in the same predicament that Ole Oleson was in when he asked for some squirrel whisky and was told that they had no squirrel whisky but that they could supply him with some Old Crow; whereupon Ole remarked, "Aye don't vant to fly. Aye yust want to yump around a little"; and if you should take me to task too seriously regarding any of these points and infer that I have stated that half of the new dealers are liars, you might force me to retract, as did a Midwestern editor, with the statement, "Half the new dealers are not liars."

There was a great surge to Republicanism from coast to coast in November. The swing of the pendulum from 40½ percent of the major party vote in 1936 to 48 percent last November cannot be credited primarily to State issues and local situations. Outside the 13 Southern States known as the solid Democratic South, the Republicans gained in all but two States—Maine and Maryland; and in those two States the loss was less than one-half of 1 percent. None of us are seriously worried about the future republicanism of Maine; and we can explain away the loss in Maryland, to some extent at least, to the extraordinary mobilization of the New Deal patronage army that has caused the District of Columbia to literally outgrow its 10-mile boundary lines.

BALANCED REPRESENTATIVE GOVERNMENT

Early in the last campaign the policy committee of the national Republican organization determined upon a constructive program that carried tremendous appeal from coast to coast. Primarily their statement of policy was that a more satisfactory America can be built upon the principle of balanced representative Government instead of an extremely centralized power, a politically managed economic life, a legislated scarcity, and a vindictive intolerance in Government.

That fortunate statement of policy expressed such a fundamental principle of free government in full accord with our American heritage that renewed confidence in our democratic form of Government became manifest. A veritable war cry for freedom from the yoke of "must" legislation and from its counterpart, the "yes man" or "rubber stamp," nonrepresentative Congress rang throughout the land. People once more sought to preserve for themselves a voice in their governmental affairs through Congressmen who would return to balanced, representative Government as contemplated by our forefathers and as provided for in our Constitution.

Many specific issues were discussed and debated in my district, but out of these many issues there arose, in addition to the question of balanced representative government, issues pertaining to the national debt, relief, and agriculture.

DEBT

The farmers of Iowa are thoroughly acquainted with the problems of debt, and they realize keenly that debt can impair not only efficiency but the harmonious peace and security of the individual, the community, the State, and the Nation. I will not try to analyze the Budget tonight.

Last Thursday's newspapers carried the story that the Federal pay roll has now reached a new peacetime high, and that in rising to the astonishing figure of 917,303 civilian employees in the executive branch of the Government in December it is within 400 of the all-time high reached during the World War. The number employed in the Capital totaled 120,589, which is much greater than at any time during the World War.

There are so many New Deal job holders packed into the metropolitan area of Washington, D. C., that when the Republican administration takes office in 1941 we must be careful or we will find ourselves in the situation that bewildered the colored pastor who was called upon to umpire a sandlot ball game. The bases were loaded and the pitcher got rather wild:

"Ball one, too high.

"Ball two, low.

"Ball three, inside.

"Ball four, low and wide. You is out."

The angry batsman protested, whereupon the parson tried to explain:

"See here. De bases am loaded, and there is no place to put you. You is out."

These many employees have not been standing still. The travel expense of New Deal Government officials during the first 3 years of the New Deal administration exceeded the cost of transportation of the entire American Army to France during the World War and was more than was spent for the same purpose in the 10 years preceding 1933.

I have heard no reports of noticeable curtailment in this extensive travel program. Is it any wonder that the Treasury ledgers showed on February 1 that the outlay of expenditures during the first 7 months of this present fiscal year approaches closely the total receipts set for the entire fiscal year ending next June 30 and that a deficit of $4,000,000,000 is forecast for this fiscal year?

Last Wednesday our gross public debt stood at $39,731,000,000, and the Presidential message on the Budget for 1940 estimated a gross public debt in excess of $44,457,000,000 by July 1, 1940. In view of our past experience with these estimates, I do not anticipate a revision downward in this figure. We are all familiar with the fact that the gross public debt stood a little over $16,000,000,000 in 1930, and

we know too well that this debt ascension must be checked lest the balloon burst from internal pressure.

It required a man of rare audacity to speak as President Roosevelt did at Worcester, Mass., October 21, 1936, when he complained that failure of the Republican administrations to pay off the war debt by 1929 forced America to enter the depression with a $16,000,000,000 handicap. I now ask what Mr. Roosevelt thinks of the situation America is in today and just what handicap it may be for us to face another depression—or possibly another World War—under a handicap of forty-four and one-half billion dollars?

My further response to Roosevelt's gem of political ballyhoo at Worcester is: "God, give this country a President who is capable of again preparing us for the next Franklin Delano Roosevelt type of spender who, perchance, may come our way."

I cannot visualize forty-four and one-half billion dollars, but I am told that if it were received in one-dollar bills sewed together it would make a blanket more than 300 feet wide and long enough to extend from Washington, D. C., to Los Angeles.

And now, my friends, if that description of our national debt taxes your imagination, I ask your kind indulgence, in view of the fact that your imagination is just about all you have left that the new dealers have not taxed. Ownership of property has become so hazardous and tax burdens have become so great that when a Negro farmer paid his last installment on a little farm the banker said:

"Now, Uncle Joe, I will make you a deed."

The old darky replied:

"Boss, if hit's all de same to you, I'd rather you make me a mortgage. The udder time I bought a farm I had a deed and the First National Bank had a mortgage—and de bank got de farm."

RELIEF

I am greatly impressed by the magnitude of the relief problem. I have yet to find a man whom I think has an absolutely complete and workable solution for this major problem. We are all brought face to face with the fact that the solution has not yet been found.

We are also, for the most part, fully acquainted with the system of biennial elections in America. At once you will say, "I can't see any connection between these points"; and my reply is that there should not be any connection but that there undoubtedly is some connection.

Why do we find the ebb and flow of relief expenditures, including F. E. R. A., C. W. A., and P. W. A., alternating with election and nonelection years? Starting with the fiscal year in which the election of 1934 was held, we find an increase of 20.4 percent. Next year that was reduced 27.9 percent. The following year (another election year) the increase was 44.3 percent. Then came a reduction of 24.9 percent, and for this year the appropriations established an increase again in the amount of 47.5 percent.

Perhaps you think the increases may have come during the severe winter, after elections have been held; but let us examine the record and consider the percentages for the period July 1 to November 15 for the past few years. During those months in 1936 expenditures for relief increased 69 percent. During those same months the following year expenditures were reduced 35.4 percent. And during that same period last fall the expenditures were increased 76.5 percent.

AGRICULTURE

Agricultural relief is not only desperately needed, but also it commands the major interest of all those devoted to public service as well as those engaged directly or indirectly in agriculture, in New York State as well as in Iowa. I was interested—and I know you will be—in the fact that more than 20 percent of the total egg supply received in New York City during the last year came from Iowa. Iowa was well ahead of the nearest competitor with a total of more than 1,361,000 cases. New York State itself was second and Minnesota third. I have not compiled figures on other items, but New York State has a real interest in agriculture within its own boundary, and in the agricultural welfare of the great producing area of the Middle West.

We might turn to Thomas Jefferson as we approach this great problem of agricultural welfare of the Nation; and at once we are challenged with his statement, which I quote:

"Were we directed from Washington when to sow and when to reap we should soon want bread. * * * When all government, in little as in great things, shall be drawn to Washington as the center of all power, it will become venal and oppressive."

The people to whom we should look for the solution and its administration are the people engaged in farming. Although the farmers of Iowa approve of many features of the A. A. A. program, centralization of power in this field such as is attempted by the naming of State A. A. A. committeemen by the Secretary of Agriculture rather than election by the farmers themselves is one of the points that brought about considerable opposition by the farmers of my State to the present national administration. No man is more interested in the return to balanced, representative government than is the Iowa farmer.

I will only mention a few other points that caused the Iowa farmer to declare his independence from the New Deal. Most farmers do not oppose a sensible soil conservation program, but they have never yet reconciled themselves to the destruction of crops growing or grown, and the untimely death of the millions of growing pigs. The Iowa farmer has not forgotten those shocking experiences; and he is not overlooking the fact that today, whereas Illinois and Iowa farmers have reduced corn production 9.6 percent and 10 percent respectively, Georgia, Alabama, and Mississippi have increased their corn percentage by 25.8 percent, 23.8 percent, and 39.4 percent respectively. While Illinois and Iowa farmers have reduced the number of pigs on the farms by 11.4 percent and 29 percent respectively, Georgia, Alabama, and Mississippi have increased their percentages by 5.9 percent, 22.2 percent, and 38.4 percent respectively. All of the above percentages are for the year 1938 compared with the average for the 5 years immediately preceding the New Deal.

Of course, the above percentages reflect only the trend and do not purport to give the relative volume of corn and hogs in the respective areas. While Iowa and Illinois were reducing the total yield of corn last year by approximately 80,000,000 bushels, the unrestricted area of the United States was increasing its yield by approximately 116,000,000 bushels.

Another factor that is not being overlooked by the Iowa farmer is that meat-packing companies have been expanding their plants quite noticeably in Texas, Louisiana, Florida, and Tennessee, and Georgia. Climatic conditions prevent the Iowa farmer from raising cotton to counterbalance this competition.

In talking with many farmers I have found that they have no opposition whatever to competition in the field of agriculture, but they do not want their corn- and hog-raising competitors subsidized. The Iowa farmer has not yet been convinced that the New Deal administration is consistent in asking for acreage reduction, whereas irrigated acreage under Federal projects has been increased from 1,589,000 acres in 1933 to 1,725,000 acres in 1937, with several new irrigation projects in various stages of completion that will eventually reclaim some 959,000 acres, in addition to the Grand Coulee Dam project, which alone contemplates eventual irrigation of 1,200,000 acres of land in the Columbia Basin area.

The Iowa farmer is watching not only this enormous spread of subsidized competition—whether it be through the A. A. A. program or through Federal irrigation; but he is also fully aware of the ever-lurking threat of unparalleled competition of cheap labor and cheap lands combined with highly efficient modern machinery in foreign countries; and the Iowa farmer has come to realize that world supplies and world production have a tremendous influence on his destiny, and that there is no trend to curtailment of production in any foreign land similar to the A. A. A. program in America. The Iowa farmer knows well that the light corn crop in Argentina during the past 2 years has had some bearing on his market; and he knows even more definitely that the near all-time record world wheat crop of last year has had a very decided bearing on his own position in the market.

With the prices received last October by farmers for their products standing at 92 percent of the 1909 to 1914 average, while the prices paid by them for the goods and services they must buy standing at 122 percent of the average for those years, it is little wonder that the farmers of America feel that their problem is far from solved.

On February 3 the Iowa State College at Ames, Iowa, announced that the price of corn on the Iowa farm has drifted about 3 cents lower than it was the first of the year; and the United States News of February 6 informs us that the demand for American goods that comes from abroad is found from the official figures to have changed greatly in character during 1938. The United States News goes on to say that foreign nations in 1938 bought eight times as many airplanes and airplane parts as they bought in 1929 and more than six times the volume of scrap iron and nearly three times as much metal-working machinery; whereas they bought only one-fourth as much lard as they bought in 1929, and their purchases of unmanufactured cotton were one-third smaller than in 1929.

Foreign nations also took barely one-third as large a quantity of American meat products, and one-third as large a volume of dairy products. The United States News goes on to state that the very war scare that increases the demand for American industrial products tends to decrease the demand for American farm products as nations seek to become self-sufficient in foodstuffs.

And so it will go so long as there is a mad race abroad in preparation for war. If, and when, war comes in Europe, the American farmer may again find a temporary increase in the demand for his products; but even though the American farmer were able to forget the bitter aftermath of wartime expansion and its repercussions, the American farmer does not look to war as a desirable solution to his vexing problem.

So long as my own 77-year-old mother finds it necessary to continue in active management of the home farm in Monroe County, Iowa, because she cannot afford to retire on 14-cent oats, 30-cent corn, and a 59-cent dollar, I cannot be convinced that we have yet found the final solution to the farm problem in America; and until that solution is found, we will have unrest, discontent, and strife among our farmers.

The new dealer who has boasted for several years that the New Deal administration has completely solved the farm problem should read very thoughtfully the last public address Abraham Lincoln made on April 11, 1865, in Washington when he said, "If you once forfeit the confidence of your fellow citizens, you can never regain their respect and esteem. It is true that you may fool all the people some of the time; you can even fool some of the people all the time; but you can't fool all of the people all the time."

I recall a speaker in my district in the last campaign who in his fervor became slightly tangled in his attempt to give the above

quotation and said—very convincingly, nevertheless, "They can fool me once; they might fool me twice; but they cannot fool me all the time because I am some of the people."

The new dealer who boasts that he has clearly diagnosed the farmers' ills is placed in the position of my doctor friend who, when accosted by the statement of his patient, "Are you sure that I shall recover? I have heard that doctors are sometimes wrong in their diagnoses and have treated patients for pneumonia who afterward died of typhoid fever." "That may be true of some doctors, but when I treat a man for pneumonia, he dies of pneumonia," said the physician.

In Washington I have come to feel much like the Russian peasant who was being shown a powerful radio station. The guide explained:

"The program going into that microphone can be heard all over Europe and the United States."

"Really? How marvelous," explained the visitor. "I would like to speak over that just once."

"Oh, no," said the guide. "That would be impossible."

Whereupon the visitor begged to say just a word. "Well," said the guide, "They are about to change the program. Perhaps they would allow you to speak a word. But mind, now, just one word."

Whereupon the old peasant stepped to the microphone and shouted, "Help."

After observing some of the strategy of the New Deal in operation, I am reminded very much of the car owner who suddenly discovered that he had lost the key to his car, whereupon his wife helpfully replied:

"Well, never mind, dear. It's a fine night—we can ride home in the rumble seat."

I myself have just one burning desire—to tell the departing new dealers following the death of the New Deal in 1941 just what the executor of the estate for a deceased patient told the doctor. The executor had called to get a statement, and the doctor, on presenting his bill, asked:

"Do you wish to have my bill sworn to?"

"No," replied the executor.

And then he added just what I intend to say at the end of the New Deal in 1941:

"The death of the deceased is sufficient evidence that you attended him professionally."

Public Salary Tax Act of 1939

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1939

Mr. SMITH of Ohio. Mr. Speaker, this bill provides for just one thing, not two, as it is perhaps intended to make us believe.

Title I authorizes the Federal Government to levy taxes on the incomes of all State and local government employees. It provides also that "the United States hereby consents" to the taxation of the income of Federal employees by the States.

Certainly the presumption is clear in title I that the Federal Government does not now have the right to levy income taxes on State government employees. Otherwise there could not possibly be any reason for writing a law now to grant this right.

Surely, if the Federal Government has the power now to tax the past income of State employees, it also has the power to tax such income in the future. Therefore, we cannot escape the presumption that there is no law now which permits the Federal Government to levy retroactive income taxes. The real purpose for inserting this retroactive feature is to throw out a sop for necessary votes to pass title I and to furnish Congressmen with a nice alibi to justify their support of the act.

It is very doubtful if this bill could pass if the retroactive feature were not in it. Many here are going to vote for the bill, not because they want to support title I but because they want to vote against allowing the Federal Government to assess taxes against State employees that are retroactive.

If the retroactive feature of this measure were acted on separately, it would, of course, receive the support of every Member of the House.

I think it is very wrong to present legislation to this House drawn up in this manner and containing a proposal such as the retroactive feature. It is not fair to Congressmen, it is not fair to the people.

The bill provides that the Federal Government shall tax the incomes of State employees. Then it reads, "The United States hereby consents to the taxation of compensation" of Federal employees by the States.

In effect, the Federal Government says to the State governments, "I will reach into your pockets. I will 'consent' to let you reach into mine."

The trouble is, this is such a one-sided affair. The State governments have more dollars in their pockets than the Federal Government has in its pocket. But this is not the worst part of this measure.

The States are not being consulted as to whether they want to enter into any arrangement of this sort or not. I believe they should be consulted. It would be only ordinary courtesy to the States.

Especially the 17 States that do not have income-tax laws—in some the State constitutions forbid the levying of income taxes—should be consulted before this bill becomes a law. My own State, Ohio, does not have an income-tax law. What will this law mean to my State? It will mean that our State legislature will be compelled to pass an income-tax law if we in Ohio wish to take advantage of the "consent" given in this bill to tax Federal employees. The likelihood is, of course, such a law will be passed in Ohio.

A nice question here for voters in my congressional district: Did they send me to Congress to pass State laws, or do they want their State laws taken care of by their State representatives?

If an income-tax law is passed in Ohio, it will mean that all State employees, as well as all persons employed in private industry, will be subject to an income tax by the Federal Government and another by the State government. The argument is being advanced here that only a small percent of State employees will be affected by this act. With the Federal Government spending as it is, it will not be long until the income of practically everyone who earns anything will be subject to direct taxation under the specific Federal income-tax acts.

Taxing taxes. The Federal Government taxes the taxes collected by State governments, and vice versa. It is wrong in principle.

But this is not all by any means. The passage of this law will be followed by another to tax the income of State and municipal bonds and other obligations. The proponents of this measure virtually tell us this here today, which will mean all future such securities must bear a higher rate of interest than they bear at present. Which means that every person in this country who earns his living will be directly saddled with more taxes. Which means the wage earners will be tapped for more of their hard-earned funds. No less than 85 percent of all taxes, in the end, are always paid by the wage earners, farmers, and other low-income groups, no matter upon whom or what taxes are levied. This is one part of taxes the politicians would like to keep a secret, and succeed all too well in doing so.

This bill is most vicious in that it is the beginning of the destruction of the sovereign power of the States to levy and collect taxes. From the levying of Federal taxes on State and municipal securities, it will not be far to the levying of taxes on every other form of intangible and tangible property—including real estate.

Here we see presented a part of the general scheme to destroy completely the sovereignty of all our States, to usurp all the powers of government and concentrate them in the hands of the all-powerful bureaucracy here in Washington.

I certainly am opposed to this measure.

Interest on Loans to Veterans

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1939

LETTER FROM MAURICE A. NERNBERG, OF PITTSBURGH, PA.

Mr. EBERHARTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter received by me from Mr. Maurice A. Nernberg, attorney at law, of Pittsburgh, Pa.:

PITTSBURGH, PA., *February 8, 1939.*

Hon. HERMAN P. EBERHARTER,
United States House of Representatives, Washington, D. C.

MY DEAR MR. EBERHARTER: The United States Government has done more than any other government in behalf of its veterans. Nevertheless, there is in my humble opinion an item that is strikingly important and ought to be acted upon at this session of Congress. This has to do with interest charged veterans on loans on their Government insurance.

An examination of the policies held by the veterans will reveal that a tremendous percentage of these policies are burdened with loans. This condition was particularly brought about through no fault of the veteran and caused solely by the depression. As a consequence a large number of policies have been dropped, and those which are being carried have become increasingly difficult to hold on because of the excessive rates of interest charged by the Government.

The ex-soldiers are forced to pay 6 percent interest on their loans. This is exorbitant, unwarranted, and unjustified. When it is remembered that the Government issues notes and bonds on which it pays as little as 1½ percent interest, when banks pay 2½ percent on savings accounts and threaten to reduce the interest, it becomes impossible to believe that our great Government is deliberately making money out of the plight of the man who wore the uniform.

I believe that you as a Representative ought to thoroughly examine this situation and recommend through the proper channels a cut in interest which will not only be appreciated by the policyholders but also will be found beneficial to the Government itself.

Yours very truly,

MAURICE A. NERNBERG.

Cost of Labor to Beet-Sugar Producers

EXTENSION OF REMARKS
OF
HON. FRED CUMMINGS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1939

STATEMENT OF S. K. WARRICK, OF SCOTTSBLUFF, NEBR.

Mr. CUMMINGS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statement of S. K. Warrick, Scottsbluff, Nebr., submitted at Scottsbluff, Nebr., hearing Monday, January 30, 1939:

The witness being first duly sworn, makes the following statements relative to sugar-beet labor used by John and Fred Tripple, of Gering, Nebr., who were the tenants in 1938 on part of the irrigated portion of the witness' farm in section 36, township 21, range 55, Scotts Bluff County, Nebr., and the division of the gross proceeds from the 1938 sugar-beet crop grown on said farm:

Number of acres of sugar beets grown, 49.65.
Total net tonnage harvested, 946.8995.
Average net tons per acre, 19.07.
Average sugar content, 15.6 percent.
Average initial price paid by the Great Western Sugar Co., $4.06 per ton.

Total initial payment from the sugar company	$3,843.99
Government payment as reported by the agricultural conservation committee of Scotts Bluff County, before expense is deducted	1,688.88
Total revenue now in sight from the sugar-beet crop	5,532.87
Average total payment per ton	5.84

Amounts paid for sugar-beet labor:

Summer work at $12 per acre	595.80
Topping at 0.8628 cent per ton, which was the average rate paid	817.09
Total payment to labor	1,412.89

Or $28.46 per acre.
The percentage gross returns paid labor is analyzed below.
Based on initial payment of the Great Western Sugar Co. only:

Topping	21.25
Summer work	15.5
Total	36.75

Percentage paid on company's initial payment, and the Government payment:

Topping	14.766
Summer work	10.768
Total	25.554

Four Mexican beet laborers did all the topping for the Tripple Bros. They commenced topping October 11 and finished November 8. They worked each workday from October 11 to October 31, inclusive, which makes 18 days. They worked November 1 and about half a day on each of November 2 and November 4, and about a full day on November 8, making about 3 full days in November, or a total of 21 days topping the beets. The loss of time in November was caused by stormy weather. In the 21 days they topped 946.8995 tons of beets, or an average of 45.09 tons per day, or an average of 11.27 tons each, per day. The average earned by the four was $38.90 per day, or an average per man of $9.72 per day.

The wages earned topping were probably better than $1 per hour. The witness personally does not have any complaint about the rate of summer wages, if sugar is permitted to seek and retain reasonable price levels, but it is the opinion of the witness that the topping rates are too high and should be changed to 75 cents per net ton up to and including 12 tons, and 65 cents per net ton above 12 tons. Labor will have to accept a material reduction in the contract rate per acre, or sugar-beet producers will have to be paid a higher price per ton for their beets, based on higher-priced seaboard sugar, and a more liberal contract from our processor, the Great Western Sugar Co.

The division of gross income from the 1938 crop grown by John and Fred Tripple, known as Tripple Bros., was as follows:

To John and Fred Tripple, operators	49.47%	or $2,736.76
To the laborers	25.53%	or 1,412.89
To S. K. Warrick, landlord	25%	or 1,383.22
	100%	5,532.87

The laborers received 14.766 percent, or $817.19 for 21 days of topping, or 59 percent as much as the landlord received, for the use of the land, supervision, payment of irrigation water charges, taxes, and the crop risks that the landlord assumes.

Sugar-beet labor cannot expect to make a total year's wages in the short period of time that it takes to tend and harvest a sugar-beet crop. I am in sympathy with labor, and want to see them obtain their fair share of the gross income from the sugar-beet crop; but as stated above, sugar must advance to reasonable levels and maintain those levels or the price of sugar-beet labor must come down.

I would recommend that the summer work for 1939 be fixed at $12 per acre, and the topping rate at 75 cents per ton, up to and including 12 tons, and 65 cents per ton above 12 tons.

I have given this matter considerable thought, and I believe that this is a fair and equitable division on sugar beets that will produce a revenue of $7 a ton and up.

Five Years of Governor Blanton Winship in Puerto Rico

EXTENSION OF REMARKS
OF
HON. SANTIAGO IGLESIAS
RESIDENT COMMISSIONER FROM PUERTO RICO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1939

ADDRESS BY BOLÍVAR PAGÁN, DELIVERED ON THE FIFTH ANNIVERSARY OF THE GOVERNMENT OF WINSHIP

Mr. IGLESIAS. Mr. Speaker, on the occasion of the fifth anniversary of the administration of Governor Winship on Sunday, February 5, there was held at the studios of the WNEL broadcasting station in San Juan an act to commemorate the event. Among the many speakers there were the Honorable Martin Travieso, justice of the supreme court; the Honorable Rafael Martínez Nadal, president of the senate; and the Honorable Bolívar Pagán, vice president of the senate; and representatives of various organizations in the island.

The complete text of the speech delivered by the president of the Socialist Party and vice president of the insular senate, Attorney Bolívar Pagán, for which he has received great general applause from all parts of the island, is as follows:

Dear fellow citizens, dear radio listeners all, the idea of celebrating the fifth anniversary of the administration of Governor Winship was a happy one. A few days ago at a social gathering with friends and when our Governor was being discussed we all agreed about the debt of gratitude that our Government and our people have contracted with the gallant soldier, statesman, gentleman, and citizen, who for the last 5 years, with a firm but smooth hand, with wisdom, tact, elevated public spirit, and even with elegance, has directed the destinies of our island as its chief executive.

With great enthusiasm and joy I welcomed this idea when I was invited to say a few words today in honor of our dear Governor, who has done so much for the welfare and progress of our people. We participate with affection in this act of justice to show our unlimited gratitude for the distinguished citizen who was selected with such striking success by President Roosevelt to be the Governor of Puerto Rico at a time of great difficulties in our island, in our nation, and throughout the world. It is to be regretted that during the limited time that has been allotted to us to address today the invisible audience of the air, we will not be able to make an exhaustive survey of the great work done in Puerto Rico by Governor Winship. As the head of one of the majority parties and as vice president of the insular senate during the entire period of Governor Winship's incumbency, I have had the good fortune and the honor of being in contact with Mr. Winship, and of becoming familiar with the important public events of his administration. It would take us too long, even if we had the necessary time, to render a fair and just reckoning of the fruitful activities undertaken by Mr. Winship as Governor and friend No. 1 of our island and of our people.

During his administration with his wholesome and powerful help and with his decisive and always active and generous cooperation, Puerto Rico has successfully faced numerous economic and social problems; has developed with remarkable success programs of public health, waging war against many endemic diseases which for many years decimated a large proportion of our weak and sick population; in public education our liberal system of the government has provided larger appropriations for increasing more than ever the number of schools, teachers, and the school population; our agriculture has received material help from our government for the protection of its basic products and for greater yield, development, and increment; the industries in general have been promoted and improved. Commerce has attained its peak, considerably increasing its volume. Figures in our statistics show that our exports to continental United States, which is our principal and almost exclusive market, have gone up from $76,000,000 in 1933 to some $110,000,000 in 1938; and the figures of our imports from continental United States, our principal source of supply, show an increase from fifty-one millions in 1933 to some one hundred millions in 1938. Public finances, in an unbalanced world, have been normalized and totally rehabilitated, and our government maintains its public credit in the States and abroad in a privileged position. An efficient government of law and order guarantees to all citizens alike the tenets of our constitution, statutes, and free institutions. The system of roads and highways has been extended throughout the island considerably increasing the number of kilometers into a network that connects all towns and cities and crosses every field, opening new channels and courses for our commerce and raising beautiful gardens along our roads which give them the appearance of multicolor ribbons on the charming background of our landscapes. Under the government of Winship Puerto Rico has enjoyed its best years of social peace, of rest from industrial strife, of enlightenment and constructive understanding in the very desirable and fair relations between employers and employees. And on ambitious and extensive plans of tourism which have received everything from the artist, the poet, the visionary and at the same time practical man that are in Winship, lend a flattering perspective for the future of a new Puerto Rico which is already taking its place on the map of the world as a beautiful land of promise and of powerful touristic attraction.

Governor Winship arrived in Puerto Rico at a peculiar time. The new ideals and humanitarian plans of our great President Roosevelt were materializing, especially the social reforms of the New Deal were being established in our island. For obtaining all the Federal aid given to the other areas of the Nation that could be extended to the Territory of Puerto Rico, Governor Winship was a factor of extraordinary value. A man of prestige in the United States because of his valiant and outstanding military career, his social connections in the metropolis, his contacts cultivated during his distinguished career there as a man of government, and his personal culture and distinction make him the man that Puerto Rico needs to back the claims of its people, especially of the needy classes, to obtain for them the greatest possible advantages. To the qualifications mentioned above we must add his perennial agitation in behalf of the welfare and progress of our people, his constant activity, his acknowledged zeal for obtaining the extension to the island of the greatest benefits for all of which we have to be thankful to him and express to this good friend of our country, to this dynamic and generous man who has made of Puerto Rico his beloved home, our gratitude for a large part of everything so far obtained—direct emergency aid, relief funds, public works for permanent reconstruction which have at the same time provided bread and work in abundance to the nucleus of our unemployed, and in everything else that as an integral part of our Nation we have succeeded in receiving.

I wish to avail myself of this opportunity to express my deep personal appreciation of Governor Winship, to tell him of the gratitude of our people and of my party for the wise, sane, and progressive work he has done or promoted in Puerto Rico during his administration. As a representative of labor and Socialist member of the legislature I call attention particularly to the numerous and very important bills that have become laws with the required approval of Governor Winship—laws which are transcendent and popular because of the spirit of social justice that inspired them. To list these laws now would take too much time, and to analyze them would be tedious and proper only on some other occasion. But among the most important ones which received the efforts, the thoughts, and the heart of this humble Puerto Rican legislator and which have become laws and are today in force in our land because they were approved by Governor Winship, it is well that we mention the universal suffrage law, which grants a supreme right and places all citizens on the same level, whether men or women, white or black, literate or illiterate, rich or poor, thus making our democracy a place where all citizens share alike the most efficient prerogative of popular government; the new election law which gave back to the Socialist Party its personality and gave to all parties equal rights, equal representation, and equal guaranties, thus asserting that political parties as government instrumentalities shall have on election day the same defense and protection as well as everything that makes for a free and clean election, which is the legitimate basis of a true democracy; the law which establishes the State insurance fund—a new law, fair and up to date, which provides compensation to the workers who are victims of accidents or diseases produced by labor, which establishes a social, humane, and up-to-date service free from the influence of private insurance business and places the system under the control and administration of the state, which seeks no dividends or pecuniary profit, but is concerned only with the rehabilitation or compensation of the worker who falls dead or wounded in the fulfillment of the Biblical precept of labor and in the daily struggle for wages and bread; the law establishing the working day of 8 hours, a measure of social and humane rehabilitation for the enactment of which universal labor and socialist organizations of the world have battled so much and have suffered persecutions, agonies, sacrifices, and martyrdom, and which gives the body and the mind of the producer in field and factory a taste of well-being and justice; the labor relations law, which sanctions and consecrates the grand principle of free federation and organization of workers for their own defense, protection, and solidarity, and which sanctions the up-to-date principle of collective bargaining, thus acknowledging the personality and rights of the workers; and numerous other measures, which insure the health, afford protection, and offer guaranty to the working masses of our people.

All of us who have read the papers of late were shocked last Thursday by the absurd information coming from Hitler's Germany about a fantastic reign of terror in Puerto Rico under the flag of the United States and the government of Winship. It is true that our people, as all other civilized and worthy people, struggle to attain in the course of time a definite formula for our political status that shall be compatible with what we believe to be our ultimate right and our honor. In the clock of history we await the hour of justice to strike when the people of continental United States, in friendship and understanding with our people, shall raise us by an act of fairness and justice to the collective category that we deserve as a liberty-loving people; but those who say that our people are the victims of tyranny of any kind do not know what real tyranny is as evidenced throughout history. Collectively we are trying out a system of government which, to a great extent, is democratic and representative. We have a system of insular regime established under the accepted standard of the three powers which Montesquieu theorized and Hamilton and Jefferson established. Our people elect by universal suffrage their legislative power. The judicial power is derived indirectly from the Puerto Rican people which make effective and valid the appointment of every insular judge in their elective senate. Our chief executive is subject to our laws, which leave him no room for arbitrariness or the illegal use of his faculties as executive power. The cabinet of the government is in the hands of Puerto Ricans, which is also true of the general structure of our government. In the field of individual rights, Puerto Ricans enjoy, under the Constitution of the United States, under our insular organic act and our statutes, the greatest assurances of liberty, property, life, and the free pursuit of happiness, with positive and effective laws for assembly, free speech, press, and religion as are not enjoyed to a greater extent by any other country in the world. Every citizen has the most extensive and complete guaranties in any legal procedure, whether criminal, civil, or administrative, in which he may be called upon to defend his property, his freedom, his right, and everything that belongs to him. Neither Jews nor Christians are persecuted here. Opinion is free. Religion is respected and sacred, and every man has in his home his own inviolable sanctuary against every excess or abuse of power, against concentration camps, against inhuman purges, and against everything that would threaten his holy individual prerogatives which are the conquest of revolutions and of centuries of struggle for human liberty. We have no Goebbels to censure our written or spoken word or resort to save denunciation and terror to threaten the liberty and life and right of free people.

Our Governor governs with Puerto Ricans in authority and responsibility to a greater extent than any other dependent country throughout the world. A few days ago, by a happy coincidence very promising of future conditions, our entire government was for the time being in the hands of Puerto Ricans. A Puerto Rican, Major Urrutia, was the commander of the American troops in Puerto Rico; a Puerto Rican, Rafael Menéndez Ramos, was the Governor; a Puerto Rican, Enrique de Orbeta, was the chief of the forces of public order; a Puerto Rican, José G. López, was the auditor of the island; a Puerto Rican, Martin Travieso, was the judge of the Federal Court of the United States in Puerto Rico; and every member of the government's cabinet was a Puerto Rican; and so are the chief justice of our supreme court, with the majority of the associate justices, all our insular judges, and all our legislators. Never did it occur in Germany during the time of her colonial empire in Africa, Asia, and Oceanica, or in any other colonial metropolis, that the people under her flag have enjoyed, even to a lesser extent, such a share of their local government.

Governor Winship represents the smooth and firm hand of law and order and is the supreme guaranty that in this island we shall live a life of democracy, of work, and of peace, for which he is highly appreciated and respected by the leaders of the country, and for what he has done he has the affection of all our people.

May God grant our dear Governor many years of health and happiness.

I thank you.

Arizona's Contribution to the Washington Monument

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, as we approach this anniversary of George Washington's birth, I did a strenuous but patriotic thing—I visited the historic Washington Monument in this city and climbed the 898 steps to the top. It was patriotic to visit the Monument and strenuous to climb it. Since there is a free elevator in this mighty shaft, it probably will be asked why a Scotchman should walk up or down when he might have a free ride.

On this trip I climbed the long, winding, square-type stairway reaching upward between the elevator shaft and the outer walls, because I had a double patriotic purpose in this visit. I wished to reexamine Arizona's memorial stone on the interior wall of the stately obelisk. On a previous trip I had noticed that Arizona's memorial tablet was placed about a third of the way down from the top, and that the only way to see it conveniently was to use the stairway either from the bottom up or from the top down. This is because the elevator does not stop along the way, but makes the entire trip from one end of the monument to the other. Since the Arizona tablet is about a third of the way down from the top, to reach the spot it is much easier to ride the elevator to the top and walk down to it, and that is the procedure I would advise.

On a visit there some months ago I found that the Arizona stone was the most unique of all the historic mementos placed within the Washington Monument. It consists of three united cross sections of polished petrified wood with the word "Arizona" written horizontally across the whole and the letters painted with gold leaf. It was seen that the lettering does not now have its original brightness and really needs renewal or freshening up a bit. Accordingly members of the Arizona Society in Washington are now arranging with the proper officials to give the needed service as a little token of loyal and patriotic attachment to their State.

There are many memorial stones embedded in the inner walls of the Washington Monument, at least one from each State of the Union, and also slabs and monumental stones from various patriotic organizations of our country. The unique memorial stone furnished by Arizona was the one hundred and eighty-third to be placed there, and it was formally presented on April 15, 1924. This program was under the auspices of the Arizona Daughters of the American Revolution. Appropriate addresses were made by officials of this patriotic organization, the Daughters of the American Revolution, by United States Senators from Arizona, by Arizona Governors or their representatives, and by the then President of the United States, Calvin Coolidge. The ceremony of unveiling was by a native-born daughter of Arizona, who sang Arizona's song to the accompaniment of the United States Marine Band. The presentation ceremony on the part of the youngest State must have been as impressive as the stone itself is beautiful and lasting.

The reason why Arizona's memorial stone is so unique and so typical of our State and unlike anything else to be found in this wonderful collection of 183 memorials is that it is taken from a giant tree in the petrified forest of northern Arizona. This is a remarkable specimen of petrified wood, highly polished and very beautiful. As this specimen has been millions of years in the forming, several of the speakers drew appropriate lessons from its beauty and enduring qualities and splendid sermons from this stone.

The Washington Monument, located on the brow of a hill overlooking the Potomac River and towering above the city of Washington, is itself a wonderful specimen of architecture and has equally meaningful symbolism. Standing 555 feet high, reaching into the very clouds, it was a half century in building and presented some perplexing problems to the engineers. Its total weight is 81,120 tons. It is a monument erected by the devoted and loving people of America in memory of the Father of Our Country. Each State has typified or expressed its love for President Washington and fidelity to his principles of government by memorial stones placed in the monument. Arizona's contribution here is not only typical of one of the great natural marvels of our State but by its beauty and lasting qualities typifies the love Arizona citizens have for the great Washington and the everlasting loyalty of our people to the principles for which he stood.

National Democratic Club of New York

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK, FEBRUARY 11, 1939

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a speech delivered by myself before the National Democratic Club of New York on February 11, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We live in a modern world. We have to deal with constantly changing economic and political conditions. In a world fraught with political bitterness, racial antagonism, and national distrust, governments have their distressing problems to solve.

We believe in the efficacy of representative self-government. We have confidence in democracy. We place reliance in our collective strength and judgment. We are jealous of our responsibilities, justly rebellious of any invasion alien to our institutions of autonomy.

Our zeal for self-government is inspired not only by our national history, replete with struggles to attain this goal, but by our observation of the piteous plight of unfortunate minorities everywhere on the earth today.

Our system of government is cumbersome; its mechanics are deliberate and expensive; its legislative grist is often ground with almost maddening meditation; but it provides for all who wish to speak an open forum for the unrestricted expression of their criticisms, suggestions, and counsel.

We have been able, here, under our system of government, to cope with every social and economic dilemma that has confronted us over a period of a century and a half. We have been able, here, to stem the tide of adversity whenever it has threatened our national well-being. We have been able, here, to make our democracy work, and to provide a reasonable portion of contentment and prosperity

to all of our people. We have been able, here, to flex our instruments of government to meet present-day needs. Our continuing ability to adopt modern methods to meet modern trends is the acid test of our democracy.

In the development of our country, economic pressure, operating like a natural law and in response to public opinion, has caused our Government to continually broaden the sphere of its activities. The forces that inspired this development still continue. It has been the wise and timely thing to do, whether it has been the establishment of retirement systems, collective-bargaining agencies, the fixing of wages and hours, relief to agriculture, provision of low-cost-housing facilities, or any similar expansion of Federal authority and supervision. This is the modern trend of Government. The present administration has followed this trend.

The force of social and economic necessity, applying itself equally to every unfortunate and unemployed citizen of the Republic, argues irresistibly for a uniform and unified national program for human betterment. Hunger and joblessness know no State boundaries. Our Nation is shrinking because of new and rapid means of communication and transportation. Our geographical frontiers are exhausted. We live closely together—farmer, laborer, and shopkeeper—our needs, our demands, and our problems are common. The broad activities of government affect us all. That is why our legislators must assume increased responsibilities. That is why we must study and perfect, with care, our agencies of government. That is why we must recognize the modern trend of government and emphasize the necessity of adapting our democracy to meet modern economic changes.

Two major trends, correlated and constantly reacting against each other, have dominated America's destiny since its beginning. One has been the steady expansion of productive efficiency through improved means and methods and multiplied machine refinements. The other has been a steady progress toward social and economic interdependence, compelling on a constantly ascending scale an extension of the functions of government to effect imperative economic readjustments in our adaptation to changing conditions and to meet and master national emergencies. Nothing is constant but change. Adaptation is the law of survival. Those who do not adapt themselves, whether institutions or individuals, soon pass out of the picture.

For America to have resisted change, instead of working in harmony with natural economic law, would have created confusion worse confounded. This analysis, in greatly accelerated degree, applies as accurately today as it did 100 years ago. The recovery program is the answer. While its progressive march from one necessary readjustment to another demand concentrated thought and sustained effort, it is the logical way. To indulge ourselves in the foolish and futile hope that our national economy will automatically adjust itself is to take counsel with indecision and indolence. Irresistible economic pressure would soon teach us otherwise.

It is a trite, everyday expression that "We're on our way—but we don't know where." This may apply to every phase of our social, economic, and political existence. Events of relatively minor significance pyramid themselves day by day, forming the structure of our progress. The National Archives Building at Washington, in stone-engraved words, solemnly pronounces that "The past is prologue." That expresses my thought that the sweeping changes of the past herald the events of today and actuate the unpredictable future.

In retrospect, let us look back to March 4, 1933, when President Roosevelt took his oath of office. He assumed this high office at an hour when general conditions were so distressing as to be unprecedented in the history of our country. Economic and business processes were in a state of collapse. Our financial system, with each day adding by the hundreds to the number of closed banks, was in a state of prostration. A policy of deflation—which had reduced the national income by more than 50 percent, dried up the source of Government revenue, killed and choked industry and agriculture—had brought America so near the brink of the precipice of ruin that anxiety was written on the faces of our people, while actual fear gripped our hearts.

President Roosevelt, his Cabinet, and the Congress acted with extraordinary speed and decision. The powers of the Government were promptly invoked by suiting legislative action to the immediate need until the situation was in hand and hope and confidence displaced terror in public thought.

That was 6 years ago. The plans and policies invoked by President Roosevelt to rescue the country from a debacle, to promote the public welfare, to maintain order, to restore confidence, and to encourage national prosperity are now known as the New Deal recovery program. The record is now before us. We know its origin, its beneficent accomplishments; and throughout the country there prevails an understanding of what the administration is striving to do and what its operations, progressively translated into effect, are intended to do to promote social justice, national prosperity, and greater equity between citizen and citizen, through observing the principle of balance in our economic business relations.

It was to restore economic balance, essential to national health, that the recovery program was instituted. The N. R. A., through higher wages and shorter hours, was intended as an effective answer to the problems of machine overefficiency. The establishment of the A. A. A. was another answer to productive overefficiency on our farms by protecting the farmer against the poverty that follows production below cost.

Our effort is to bring a balance between our ability to produce and our capacity to consume. The enactment of the Emergency Transportation Act, the Federal Deposit Insurance Act, the Securities and Exchange Act, the Utility Holding Company Act, the Social Security Act, the Public Works Act, and similar legislation was prompted by a purpose to protect producers and workers from the price and employment disorganization that overproduction brings; to protect the earnings and investments of the masses of our people; and to diffuse the benefits of technological advances more equitably among the people.

The agencies of the recovery program have a common background and a correlated purpose—that of restoring prosperity to America through the accomplishment of a wholesome economic balance.

We are on the steady, upward grade. Under conditions of safety, opportunity, and comfort far beyond that of any other nation of the world our democracy is proving its ability to master modern problems of economics and government. The mud sills of the recovery program are laid deeply in the soil of the Republic. Its superstructures can only be erected, completed, and perfected by its friends.

We have confidence in our national ability through democratic processes to solve our modern perplexities of government; we have trust in our party as the vehicle for the recovery program; we have faith in our national party leader, the President of the United States, Franklin D. Roosevelt.

National Armament

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

ARTICLE BY OSWALD GARRISON VILLARD

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "Why Should We Arm Further," by Oswald Garrison Villard, and printed in the New Year's issue of America's Future.

There being no objection, the article was ordered to be put in the RECORD, as follows:

[From the New Year's issue of America's Future, 1939]

WHY SHOULD WE ARM FURTHER?

(By Oswald Garrison Villard)

This country undoubtedly has the jitters and not wholly unjustifiably. We see the other nations in the maddest and craziest race for armaments which no less a person than former Prime Minister Stanley Baldwin has declared can only lead to war or financial disaster. President Roosevelt, speaking at Buenos Aires on December 1, 1936, only 2 years ago, has warned us that any rearmament employment "is false employment * * * It builds no consumer's goods for the maintenance of a lasting prosperity. The nations face the day either when their weapons of destruction must be used against their neighbors or when an unsound economy like a house of cards will fall apart." Still the nations persist. As Harold Butler, lately the director of the International Labor Office in Geneva, has pointed out, the rulers of the world know that continuance of this armament race spells disaster for their respective countries and yet their statesmanship does not suffice to enable them to find any way out.

They are like the Frenchman who fell into a pond and, mixing his tenses, kept calling out, "I will drown, and nobody shall help me," until he went under and died. Our former Assistant Secretary of Labor, Edward F. McGrady, when still in office in 1937, declared in a speech at Geneva that for every laborer employed on armaments at least two others must produce profit-making goods to support the man making guns and ammunition, for these are unproductive. He stressed the obvious fact that the armament race involves a steady sinking in the standard of living for all wage earners in the countries which participate, and he made the sensational statement that if this continued it could only lead to revolution in every country. There can be no doubt whatever that Field Marshal Goering was right when he said that the German people had a choice between guns and butter, and that they would have to take guns and do with little or no butter. The same thing will happen in every other country which carries its armaments far enough. Every sound economist knows that if this arms race continues the resulting effect upon the economies of all the nations will be almost as destructive as war itself and will induce the very collapse like a house of cards of which Mr. Roosevelt spoke.

Nonetheless, Mr. Roosevelt announces that he will demand large sums for rearmament when Congress meets, and he says that among other things we must have the largest air force the world has ever known. At first the intimation came from the White House that, despite his speech at Buenos Aires, he was planning to try to produce prosperity by armament. Perhaps someone reminded him then of that speech; undoubtedly he found that Congress, the public, and the press did not react favorably to this idea, and so he told the newspapermen that he was sorry to spoil their story. He has meanwhile declared for a doctrine of solidarity of this hemisphere—that is, a united front against any European attack—and has stated—without the authority of Congress, which, under the Constitution, is the war-making power—that we shall fight if Canada is attacked by anybody. At the Lima Conference his representatives labored to produce that united front, with what result is known.

There is no doubt that the bulk of the American people approve of what they call "adequate defense." They are most eager that the horrors in Spain and China of which they have read so much shall never be repeated on our soil. While they trust the President and Congress to do the right thing, they do not wish the country to be militarized; they do not wish to pour out the huge sums voted by Congress last winter, two billions of dollars for Army and Navy, unless this is absolutely necessary, and they do not want to have all industry subjected either in peace or war time to the War Department's complete control, but they wish to feel secure and are willing to make any sacrifice in order to accomplish this end. The difficulty is that they are unaware of the true state of the military situation in this country, and they do not realize the enormous benefits conferred upon this country by its geographical situation, the barrier of 7,500 miles of ocean between us and our only possible enemy in Asia and of 3,000 miles between us and Europe. They are unaware that the hundreds of millions of dollars poured out for the defense of the country in the last few years have not improved our defenses to any appreciable extent, not even the voting of sums for the six huge new battleships which now cost—the latest—no less than $50,000,000 apiece.

It is characteristic of President Roosevelt's failure as an administrator and his inability to think things through that there has been no genuine improvement in our military and naval conditions since he took office 6 years ago, although during that time we have been expending such huge sums of money. Doubtless the people thought when Congress appropriated or authorized the expenditure of $2,000,000,000 last winter that a great deal had been done to improve our defenses. The simple fact is that it is no exaggeration to say that those sums of money added only to the chaos in Washington. "It's a madhouse, this Washington," said a Regular Army officer who had just been called down to Washington again to consult as to how some of these large sums of money could be expended. Few people realize that there does not exist a single plan for the cooperation of the Army and Navy in any possible emergency. They are working on one now, but it has not yet been adopted, and no one knows when it will be. If war should come suddenly, no one would know just what role the Navy should play in the defense of our coasts; whether its air fleet or the Army's air fleet, or both, would be used to defend our shores. The role of mines, submarines, and coast defenses has never been studied with the idea of the cooperative use of both services. Yet these are merely matters of planning and would not require a single appropriation. Almost every other large country now has a single ministry of defense with the army as one branch, the navy as another, and the air force as a third.

So far as the War Department is concerned, its entire organization is antiquated, and by the confession of its own Assistant Secretary today it has practically nothing with which to defend the country or equip an army, this despite the fact that our Army has never had less than $220,000,000 a year since the war, and for the last 3 years has gone above $330,000,000, and then jumped roughly to $430,000,000. When we are told that our entire artillery is inadequate; that our gun carriages date back to the last war; that we have not enough or adequate antitank guns; that we are only just beginning to produce antiaircraft guns, and to supply our regiments with our wonderful new rifle, one cannot help asking where in the world all the money has gone to. If Mr. Roosevelt really wished to put this country in a state of defense in the shortest possible time, he would have appointed a board of inquiry 5 years ago to find out why these things are so, and to work out a sane, intelligent military establishment fitted to the possible needs to which it would be put. This he has, of course, never even attempted. Yet officer after officer, like Maj. Gen. Johnson Hagood in his book We Can Defend America, says that we can defend this country with a much smaller military establishment than we have now. In his just-published book The Ramparts We Watch, Maj. George Fielding Eliot has taken similar ground that, given an efficient Navy, we do not need any more troops than we have, if as many. He is absolutely opposed to many of the features of President Roosevelt's armament program, and so are, I am told, not less than 70 percent of the Army and Navy officers who cannot, however, express their opinions publicly without getting into trouble with their superiors.

Perhaps most important of all is our never having established what it is that we propose to defend. We are asking the impossible of Army and Navy because we are not even giving them the problems they are asked to solve. We have not, for instance, told them whether they are going to try to defend the Philippines, which is militarily impossible, or whether our western defenses shall be the line from the Aleutian Islands to Hawaiia to Panama. We have not told them whether they are to defend South America, or even if we are to protect our trade routes to South America. Our Navy does not know authoritatively whether it is to be prepared to fight overseas or to meet and defeat the enemy 500 miles off our coasts, as President Roosevelt recently suggested in a public statement. The Army is still preparing to repeat its performances of 1917–18 and to throw an army of 3,000,000 men abroad. But that is contrary to the statement of President Roosevelt to the Daughters of the American Revolution that we were never going to do anything but defend our coasts, which is an entirely different military problem and a vastly simpler one. I do not think that I am making any misstatement when I say that until all this confusion is cleared up and our military objectives are clearly defined all the money voted by Congress merely adds to the confusion and does not give us a dollar's worth more of insurance of our safety.

Again, it is an actual fact that officer after officer has said that this country cannot be attacked. Admiral Sims said this on many occasions. He insisted that we could not make war upon Japan nor Japan upon us. In this he was reinforced by no less a person than Franklin Roosevelt himself, who declared in an article in Asia magazine in 1931, on the basis of his experience as Assistant Secretary of the Navy, that a war between the United States and Japan was physically impossible and that, therefore, we ought to give up all talk of a possible war and approach our joint problems from another point of view—something that he has completely forgotten, as he has so many of his earlier utterances. Speaking on November 18, 1935, to the National Foreign Trade Convention at Houston, Tex., Rear Admiral W. W. Phelps said: "Of course, there is no possibility ever of any hostile attack on either of our shores." General Hagood, General Rivers, Gen. Smedley Butler, and other officers have said the same thing. Now, they may be all wrong, including President Roosevelt, but isn't it worth while to undertake an inquiry as to the correctness of these statements before we begin to pour out unlimited sums and create a huge military machine in America, with all the danger to the Republic that that connotes? It would seem to be simple businessman's wisdom to do this.

What businessman in America in his senses would think of pouring out billions without any definite target for his expenditures? What the hour requires is not the appropriation of a single dollar of additional defense funds beyond the necessary upkeep of Army and Navy, but the immediate setting up of a civilian commission to study the whole problem with the greatest care. Congress would not like some of its findings, because Congress itself is responsible for so much of the wicked waste that goes on in the Army, because it treats both the Army and Navy as a pork barrel. The Army is distributed in hundreds of posts, for example, instead of being concentrated in large reservations where officers and men could be trained in the handling of large bodies of troops. Congress is surely to blame when General Hagood can write that the present organization of the War Department "is so involved that no Secretary of War has ever been able to understand it, and no Chief of Staff, however well qualified, has ever been able to keep it under control or to know just what was going on among his subordinates." Such a commission should put up to Congress also an inquiry into the Navy and find out if it can why Admiral Sims said that the only place for battleships in the next war was the Mississippi River, that all the money spent on the fortification of Hawaii was money thrown into the Pacific Ocean and that the naval training system is so bad that it is not producing a single officer qualified to command the fleet in time of war, and why a writer in a recent issue of the Forum says that the morale of the Navy has never been as low as it is at present.

There is no question that an inquiry of this kind would result in the clarification of all our military and naval problems, and with that before the country it would be extremely difficult for Congress to shirk its plain duty of insisting that every dollar appropriated by Congress should produce a dollar of defense, and that not one dollar more than is needed should be taken out of the taxpayers' pockets. In two speeches Mr. Roosevelt in a holier-than-thou spirit has declared that we are much better off than foreign countries because we are only spending 10 or 12 percent of our Budget for Army and Navy, whereas other countries are spending up to 50 percent and more. That statement was entirely misleading and dangerously near public deception. It has a vestige of truth in it only if we assume that the present emergency budgets running between seven and nine billions of dollars are henceforth to be the fixed expenditures of the United States. That is, of course, preposterous unless it is assumed that we are always going to have eleven or twelve millions of unemployed, in which case we are headed for bankruptcy. If we assume that a normal Budget hereafter will be approximately $4,000,000,000 or four times what it was before we made our fatal mistake of entering the World War in 1917, then the annual expenditure of more than $1,000,000,000 per annum for the actual upkeep of Army and Navy, to say nothing of any extraordinary expenses, would mean that we shall be spending between 25 and 30 percent of our Budget every year for war purposes, this without any allowances for the huge cost of the wars that we have already fought in the way of pensions.

Should the taxpayers of America stand for this unless it is incontestably proved that this tremendous outlay is really required for our safety, and is honestly and efficiently expended?

Nomination of Judge Roberts to the United States District Court for the Western District of Virginia

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

ARTICLE BY CARR V. VAN ANDA IN THE NEW YORK TIMES

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD a most able article published in the New York Times of February 12 and written by Carr V. Van Anda, with respect to the controversy involving the rejection of the nomination by the Senate of Judge Roberts to the United States District Court for the Western District of Virginia.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of February 12, 1939]

POWER THE PRESIDENT MIGHT LOSE—UNDER THE CONSTITUTION IT IS ONLY BY COURTESY OF CONGRESS THAT HE HAS SHARE IN MOST APPOINTMENTS

To the EDITOR OF THE NEW YORK TIMES:

The controversy between President Roosevelt and Senator GLASS is too important to be passed over as only an amusing exchange of harsh words between two distinguished persons, because it brings out anew the President's unceasing purpose to dominate Congress and the courts, and at the same time suggests a method by which Congress, if it chooses (a remote prospect, it must be owned), may do something effective to relieve the courts of political pressure. As for itself, Congress appears at last to be rapidly erecting adequate defenses against Executive domination.

The spectacle of a President's descent to the imputation of falsehood against a man so preeminently distinguished as Senator GLASS for honorable and disinterested public service must always be painful. It is more than painful when, as in the present case, the imputation turns upon a definition of terms, and is attended by an obvious suppression of supporting evidence, if such evidence exists.

SUPPORT FOR GLASS

When Senator GLASS was unable to elicit anything but unbecoming persiflage in response to inquiries as to the truth of widely published allegations that, in the matter of appointments to Federal office, the recommendations of the Governor of Virginia would, as a matter of punitive policy toward the Virginia Senators, be accepted as outweighing theirs, it was not surprising that seventy sympathizing Senators joined those of Virginia in rejecting the Governor-sponsored nomination to a Federal judgeship in a district of that State. Senator GLASS' characterization of the influence exercised by the Governor as an "effective veto" of the constitutional rights of Senators to advise the President on nominations was justified by any other than the narrowest definition of the term.

A veto, according to the lexicographers, may be not only the exercise of an absolute and lawful power but any act of prevention, any refusal to approve. That the exercise of his influence with the President was effective is true, if the Governor of Virginia did in fact propose the nomination of Judge Floyd H. Roberts. He certainly went to Washington to support it. The President, in his letter of condolence to Judge Roberts, mentions the proposal of various candidates by various unnamed persons. If the Governor of Virginia was not an original proponent of Judge Roberts' nomination, citation of this fact would have been an obvious and easy advantage to the President's side of the case.

But this unpleasantness is the least important element of the matter. What is of real consequence is that, in his letter to Judge Roberts, Mr. Roosevelt appears seriously to misconceive the powers of the President in relation to the appointment of Federal officers.

STATEMENT MISLEADING

He speaks of "the appointive power, which is in the President"; of "that time-hallowed courtesy which permits Senators and others to make recommendations for nomination," and solemnly announces that "it is, of course, clear that it was the intention of the Constitution of the United States to vest in the Senate as a whole the duty of rejecting or confirming solely on the ground of the fitness of the nominee."

Some of this is merely careless writing, the rest is grossly misleading. The President has no independent appointing power whatever under the Constitution, except when the Senate is not in session, and then only for a limited time. There is no "time-hallowed courtesy" that permits Senators to suggest nominations. On the contrary, the Constitution expressly requires that, in the matter of nominations to office, the President shall seek the advice of the Senate. That is why this advice, if not volunteered, is, as a rule, asked for before a nomination is submitted.

Setting aside the careless expression which may convey to many the mischievous implication that a unanimous vote of the Senate is required for the rejection of a nomination, there is nothing in the Constitution, or in the debates previous to its adoption, which suggests an intent that the Senate shall act "solely" upon the ground of fitness, although there is much in the debates that suggests a jealous scrutiny of the acts and motives of the President.

A fit candidate being nominated, the Senate or a single Senator may advise the President that it or he knows a fitter one, or cite the inexpediency of the nomination on any ground whatever, or act in justified retaliation against punitive or other humiliating treatment of individual Senators which, if not resisted by a majority, may lead to the injury of all.

Fortunate indeed would be a unanimous response to Mr. Roosevelt's appeal to the citizenry to study more closely the prerogatives allotted to the President by the Constitution. Those not already aware of the fact may be surprised to learn that it is only by the courtesy of Congress that the President possesses the privilege of nominating more than a mere handful of the multitude of Federal officers. Article II, section 2, paragraph 2, is brief and clear on this point:

"* * * and he (the President) shall nominate and by and with the advice and consent of the Senate shall appoint ambassadors, other public ministers and consuls, judges of the Supreme Court and all other officers of the United States whose appointments are not herein otherwise provided for, and which shall be established by law; but the Congress may by law vest the appointment of such inferior officers as they think proper in the President alone, in the courts of law, or in the heads of departments."

RIGHT LIMITED

Thus the only indefeasible right of the President to nominate is limited to members of the Supreme Court and of the diplomatic establishment. As to all the rest, Congress can take away the privilege at any time and vest the appointing power in other executive officers of the Government or even in the judiciary branch.

Why not, therefore, as to Federal judges, settle the nominating power upon the courts themselves as the Constitution expressly permits? Who can judge of qualifications better than the courts, whose business is largely the examination of the work of all possible candidates? Supreme Court Justices would still have to be nominated by the President, but each higher court could nominate candidates for the next lower.

A self-perpetuating oligarchy? Retain the power of the Senate to inquire for itself into the qualifications of nominees and to reject them whenever necessary, with provision, in the latter event, requiring the prompt submission of new nominations. The difficulty, of course, would be the mustering of a two-thirds majority to override a Presidential veto.

Such a plan would remove the Federal courts as far as is humanly possible from the field of politics. It would certainly secure future Presidents against Mr. Roosevelt's temptation to consult "Nancy Astor, the Duchess of Windsor, the W. P. A., a Virginia moonshiner, Governor Price, or Charlie McCarthy" in such matters.

CARR V. VAN ANDA.

NEW YORK, *February 9, 1939.*

President Franklin D. Roosevelt and Former President Herbert Hoover

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

EDITORIAL FROM PHILADELPHIA RECORD OF FEBRUARY 15, 1939

Mr. MINTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Philadelphia Record of February 15, 1939, entitled "To Appreciate Roosevelt—Remember Hoover."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Philadelphia Record of February 15, 1939]

TO APPRECIATE ROOSEVELT—REMEMBER HOOVER

"Prosperity is just around the corner."

That's what Herbert Hoover told the American people from 1929 to 1933.

"Inflation is just around the corner."

That's what Mr. Hoover has been telling them ever since 1933.

He has been 100 percent wrong on both prophecies.

On the day Hoover left office the only thing around any corner in America was a closed bank.

And after 6 years of repeated promises that inflation was about to skyrocket prices, as in Germany, and ruin the country, we find:

That whereas the commodity price index ranged between 95 and 100 under Hoover in 1929—

The price index today is down around 77.

In his Lincoln Day speech Mr. Hoover shouted the country has "a rendezvous with inflation and a full-sized dictator."

If there were even faint nudges toward inflation the price index would be soaring far above the 100 mark. Instead, the price level has dropped to 77 from 86 in the last 2 years.

That's deflation, not inflation.

Mr. Hoover demonstrates that he is as bad a prophet in 1939 as he was in 1929.

In 10 years he has learned nothing.

Normally our feelings toward the depression President are feelings of pity, and our inclination is not to take him very seriously. But his Lincoln Day address was such a complete mass of misinformation and so completely ignored his own record as President that it is time to recall the conditions to which Mr. Hoover, on Monday, demanded a "return."

Hoover wants an end to Government "spending." He begrudges the money that has been spent.

In other words, he would return to the days when he told Congress it was all right to appropriate money to feed mules but not to feed men. He would return to those days when campaigns to feed the jobless consisted chiefly of dinners—for the committee—at the Waldorf Astoria.

Hoover cries for an end to "inflationary monetary and financial policies."

That is, he would again let deflation run its course, wipe out the values of the resources of our people and wreck the credit system.

Hoover claims that the Republicans started the R. F. C.

True. But while it was under Republican control its chief contribution to national recovery was an $80,000,000 loan to the Chicago bank of G. O. P. chieftain General Dawes, a loan which represented almost the entire deposits of Dawes' bank. At the time John T. Flynn, the economist, showed that—

"Twenty-one million of the first $24,000,000 loaned by the R. F. C. went to two banks; that more than 40 percent of its loans over 5 months were to seven big banks; that the Union Trust Company, of Cleveland, got $14,000,000, the chairman of the board of that bank having been the treasurer of the Republican National Committee; that $12,000,000 went to the Union Guardian Trust Company, of Detroit, of which Hoover's Secretary of Commerce was a director. * * *"

Yes, the G. O. P. launched the R. F. C. And how!

But probably the most audacious claim in the Hoover Lincoln Day speech is this:

"When the Federal Reserve System * * * failed to meet the storm of 1929, it was a Republican administration which again proposed drastic banking reform."

Yes, the Hoover administration reformed banking. By wiping out the banks.

The Roosevelt administration may have made mistakes.

But it has had a heart.

The Roosevelt administration may have made mistakes.

But it never had to put chains on the White House gates for fear of an uprising of starving Americans; it never told people that the folding of banks and wiping out of depositors was "a healthy process"; it never drove homeless veterans out of shacks at the point of bayonets.

A "rendezvous with inflation"?

Does Herbert Hoover remember his rendezvous with a committee of bishops and businessmen who called on him in June of 1930 to demand action to check the spread of unemployment? Does Mr. Hoover remember what he told them—in June 1930:

"Gentlemen, you have come 6 weeks too late. The crisis is over."

It is too easy to forget how raw those days really were!

Yet the G. O. P. wants to "return" to them.

The way to appreciate Roosevelt is to remember Hoover.

The Island of Guam

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

STATEMENT OF NAVY DEPARTMENT REGARDING THE ISLAND OF GUAM

Mr. GIBSON. Mr. President, fortification of the island of Guam is a matter that will soon be pending before the Congress if the present rearmament plans are carried out.

The island of Guam is one of the Marianas group, scattered in the Pacific.

People generally have little information concerning the island of Guam. With that situation in view, the Navy Department has furnished information concerning the island, its location, its people, and its history. I ask unanimous consent that this statement by the Navy Department be printed in the CONGRESSIONAL RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Marianas Islands extend in a line almost north and south for a distance of some 420 miles, between the thirteenth and twentieth parallels of north latitude, along the one hundred and forty-fifth meridian of longitude east from Greenwich. The 17 islands of this group are of volcanic origin, but the southern members have long been free from volcanic action. Guam, at the southern end of the chain, is the largest and most populous of the group. It lies about 5,100 miles from San Francisco, 3,400 from Honolulu, 1,500 from Manila, and 1,400 from Yokohama. Guam is a possession of the United States, while the remainder of the Marianas Islands are governed by Japan by League of Nations' mandate.

This island has an area of about 225 square miles, being about 30 miles in length and from 4 to 8½ miles in width. The southern part is high and mountainous with a range of hills along the west coast ranging from 700 to 1,300 feet in height. Numerous rivers, with their tributaries, rise in this ridge and empty into the sea on the east coast. The northern part of the island is a plateau ranging from 200 to 600 feet in elevation, with only a few small brooks near Mount Santa Rosa on the northeast coast.

Guam was discovered on March 6, 1521, by Magellan, while on his voyage around the world. He named the islands Ladrones, but they were later, in 1668, named Marianas, in honor of Maria Ana of Austria, Queen of Spain. The first Spanish missionaries landed in Guam June 15, 1668. Churches and a school were built and the work of converting and baptizing the natives was started. Trouble was soon encountered and many of the priests and soldiers met violent deaths. Rebellion and wars were constant between 1670 and 1696. In 1856 a terrible plague swept the island. The oldest known book upon the early history of Guam states the population in 1668 to have been about 50,000, but this number appears to be an exaggeration. The population was reduced by war, storms, and pestilence to 3,678 in 1710, when the first census was taken. The period from 1696 to 1898 was a period of colonial development under Spanish rule.

Guam was captured June 21, 1898, by the cruiser *Charleston*, commanded by Capt. Henry Glass, United States Navy, and was ceded to the United States by the Treaty of Paris, which terminated the War with Spain. President McKinley, on December 23, 1898, issued an Executive order placing the island of Guam under the control of the Navy Department. A naval officer is commissioned by the President as Governor of Guam, and the same officer is ordered by the Secretary of the Navy as Commandant of the Naval Station, Guam, which includes the entire island. Since coming under American jurisdiction the people of Guam have been regarded as wards of the United States Government.

The natives of Guam are called Chamorros. The origin of the ancient Chamorros is obscure, but it is probable that they were a group that became detached and isolated in the Marianas Islands from the Proto-Malays in their migration eastward from the mainland of Asia. The main part of this people are the Polynesians that now exists in Hawaii, Samoa, New Zealand, and other Pacific islands.

The official language of Guam is English, but the natives still cling to the ancient Chamorro tongue, which has been corrupted by the addition of loan words, phrases, and grammatical forms, principally from Spanish and English, with a few words and expressions from the dialects of the Philippines. During the conquest (1670–96) and the pestilences of later years many of the native men died, and as a result the present Chamorros are principally descendants of the Spanish, Mexican, and Philippine soldiery, who were brought to Guam for the conquest, and of the Americans, British, Chinese, and Japanese, who came later. It is probable that no pure-blooded Chamorro exists in Guam today.

The population of Guam on July 1, 1938, was 22,314, an increase of 182 over the previous year. The population is divided as follows: Native born, 20,880; foreign born and their families, 755; naval establishment, 679, including their families. The foreign-born permanent residents of Guam are as follows: Americans, 61; Filipinos, 30; Danish, 1; German, 2; Spanish, 12; Japanese, 41; and Chinese, 2.

The climate of Guam is on the whole pleasant. The northeast and east-northeast trade winds prevail from December to May, during which time there is comparatively little rain. The southwest monsoon blows at more or less frequent intervals influenced by the typhoons, from June to November, bringing heavy rains. The average yearly rainfall is 89.88 inches, 61 percent of which falls in the 4 months of July, August, September, and October. The hottest months are May and June. The minimum temperature is about 72° and the maximum about 95°. Although the island is in the typhoon belt of the western Pacific, it is seldom visited by severe typhoons.

The agricultural products of Guam are copra, alligator pears, bananas, pineapples, oranges, lemons, mangoes, papayas, breadfruit, coffee, limes, cacao, grapefruit, corn, taro, sweetpotatoes, yams, to-

bacco, rice, cassava, arrowroot, sugarcane, and kapok. Copra is the principal crop of the island and is the main item of export although soap, coconut oil, and "aggag" woven products are showing healthy increases. The rapidity of jungle growth over most of the island makes constant clearing necessary and in the northern part, although the soil is fertile, it is shallow.

The administrative organization of the government of Guam includes the following departments: Executive, records and accounts, industries, education, health, police, military, attorney general's, judiciary, customs and immigration, and agriculture. The island is divided into 15 municipalities: Agana, Agat, Asan, Barrigada, Dededo, Inarajan, Machanao, Merizo, Piti, Sinajana, Sumay, Talofofo, Umatac, Yigo, and Yona. The municipalities are each in charge of a commissioner appointed by the Governor, assisted by a deputy commissioner where necessary. The naval government activities of Guam are financed chiefly by the revenues from taxes paid by the citizens of Guam.

There are no civilian physicians or hospitals in Guam, nor could the population support them financially. There is one civilian dentist under part-time pay of the Federal Government. The natives are dependent on the government for prevention of diseases and medical care. For the fiscal year 1938 the Federal Government appropriated $20,000 for hospitalization of lepers, gangosa, and indigent native cases. In addition the Federal Government appropriated $73,220 under the cognizance of the Bureau of Medicine and Surgery for the maintenance and operation of the naval hospital, which is principally maintained for the treatment of the native population and furnishing of medical supplies to all health activities caring for natives. The hospitals are operated by the medical department of the United States Navy and native nurses trained by this department.

The educational program in Guam is based on the philosophy that education is to prepare the individual for happy, efficient living in his community. Such basic instruction, born of educational practice in the United States, as applies in Guam is given. Emphasis is placed upon the English language as a medium of speech among all the people, upon health and sanitation and knowledge of civil regulations as necessary to community cooperation and progress, and upon character-building agencies as invaluable to community stability. Industrial and agricultural instruction has a prominent place in the curriculum. For the fiscal year 1939 the Federal Government appropriated $15,000 and the naval government $48,319.56 for educational purposes. The department of education consists of a head of department (a naval chaplain), a native supervising teacher, 3 native supervisors, 11 industrial teachers, 171 academic teachers, and 3 office staff. The policy is to fill all possible positions in the native schools with native teachers. Prospective teachers are trained through a teacher-training course in the last year of high school, and active teachers are trained in service by either a teachers' normal held every 3 years or by annual teachers' institutes. The latter method plus advanced study during the year will be used for the next 2 years. Teachers are instructed in English, teaching methods, American history, factual knowledge of Guam, mathematics, music, sanitation, and hygiene. The schools had an average enrollment in 1937–38 of 4,066, a decrease of 405 from 1936–37 and an increase of 2,485 during the last 15 years. The age of compulsory attendance is from 7 to 12 years, inclusive, but children may attend school after reaching 12 by maintaining satisfactory progress. There is an American school for American children. During 1937–38 six American college women graduates, with teachers' certificates, taught in the American school, which has grades 1 to 10, inclusive. Information concerning teaching positions should be obtained direct from the Governor of Guam. Currently none other than natives are employed in the native schools, and only members of service families or American civilians already in Guam teach in the American school.

The Bank of Guam was established by executive general order No. 193, dated December 20, 1915. The capital stock, $25,000, is owned by the naval government of Guam. The bank is authorized to conduct the business of commercial banking as a division of the treasury of the naval government of Guam. While the bank is operated according to approved commercial banking standards, special effort is made to assist in the general improvement and betterment of the island of Guam as a whole.

The Guam Recorder, an illustrated monthly magazine, which is published under the direction of the Governor of Guam, covers current affairs; historical, scientific, and governmental matters of interest to the life of Guam. Subscriptions may be obtained from the editor, Guam Recorder, Agana, Guam., at $1 per year for subscriptions within the United States territorial limits or possessions and $1.50 for foreign subscriptions.

There are no hotels in Guam except one operated by the Pan American Airways for the convenience of their trans-Pacific air passengers. Transportation to and from Manila and the United States is by occasional Army and Navy transports; by a Dollar Steamship Co. vessel, which makes about three trips a year and carries mail and freight; and by Pan American Airways' clippers, which carry passengers, mail, and air express. Guam is an important link in the trans-Pacific air route of the Pan American Airways.

Located at Guam is the important cable station of the Commercial Pacific Cable Co. It is from here that messages from San Francisco are relayed to the Philippines, China, and Japan. The Globe Wireless, Ltd., maintains a radio station at Guam, and communications with the United States, the Hawaiian and Philippine Islands are possible through this system.

Immigration into Guam, while not prohibited, is not encouraged, as there is little opportunity for a newcomer to make a living there. All sales of land must have the approval of the naval government. Only citizens of the United States and of Guam may own land. Government land may be leased by citizens of the United States or of Guam for a period of not more than 25 years, or in the case of town property, 50 years. Real property cannot be leased to aliens for a period of more than 5 years.

A publication entitled "The Island of Guam," containing more detailed information on Guam, may be procured from the Superintendent of Documents, Government Printing Office, Washington, D. C., at 25 cents per copy.

Justice Louis D. Brandeis

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

EDITORIAL FROM PHILADELPHIA RECORD OF FEBRUARY 15, 1939

Mr. MINTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Philadelphia Record of February 15, entitled "Brandeis—Man of Facts."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Record of February 15, 1939]

BRANDEIS—MAN OF FACTS

In 1916, when President Wilson appointed a Boston lawyer, Louis D. Brandeis, to the United States Supreme Court, the resulting chorus of enraged protest was almost as loud as that which followed the announcement of President Franklin D. Roosevelt's court plan.

Former President Taft, later Chief Justice, led the opposition to Brandeis. Every then-living president of the American Bar Association objected to Brandeis. Boston—or those who spoke for Boston—clamored against the man who had set himself, successfully, against the sacred cow of Boston Brahmanism, the New Haven Railroad, and who had predicted, correctly, the downfall of that enterprise as the result of the sin of financial gluttony.

Brandeis was a "dangerous radical." Brandeis was an "impractical theorist" given to "extravagant statement" and "self-advertisement." Brandeis was "reckless" and "inspired by prejudice and intolerance" and wholly lacking a "judicial temperament."

So ran the statements and the editorials in the 5 months' fight between his appointment and his confirmation by the Senate.

The Judiciary Committee reported that powerful financial interests had supported the fight against Brandeis. But the attack was masked. They did not say openly that Brandeis was a friend of labor and therefore unacceptable, or that they opposed Brandeis because he had fought monopoly. They accused him of "unethical conduct," of accepting fees from hidden interests in cases that he had fought without fee, solely because the public interest called him to the fight.

Senator Tom Walsh, of Montana, summed up neatly the attack on Brandeis:

"The real crime of which this man is guilty is that he has exposed the iniquities of men in high places in our financial system. He has not stood in awe of the majesty of wealth. The man who never represents the public or the impecunious citizen in any great forensic contest, but always the cause of corporate wealth, never has these troubles."

Brandeis was finally confirmed, 47 to 22. Among the Senators who voted against Brandeis on the pretext that his conduct had been "unethical" were Warren G. Harding, of Ohio, and Albert B. Fall, of New Mexico.

Time is the most eloquent debater. This week Louis D. Brandeis steps down from the Court, closing liberalism's case on whether his appointment was a proper one. Twenty-three years of as distinguished service as the American bench has ever seen is the answer to those who called Brandeis a "shyster."

Only Justices Marshall and Holmes—and perhaps only Marshall—have had as powerful an effect on American legal and social thought. The Brandeis briefs and dissenting opinions are slowly becoming the law of today, and the philosophy behind them is perhaps the most thorough exposition we have of American liberalism.

Marshall intuitively foresaw the future economic necessity for a strong Federal Government and forged a constitutional basis for it with bold, partisan strokes that made the Constitution an effective instrument.

The statesmanship of Brandeis addressed itself to an equally vital problem—the anarchy arising from the "curse of bigness," from the rule of unrestrained corporate monopolies whose power, though exercised only with the help of the State, placed them outside the control of the State and sometimes allowed them to operate contrary to the interests of society.

"To preserve the liberty of the many," Brandeis said, "we find it necessary to restrict the liberty of the few."

More specifically:

"We have passed to a subtler civilization: from oppression by force we have come to oppression by other ways. And the law must still protect a man from the things that rob him of his freedom, whether the oppressing force be physical or of a subtler kind."

Brandeis perceived that political liberty could not survive side by side with "industrial absolutism." He attacked this great dilemma of our time on two fronts—the vigorous protection of individual civil liberties against governmental tyranny and the vigorous interposition of governmental regulation against industrial tyranny over individuals.

There are those who profess to see contradiction between Brandeis' battle against the extension of governmental repression and his defense of Government regulation to counterbalance the supergovernment of big business. In both positions Brandeis was protecting the individual against forces which were actually menacing.

As Brandeis sees the facts, civil liberties are necessary to protect men against corporate "bigness" and restraint against "bigness" is necessary to protect civil liberties. The two principles are not contradictions, but the two sides of the coin which buys liberty.

Law to Brandeis is not a fixed mold into which human conduct is to be poured. Rather law to him is the science of discovering rules of behavior from the changing conditions of life:

As he put it:

"In the past the courts have reached their decisions largely deductively from preconceived notions and prejudices. The method I have tried to employ in arguing cases before them has been inductive reasoning from the facts."

In defending the Oregon law limiting women's hours of work, Brandeis did not follow the traditional method of emphasizing other forms of regulation which courts had upheld. Instead he devoted 97 pages of a 100-page brief to a factual description of the conditions prevailing in most factories and the effects of those conditions upon women. When Brandeis took an industrial case he acquired a more intimate knowledge of the industry than many who spent their lives in it.

In a word, the attitude of Brandeis was that of the scientist, not the sage.

Justice Brandeis stands for the twentieth-century man as jurist, for the break with the traditional concept of law as "that which has been law." He knows that sound law is made in the laboratory of life, not in the minds of isolated men, no matter how high their ivory towers may be.

That modern approach may be a more significant contribution than even the glorious Brandeis fights against monopoly or the glorious phrase "Holmes and Brandeis dissenting," which was the introduction to a reawakened American concept of civil liberties and human dignity.

To Mr. Justice Brandeis on his retirement we wish many more years of useful work. To his country we wish a deeper appreciation of what Brandeis represents.

Business and Industry

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

STATEMENT BY AMERICAN FEDERATION OF LABOR

Mr. BAILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement on business and industry by the executive council of the American Federation of Labor. I heartily endorse the sentiments expressed in the statement.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of February 15, 1939]

A. F. OF L. BIDS NEW DEAL STOP CHANGING RULES—ASKS ADMINISTRATION TO END BUSINESS FEAR BY HALTING "SURPRISING" REGULATIONS

(By Edward Angly)

MIAMI, February 14.—American Federation of Labor leaders appealed today to the Roosevelt administration to cease "changing the rules of the game" under which private industry must operate.

Before ending its midwinter meeting tonight the federation's executive council issued a statement reaffirming its belief that only private business, and not government, can solve the unemployment problem. The New Deal was asked to restore confidence and eliminate fear among investors and management by giving up its habit of issuing "surprising and unexpected" regulations.

Taking the position that the army of unemployed could not forever "remain the wards of the Government," the council asked the New Deal to remove whatever barriers stand in the way of enabling all financiers and the owners and management of industry to face the future with confidence and risk their money on development of enterprises.

"Whatever barrier may have been created, either as a result of fear or as a result of affirmative action on the part of those who administer the affairs of government, ought to be broken down so that our industrial processes may function in a proper way and unemployment may thus be overcome," the statement said.

OPPOSE EXCESS-PROFITS TAX

Although the statement named no specific law or regulation, William Green, president, remarked that he and his colleagues agreed with the business community that the excess-profits tax should be repealed, if only to "correct the state of mind" into which private enterprise had fallen.

He said businessmen continually complained to him that the Government had created many bureaus "that formulate and issue orders and regulations surprisingly and unexpectedly and that that ought to cease; that the rules of the game should be made clear and plain, and that those launching a new enterprise could be sure no new rules would crop up about which they knew nothing when they launched it."

The executive council instructed Mr. Green to submit its statement on the Nation's business and economic conditions to the Secretary of Labor and the Secretary of Commerce. Setting forth the federation's position that eventually private industry, not the Government, must absorb all who are able and willing to work, the statement continued:

"We are firmly convinced that various forms of Government spending, either in the distribution of relief or in the development and maintenance of work projects designed to supply relief wages to unemployed, can only serve as a temporary measure and cannot and do not provide a permanent solution for unemployment.

"The market for the sale of goods and service can be increased and enlarged only through the application of a sound economic policy whereby there is placed in the hands of the masses of the people a buying power which will enable them to buy, use, and consume the manufactured goods and service which private industry is prepared to supply.

"BUSINESS STIMULATION FAVORED

"This leads to the inevitable conclusion that private industry and business generally should be stimulated so that the facilities of production may be increased and millions more working men and women may be employed.

"What can be done and what should be done, therefore, are the problems which, at the moment, call for consideration and a proper solution. We do not believe that the Nation has reached the maximum in production or consumption of manufactured goods. For that reason we cannot accept the reasoning of those who maintain that we must prepare to maintain constantly an army of unemployed as the wards of the Government. We must turn to private industry for the solution. It should and must serve the Nation.

"Our national interests require that private industry be accorded the widest opportunity to do so. That involves expansion and an increase in productivity. Such action must be considered as the primary step necessary to create work opportunities for the millions who are unemployed. Obviously the next step must be the establishment of credit and the will and purpose, on the part of the owners of industry to risk, invest, build, and construct. The basis for such procedure must be found in the creation of a favorable state of mind. Fear, a lack of confidence and distrust in governmental, social, and economic procedure should be removed. A political and economic state of mind should be created which would enable all financiers and the owners and management of industry to face the future with confidence, willing to risk in the expenditure of funds for the development of industrial enterprises and in the manufacture and sale of manufactured products.

"We are firmly convinced that the realization of this objective should be the primary purpose of government, industry, and labor. Whatever stands in the way—whatever barrier may have been created, either as a result of fear or as a result of affirmative action on the part of those who administer the affairs of government, ought to be broken down so that our industrial processes may function in a proper way and unemployment may thus be overcome.

"FOR DEFINITE RULES

"Some strong, powerful, and influential representatives of private industry maintain that in order that private enterprise may go forward it is necessary that the rules and laws under which industry should operate should be more definite, clear, and understandable. This, it is asserted, would stabilize industrial conditions and would serve to release financial and industrial forces necessary to the enlargement and expansion of private industry.

"The executive council is firmly of the opinion that this issue should be met squarely. All should understand that no new rules or stipulations will be promulgated by some administrative bureau other than the rules and regulations definitely set forth in regulatory statutes enacted by the Congress of the United States. Such action will serve to help business, labor, and the people generally. Under such a plan industrial management would be accorded the

widest opportunity to render service in the solution of our unemployment problem.

"The executive council reaffirms the position of the American Federation of Labor regarding private enterprise and private initiative. We are firmly committed to such an economic philosophy. We believe that private initiative, private investment, and private endeavor in private industry should be encouraged and supported. We assert that those who invest in private industry should earn a fair return upon such investment and that labor should be paid a wage which would accord to all workers and their families an opportunity to live in decency and comfort."

Today and at a final session tonight the board cleaned up odds and ends of its midwinter agenda, but postponed until spring decision on various resolutions passed up to it by the Houston convention last October. At tonight's session Frank Morrison, secretary, making his quarterly report, said there had been a substantial increase in the federation's membership in the last 3 months. He said paid-up members were rapidly approaching 4,000,000.

Development of the Airplane

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

ARTICLE BY HON. O. MAX GARDNER

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the CONGRESSIONAL RECORD an extremely interesting article from the pen of Hon. O. Max Gardner, former Governor of North Carolina, in relation to the development of the airplane. In this article he particularly mentions another North Carolinian, Mr. Thomas A. Morgan, who is identified with that industry concerning which we hear so much at the present time in the discussion of the national-defense program.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

In America, Europe, and throughout the civilized world there is nothing of more vital concern to men and women today than aviation and its relation to transportation, national defense, and preparation for war. Last September there were millions of people paralyzed with the fear that within less than a month London or Paris, or both of them, might be as completely destroyed from the air as Sodom and Gomorrah.

At Kitty Hawk, N. C., aviation was born a little more than a third of a century ago. Just 16 years earlier, Tom Morgan was born on a poor farm in Vance County, N. C., 150 miles from Kitty Hawk. Apparently there was no relation between the birth at Kitty Hawk and the birth in Vance County. Yet aviation has made Morgan, and Morgan has done much for aviation.

SELF-RELIANCE DEMANDED

Thomas A. Morgan, president of the Sperry Corporation, is a living example of a changing world, and his achievements are an illustration of the wisdom of the fact that new conditions demand new remedies.

He was born under conditions demanding self-reliance, independence, hard work—all of which combined with good raw material in the creation of a self-made man. He was born poor, his parents were poor, his neighbors were poor, his country was poor, and his future prospects were about as dismal as poverty could plan. He never saw a college until he was middle-aged. He worked at night as an operator in a telephone exchange while striving for meager schooling in Littleton, a small town nearby.

The short flight of the Wright brothers on December 17, 1903, set young Morgan afire. He knew little about physics or science, but Kitty Hawk opened a new world for him. He saw opportunity for himself in the world of science and invention and determined to grasp for it. He closed the books and started for the sea. He had never seen the ocean, but the ocean, through the United States Navy, became his college. He joined the Navy as an apprentice and served for 4 years. In the Navy he went through the electrical school, specializing in radio. He was on the U. S. S. *Delaware* when Dr. Sperry installed his first gyroscope compass. Morgan lived with this compass until he learned everything about it. He was graduated from the Navy with the rank of chief electrician.

JOINED DR. SPERRY

Morgan left the Navy and joined Dr. Sperry. Within several years he had come through engineering, manufacturing, sales to the presidency of Sperry. His company concentrates on development of devices and instruments of precision that world aviation demands. Morgan loves an airplane with the same devotion that Evie loves her horse John the Baptist.

A few years ago Morgan reorganized Curtiss-Wright and lifted it from the red. He served for 4 years as president of the Aeronautical Chamber of Commerce of the United States. He is chairman of the board of five other corporations. He was appointed by Grover Whalen as chairman of the advisory committee on aeronautics for the world's fair. It is a far cry from a poor tobacco farm in North Carolina to the head of a great corporation in Rockefeller Center.

I regard Tom Morgan as one of the greatest living North Carolinians. He is more than this. He is a great American. His life is a shining example to thousands of young Americans who are willing to take the hard way.

What Does Democracy Mean?

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

RADIO ADDRESS BY EDWARD STAFFORD

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Edward Stafford over the radio, entitled "What Does Democracy Mean?"

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Democracy means more than is indicated by its derivation—the rule of the people—though that meaning alone is enough to endear the term to the hearts of all mankind. It means the right of the common man—the obscure, unknown citizen—to live his own life, make his own way, form his own opinions, vote his own convictions. Because of these inestimable blessings which democracy endeavors to secure for even the humblest and most ignorant member of the body politic, citizens of democracy in times of stress have nearly always proven themselves devoted sons of the state. The totalitarian doctrine is the sacrifice of the individual to the perfectly efficient state. But, to paraphrase a very high authority, the doctrine of democracy is that the state was made for man, not man for the state. Therein is the distinct cleavage between two theories. It has been truly said that, except only his faith in God, the state is the most sublime conception of mankind; but man is more important than any of his conceptions.

Democracy means the whole-hearted, genuine effort of the members of a community as a whole to perform with efficiency the tasks of government. From its very nature, it is incapable of reaching perfection; yet perfection is always striven for by succeeding generations. No one should deceive himself with the false hope that democracy can be made into a perfectly efficient government. It is not built for efficiency; it is built for safety throughout. We have all seen within our recollections in England, in France, in America, men who, if given absolute power in their respective states, could have gone forward within a few years to a point which the struggling peoples may not attain for another century. But not even the loss of these dazzling possibilities will cause us any regrets when we consider that they would in all probability have been secured at the cost of our children or our children's children finding themselves enslaved beneath a power still absolute, still brilliant, but no longer enlightened.

Critical references have recently been made by totalitarian leaders to England, France, and the United States as the herd democracies. While the designation was meant for a sneer, the characterization is not altogether unhappy. The herd has a leader whom it follows. It is led from within itself; it is not driven by one of its own. The leader in a democracy must have the confidence of the community. When he no longer enjoys the trust of his fellows, he is replaced by another. The remedy in a democracy is a change of leaders by peaceable means, not the exile or murder of those who differ with the leader. Democracy's great leaders alone are its justification. They are elemental, racy, perfectly adapted to their time, to their environment, to the necessities of their state. Edwin M. Stanton was telling the story of democracy's achievement when over the bier of Abraham Lincoln he said: "This was the greatest ruler of a free people that the world has ever seen."

Democracy means the other end of the gamut from a totalitarian state, whether topped by tyrant, emperor, directory, or leader. It means the broad sure foundation of the trust of the average man in his own institutions, the existence of the state for the benefit of mankind, not the enslavement of mankind for the glory of the state. It does not mean complete tranquillity and calm submission to all authority. Its only safety is in constant

agitation. "If the Alps, piled in cold and still sublimity, be the emblem of despotism, then the ever restless ocean is ours, only pure because never still."

The real demonstration of democracy is the safety at all times of unpopular minorities, whether hated racial or religious groups, or intensely offensive bands of political fanatics. Democracy means that so long as they do not seek to overthrow the civil authority by force, these minorities are at liberty to advocate their theories in speech, in writing, in political canvasses, to convert as many to their ways of thought as their arguments can win over, unmolested in their lives, their liberty, or their property even by an overwhelming majority of their fellow citizens or by the state itself.

Democracy means, above all else, the hope of the common man. If it were wiped from the face of the earth, the dull despair which would descend upon the world is quite beyond our comprehension. It is the only way of life for a people who believe in the possibilities of all citizens and who profess the Christian religion. It cannot be otherwise since the founder of that religion shed his beneficent light upon mankind from the workbench of a carpenter in a remote corner of a vast empire and found his mightiest advocate engaged in the making of tents not many miles away. Within a single generation these two workmen changed the course of history and after nearly 20 centuries their work lives and grows in the souls of men. Democracy means the spirit shall always be present among the lowliest to aspire to the highest things, because the future of each is for himself to make, not for the state to make.

For those born in its sunlight, and nurtured under its protecting care, it is difficult to speak with restraint of democracy's priceless blessings or of its glorious meaning, when, among nations gone half-mad its very existence seems threatened. It is "The prophetic soul of the wide world dreaming on things to come."

Birthday Anniversary of Susan B. Anthony

EXTENSION OF REMARKS

OF

HON. LYNN J. FRAZIER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

STATEMENT BY MRS. CAROLINE L. BABCOCK

Mr. FRAZIER. Mr. President, yesterday was the anniversary of the birth of Susan B. Anthony. I ask unanimous consent to have printed in the RECORD a statement on the life and work of Susan B. Anthony by Mrs. Caroline L. Babcock, campaign secretary of the Woman's National Party of Washington, D. C.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Today all over the United States women are meeting to commemorate the birthday anniversary of Susan B. Anthony, to whom every woman who holds a job, who goes to college, who is a doctor, lawyer, scientist, professor; every mother who has equal guardianship of her children; every woman who controls her own property, her own wages; every woman who votes or holds office, owes a debt of gratitude which never can be repaid.

To give the younger generation of men and women some comprehension of what this woman accomplished in a lifetime, I will sketch briefly her career and tell you something of the times in which she lived. Susan B. Anthony was born February 15, 1820, in the small New England town of Adams, Mass., where her father owned a cotton mill. Later the family moved to western New York, and in Rochester Susan spent most of her young womanhood and old age. The Anthonys were people of liberal minds and Susan, their brightest child, was given as good an education as girls usually received in those days. This was less than a child now receives in the fifth grade of a public school, and when Susan demanded to be taught long division and algebra she had to find a private tutor. When she was 17 her father lost all his property in the panic of 1837, a depression as long and as terrible as we are now enduring. Teaching being the only job open to girls of her social class, Susan became a teacher, and her first indignation against the degraded position of women was when she found that she had to accept $2.50 a week for doing work for which a man was paid $10 a week. She also discovered that the little money she earned was not legally her own, if her father chose to claim it, which happily Mr. Anthony did not. She found, when she looked about her, that women were practically enslaved. After a girl married until she died or was widowed she was under the absolute control of her husband.

A married woman could own no property, even if it were inherited or a gift. If she worked—and many women did work, sewing, washing and ironing, taking boarders—her earnings all belonged to her husband. Worse than this, she had no control over her children, for they belonged by law to the father. A man could give his children away; could even will an unborn child to his family or strangers. A married woman could not testify in courts of law; could not sue or be sued. She could not make a will giving away even her personal effects. No woman, married or unmarried, had any way of protesting against such injustice, for women were barred from public platforms, and whoever wrote on the subject was practically ostracized by society.

Susan B. Anthony broke the first taboo by daring to speak at a convention of the New York State Teachers' Association. No woman had ever asked to be heard before; but the men, by a majority of one, voted that she might speak. After that she made speeches advocating the most modern ideas in education, the admission of girls to high school and college, coeducation, promotion of women teachers to higher positions, equal pay for equal work, and, above all, equal educational opportunities for children regardless of sex. People flocked to hear her speak; but a man of prominence once said to her, "Miss Anthony, that was a fine address you gave, but I would rather see my wife or my daughter in her coffin than to hear her speak as you did before a public assembly."

Until she was past 30, educational reform occupied her entire attention outside of the schoolroom. But in July 1848 there was held in the village of Seneca Falls, N. Y., the first woman's rights convention in the history of the world. Susan did not attend the convention, for as yet she did not know Elizabeth Cady Stanton or Lucretia Mott, the two great women who called it together. But Susan read of the convention and its proclamations of the freedom of women and she heartily approved. In the early 1850's she met Mrs. Stanton, and from that time on the two women worked together in the closest friendship and harmony. They wrote speeches together, traveled, lectured, organized and called annual conventions. Until Mrs. Stanton's death in 1902 they were inseparable and their names are forever linked together in the woman movement.

No modern woman can faintly imagine the difficulties and the hardships those pioneers had to endure. They were ridiculed, abused, insulted, denounced by the newspapers and from the pulpit. Often they were turned away from hotels and rudely denied halls in which to speak. Yet they kept on, converting women throughout their State, getting petitions to the legislature for better laws, and in 1854, by sheer persistence and force of character, they succeeded in introducing into the legislature a bill providing for full property rights for women, control of their wages, equal guardianship of children, and many other rights, including the right to vote. Of course the bill was rejected, the horrified legislators quoting Scripture to prove that God did not intend that women should ever have any kind of equality with men. But Susan told them that she and her associates were prepared to come before them every year until they died or until the bill was passed, and she started out at once to get more names on new petitions. Mrs. Stanton had a family of young children, but Susan was what was then called an old maid, so she was free to travel, and by slow trains, stagecoaches, hired carriages, and sleighs, winter and summer, she visited every county in the State. She had no money, but her father, then a salaried man, helped her all he could, and for the rest Susan had to depend on collections taken up at her meetings. The result was that in 1859 the New York Legislature actually passed a bill giving women almost complete control of their property and wages, and partial control of their children. It was the first women's bill of rights, and marked the greatest advance in the status of women that the world had ever seen. But Susan was not satisfied, since many rights, including the right to vote, were still withheld.

Susan saw that what she had to do was to change the mind of the whole Nation in regard to the position of women and bravely she set herself to do it. Perhaps in the beginning it was hardest to change the minds of women. A married woman with a comfortable home, a good husband, a secure social position, and all the spending money she wanted could not know, as Susan did, that women without good husbands, or without any husbands at all, needed the protection of the ballot. Protected wives knew nothing about the great army of working-class women who needed education, training for skilled trades and professions, needed even more opportunities to enter the world of business on equal terms with men.

As the years passed women by the thousands and millions became supporters of woman suffrage. Girls went to college, studied medicine, law, science. Practically all trades and professions were invaded by women. The invention of the typewriter and the telephone increased their importance in the world of business. But Susan's great objective, women's citizenship, seemed as remote as ever. By 1890 woman suffrage was no longer exactly laughed at, but few people really believed that it would ever be attained. Susan knew that it would be. She saw how the world changed since her childhood, and she wished it to be. She who in her youth had been insulted, abused, pelted with decayed vegetables and rotten eggs for daring to advocate votes for women, in her ripening age was one of the most famous and best beloved of women in the United States. In Washington she was honored as a guest at the White House, though no President would ask Congress to pass a suffrage resolution. When she traveled abroad she was entertained in kings' palaces. Queen Victoria, who opposed all women's rights, received her at Buckingham Palace. In Berlin the Kaiser and his Empress honored her. To women all over the world her name was a symbol of hope and encouragement.

Those men and women today who are working for social ideals, and who are often weary and heartsick because their dreams are not immediately realized, would do well to study the life of this woman,

who never grew weary, never lost faith, never stopped, working even into extreme old age. At 70 years of age, 75, 80, and beyond she continued to travel all over the United States, lecturing, organizing, taking part in every losing State campaign for woman suffrage. She welcomed the four western States that in her lifetime gave women the vote, but she always believed that women's enfranchisement should be written into the Constitution of the United States, and toward that end she worked until she died. At 83 she was in Berlin helping to organize the International Woman Suffrage Alliance. At 86 she attended in Baltimore a convention of the National American Woman Suffrage Association, February 15, 1906, and appeared for the last time at a birthday party given in her honor, ending her speech with the challenging words, "Failure is impossible." She went home a dying woman, and on March 14, 1906, her burning spirit fled from her frail body and soared to those regions of light and happiness that are waiting for the good and the brave of this earth. Her work was not in vain, for 14 years after her death, in November 1920, American women went to the polls free citizens in a free republic. They voted first in a national election in the centennial year of Susan B. Anthony's birth.

Lincoln Day Address

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN, FEBRUARY 10, 1939

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the RECORD an impressive Lincoln Day speech, delivered at Fairmont, W. Va., February 10, 1939, by the able Senator from Wisconsin [Mr. WILEY].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I want to thank you for this cordial, this West Virginia welcome. I am very happy to be with you today.

It is an added pleasure to speak to this audience in tribute to the memory of Abraham Lincoln.

All over this land tribute is being paid to this great American. In the South as well as in the North, on the Pacific coast and on the Atlantic coast hearts are lifted in memory of "his life's meaning."

Recently it was my privilege to enter the Lincoln Memorial which houses the log-cabin birthplace of Lincoln near Hodgenville, Ky. As I stood looking at this humble log cabin time was turned back. Here in this very log cabin on February 12, 1809, Lincoln was born; and out over the hillside, where I subsequently wandered, and down to the spring, the little Lincoln walked and played.

Mount Vernon and this log cabin are the two great American shrines. On the occasion that I visited these places for the first time I was overcome with a feeling that I was treading on holy ground.

What made Lincoln great?

Edwin Markham answers it this way:

> The color of the ground was in him, the red earth;
> The smell and smack of elemental things;
> The rectitude and patience of the cliff;
> The good will of the rain that loves all leaves;
> The friendly welcome of the wayside well;
> The courage of the bird that dares the sea;
> The gladness of the wind that shakes the corn;
> The mercy of the snow that hides all scars;
> The secrecy of streams that make their way
> Beneath the mountains to the rifted rock;
> The underlying justice of the light
> That gives as freely to the shrinking flower
> As to the great oak flaring to the wind,
> To the grave's low hill as to the Matterhorn
> That shoulders out the sky.

Lincoln was a growing soul. In response to something within him he sought a larger, freer, nobler world of thought, of ideas. He didn't remain where birth placed him. He had commerce with far horizons.

One fine thing about this great American was that he never conceded defeat. He felt the drive and urge within him which evolved into the dynamic of a great purpose. As a politician he has quite a record as a failure. When he ran for the legislature as a young man he was badly defeated. Later on he ran for Congress and was badly defeated. He failed in his trial to get an appointment to the United States Land Office. He was a candidate for the United States Senate and was badly defeated. In 1856 he was a candidate for the Vice Presidency and was again defeated. In 1858 he was defeated by Douglas for the race in the United States Senate. But in the face of all these defeats and failures, coupled with his failure as a man of business, he achieved the highest success attainable in life.

One cannot study the life of this great character without arriving at the conclusion that he was led to the uplands of his success by a great vision. He knew and obeyed God. He had a divine chart as a path for his life, and he dedicated his powers and his pilgrimage to the common good of mankind.

Lincoln possessed faith. Especially was this true after he had been elected to the Presidency. With some of us it might be well to realize that Lincoln was the result of growth. Year after year made its contribution.

Several weeks ago I had the privilege of attending a great play in New York City, Lincoln in Illinois. Raymond Massey portrayed Abe Lincoln. See this play if you can and you will realize that out of the trials and tribulations, out of the successes and defeats, out of the experiences of living, this man developed and grew. I want to say to you leaders—and that is what I hope I am addressing myself to—leaders of men, men who think and grow—I want to say to you that this play as acted by Raymond Massey is a graphic portrait of the fact that as long as there is life in a human being there is constant opportunity for that individual to "go places," to build himself into a big, serviceable character, to do things in a big way. Massey pictured Lincoln as a young man who hungered after knowledge, but who was lazy, who lacked ambition, who was strong physically and mentally, but who seemed to lack the urge to do things. Then, something happened to Lincoln. Certain things took place. He married a woman who was ambitious, who had faith in him, who drove him, and he came in contact with ideas that aroused him from his dormancy and set him in motion toward the White House.

Yes; he was impacted by certain ideas.

Some years ago I developed a talk on the subject of the impact of an idea, and in that talk I related the incident that emphasizes very well what I am talking about now. Lincoln had come off of the circuit and stopped in a friend's house. He had been riding his horse most of the day. He was tired, and he took a chair in the corner of the little room, and his long legs stretched out into the center thereof. It was near bedtime. One of the children said, "Father, it's my turn to read tonight." In those days they had only one book, and that was the Bible. It was a privilege to read. And this youngster opened it up and read therefrom, the saying, "A house divided against itself cannot stand." Lincoln felt the impact. He asked the young lad to read it over again. And Lincoln was heard to say, "A house—a State and Nation, divided against itself cannot stand." The point I am making is that within 6 years after this experience he was the President of the United States.

You and I have had similar experiences. We have heard phrases that were meaningless to us, and then, all at once, the light that was there always we beheld. Yes; Lincoln was a thing of growth.

Lincoln had another quality that we need so much. He had conviction. He saw the absolute need of national unity. With his seer's eye he scanned the future, and he saw the America of today. He knew the need of these 48 States being one Nation. In his approach to the solution of problems he saw the imperative need of maintaining mental perspective. In other words, he knew how to get above the problem and look at it from every angle. He was close to God. He recognized something of the true meaning of "In Him we live and move and have our being."

On a day like this, we should not stoop to petty politics, but we should discuss the larger politics. Lincoln realized that the well-being of the Nation depends upon the clear thinking of the individuals who constitute the Nation. You and I as leaders in thought—leaders in the field of economic and political thinking—can profit much from this backwoodsman who knew that to think defeat brought about defeat, and who knew also that God was on the side of men who did right.

If there is one thing in life that provides a thrill to me it is to watch a human being come to life, awaken, to see him break his narrow shell and grow in the consciousness of power. Lincoln was such a man. He broke the petty bonds of limitations that held him. He released himself from the prison of small thinking and small living. He recognized that he "of himself could do nothing," but that with God, Who was his constant companion, he could do anything that was right for him to do.

Thus he plucked a thorn and planted a flower. He caused in human beings the hardness to vanish, the pettiness and the cynicism to depart, and in their place he planted flowers of strength and power, sympathy, love, and faith.

And who was this Lincoln who so profoundly affected our America?

He tells us himself he was born on February 12, 1809, in Hardin County, Ky., of undistinguished parents. His mother died in his tenth year. His grandfather in 1781 moved to Kentucky and was killed by the Indians. He said of himself, "I was raised to farmwork until I was 22. At 22 I came to Macon County, Ill. Then I got to New Salem, where I remained a year working as a clerk in a store. Then came the Black Hawk War and I was elected captain of a volunteer company. I was defeated for the legislature, but ran the next year and was elected. During the legislative period I studied law and moved to Springfield to practice. From 1849 to 1854 I practiced law."

That is his own picture. There was no cradle for this babe when he was born, but there was mother love, the mother love that inspired him to say in his Cooper Institute speech, "Let us have

faith that right makes might and in that faith let us to the end dare to do our duty."

Speaking of his mother, he said, "My earliest recollections of my mother is sitting at her feet with my sister drinking in the tales and legends that were read and related to us."

And to him on her deathbed this mother said, "I am going away from you Abraham, and I shall not return. I know you will be a good boy, that you will be kind to Sarah and your father. I want you to live as I have taught you to and to love your Heavenly Father."

And Lincoln said of her, "All that I am or hope to be I owe to my angel mother."

This Lincoln of the backwoods, of the prairie, of the legislature, of Washington, used the past not as a chain but as a challenge. He was loyal to it. He cherished it, but he recognized also that the landmarks of the past were not alone sufficient to point the way for the present or future. In his address to Congress on December 1, 1862, he said:

"The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. As our case is new, so we must think anew and act anew. We must disenthrall ourselves, and then we shall save our country."

But this Lincoln also realized that the past with its proved values should not be thrown into the discard. In his Cooper Institute speech on February 27, 1860, he said:

"I do not mean to say that we are bound to follow implicitly in whatever our fathers did. To do so would be to discard all the lights of current experience, to reject all progress, all improvement. What I do say is that if we would supplant the opinions and policy of our fathers in any case, we should do so upon evidence so conclusive, and argument so clear, that even their great authority fairly considered and weighed, cannot stand."

Lincoln then to us of this period would give this direction: "Conserve all that is good and true and beautiful in the past, but remember you cannot live on the spiritual capital of your forefathers. Every generation advances or retreats. If you are to be true to the America of your day as we were of our day, you must be a spiritual pioneer. You will clear the highways of America of the driftwood and the debris accumulated by the preceding generations, but you will not destroy the highways."

No man has had as great an influence upon the life of America since 1860 as this man.

Amid the noise of national tumult, he spoke:

"A house divided against itself cannot stand. I believe this Government cannot endure permanently, half free and half slave. I do not expect the Union to be dissolved. I do not expect the house to fall. But I do expect it will cease to be divided."

He spoke on the great issue of slavery which was dividing this country.

He possessed power because he spoke the truth. What would Lincoln say today about those who are inciting capital and labor against one another? What would be his position on the perverted theories of government that are plowing roughshod through and over the American concept of government of his day?

What would he say to the use of the public purse not only in undermining the self-reliance of the citizen but to control the vote of the electorate?

What would he say to the situation where the Government has spent $25,000,000,000 for relief and finds as many unemployed now as when it undertook to cure that situation?

Would not this great man again deliver a house-divided-against-itself speech?

Can you not see that great figure reaching forth his long arm and with the light of conviction in his eyes say:

"I believe this democratic Government cannot endure permanently democratic in principle if these actions are persisted in. I do not expect the Union to go Fascist or Communist. I do expect it will cease to be led by those who possess these perverted theories of Government. The people have been fooled long enough. Their eyes are being opened. They see that industry and business are being restricted by men who are "theory ridden," that labor does not profit by such restriction.

"We need intellectual honesty in Government. Let all the truth be told. Let Government itself cease from propaganda. Let Government set an example in fair dealing and in maintaining its contracts. Let those in high places serve all the people and stop stirring up hatred between groups.

"Let the business of government be to allay unrest and not to create it. Let it harmonize the conflicts of interests that exists in all human relations instead of widening the area of strife and sowing new seeds of dissension. Let it not rest in its effort to compose the quarrels in industry and labor, get rid of untested doctrines and inflexible rules of procedure by replacing them with common sense, knowledge, and experience. Let Government cease dividing its citizens into groups and let Government cease from becoming a partisan. Let the workman and the employer be taught with the rest of the citizens, that they are riding in the same boat, that it pays to pull oars in unison, and doing this will insure the boat from going on the rocks and will preserve our national and individual livelihood.

"Then will government function for the benefit of all and we will have returned to the tested wisdom of history."

Lincoln never called names. There was a bigness about him, composed of gentleness and charity and firmness. Within his soul rested earnestness, sincerity, and candor. If he was wrong, he admitted he was wrong. The great always possess humility.

Lincoln was not a state paternalist. He did not believe in the totalitarian state or the collectivist notion of government. The fact is that in 1860, when Lincoln was elected, the Republican Party in its platform recognized that it was un-Jeffersonian, un-Republican, un-American to impose upon the States a dictatorship from Washington—a centralization of power in Washington. Progress must come through a greater emancipation, not through centralization of authority.

Lincoln in his Gettysburg speech spoke of a government "of the people, by the people, and for the people," not a government of, by, or for a class.

In this same speech he said, "It was for us to be dedicated to the great task that this Government shall not perish from the earth—this Government of, by, and for the people." Shall we dedicate ourselves to this task?

This same Lincoln was a student of history. He knew the story of the birth of this Republic, and he knew that the great Civil War was a test whether "this Nation, conceived in liberty, could long endure"—if it were divided.

When the South was on her knees and the North was triumphant, there were those who thought only of revenge, but Lincoln spoke with the wisdom of the ages. He knew that love alone could heal the sores of disunion, and instead of hanging the leaders of the South he said, "We will hang onto them."

It was "with malice toward none, with charity for all," that he was ready to approach the reconstruction days. If that same spirit would emanate from our leaders, we would solve our problems today.

Bias and prejudice and fear befog the vision.

"Without vision the people perish." Yet, with Lincoln, I feel that "The mystic chords of memory stretching from our noble as well as our mistaken efforts of the past to every living heart and hearthstone all over this broad land will yet swell the chorus of America when again touched, as surely they will be, by the angels of our better nature."

"The angels of our better nature" will show us how to get rid of public charity which the politician has exploited to the nth degree—by showing us how to get rid of the idea that the State will and can settle all our worry and provide the magic touch to solve our troubles.

"The angels of our better nature" will also decentralize government and bring to us again the American idea—getting rid of the overlordship of the State.

These same angels will teach us, as Lincoln was taught, that progress does not consist of flighty ideas, mere change—that progress can never be accomplished by idleness, wastefulness, mere preachments. Rather, progress in a man's work and in the work of a nation comes from labor, honesty, and fair dealing.

"The angels of our better nature" are now showing us that "Europe's try" at centralization of power under fascism, nazi-ism, and communism provides no remedy for our problems; rather, our partial trial of some of that same medicine has brought us to our present impassé.

As with Lincoln in his day, so we in this day would not turn the hands of the clock back.

While critical times are upon us, we would not let the unemployed down, but we would try to build jobs, building up the industry of America by begetting confidence—confidence in government and confidence between government and its citizens.

It was Lincoln who said, in relation to political tactics that were being used, "You can fool some of the people all of the time, all of the people some of the time, but you cannot fool all the people all the time."

Back in the consciousness of the people there is level-headedness, there is a sense of squareness, and this people know that in the last hundred and fifty years it was the dynamic of business and labor that built this America of ours. Here men carved out on this Western Hemisphere a nation where the downtrodden peoples of the earth found sanctuary and opportunity; here labor, initiative, invention, and business built cities with towering skyscrapers, built farms and homes, and great industries; here was created a standard of living and greater happiness and prosperity finer than the world ever knew before; here there were no castes; here the humblest could rise from obscurity to the loftiest place in the land, providing he possessed industry, character, ability.

In spite of the apprehensiveness of many people, especially the fear of millions of businessmen in this country of government, I personally feel that we have a right to expect a change in conditions, and one basis for justifying this faith—and it is not a faith simply built on sham optimism, or mere blind trust without any foundation—is the important fact that businessmen and workers are rallying to a standard, they are becoming articulate, they are recognizing that the business of government is their business, they are saying "this is my city, my State, my country which my forefathers helped build and establish, and by the grace of God no combination of men or circumstances is going to ruin the same."

Lincoln saw this country as a whole.

He was big in mental stature, big in mind and soul. In the words of Isaiah, "He lifted up a standard for the people."

How he loved our America with her democracy, her American ideals, her opportunities, her freedom of worship, her lakes and rivers, her wide open spaces, her mountains and valleys—her people.

Yes; he lifted up a standard for us all.

And when I think of Lincoln, I think of—

"MY COUNTRY

"My Country, there she stands—
Expectantly, confidently facing the future.
From many lands have come her brood,
And under her wings she has taken them.
Shepherdess of many flocks,
On guard she stands to protect her own.

"Unafraid she surveys the world.
There is in her eye the look of one who has suffered much,
But grown strong.

"Again and again she heard the cries of her children,
And war came and went.
And Freedom, threatened but triumphant, perched upon her shoulders.
Dark hours came, and through it all a lifted brow—
Hopeful, triumphant—showed itself to the wondering world.
And now, strong, courageous, and beautiful,
She stands fronting the future.

"Accepting the challenge the future holds,
And vowing nothing is impossible for her and her brood,
She confidently awaits the dawn.

"And now she bids her brood conquer again,
Not with sword and fire,
But with the great spirit of peace.

"And over all this great land
In the hearts of men—hope and courage and strength return.

"Oh, my Country—
Emblem of man's mastery,
Symbol of man's accomplishments,
Leader of men
To that great goal
Where man shall be free—
Free of hatred and of strife.
We of this generation pledge, like the Greeks of old,
'We will transmit unmarred to our children
The freedom and democracy we have received.'"

We are standing at the border of one of the great periods in history. Through the Gethsemane of our yesterdays we hope to ascend the Mount of Vision tomorrow. It is true that many of our cherished ideas are fading from the sky and we grope in the dim light. Strange concepts in government, in economics, have come into being. Many of our established ways are lost, and up ahead the road seems to go in many directions, and doubt and perplexity come to bewilder our senses. But I say to you with conviction, a conviction that will not down, that the dawn is up ahead. Some of us can perceive the first dim light, and we are impelled to break through the mist of doubt and fear; and in doing that we come to see we have only been on a detour. We will soon be back onto the beaten path. In this dawning light we know that tremendous forces are in operation. Great ideas are in conflict. We seem to feel the impact as of clashing armies.

In the dim light we catch the voices of those who would tear down. We sense that not only government but the church is attacked and besieged and betrayed. In government, partisanship reigns supreme; because of government we see industry and business trodden under and fearful, and shackled, and across the water comes the hiss of a dissolving Europe.

And yet I say to you, above it all can be heard the heartbeat of America—unafraid, undismayed, holding fast to the verities that the ages have demonstrated to be real, standing fast by the Bill of Rights, the Constitution, and the church.

When the great Lincoln fell, America heard the voice of Garfield, who said, "God is in His heaven, all is well with the world." The poet says that life has meaning and to find its meaning is our meat and drink. You and I can find it by being heralds of the dawn, by pointing the way that leads to national bigness—the way of honor and safety—through the perplexing problems. You do not have to be in a position of trust to point the way. Become a landmark to rally the people, to see the need of thinking straight in the defense of their liberties, revitalize the ancient patriotism that was always America's, so that the people will cry aloud to be led against the enemies of our American concepts. The problem of the farmer, the problem of the businessman, and youth looking for an opportunity for home and wife and babies, the problem of the unemployed, the problem of dealing with our foreign brother—they are all yours to grapple with, to meet and master. It will be for you to decide whether this Nation of 130,000,000 people can keep its balance, or whether it will go overboard, whether we shall continue to govern ourselves, or, like Europe, ask that others loot us of our great freedoms and regiment us into a herd. Yes; I admit the responsibility is tremendous, it is challenging—but, oh, it is great to be alive in a period like this; and I say to you that liberty shall not be lost. You will maintain it. If you only knew it, you were born to meet this great challenge.

At Thermopylae 10,000 Greeks on bended knee, 2,000 years ago, looked up and saw the Persian horde approaching, and then swore that they would transmit to their beloved Greece the freedom of Greece unmarred and untainted. You and I stand at the American Thermopylae today. Aye, more we stand at the Thermopylae of the world. This Government carries the hopes of the human race. Dash out the lights and the world is, indeed, adrift. Keep the lights burning—we have a democracy here—and when the fitful fever of Europe is over, when the people over there have once more gotten their balance, when they have learned that war and hate, murder, and rapine solve no problems, then with the lights of the Republic burning they will turn their weary bloodshot eyes to us for succor and aid.

I speak to you of the greatness, the majesty of the mission that stretches out before each one of you.

A psychologist has said that man only uses 10 percent of his power, physical, mental, and spiritual—that there is a dormant 90 percent, which if aroused—well, what couldn't we accomplish? What is the remedy?

You know we have been philandering around with a lot of false but apparently attractive ideas. We have been tinkering so much that history will record our day as the tinkering age.

Our great Supreme Court said of America: "This is an indissoluble Union of indestructible States." Yet with the increasing tendency to concentrate in the Federal Government more and more power—that belongs to the States—and to create in the Federal Government powers that should be left with the people, we are traveling in the way of fascism and nazi-ism. But you ask for the medicine. Well, there is no magic formula, as the last 6 years have demonstrated. But we had better stick to our principle of local self-government. We had better build the individual again, and build the morale of a nation. And in doing this we are not weakening the Government in Washington, we are strengthening it.

In this last election in my own State I traveled 17,000 miles; I learned to know and love Wisconsin as never before. It would not hurt if we had a "good shot in the arm" of old-fashioned patriotism—the patriotism that makes a man love his home, city, State, and Nation. Aye, makes him love the soil he stands on, where lie the mortal remains of his parents, the cultivated broad acres, and the pleasant valleys, the wooded hills, the brooks, rivers, and lakes.

Love of country, love that is deep and abiding, that makes a man want to grow and leave behind his outworn shell of yesterday. Love that follows him through the busy day; that attends him when on bended knee he bows to his Maker and asks for guidance and direction. This love is not narrow and unkind. Do you know, folks, there are many people who have never had the experience of feeling this thing called patriotic love of country? This is due largely to a lot of false education and propaganda, due to a cheapening process of the real values of life. If you want to exalt yourself, then go onto the heights and know and sense your obligation to the present and the Nation. Teach yourself to be self-reliant, self-respecting—a son of God dwelling in America.

"America, 'tis of thee I sing,
Sweet land, sweet land of liberty."

Teach yourself to be self-sustaining—a builder and a sustainer of the State.

Then, truly, we shall be a "government of the people, by the people, and for the people," and we shall have a nation "that shall not perish from this earth."

Legislation Affecting Wheat and Corn

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

ADDRESSES BY HON. SCOTT W. LUCAS, OF ILLINOIS

Mr. TYDINGS. Mr. President, on December 13, 1938, at the annual convention of the American Farm Bureau Federation, held in New Orleans, La., the junior Senator from Illinois [Mr. LUCAS] discussed legislation affecting two basic commodities, namely, wheat and corn.

Last Saturday, on the American Farm Bureau Federation program over a national radio hook-up, the Senator from Illinois discussed legislation affecting the corn farmer in the commercial corn-producing area in America.

Mr. President, I ask unanimous consent to have both speeches printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. SCOTT W. LUCAS, OF ILLINOIS, AT THE ANNUAL CONVENTION OF THE AMERICAN FARM BUREAU FEDERATION AT NEW ORLEANS, LA., ON TUESDAY, DECEMBER 13, 1938

It is heartening to be among men and women who so truly typify the spirit of American agriculture. And I assure you that I am

grateful for the privilege of addressing leaders of American agriculture who believe in the philosophy that the American farmer is entitled to equality before the law.

Coming from every section of our land and representing every type of agricultural commodity produced from American soil, your presence and activities in this annual convention of the American Farm Bureau Federation are visible proof that there prevails in these modern days a pioneer spirit of perseverance along with an intellectual leadership that will go far in helping solve the farm problem of this Nation.

Today, as of yesterday, our greatest need in the solution of this problem is unity—unity of thought, unity of aim, unity of action, and unity of plan.

That such unity is difficult to attain cannot be denied, for ours is a vast Nation embracing a complicated agricultural problem. Hardly one among us can comprehend the scope of American agriculture. It taxes the limits of the imagination to visualize a land wherein more than a billion acres are tilled and where more than 200 agricultural commodities are produced under all conditions.

We must remember, as well, that the masters of this bounty are human beings and that wherever humans toil human nature is a predominant factor in arriving at any common goal. Between the oceans and our borders are dairymen, corn farmers, cotton producers, tobacco planters, wheat growers, cattlemen, truck gardeners, and countless variegated interests, each seeking an economic foothold. It is inevitable that out of this welter of interests there should be some cleavage of opinion as to what is best for all agriculture and for our Nation.

Notwithstanding the opinion of the Supreme Court to the contrary, you and I know that our farm emergencies are national in scope and can be dealt with only on a national scale.

When I say our greatest need is unity of thought and action, I mean we must adopt, and stand by, an integrated plan wherein the best interests of all are placed above the specious, selfish interests of any one section of our country. This, of course, means compromise—but I say it is better to compromise in behalf of a united national program than to allow our national welfare to be jeopardized by stubbornness and selfishness.

Thinking farmers everywhere realize this. It is the minority of dissenters who either do not realize this fact, or, realizing it, refuse to accept their responsibility to cooperate for the good of the whole. They are the type who give little or no thought as to what may happen to them tomorrow.

In my opinion one of the most helpful things that can be accomplished by the American Farm Bureau Federation, or by any other organized agricultural group, is the dissemination of honest information concerning those who selfishly or ignorantly oppose any farm plan. Tell your neighbors to be wary when propagandists try to make it appear that one section of our Nation is pitted against another section, or that one agricultural interest is the natural enemy of the other. Tell them that when one of these so-called "protest" organizations springs up—and they usually come into full bloom just prior to an election—to examine the purposes and investigate the background of the officers thoroughly before endorsing it. They probably will find that the same groups which have fought every farm plan for the past decade are sponsoring them, and they probably will find, also, that the organization is usually active only during an important political campaign.

It is essential that the farmers of the land understand that we're all in this economic battle together, that the surest way of reaching our goal is for agricultural interests to maintain a united Nation-wide front.

As one who has been invited to speak on behalf of the corn and wheat farmers of the West and Midwest at a meeting of the American Farm Bureau Federation in this metropolis of the deep South, I think I can give an example of the way that propagandists work to tear down national unity among farmers. There have been charges made that the people of our section of the country are opposed to certain proposals made by southern agriculturalists.

Now, I believe I echo the opinion of the thinking farmer of my section of the country when I say that he believes it fitting and proper that those sections of the 1938 agricultural bill which concern cotton and tobacco should be prepared and administered by cotton planters and tobacco growers. They should work out their own program, ever keeping in mind, of course, the broader objectives of the entire national program.

In my opinion, the thinking farmer of the West and Midwest has no objection to the plan under which the cotton-producing areas of the South cultivate more acres of corn for feed, raise more pork for home consumption, and increase milk production for local needs. The midwestern farmer conversant with such conditions realizes that these commodities, in such small amounts, could not have any appreciable effect upon the commercial markets in which the corn, wheat, and dairy farmer of the Midwest is primarily interested.

Naturally, the midwestern farmer, with his generally higher land values, rentals, and labor costs would have, and would make, a vigorous protest should these commodities be produced in the South to the extent that they compete seriously in commercial markets.

Likewise, I believe the thinking farmer of the cotton South realizes that mandatory loans, such as those which I helped write into the law on behalf of corn, would not be applicable to cotton. Corn is a seasonal crop and 85 percent of the total production is consumed in America. When mandatory corn loans were placed in the agricultural bill, other safeguards were added to the law which protected both the Government and the corn farmer by making certain that surpluses would not glut the market and depress prices, thereby jeopardizing Government credit.

It is obvious that cotton is an export crop to a much greater degree than corn and therefore largely dependent upon the world price rather than the domestic price.

It is essential that farmers of one section of the land play fair with farmers of another. In other words, the dairyman, the corn and wheat producer, and the hog raiser of my part of the country are anxious that the cotton and tobacco producers make a reasonable profit on their crops so that the southern farmers will not invade the fields of dairying, corn production, or hog raising in order to make a living. Obviously, there should be no encroachment by one section upon another, and we of the corn and wheat sections will willingly and cheerfully cooperate with the cotton and tobacco sections of the South to the end that all basic commodities of America will have equality before the law.

I think there is a general agreement among all farmers in all sections that the broad principles of the 1938 agricultural bill are designed for that very purpose. They are sound, equitable, progressive, and will lead toward a greater national prosperity.

As one who was born and who has lived in the heart of the Corn Belt of Illinois, it was only natural that problems pertaining to the farm should be my primary concern as a Member of Congress. Serving on the Committee on Agriculture in the House of Representatives, I took part in the fight to enact a national farm program, and I deemed it a privilege to work and vote for the Agricultural Adjustment Act of 1938, with the firm conviction that it is the most beneficial piece of legislation ever adopted on behalf of the American farmer.

And, notwithstanding some recent trends which may challenge the statement made, I do not alter my position one iota, and I here and now predict that time will prove the correctness of this conclusion.

No one group in America has received more set-backs from the standpoint of legislation than has the American farmer. Your fight for beneficial legislation has run the gamut of unsympathetic Chief Executives. The Constitution of the United States was tortured by the Supreme Court in finding a way to invalidate the original Triple A. But let no one think that these reverses have dimmed the activities of the great majority of the farmers of the Nation. We realize that in President Roosevelt the farmer has a friend. Knowing that the present administration is willing to cooperate sympathetically in the solution of our problems, we welcome the dawn of tomorrow, eager to carry on to the end that the American farmer may have his rightful place in the economic sun.

I doubt that the most severe critic will challenge the statement that no permanent basis of economic well-being can be achieved in this land of plenty until the fundamental needs of our agricultural population are recognized and satisfied. Can there be any doubt that a greater national prosperity can be achieved only through a prosperous agriculture? Those leaders who assumed for years that the wants of the American farmer could be ignored while other industries were protected learned in 1932, to the accompanying sorrow and tragedy of our Nation, that when agriculture fails our entire economic structure collapses.

It would seem unlikely that in the face of so recent and bitter a lesson anyone would dare again raise a voice against efforts to better the lot of the farmer and to make him once more an integral part of—and a moving force in—our economic system. Yet, scarcely more than a month ago, we observed the spectacle of blind and short-sighted interests attempting to scuttle the farm program on the shoals of petty, partisan, and piratical politics.

Now, this was foolhardy on the part of the offenders, for the farm program is not a partisan question. It is an American question. And eternal condemnation will rest upon him who attempts to discredit and destroy a national farm plan by making it an issue in partisan politics.

Review the history of the efforts of agricultural leaders to gain fair treatment—not advantage—for the farmer from a government which already had admitted its obligation to other groups in our national economy. You will find that the principle of surplus control has been given the endorsement of leaders in the Republican and Democratic administrations for more than 10 years. It was Republican leadership in the Midwest who first advocated the control of chronic surpluses. You will find that the Agricultural Adjustment Act of 1938, as well as previous farm legislation passed under the present administration, has enjoyed the voting support of many sincere Republicans, as well as an overwhelming majority of Democrats.

You will find upon investigation that in the farm crisis of 1932, and since that time, President Roosevelt has summoned farm leaders from all sections of the Nation, without thought of politics, to work with legislators in preparing and enacting a farm program. Men like your own Ed O'Neal, and men like Earl C. Smith from my home State (Illinois) have been intimately associated with the farm dilemma from the beginning, and certainly no fair-minded person will challenge the sincerity of such men in their approach to the farm problem. They do not bicker along partisan lines. And, obviously, the real peril to agricultural legislative progress does not lie in that direction.

No, my friends, the real threat which looms ahead of us is within our own ranks. Twenty percent of our opponents in their effort against control legislation are sincere in their opposition. With them I have no quarrel. The remaining 80 percent, however, are the spawn and followers of selfish and demagogic politicians.

Candor compels me at this moment to make the following observation in passing. In my opinion there are politicians in America who would wreck any agricultural program if such destruction would assure their return to political power. This is a type of public servant who is a constant threat to the fundamental principles of free government. Fortunately, this group is in the minority.

I am convinced that the majority of the farmers are either wholeheartedly enthusiastic about the farm program or are sufficiently tolerant and sympathetic to temper their criticism until the current law has been given a fair chance to succeed or fail in the field of operation.

I know, for example, that in my home State leaders of the farm movement predict that between 75 and 85 percent of the farmers eligible to cooperate will enlist in the 1939 program.

This is an encouraging trend. Approximately 50 percent of those eligible cooperated in the 1938 program. There were several reasons for this low average. A recent survey disclosed that many failed to take advantage of the provisions of the act this year because the law was passed so late in the season that many either already had planted crops or failed to understand the provisions of the farm program. It is a reasonable assumption that, had the law been enacted several weeks or several months earlier, a far greater number of farmers would have cooperated in the program.

During the past few months the campaign of public education which has been undertaken by the Department of Agriculture, by farm advisers, and by organized farm association leaders is beginning to bear fruit. Already there is an increased comprehension among farmers in my district that the cry of "regimentation" and "dictatorship" raised by an antagonistic press was a red herring created for the sole purpose of destroying the farm program.

If there is one quality the American farmer possesses above any other, it is the spirit of fair play, and he resents such partisan and inspired efforts to delude him. He has learned by now that there is no regimentation, no compulsion, connected with the farm bill, and that even marketing quotas cannot be placed in effect until two-thirds of the eligible producers in his particular field vote to impose them. In a nation governed by majority rule, there certainly can be no dictatorship in a provision which requires a two-thirds vote before it becomes effective.

Every fair-minded individual agrees that there are imperfections in the 1938 Agricultural Adjustment Act. However, it must be remembered that this law has been on the statute books only since last February. It should not be blamed for the effects of two bumper crop years, nor for being launched in the midst of another excessive yield of basic commodities. Certainly the law could not affect prices when it had control neither over the huge carry-over from preceding years nor over the planting of the 1938 crops.

The primary objection frequently made to the program concerns the numerous and rigid regulations laid down by the Secretary of Agriculture in the administration of the act. Let it be understood that I do not attach any signal blame upon the Secretary for this procedure. Recognizing the vast problems of agriculture as well as the delicate and complicated price structure of our agricultural economy, it was necessary for him to take every precaution of safety, and in so doing there were drafted rules and regulations which have proved to be unnecessary and which gave to the philosophy of the act unjust criticism and condemnation.

Actual experience in the field along with a campaign of education is helping remove most of these complications. Advice and counsel from farm leaders throughout the Nation will further aid in ironing out these difficulties. I am pledged, when I go to the United States Senate, to use my power in an effort to remove useless regulations and to urge a more liberal interpretation of those remaining. This, in my opinion, is the one necessary thing to aid in obtaining the maximum amount of cooperation from the farmer which is indispensable if the program is to succeed.

Let me repeat that notwithstanding these defects the basic principles of this plan are economically sound and socially desirable.

Congress will soon convene. A national election is coming along in 1940. I here and now prophesy that you will see all types and kinds of farm bills introduced during the next 2 years, the author of each claiming that his bill is the acme of perfection and that the farmers' problems will be solved if they will but follow his discovery. Some of these men will be sincere, but I admonish you now ever to be on the lookout for the politician's bill that would wreck any farm program for political and selfish purposes.

As for myself, I shall continue to fight for the principles of the present act. I shall insist that it be given a fair trial at the bar of public opinion over a reasonable length of time. And it is my sincere hope that this great farm organization will continue with unity of thought, unity of action, unity of aim, and unity of plan along the far-reaching principles laid down in the Agricultural Adjustment Act of 1938, for it must be remembered that yours is a mighty and forceful power in the success of farm legislation in America.

I believe that my position with respect to the continuation of this program is shared by the great majority of the Members of Congress coming from the large metropolitan areas. The farmers of the Nation are indebted to these Representatives because of their legislative cooperation. The city dweller and the farmer realize that they are interdependent one upon the other for their economic security. The logic behind this statement was one of the motivating forces in the minds of the leaders who helped draft the agricultural legislation and who worked so diligently for its passage.

In other words, the city dweller is dependent upon the farmer, not only as the producer of his food and raw materials, but as a customer for his goods, and when the farmer cannot buy, the manufacturer and shopkeeper cannot sell. Likewise, the farmer needs the market offered by the city as an outlet for his produce.

And the farmer might well remember, in connection with current discussions of the wage and hour law, that the minimum-wage standards established under that law are designed to raise the purchasing level of a low-income group where the opportunity to increase the consumption of food by raising income is the greatest.

Gradually, I believe, all sections and all interests in this Nation will come to the realization that to better the lot of any one group is to increase the welfare of all. And, in that light, I am firmly convinced that the present minority group which seeks to destroy an American agricultural program which protects the farmer by placing a degree of control upon surpluses of basic commodities will eventually see that it is only defeating its own ends by such a course. Until some genius, statesman, or economist discovers a more equitable method of distribution of our surpluses, control is inevitable for the farmers' success.

Another important factor in the economic life of the American farmer is tied in closely with exports and imports. The historical background of this phase of the agricultural program is exceedingly interesting. There was a time in the history of the American farmer when foreign nations purchased practically all of his surplus crops. But since the Great War we have become a creditor Nation, and that market has gradually disappeared, primarily because of the growth of nationalism in every Nation, with its attendant need for economic self-sufficiency, and also because of our tariff policy which resulted in nation after nation shutting out American products in retaliation against our own prohibitively high tariff wall. As a result of this economic warfare, the American farmer found the trade doors of the world locked against him.

The question as to what steps should be taken to unlock those doors arose in this administration. Experts on foreign trade were called for counsel and advice, and under the leadership of the unobtrusive and quiet Secretary of State, the Honorable Cordell Hull, this administration has negotiated a series of reciprocal-trade agreements with foreign nations to the end that the flow of commerce from this to other countries may be stimulated and that the American farmer may once again take his place as an important factor in world trade.

That this foreign trade remains an indispensable part of our national economy is proved by the fact that we had a foreign trade of more than $6,000,000,000 last year. And the best evidence that the reciprocal-trade agreements are producing beneficial results for the American farmer can be found in the fact that the value of American exports to the countries with which reciprocal-trade agreements have been concluded has shown a greater rate of growth than to the nonagreement countries.

And the peak of these negotiations was reached a few days ago in the signing of the agreement with Great Britain, the British Crown colonies, and Canada. This undoubtedly will advance our national welfare as world trade is expanded on a nondiscriminatory basis.

I am convinced that the trade agreements represent a sound approach to the restoration of foreign trade.

Yet there are certain competitive agricultural products imported from tropical countries which are now on the free list and are used for trading purposes to the disadvantage of the American farmer. On those items I favor placing an excise tax which will protect the American farmer from unfair discrimination.

In conclusion, I should like to express another thought of what I conceive to be of national importance. We cannot forget that the frontiers of economic equality and social justice are as challenging and foreboding to us today as were the geographical frontiers to the pioneers of '49. There has never been a time in the history of the Nation when government has been more intriguing and complex than it is today, and yet I am one who believes that we are steadily marching forward toward the ideals of an economic democracy wherein all groups shall be afforded equality of opportunity and a fair share of the national income. Such an economic philosophy is necessary for fair and equitable American progress. In November 1937, during the special session of Congress called by the President for the purpose of considering agriculture and labor legislation, I received from the voters of Illinois 10 times more complaints about business conditions than I did about agriculture or labor, and in discussing this question from the floor of the House I said in substance that it seemed to me that the time had arrived in America when agriculture, labor, industry, and government should all move in harmony on the same front, and only by so doing could there be obtained for the American people the maximum benefits which they so justly deserve. Today I repeat that thought. I say boldly that industry, commerce, agriculture, labor, and government should be willing to sit around the table, calmly debating their problems, each making sacrifices, each admitting mistakes made, each tolerating the other's point of view. With such procedure, I prophesy that these economic groups would produce an all-American program that will go far in solving the economic and social ills of this Nation. Such a united front with simple and rugged honesty in the foreground will open up a new era of cooperation which will be beneficial to our national welfare. It would seem that the President of the United States could well afford to call a conference of this kind in the interest of the public weal and national good.

My friends, I have the utmost faith in the future of this Republic. America will find the way. Just remember that America is young; America is virile; America is courageous, and she always conquers when her cause is just. And in the solution of all these great problems, including agriculture, Americans will successfully work out their destiny within the Constitution of the United States and its priceless Bill of Rights to the end that a better day will come in America for the great masses.

ADDRESS BY HON. SCOTT W. LUCAS, OF ILLINOIS, ON THE AMERICAN FARM BUREAU FEDERATION PROGRAM, WASHINGTON, D. C., FEBRUARY 11, 1939

For the past two decades American agriculture has been engaged in a fight to survive. This has been an uphill battle. Ever in the vanguard of the struggle have been the corn farmers of Illinois and the Middle West who have contributed honest and intelligent leadership in attempting to reach the objective of economic equality before the law for all classes and groups of citizens. The farmer merely wants his dollar to have equal purchasing power with all other industry and upon this premise is based the Agricultural Adjustment Administration Act of 1938.

In this discussion, I have been requested to talk about corn legislation. You should know that the present law seeks through quotas on corn and a schedule of mandatory loans to give to the farmer an element of stabilization in price structure. And while this law has only been on the statute books since last February, agricultural leaders in the Corn Belt are almost unanimously agreed that it is working with a remarkable degree of success. Economic prudence dictates that it be given a fair trial before the corn farmers of America listen to the siren song of those who would destroy this potential germ of progress and security.

My friends, the battle waged for mandatory corn loans will not soon be forgotten by either the corn farmer or Members of Congress who participated in that legislative fight. It was a victory of considerable import, involving human elements and clashes along with the economic relationship of corn to basic commodities produced in different sections of our Nation. The history of Government loans with corn as security is an interesting one. Back in October 1933 corn was selling for 24 cents per bushel in my State. In other sections it was used for fuel instead of coal because it was cheaper. Realizing that desperation had seized this commodity, President Roosevelt announced that corn loans would be made to farmers at 45 cents per bushel.

Under this plan the Government loaned $121,000,000, and when corn was being plowed over the second time the following year the market price had arisen above the loan price. Millions upon millions of dollars thereby went into the farmers' pockets instead of the speculators'. Every year since we have loaned millions of dollars to the American farmer with corn as the collateral. And to the lasting credit of the American farmer let it be recorded that not a single dollar was lost to the Federal Government on these discretionary corn loans.

Now, it occurred to those in Congress representing corn commercial producing areas that if such an effect could be achieved with discretionary loans why could not an even greater degree of stabilization and comfort be effected by making the loans mandatory, so that each corn farmer, cooperating with the program, could look forward confidently to an era of stabilized prices and avert the risk of wild and uncertain fluctuations?

With this thought in mind, we organized a Corn Belt block of Congressmen, and it was my privilege to lead this fight on and off the floor. Defeated in the House of Representatives by a narrow margin on a record vote, we pushed onward and laid our cause before the conferees of the House and Senate. They finally reported a bill including mandatory corn loans and a decrease in corn quotas.

Now, my friends, there is a salient lesson in this review. It is that our purpose was only achieved through unity of thought and action. Democrats and Republicans alike, separated by geographical distances, united in a common aim and stuck by their guns until we gained our point. Without such cohesion and sincerity of purpose the loan feature would have failed and the market price of corn, in my opinion, today would not be over 30 cents per bushel.

I am certain that my friends of cotton and wheat will agree that this victory was not gained at the expense of either, for corn is unique in that 85 percent of the corn produced is for feeding purposes and only a negligible amount is represented in export trade. Corn is not dependent upon the world price. The Liverpool market does not fix the price for corn as it does for cotton and wheat. The price of corn is fixed by the American market; and in addition to this we placed safeguards in the bill, through marketing quotas, which protect both the Government and the corn farmer by making certain that surpluses will not in the future glut the market and depress the price, thereby jeopardizing Government credit extended in these loans.

While this legislation is not perfect, the basic philosophy of the law is sound. It should be protected, and under no circumstances should any corn farmer of this Nation be deceived with some fantastic and impractical plan.

Just remember this—we have a program. It is working; and as a Member of the United States Senate I shall continue to champion the philosophy of the control of the chronic surpluses of the basic commodities of this Nation until some statesman or scholar produces a spark of genius which will rectify the economic flaws of our current system of distribution.

Before the Congress of the United States is a measure known as the cost-of-production bill. Several United States Senators sincerely believe in it. Certainly no one can quarrel with its objectives. Hearings have been held during the last 10 days. As a member of the Agriculture Committee I have listened closely to the witnesses and have participated in the examination. I confess I have little enthusiasm for the bill, for the following reasons:

(1) It would repeal the present Agricultural Adjustment Administration Act, including the corn-loan feature.

(2) It would place a barrier on 49 commodities in this country which would prohibit the import of a single pound or bushel of any of these commodities from foreign nations. Such a tariff is far more reaching and abominable in its ramifications than the Smoot-Hawley Act of a few years ago. It would be the signal for retaliation by every world power.

(3) It would abrogate the reciprocal trade agreement policy of this administration, which, in my opinion, is the only way to regain our foreign trade.

(4) It would require a degree of regimentation of the American farmer and of those to whom he sells his produce never dreamed of by Members of Congress or responsible farm leaders.

(5) Yesterday the Secretary of Agriculture, the Honorable Henry Wallace, testified in open session that it would cost annually $150,000,000 to administer it. From my own personal knowledge of the bill and what it seeks to do, I am confident that under no circumstances could it be properly administered, and that in the end it would defeat its own purpose.

And lastly, it would practically destroy our soil-conservation program. No more essential service can be rendered to this Nation than the planting of soil-conserving crops. Successful farmers have no delusion about that statement. They seek to make two ears of corn grow upon a spot where only one grew before. This is a noble ambition and augurs well for the future of this country, because peace, security, and contentment are closely allied with the fertility of the soil.

The American Ideal of Education

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

ADDRESS BY HON. JAMES J. DAVIS, OF PENNSYLVANIA, WEDNESDAY, FEBRUARY 15, 1939

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the distinguished senior Senator from Pennsylvania [Mr. DAVIS] at the general alumni meeting, Temple University, in the city of Philadelphia, Pa., on the occasion of Founders' Day exercises, February 15, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Temple University is the continued radiance of one man—Russell Herman Conwell. His light and glorious spirit of adventure still live on in our lives today. Probably the best known lecture in the annals of American literature is Conwell's masterpiece—Acres of Diamonds. More than any other man he called on us to find distinction and satisfaction in the common experiences of the daily routine. Conwell was possessed by one all-absorbing idea. His ideal of education was to find your opportunity in your own back yard, in the path just before you, in the person at your right hand, and in every challenge of the immediate and the present. This has become the accepted pattern of our national way of life. This is truly the American ideal of education. It is learning by doing.

Indeed, the historic experience of the American people is a confirmation of this ideal. The United States was settled by pioneers who had one great idea. They insisted on taking what they had and making the most of it. They started their settlements along the Atlantic seaboard, then crossed the Alleghenies, then pushed on to the Mississippi and thence to the great Northwest and to California and Texas. The westward movement was progressive, one step leading to another, and one base of settlement secured as the necessary aid to that adjoining it. One settlement was the proving ground for others. The pioneers learned how to conquer this mighty continent in the school of experience, content to be schooled on one frontier before moving to another. My father had the essence of this big idea in mind when he used to caution me while I was picking berries. He told me to pick the berries closest at hand, to pick the bushes clean, and not to spend my time running all over the patch.

Conwell's American ideal of education was essentially based on the belief that men create opportunities for themselves. A man is expected to take what is at hand and make it productive. And, with that keen, practical insight which characterized him, Conwell knew that advancement for youth comes not only in academic halls but also in the school of experience.

America is suffering from the spirit of defeat comparable to that which hung over the land during the days of my early manhood. I remember vividly the panic and depression of 1893. I had been working in the mills, and with the coming depression they closed down, and I was left without work. Those were days when the American frontier of free land had been closed up. Many said that the great days of our Nation were over and that we could expect but little of the future. But they proved to be false prophets. A few years later came the automobile and the entire new industrial development which it was destined to bring. Some years later came radio, and again a new industrial frontier was opened. Now television is at hand. Still there are those who say that there are no new frontiers to cross; that the Nation has come to the end of its pioneer possibilities, and warn us against looking around for any more "acres of diamonds" or startling back yards to be surveyed. The spirit of defeatism has spread over the land, which in itself is the most un-American thing I know about our citizens today.

Pessimism is quite contrary to the American ideal of education which involves an inexhaustible range of choices such as must constantly be presented to a free people, if they are to continue to grow. And yet there are many forces in the world today, spreading their influences throughout our own land, which deny the possibility of new opportunities and choices. A deadening fatalism, a new political determinism is sweeping over us. Attacks have been launched at the essential principles of free choice, which is the essence of democracy. Especially is this evident among the most enterprising part of our citizenship, agricultural and business enterprise. The merchant and the farmer are always those who take the fundamental chances of loss or gain. And these are the ones who are suffering most largely today because of the restriction of economic opportunities imposed upon them. Government seldom takes a risk because government invariably plays with other people's money. But the merchant and the farmer take the risk, for when they venture forth they have to operate on their own financial resources. The Government may undertake an enterprise and fail and yet continue on. But if a private enterprise fails, the adversity is ordinarily fatal and no further chances are offered. It is therefore essential that such choices as are offered to private business, the manufacturer, the merchant, and the farmer, shall be on such terms as to give a genuine inducement for profit. Otherwise we might as well lay Conwell's Acres of Diamonds on the shelf; it will have no further significance for us. I hope never to live to see that day dawn in America.

We have been trying to spend our way to prosperity these many years. Lump-sum appropriations have been made with the same ease with which Aladdin rubbed his magic lamp. The results have not been so fruitful. The average American citizen has come to realize that to spend or not to spend is no longer a partisan issue. Common sense and ordinary prudence caution a return to a larger degree of individual and social responsibility. Certainly, if neither the individual citizen nor the Government has an eye for the final day of reckoning we shall all end in the dog house.

Much of this public spending has been channeled through governmental agencies which have had no chart of experience for their operations. Frankly, they have been experiments. As a member of the Joint Congressional Committee for the Investigation of the Tennessee Valley Authority I have had an opportunity to witness the reckless and irresponsible way in which public funds have thus been spent. We have listened to much talk about the benefits of Government investments in this way. This sort of talk does not inspire confidence. If this talk about Government investment in economic developments is to be taken seriously, these projects should be required to stand on their own investment worth. Let them be presented to the public as a field for private investment, with bond issues arranged on definite terms for amortization. Let the public be assured that the Government will supervise the business transactions of these large corporate ventures in such a way that the taxpayers may know they shall never be called upon to supply a shortage. If these Government investments are as sound as some now tell us, certainly the individual investor will gladly seek a stake in them. Otherwise they deserve to fail for lack of social value.

We have here in Pennsylvania a number of worthy projects which operate on the basis of their own productive worth. Examples may be found in the Port of Philadelphia Authority, the Philadelphia Bridge, and, more recently, the Pennsylvania Turnpike Commission. This is the use of corporate authority under Government sponsorship for great economic developments which exceed the ordinary ranges of private enterprise and yet can be made to operate profitably if given public sanction. In the case of the Pennsylvania Turnpike Commission, the initial financing has come from a grant of $26,000,000 by the Public Works Administration and a loan of $35,000,000 by the Reconstruction Finance Corporation. Were the entire project carried on a loan basis it would entail no burden whatsoever on taxpayers. In its long-time operations it will become self-supporting as a toll highway, with four lanes connecting Harrisburg and Pittsburgh, expecting to give employment to 25,000 men for a period of 2 years. All these jobs and pay rolls will be provided without any cost to the State of Pennsylvania. As a public highway the Pennsylvania Turnpike with all of its improvements will become the property of the State. Tolls to be collected from users of the highway will be applied to amortization of bonds issued for the cost of building the road. This is a practical application of Russell Conwell's principle of life. Build something worth while for yourself in your own back yard.

Youth has a right to expect that government will adjust itself to the needs of agriculture, labor, and industry so as to restore conditions that make for full work opportunities. Government cannot compel a man to work if he lacks the ambition to provide for himself, but government can help to produce the conditions which will enable the energetic, able-bodied citizen to help himself. For youth the economic stringency of the present decade is a matter of first importance. Both the present and the future of our young people is being badly conditioned by the political restrictions now unnecessarily imposed on American labor, agriculture, and industry by a top-heavy Government spending program.

Low employment opportunities is the point at which the American ideal of education involving many free choices meets its greatest obstacle. It is no longer possible for the college or the university to regard unemployment in the cold light of a laboratory observation. For unemployment is putting a blight on the entire educational process. What does it profit a student to spend his years in educational halls in pursuit of skills and training which he will never be called upon to use? Why should a young man put himself or his parents to the expense of advanced education if it will not give him a reasonable assurance of economic security such as has been found in this country for the greater part of our national life? These are no longer bold questions. They are the questions which a large percentage of our young people are now compelled to ask themselves every year. And the answer to that question has caused a distress and anxiety which if not met with a sane reply will bear heavily on the foundations of our Republic in the years to come.

If Conwell were here on the American scene today, what would he say? I believe he would tell us to hold firm to the foundations of our American heritage. He would counsel us to remember the blessings of the past under a liberty tempered by law. He would call us to a sense of our individual responsibility. He would again tell us to cease wandering all around the world looking for the gifts of magic and insist that we begin by the sweat of our own brow to labor for and find wealth in our own back yards.

I do not believe that Conwell devoted his life to the establishment of Temple University because he desired oncoming generations of students to attempt to substitute academic learning for the rich privileges of personal initiative and glorious struggle. This school had its birth in the soul of a man who loved to battle for his ideals, one who found exaltation in winning victories. Conwell knew that the university is not all of life, but the beginning of life. He knew that the blessings of theory require the added blessings of practical experience. Certainly Conwell would be the last man in America to advocate an educational system which would hang an unbearable weight of taxation on its citizens. As a practical man he would advocate that life itself, labor, and industry accept the major part of responsibility for training in specific tasks. Surely we have had enough of that kind of vocational training which seeks to implement the hands of the students with the toys of the classroom while they are denied the mental versatility required when they reach the actualities of the factory and the workshop.

The restriction of the American ideal of life and education occasioned by unemployment has been undeniably serious. However, it is not as bad as would befall us should we be forced to endure the calamity of war, for war represents a complete negation of free choice. In time of war there is but one pattern of thought for the Nation, and that is military necessity. We have been paying the costs of the last war in broken bodies, maimed minds, interrupted life plans, and countless billions of dollars. We have been paying and shall continue to pay. If by paying more for the last war we could be led to a measure of national stability which would forever set us against entrance into any foreign war, I should favor the increased appropriations at once. In fact, I have long protested the so-called Economy Act, which took out its spite on our veterans and underpaid Government employees, only to be followed thereafter by such a deluge of public spending as the Nation had never before known. I have no sympathy with those who seek to involve us in foreign strife. I was glad to receive over 25,000 letters and telegrams this last month urging that the United States remain neutral. Our hearts and our votes belong to peace.

I have steadfastly followed a program to keep our country out of war. This I believe to be the first obligation of every loyal American. I am committed to the ideal of genuine neutrality. I have always accepted the teachings of George Washington, who warned against becoming involved in foreign entanglements. I believe our first duty now as American citizens should be to refrain from taking any attitude which might involve our country in war. Let us keep America strong and at peace within ourselves and with the rest of the world.

Our unsolved problems of unemployment and relief still have first claim on our attention. Although my heart goes out in sympathy to every oppressed and needy group throughout the entire world, my first obligation as an American citizen is to devote myself to the utmost in order that peace, good will, and full work opportunities may be established for the unemployed millions of my fellow citizens. I know of no problem in the world today that is so vital to world peace and international security as our own unsolved unemployment problem. When we achieve sufficient national statesmanship to afford an adequate solution to this grave problem, we might possibly then be in a better position to advise the other countries of the world how they are to run their own business. Until then let us humbly refrain from calling them names or needlessly deriding them.

During recent years human conflict has increased in every part of the world. It has increased in our own land. There has been less of good will and more of war. There is now a desperate need for peace, lest the world continue on to unspeakable tragedy. It is not enough that we say we hate war. It is true that a great majority of the American people do hate war. We must continue to feel that way and at the same time do something constructive for the cause of peace.

Believing in good will and peace, I have introduced a Senate joint resolution, No. 47, seeking the authorization of the coinage of 1-cent pieces to symbolize peace. If this bill is enacted, it will mean that every cent piece in circulation in our land will be dedicated to peace. And if every American penny is dedicated to peace, it ought to spell the difference between peace and war as far as our country is concerned.

I hope that this bill becomes the law of the land. I hope that whenever a penny comes into your hand you will think of it as a peace penny. Every cent in the United States Treasury will then be the agent of good will and peace. This is my sincere hope.

The peace penny will also mean that more pennies will be contributed to the institutions which seek actively to maintain peace and human relations. The school, the church, the voluntary organization in every field of American life will receive more because they are all devoted to the cause of peace. I trust that Temple University will be able most liberally to increase its endowment in honor of Russell Conwell with millions of these peace pennies.

The American standard of life and education rests on individual liberty which is our priceless heritage. This liberty of choice and action is guaranteed us under the Constitution of the United States. This protection becomes increasingly imperative. Every school, church, and voluntary organization in the land leans heavily on the constitutional safeguard of its local and individual liberties. And without this bulwark of liberty all of us would quickly be thrown into the maelstrom of confusion and tyranny. I cannot understand how any American citizen who truly loves our independent centers of research and education could be party to any attempt to undermine or subvert our constitutional principle of government. And yet, strangely enough, under the banners of liberalism this has been attempted and the attack continues. Therefore, it becomes a matter of conscience with every individual American who desires to preserve our traditional ideal of life and education, that no comfort or aid be given to the enemies of our Republic. Let us with one accord seek to uphold the way of life in which this great university was established in keeping with the precious traditions of its founder.

The Foreign Policy

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

RADIO ADDRESS BY HON. GERALD P. NYE, OF NORTH DAKOTA, FEBRUARY 12, 1939

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the senior Senator from North Dakota [Mr. NYE] over the radio on Sunday, February 12, in which he discussed the foreign policy of the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The present threat of world war is quite entirely traceable to the Treaty of Versailles, our reward for having won the last war. Without that treaty there would be no place for a Hitler today. In view of our past experience with Europe, our foreign policy should be one devoid of playing any favorites in Europe, devoid of help or encouragement to any side or any nation threatened with war, at least, until two positive conditions prevail. The first condition is that those who won the loot from the last war shall have tried to accomplish better understanding by offering to sit down around the table and adjust the injustices of that Treaty of Versailles, knowing they are going to have to give up something which is theirs, not only that which belongs to others. That condition can prevail only upon England's will. To think of our getting into another foreign mess for the sake of trying to keep the injustices we helped win the last time ought to be repulsive to every American. The second condition essential before we alter the kind of foreign policy I have suggested is that there can be reasonable chance, if our cooperation with other so-called democracies ultimately leads to war, that we are going to have chance to win what we fight for after having won the fight.

So much, for the moment, as to what our foreign policy ought to be. Definitely that is not our policy today. What is our policy? Please note that I am asking the question. Frankly, I don't know what it is. There are public pronouncements of policy from time to time but the pronounced policy does not always square with our actions; they often conflict and contradict. Such policy is dangerous—so dangerous as to convince many that a war now in Europe would quite guarantee our participation in it.

Why do I say our policy is dangerous?

First. Because the power to make and conduct foreign policy is the power to make war. There can be such conduct of policy as leaves no alternative to Congress than that of declaring war to save face for the country and its leader. Congress should have closest knowledge of what is our foreign policy.

Second. There is danger in a policy which causes a foreign nation to feel that we are promoting a world cause and are inviting other nations to join in the fight. We talk of the need of rallying to the side of England and France in defense of democracy. But we are startled to find Premier Chamberlain, in a cool, deliberate manner, telling the House of Commons that England might give consideration to joining the Roosevelt program to defend democracy. Whose war is this next one to be, England's or ours?

Third. Ours is a frightfully dangerous policy which finds us talking about "no entangling alliances," while the French Air Minister, speaking of the recent airplane deal, is saying to the Chamber of Deputies of France (as quoted in the New York Times of February 1):

"I cannot permit this deal in America to be attacked. Our contracts in America are meeting our entire satisfaction. And I take this opportunity of thanking the great American democracy and its leader President Roosevelt for the way they have shown that they are thinking of only one thing in this matter—how best to serve France."

Then, again, what is to be said of a foreign policy that lets us be party with England and France to a process in Spain that can only enlarge upon the power of the dictatorships that we pretend so much to fear and insist must be stopped? What dictatorships do we dislike? What democracies do we like? It is dangerous policy, to say the least.

The most recent public pronouncement of foreign policy produces, among others, these words: "We are in favor of the maintenance of world trade for everybody—all nations—including ourselves." Can this mean anything other than that, in the event of war abroad, we are going to once again insist upon that which does not exist in time of war, namely, freedom of the seas? I insist that any such policy is dangerous and an immediate invitation to war.

Why is the foreign policy dangerous? Let us read another line in the pronouncement of the President before his press conference 10 days ago, when he declared it to be our policy to peacefully "maintain political, economic, and social independence of all nations in the world." This can mean anything or nothing. Certainly our official actions of late have not shown us to be especially peaceful toward the political, economic, and social independence of some parts of the world.

Again, any foreign policy that calls upon our Government and its agents to "make faces" and call names across the Atlantic is hardly ready for defining as a safe and sane policy.

A dangerous foreign policy? What of a policy by those who ask us now to start fortifying Guam, just after these very same people have enthusiastically sponsored our freedom from the Philippines, where we already have an $80,000,000 fortification and preparation? If our foreign policy is one requiring this, how many more islands thousands of miles away must we ultimately fortify to protect Guam that is to be fortified to protect the Philippines?

Why should we, the world power that least needs to fear attack, more happily armed with a natural defense against attack than any power—why should we be asked to be out in the front lines of this present mad armament race, unless our foreign policy is one calling for something more than defense against attack?

I say our foreign policy—whatever it is—is a dangerous one when knowledge of what that policy may be is dependent upon the crash from the skies of an air bomber—the crash revealing the existence in the country of a secret foreign mission witnessing secret demonstration of products over the protests of our own military experts.

And, finally, no undertaking of foreign policy packs more danger for America from democracy's worst enemy, war, than a policy that seeks profit and gain from other people's wars and preparation for war. The most jealous defender of the President will not undertake to deny that we are out after this kind of profit. We've heard much about the desirability of the aircraft trade which England and France were ready to place with us. We hear the talk about what business and what chance for labor an expenditure by France for planes will mean.

Pause here for just a moment and try to compare present declared policy with that declared in 1937 in that great and famous chautauqua speech in which the President said, while depicting influences that took us into the last war:

"* * * production for a war market may give immense fortunes to a few men; for the Nation as a whole it produces disaster. * * * If we face the choice of profits or peace, the Nation will answer—must answer—'We choose peace.'"

That was our foreign policy 18 months ago. What shall we say of our policy today, when we find the same maker of policy enthusing about our chance for commercial gain from supplying aircraft to certain nations? Conflict. Contradiction. What is our foreign policy?

Whatever may be said concerning the merit of selling planes abroad, there is one result—a war maker, inevitable. Suppose we build up our productive capacity to supply the wants in aircraft of France, England, and ourselves. For the moment that will afford a prosperity for some. But with these wants supplied, what then of the industry? How then shall we keep it going and ready for emergency? How shall we continue the opportunity and prosperity in that field? Will we not be having to enlarge more upon our foreign trade in that industry?

Why, under that policy I can see the day coming when we shall be eager to supply Germany and Italy and Japan with the latest thing in pursuit, combat, and bomber planes in order that our prosperity may not be interrupted. And don't lose sight of the fact that every time we sell a plane to a foreign power, the obligation is upon us to produce one more for our own national defense.

Once we develop a trade, we find it hard to give it up. Build up a nice foreign trade in planes while nations prepare for war, then what is to be our practice after war comes? Will we again try to stay out of other people's wars while at the same time trying to keep all this foreign trade in contraband? That question is already answered for those who have the faintest recollection of how this trade and our developed appetite for the profit from war and preparation for war served us when 20 years ago we went to war against our declared purpose and judgment.

So I go back to where I began, with expression of the wish that we might have a mind-our-own-business foreign policy, at least until that time when certain conditions should prevail. And I wish mightily that we might have fortification of that kind of policy in the form of more light to be thrown upon our foreign plans, a more open ear to our experience of the past, a more mandatory policy of neutrality and enforcement of the neutrality law, strict embargoes against a trade boom based on war and preparation for it, a sure prevention of individual profit from war, and finally, a constitutional right with the people to determine by referendum when we shall again engage in a foreign war in which we are not yet attacked.

Permanent Public-Works Policy

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1939

STATEMENT BY HON. JAMES M. MEAD, OF NEW YORK

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by myself on the subject of a permanent public-works policy.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The time is opportune to consider more definite steps toward the establishment of a permanent public-works policy.

During the past 5½ years this Nation has carried on a tremendous public-works recovery program, which has been eminently successful in accomplishing its purposes.

Its success has been due to the diligence, ability, and industry of thousands of public officials throughout the Nation who have exerted commendable efforts in this important public service.

It is time for an accounting. It is time for intelligent, careful planning. It is time to consolidate our gains and to place the benefit of our experience at the disposal of the Nation.

Our first task is to eliminate the term "emergency." Crises produce emergencies—emergencies, if not met with fortitude and remedial action, breed panic. Such was the state of the Nation when new leadership was chosen to take over the affairs of the Government in 1933.

In that emergency there was little time for planning—action was needed and was fortunately forthcoming.

Some of the measures then adopted failed and were displaced. Others, their worth proven both by time and by public acceptance, were continued and are today rendering valuable service to the people, to an extent that they should no longer be regarded as temporary or "emergency" agencies.

Among the foremost in value of these efforts has been the Federal Emergency Administration of Public Works. Created in the rush of the historic 100-day session, it came into being as a recovery measure to stimulate heavy industry and to create employment through the construction of useful public works. Time has proven that the resultant gains have been noteworthy.

In my own State of New York, 1933 found public works at a virtual standstill. Children were being taught in antiquated school buildings; overcrowded cities suffered from inadequate disposal of sewage; the sick could not find ample hospital facilities for their care; transportation was hampered by lack of proper traffic facilities and bridges. These needs were known, but no remedy was planned—nothing expressed beyond the pious hope that some day we will be able to do something.

Pitched into this the Federal Emergency Administration of Public Works, without precedent or guide, developed businesslike methods in handling its task. Action was initiated by local government units, construction was carried on by private enterprise, materials came from private industry, work was efficiently, economically, and effectively carried out. Requirements for a practical, effective program were met.

In my State local governmental units have undertaken over a half billion dollars' worth of needed public works, creating upward of 623,000,000 man-hours of work in private industry. At the present moment tens of thousands of men are at their accustomed jobs, at their accustomed wages, working on the current program.

The program has been successful. I learn of the high estimate of P. W. A. by local officials everywhere in my State. Statistical proof of the popularity of the program is indicated by the fact that when last June Congress authorized Administrator Ickes to receive applications and to make P. W. A. grants of 45 percent to worth-while projects, from New York along came 775 requests for aid in construction to cost three-quarters of a billion dollars. Yet funds were available for only 232 projects to cost somewhat over a hundred million dollars. Judging from communications I have received, many of the remaining proposed projects are now much needed.

While the P. W. A. program has, without question, been carried on efficiently, yet certain intangible losses have been sustained. These losses stem from the appropriations styled as "emergency," each bearing a deadline which takes effect inexorably a few months after it has passed the Congress.

The spur of speed—and more speed—has allowed slight opportunity for the full development of studies in the use of funds; for the planned development of areas; or for long-term use. My native district in western New York is fortunate in being among the first to attempt long-range planning, yet we, too, have suffered under the lash of rapidly expiring time. Throughout the Nation the emergency deadlines have forced employment and construction to be utilized almost entirely on just the most obviously needed local projects. The result has been taking care of immediate needs of employment quickly, of building the most sorely needed projects, but it has prohibited the best use and integration of facilities. Effective planning and proper design have suffered in many good projects forced into construction by arbitrary date limitations. Project after project has been launched in midwinter, where, with opportunity for proper planning the structures might have been closed in before the winter season, thereby affording more employment when it was most needed. Repeatedly we have made almost superhuman demands on P. W. A. personnel.

We have always had public works. We wrested the country from the wilderness by public works. Through public works we provided schools for our children, hospitals and institutions for our sick and indigent. We are civilized in part by reason of our public works. As our country continues its development our building of public facilities must continue with it.

It is time then for us to consider capitalizing on the success of our federally-aided public-works program. If we will correlate all our experience into a well-integrated national policy, we will provide a better balance to our national economy.

Let us recognize that there always will be fluctuating periods in our national employment and in the cost of construction. Let us resolve to gear our public-works program to that cycle, so that we will build when prices are low and when men and mills need employment. Let us plan to ease off when men are scarce, when prices are high, and when mills are operating at capacity. That will be the result of intelligent planning—planning that will offer a measure of security to our great labor and industrial resources, and at the same time provide a prudent, practical program at a minimum of public cost.

To effectuate this let us erase the word "emergency" from the Public Works Administration. Let this bulwark against unemployment operate on a normal, continuing businesslike basis. Let P. W. A. examine the worth-while project applications they now have on hand and evaluate them for use should the country's economy be in need of further aid to speed it toward recovery. Let P. W. A. encourage communities to plan ahead, to have plans prepared so that their most needed public works may be put into prompt construction when the economic cycle begins to swing down. Thus the shock of a depression may be cushioned before it gathers uncontrollable momentum. We should likewise instruct the agency to taper its program when the upswing is felt.

If we take this action, we will have an agency to which Congress may turn at any time and demand a well thought out, well developed program; one that can be put underway within a few days. Congress can then take steps to effectuate it. But this can only be done if we take off the tag and methods of "emergency" and put in their place the integrated, careful development that comes with permanency.

This is the task to which we must now address ourselves on behalf of the people of this Nation.

Woodrow Wilson

EXTENSION OF REMARKS
OF
HON. WILLIAM H. SMATHERS
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, February 16, 1939

ADDRESS BY DR. JAMES T. SHOTWELL DELIVERED BEFORE THE WOODROW WILSON FOUNDATION TO COMMEMORATE THE EIGHTY-SECOND ANNIVERSARY OF HIS BIRTH ON DECEMBER 28, 1938

Mr. SMATHERS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an address by Dr. James T. Shotwell on the subject of Woodrow Wilson's place in history.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is the custom and privilege of democracies to deal harshly with their great men. This has its good as well as its bad side. While it may keep us from reaching the goal set before us by our leaders, it also saves us from getting lost on the way. While it may delay progress and confuse our minds, it is also our protection against that kind of leadership which encroaches on the liberties of the people until it rides roughshod over them.

The history of the United States is not singular in this respect; but it supplies outstanding examples in the case of those whose names stand highest among its immortals. Even Washington did not escape partisan attack, and felt it so keenly that he was reported to have said to his Cabinet in 1793 that he "would rather be in his grave than in his present situation." Jefferson, although more buffeted by political storms, ended his Presidency with strong expressions of popular support; yet just before leaving the Presidency he wrote to a friend, "Never did a prisoner released from his chains feel such relief as I feel in shaking off the shackles of power." As for Lincoln, all the world knows how the pent-up bitterness against his far-visioned and magnanimous spirit showed itself in the malice of the era of reconstruction. There was therefore nothing new in history for the reaction against the leadership of Woodrow Wilson to take the form not only of disavowing his policies in world affairs but of discounting his statesmanship.

But if democracies can be unfair and unjust they at least have this advantage over autocracies that they keep at hand the means for redress in a free public opinion. To be sure, opinion cannot be free so long as it is bound by prejudices that are the lasting echo of old convictions. But when situations arise that are similar to those of the past, and grave crises confront the country once more, it is the first duty of patriotism to reexamine the old issues to see if in the heat of political debate decisions have been taken that need to be reconsidered.

This is just what is happening in the United States today. Militarism is once more menacing the free peoples of the world, both by war and the threat of it. The crisis is not presented to us in the same terms as in 1917, for history never repeats itself, but it is perhaps even more threatening than then; for it uses the arts of peace as well as the science of war to dominate unoffending nations. While Japan pursues its ruthless conquest of China as a first step toward the realization of the greatest oriental empire of all time, and Mussolini endangers the peace of Europe, Hitler wins for enslaved Germany the greatest triumph of its history by the use of terror.

The answer of the American people to this threatening swagger of militarism throws a strong light upon the fateful decision of 1917. We are arming against it to an extent that everyone knows is ruinous but everyone accepts as necessary. In 1917 militarism had already unleashed its attack, challenging our sovereign rights by unlimited submarine warfare that brought the terrors of anarchy on all the seven seas, at a time when its legions were invincible on land as well. Does anyone who looks around him today and measures our unshaken purpose to preserve our liberties and our institutions, believe that Woodrow Wilson misinterpreted the mind and spirit of America when he closed his war message to Congress with the words of Martin Luther: "God helping her, she can do no other." In recent years the charge has been made that we were tricked into the war by Wall Street and allied propoganda. That there were bankers who shared the common concern over the possible triumph of German militarism is true and is to their credit. But it was Indiana and the farming States of the Middle West, the traditional seat of opposition to Wall Street, which first filled up the quotas of the draft. That there was propaganda no one denies, but the acts of Germany spoke louder than words.

But neither the preparations for war going on in the world today, nor the resort to war in 1917, is the real test of statesmanship. It is hard to imagine any President of the United States who would have refused to meet the challenge thrown at us by Germany with a duplicity and insolence patent to all. The tribunal of history is not likely to pause long in judgment over this fact, that a President who had long endured abuse for his pacifism became the flaming prophet of a great crusade. The real test lies in his conduct of the war and his plans for the peace which was to follow.

There had been lack of previous military preparations, for which Wilson's critics, with some justice, have held him responsible. But the historian will recall how, from week to week, and then from month to month, throughout the war, economists and students of public affairs kept pointing out that the war could not possibly last longer and, if it had come to an end as at first seemed likely, America would have been stronger to have kept its peacetime resources undiminished so as to serve the world and itself richly in the vast process of reconstruction. But these calculations proved false, and we had to improvise our military power. Although inevitable mistakes were made, two great achievements must be credited to the Commander in Chief of our armed forces. A wartime government was built up alongside the old civilian structure, and in it Wilson disregarded party lines, appointing such Republicans as Schwab, Stettinius, Vanderlip, and Hoover, because of their administrative capacity, to work alongside Democrats in vast new structure of national industrial mobilization. In this work, in which the President cut through red tape, rearranged bureaus, and created war boards, he showed a degree of statesmanship for which history has not yet done him justice. A survey of the European governments during the war shows that, without copying their devices, Wilson worked out for us here the plan which proved most effective there. On this count history has already given its verdict: Wilson, while not a great administrator, was a great Executive, and that is what a nation needs in time of crisis.

The next point is the one that everyone remembers, the transformation of the war from meaningless carnage to a crusade that was to "make the world safe for democracy." This slogan of victory has been denied by cynics and disowned by half the world today. But for those of us who cherish freedom, it still remains an ideal unsullied by attack, the hope of all peace-loving peoples. Yet no one was more conscious than Wilson of the fact that war is not the final answer to tyranny, nor armaments the final bulwark of freedom. For this he sought to force upon a world that was not yet ready for it the Covenant of the League of Nations.

Now, what has history to say about Wilson's idea of a League of Nations? It has no answer to this question, because the League as Wilson conceived it has never existed. Instead of the acceptance of a community of nations, America chose to follow Lodge, Borah, and Johnson. With America renouncing its great ideal, other nations proved false to theirs. The anarchy we are living in today, the most dangerous since the fall of Rome, is the work of those who denied or falsified the conception of a community of nations set forth in the covenant.

But was that conception an impossible ideal, the dream of an altruist rather than the working program of a statesman? If we take the short stretch of these last 20 years as the final verdict of history, then there can be no doubt but that selfish nationalism holds the key to our destiny. If so, there is no morality in international dealing; force and violence in the hands of the militarists abroad and selfish indifference to right and wrong on the part of isolationists at home, sap the very foundations of law and order in the world. If anyone is shocked at having our isolationists, who are mobilized under the banners of peace, grouped with European or Asiatic militarists as the agents of international anarchy, they have only to consider that without justice there can be no lasting peace among nations. "Justice," in the words of the Institutes of Justinian, "is the fixed and constant purpose to give to every man his due." Among nations it is the same fixed purpose neither to take what belongs to others nor to be the accomplice of such a crime. A nation indifferent to this everlasting principle of right and wrong makes for anarchy and the law of the jungle, equally with the nation that despoils the weak and threatens violence to its neighbor. This kind of nationalism not only makes peace insecure but prosperity impossible. For the world of business has become a world of credit, and credit means confidence in the future, a confidence which is impossible so long as violence rules in the world and peace-loving nations draw no distinction between the aggressor and his victim.

Now, unless civilization is doomed, it is this post-war nationalism and not the experiment of a League of Nations which is destined to disappear. Nationalism may be the strongest force in the world at the moment, but it runs counter to the newest and most powerful factor in human history, the science that conquers time and space and changes all our relationships. Science has only just begun. It has all the centuries of all the future ahead of it. In its first stages it has been warped and misused by powerful nations. This was to be expected, because it is within them that science has grown up. But it knows no frontiers and it makes the world interdependent. No civilized nation can live alone, as it used to do. Its raw materials and its markets lie in other countries and its inventions and discoveries are for all the world. The plan of Woodrow Wilson was, therefore, not an interlude in human affairs, like the Holy Alliance, attempting to hold back the inevitable tide; but it is a political ally of the work of scientists, thinkers, and engineers, in whose hands lie the forces of eternal change. If this is so, we should turn to it again, recasting it to fit its purpose as the alternative for war. To do this effectively we should build first among those peoples who treasure peace and practice democracy. We should emphasize jus-

tice rather than police, and adjustment to changing conditions rather than a rigid adherence to ancient rights; thus the democratic peoples can acquire the strength and singleness of purpose which ultimately can impose fair dealing upon reluctant nations.

In this short survey I have dealt with the elements of Woodrow Wilson's statesmanship, which all the world associates with his name but the historian who attempts to take the measure of his statesmanship should not forget that it was only the pressure of events which forced him to turn his vision from the domestic scene to that of foreign affairs. A champion of fair dealing, he tried in the Clayton Act to restrain the trusts from interfering with the free development of business and in the Federal Reserve System created a reservoir of credit to stabilize and strengthen confidence. But it was the very opening act of his first administration, the so-called Underwood tariff, which should be remembered now as a forerunner of that long and patient struggle of Secretary Hull to lessen the barriers of international trade and open the pathway to peace among nations by the practice of economic justice and fair dealing.

It is not possible to enumerate more of the events of Wilson's administration that have left their mark upon the history of the United States. But, after all, it is as a world figure that he stands before us today, one whose memory every American can proudly cherish in the hour when the Hitlers, Mussolinis, and Stalins draw the allegiance of subservient nations. The apostle of the new freedom, which was freedom based upon social justice, spoke the true voice of his country when he interpreted its historic mission in the world in terms that invoke for its fulfillment not force and violence but a decent respect for the opinion of mankind.

Frazier-Lemke Refinance Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1939

Mr. LEMKE. Mr. Speaker, I am going to talk turkey today. I am going to talk straight from the shoulder to those who have all but wrecked agriculture. I shall not mince words with those who have sold our farmers and our laboring people in foreign marketing places, who have curtailed and destroyed agricultural wealth. This in order to import foreign products from nations that already owe us over $30,000,000,000 and which they refuse to pay us. Products that our own farmers could and should have produced.

I not only challenge that shortsighted and stupid policy, but I am confident an enlightened public opinion will put a stop to it. The farmers of this Nation will no longer submit to being made an international pawn for international horse traders. They are going to demand the enactment of the Frazier-Lemke refinance bill and the nonpartisan cost-of-production bill during this session of Congress. They are through with the inferior complex of the Agricultural Department.

Ever since 1920 there has been a real farm problem. Ever since 1920 hundreds and thousands of farmers have been losing their homes by mortgage foreclosure, judgment, forced, and tax sales. Hundreds and thousands of innocent men, women, and children have been evicted from their homes—hundreds and thousands more lost their farms and became tenants, or sharecroppers and surfs for absentee landlords. In this nefarious work the Federal land banks have been some of the worst offenders.

Since 1920 over 10,000,000 farm boys and girls have been driven into the already overcrowded cities to swell the ranks of the unemployed—compelled to look for W. P. A. jobs or doles. This is an insult to our intelligence. This condition has been brought about because we have compelled the men, women, and children who live on the farms to feed the Nation, to feed us, below the cost of production.

Any intelligent person knows that a farmer can no more continue in business by selling the things we eat, drink, and wear for less than it costs him to produce them than a businessman can stay in business and sell goods for less than he pays for them. If they do they will both become insolvent.

The truth is we have not been honest with ourselves or with the farmers. We have permitted the curtailment and the destruction of agricultural wealth by cutting the throats of little pigs, by shooting cows and calves, and by setting fire and plowing under cotton, wheat, and corn. Congress has been influenced by a "brainless trust" during this administration and by a "do nothing bump on the log" during the past administration.

Ever since 1920 there have been, and there are pending today, before Congress bills which, if passed, would solve the farm problem once and for all. But whenever one of these bills, such as the Frazier-Lemke finance bill or the nonpartisan cost-of-production farm bill, comes up for consideration then every reformer in the land attempts to amend it so as to include some pet reform or idea of his own. The Department of Agriculture, which is supposed to represent the farmer but does not, is always there with its ax, there with its political machine, built at the expense of the taxpayers, with its salaried lobbyists, to defeat the bill.

Little wonder that Members of Congress and dignified Senators become bewildered and babble like the ancient Babylonians at the Tower of Babel—and become just as confused. Then every subject under the sun comes up for discussion except the bill under consideration. Silly questions are asked the farmers concerning monopoly, banking, consuming, gambling, foreign trade, foreign exchange, reciprocal-trade agreements, and every subject under the sun except the substance of the bill under consideration.

When we pass laws for the railroads we listen to the railroad men. When we pass laws concerning industry we listen to the industrialists. When we pass laws for banks we listen to the bankers. But when we pass laws for agriculture we listen to college professors and school boys—to everyone but the farmer. Why not listen to the 32,000,000 men, women, and children who feed and clothe us? They know their own business better than anyone else. Why listen any longer to the Department of Agriculture that does not yet know that proven failures are no longer even experiments?

Surely common decency and common horse sense after all these years of waiting would impel Congress to give to the farmers during this session of Congress the Frazier-Lemke refinance bill and the cost-of-production bill. If these bills had been passed in 1920, then there never would have been a Hoover depression or a Roosevelt recession. Both of these were the result of stupidity and ignorance. A recession is even worse than a depression. A depression means that you have been flattened out; a recession means you are receding—you have gone backward, traveled in reverse.

The new Frazier-Lemke refinance bill, H. R. 70, provides:

SEC. 2. The Farm Credit Administration is hereby authorized and directed to liquidate, refinance, and take up farm mortgages, and other farm indebtedness existing at the date of the passage of this act by making real-estate loans, secured by first mortgages on farm lands, to an amount equal to the appraised value of such farm lands and 75 percent of the value of insurable buildings and improvements thereon, such loans to be made through the Federal land banks and national farm loan associations. Such loans shall be made on the standard amortization plan at the rate of 3 percent per annum, the interest rate shall be 1½ percent, and the balance of each installment or payment shall be applied on the principal.

SEC. 3. The Farm Credit Administration is further authorized and directed to liquidate, refinance, and take up chattel mortgages and other farm indebtedness, existing on the date of enactment of this act, by making loans at the rate of 3 percent interest per annum, secured by first mortgages on livestock, to an amount equal to 65 percent of the fair market value thereof, such loans to run for a period of 1 year, with right of renewal from year to year for a term of 10 years: *Provided*, That any depreciation in the value of such livestock is replaced by additional livestock, and the amount of the loan is reduced 10 percent each year. Such loans to be made through the intermediate credit banks and the production credit associations.

SEC. 4. The funds with which to liquidate and refinance existing farm mortgages and other farm indebtedness shall be provided by the issuing of farm-loan bonds by the Farm Credit Administration. Such bonds shall bear interest at the rate of 1½ percent per annum if secured by first mortgages on farms, and 3 percent per annum if secured by first mortgages on livestock. The Farm Credit Administration may sell these bonds at not less than

par to any individual or corporation, or to any State, national, or Federal Reserve bank, or to the Treasurer of the United States.

It shall be lawful for the Federal Reserve and national banks to invest their available funds, including surplus and net profits, in such farm-loan bonds. Any State, national, or Federal Reserve bank that buys such farm-loan bonds direct from the Farm Credit Administration may, upon giving 30 days' notice to the Board of Governors, exchange them for Federal Reserve notes. Such notes to be issued by the Federal Reserve System and given in exchange for the bonds without recourse.

SEC. 5. In case all of said farm-loan bonds are not readily purchased, then the Governor of the Farm Credit Administration shall present the remainder to the Board of Governors of the Federal Reserve System, and the Board shall forthwith cause to be issued and delivered to the Land Bank Commissioner, Federal Reserve notes to an amount equal to the par value of such bonds as are presented to it. Such farm-loan bonds to be held by the Federal Reserve Board as security in lieu of any other security or reserve: *Provided, however,* That as additional security and reserve the President, in his discretion, by Executive order, may set aside a gold fund in the Treasury as a reserve for such notes out of free gold in the Treasury or out of the exchange stabilization fund created by section 10 of the Gold Reserve Act of 1934, and maintain such reserve fund in an amount equivalent in dollars to not more than 40 percent of such notes outstanding. The outstanding Federal Reserve notes issued under this act shall at no time exceed $3,000,000,000.

SEC. 8. The benefits of this act shall also extend to any farmer or member of his family who lost his or her farm through indebtedness or mortgage foreclosure since January 1, 1930, and who desires to purchase part or all of the farm lost, if available, or another like farm. It shall also extend to any tenant or member of his or her family who desires to purchase a farm not exceeding $10,000 in value, provided he or she has lived on and operated a farm as a tenant for at least 3 consecutive years prior to the enactment of this act.

There is nothing new in this bill. The banks are given an opportunity to buy the bonds. They have $15,000,000,000 of idle money that they are unable to invest because the people have no credit left. If this bill is passed, they can invest part of this in these bonds. If they refuse, then the Federal land banks can get the money from the Federal Reserve System the same as the Federal Reserve banks do now for the bankers. What is "sauce for the goose is 'still' sauce for the gander." Then the Government would make a profit of $6,345,000,000 at 1½ percent interest in 47 years—the time required for amortization of the farm indebtedness—and, at the same time, the farmers would save over $19,000,000,000 in lower interest.

Under the Frazier-Lemke bill a farmer can carry a $17,000 mortgage loan—as far as his ability to pay goes—as easily as he can carry a $7,000 loan under the present law. That is why, under this bill, it is perfectly safe to refinance a farmer up to the full reasonable value of the land and 75 percent of the insured permanent improvements, because in that bill we take into consideration the farmer's ability to pay.

This bill, together with the cost-of-production bill, is a complete solution of the agricultural problem and also largely of the unemployment problem. We have spent $54,000,000,000 in 6 years. This would have been enough to have given to every baby, to every boy and girl, and every man and woman a check for $410 in cash. Yet, as far as I know, we have not made a single man or woman self-supporting. Every courthouse is still a poorhouse.

It is true we have built some schoolhouses, golf courses and tennis courts, skiing contraptions, auditoriums and courthouses, and put a few benches in the parks, but there is little enjoyment in sitting on a bench when you are hungry and cold. Neither can you enjoy an auditorium or a schoolhouse unless you have a home—unless you have food, fuel, clothing, and shelter.

We have done everything but the right thing. We have virtually bankrupted the Nation in trying to solve these problems. We have run all around the remedies, chasing will-o'-the-wisps, but we have stubbornly refused to listen to reason and do the sensible thing—to refinance the farmers' indebtedness and give them cost of production for that part of their products consumed within this Nation. We will have to come to this eventually. Why not during this session of Congress?

Trade Agreements Program

EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1939

Mr. BUCK. Mr. Speaker, the prosperity of our country is dependent by and large upon the prosperity of industry, agriculture, and labor. There have been many steps taken by the present administration which have been designed to revive both domestic and foreign trade, both of which are essential to the disposition of our raw materials and our manufactured products. As to our foreign trade the enactment of the Reciprocal Trade Agreement Act, its subsequent extension and the agreements entered into under its authority form the outstanding accomplishment of the past three Congresses and the present administration.

We have witnessed since the inception of this first session of the Seventy-sixth Congress, and even as late as today, attacks on the reciprocal trade agreement program, some of which have been based upon such a number of fallacies and incomplete statements that I have asked for time to try to bring home some facts regarding the effect of these agreements to the American people. I have nothing to fear from facts, and it is regrettable that in practically every speech so far made against these agreements the least that can be said is that incomplete statements have been made. Mere repetition of a partial statement or misstatement of facts will not convince the American people that there is anything sinister in these trade agreements. Those of us who support them stand on the record of increased trade since the agreements have come into force. These gains seem to well justify the program.

Although some data showing the increase of trade have already appeared in the RECORD, particularly under the remarks of the gentleman from Missouri [Mr. COCHRAN], the gentleman from Virginia [Mr. ROBERTSON], and a short statement by myself under date of January 13, 1939, I again submit with these remarks some of the same kind of information. I want to call your special attention to the remarks of the gentleman from Virginia [Mr. ROBERTSON] of February 3, on the trade-agreements program, in view of what has been said today. I might say further that those of us who support the trade-agreements program intend to repeat the results in terms of trade gained as long as the opposition continues to fill the RECORD with what we consider unwarranted attacks against the program.

RESULTS OF TRADE-AGREEMENTS PROGRAM

There follows a table showing the results of trade agreements which were in effect during 1938.

[Department of Commerce figures]

	Comparison of 1937-38 with 1934-35			
	1934 and 1935 average value	1937 and 1938 average value	Change	
			Value	Percent
United States exports, including reexports:	*Millions*	*Millions*	*Millions*	
Total, all trade-agreement countries	$759.8	$1,224.8	+$465.0	+61.2
Total, all nonagreement countries	1,448.0	1,996.8	+548.8	+37.9
Total, all countries	2,207.8	3,221.6	+1,013.8	+45.9
United States general imports:				
Total, all trade-agreement countries	793.9	1,073.6	+279.7	+35.2
Total, all nonagreement countries	1,057.4	1,448.5	+391.1	+37.0
Total, all countries	1,851.3	2,522.1	+670.8	+36.2

Briefly, these Department of Commerce figures show that during the 2-year period, 1937 and 1938, the relative increase in value of American exports, as compared with the 2-year preagreement period, 1934 and 1935, was 61.2 percent to the agreement countries and of 37.9 percent to the nonagreement countries. The opposition repeatedly points out that trade with some individual nonagreement countries increased more than with certain agreement countries. That is true in some instances, but we all recognize that there are various other factors entering into the picture and this certainly does not condemn trade agreements. I believe anyone who is willing to view the results from an unbiased standpoint will agree to that.

The figures show that imports from nonagreement countries have increased more than imports from agreement countries; certainly this does not bear out the charge that trade agreements are ruining the country by flooding us with foreign goods. Moreover, the flood of imports in 1938 turned out to be a mere trickle.

NATIONAL INCOME AND FOREIGN TRADE

Since the opposition seems to take great pride in the temporary recession of 1938, I present herewith a table showing the national income, cash-farm income, and the foreign trade in 1929, 1932, and 1938. The 1929 figures are shown because that was the last full year before the infamous Hawley-Smoot Tariff Act, which almost brought the United States to its knees, went into effect. It is not necessary here to repeat what actually took place after the passage of that act except to call attention to the figures for 1932. As far as statistics can explain a bad situation these fully describe the results of that act. The 1938 figures, in spite of a temporary set-back in exports, show an important recovery from the bottom of the depression in 1932. With the national income up more than fifteen billions over 1932, with farm income up more than three billions, I think we are justified in taking a more optimistic view of our progress than the "viewers with alarm" have expressed.

National income and foreign trade

[Official figures in thousands of dollars]

	1929	1932	1938	1938 greater than 1932 by—
Exports	5,240,995	1,611,016	3,094,095	1,483,079
Imports	4,339,361	1,322,774	1,960,528	637,754
Excess exports	901,634	288,242	1,133,567	845,125
National income	78,556,000	49,024,000	[1] 65,000,000	15,976,000
Cash farm income	10,479,000	4,228,000	[1] 7,625,000	3,397,000

[1] Preliminary estimates.

THE BALANCE OF TRADE IN 1938

It is to be noted that the exports exceeded the imports by more than a billion dollars in 1938. It is said by our critics that this excess of exports was not the result of an increase in exports. It should be emphasized that exports were only down by about 8 percent below the 1937 level. It is a significant fact that brisk foreign trade contributed to the maintenance of industrial activity in 1938 and some manufacturers have stated that foreign sales enabled production to reach a volume of from 60 to 100 percent over what would have been required in domestic business.

Exports in 1938 were nearly a billion and a half greater than for 1932; that certainly indicates that we have progressed. Furthermore, the value of agricultural exports has increased every year since 1932. Of course, there are some items which have not followed the trend upward, particularly cotton. No one claims that trade agreements can or have solved all of our problems. Insofar as has been possible, trade agreements have prevented increased barriers against the exportation of cotton.

Those who formerly boasted about the large so-called favorable balance of trade in the Hoover era ought to be praising rather than condemning the 1938 export trade, which shows the largest excess since 1921. But opponents of trade are saying that this balance is more than offset by the importation of gold and silver. In order to show a so-called unfavorable balance, the gentleman from Massachusetts [Mr. TREADWAY] adds the imports of gold and silver to the trade in commodities. This new practice is resorted to because opponents seem to think it presents an unfavorable picture in our trade relations. The gold and silver used to be considered as a national asset under Republican administrations, now they seem to consider it a liability. If our trade barriers had been lower, we might have purchased more products—products which would have given employment to industries and furnished consumers with needed goods—instead of taking gold and silver in payment for our exports. When opponents oppose the reductions in duties and at the same time criticize the importation of gold they are in effect saying we should not take any payment for our exports.

CHARGE OF EXPORTS OF ALLEGED WAR MATERIALS

The opposition further maintains that we would have had a so-called unfavorable balance in recent years if it were not for the exports of war materials, and they make their own classification of war materials. The gentleman from Virginia [Mr. ROBERTSON] answered that proposition in his speech on February 3. What are war materials? Certainly not foodstuffs. What kind of exports held up in 1938? Our exports of crude foodstuffs in 1938 increased by 138 percent over 1937; manufactured foodstuffs increased by 3.6 percent; the exports of crude materials, other than foodstuffs, decreased by 17.7 percent; semimanufactures decreased by 25.4 percent—incidentally iron and steel scrap come in this category; and finished manufactures, other than foodstuffs, decreased by 5.8 percent. Of course, no one denies that in some instances there were larger exports of certain materials which can be and are used in the execution of war. Trade agreements have very little relationship to the exports of war materials. From some of the remarks of the opposition one might be led to believe that the sole purpose of trade agreements was for encouraging the exportation of war materials. How absurd.

The value of exports of iron and steel scrap decreased from $79,387,000 in 1937 to $45,837,000 in 1938. Exports of some other alleged war materials also substantially decreased in 1938. This cry of an "unfavorable balance of trade," but for the exports of war materials, is a subtle alibi of the opposition which for the last few years has charged that the trade-agreements program was wiping out the favorable balance. The excess of exports over imports of more than a billion dollars for 1938 has once more placed the opposition on the defensive, and they are now contriving another alibi for their inaccurate and ill-advised forecast about the effects of trade agreements.

THE MOST-FAVORED-NATION TREATMENT NOT PARTISAN

In the continuous criticisms of the trade-agreements program opponents in their attempts to show that trade agreements are a one-sided affair harp on the most-favored-nation clause. They either do not or cannot understand that through this arrangement the removal of the restrictions in trade agreements is a safeguard against any later preferential legislation which may be given by those countries with which we negotiate to third countries. Furthermore, they misrepresent the facts when they claim that the most-favored-nation principle is something new and experimental in American commercial policy. The most-favored-nation principle has long been a part of the commercial practice of the United States.

The gentleman from Virginia [Mr. ROBERTSON] indicated a few days ago that this policy had a perfectly respectable and legitimate Republican origin. He quoted from leaders of that party at the time this principle was formally made a part of the commercial policy after the Tariff Act of 1922.

Possibly a parallel case of the workings of the most-favored-nation principle under the present program and under

the so-called flexible clause of the Tariff Act of 1930 will illustrate the nature of the most-favored-nation policy under both a Republican and under a Democratic administration.

On January 1, 1932, strange as it may seem, President Hoover reduced the duty on certain classes and sizes of cylinder, crown, and sheet glass (window glass) after an investigation by the Tariff Commission. Belgium was the chief supplier of this kind of glass; the reduced rates of duty, however, applied to imports of this class of glass from all countries—England, France, Czechoslovakia, and Germany—not just Belgium. Neither Belgium nor the other countries made any concession to the United States in return for this reduction in duty.

On May 1, 1935, the United States entered into a trade agreement with Belgium in which the rates of duty on certain sizes of plate glass were decreased. Like the reductions in the rates of duty on cylinder, crown, and sheet glass under Mr. Hoover, they applied to all countries according the United States equal treatment to our exports. Now, there was this contrast in the two changes in duty: Under the Hoover reduction our citizens received no compensating benefit; under the trade agreement of 1935 with Belgium that country reduced her trade barriers on a number of the products which we customarily ship there. I do not think there is much question as to which reduction was to the greatest advantage to the United States. As a matter of fact, the Honorable Robert Lincoln O'Brien, former Republican Chairman of the Tariff Commission, stressed the importance of getting other countries to reduce duties while we reduce our own when he said:

> This method, if properly employed, has an advantage which the flexible tariff law in itself did not possess in giving us a concession for our exports in exchange for any that we yield to the foreigner. By the application of the most-favored-nation principle, we obtained from other countries all of the advantages which they give to anybody in the way of access to their markets, while at the same time we accord them a similar relation to ours (New York Times, April 11, 1936).

Now critics of the unconditional most-favored-nation policy say that the reduction in duty under the Republicans was the result of a cost-of-production investigation by the Tariff Commission. That is mere quibbling over details. Where changes in duties are now made, it is as a result of much more comprehensive information than mere estimates of the cost of production. Furthermore, members of the Tariff Commission now have to pass on every reduction of tariff made in a trade agreement, and, when available, costs are part of the great fund of information used by the interdepartmental committee in arriving at its conclusions.

It is somewhat amusing that in one breath the opposition states that we get traded out of our shirts once we sit down to bargain with a foreign country, particularly with the British, and then in the next breath suggest that the British are such poor bargainers that Japan or some third country is going to reap the benefits which we granted to the British for the concessions they gave us. Both contentions cannot be true. As a matter of fact, an examination of the record shows that both contentions are substantially in error.

M'KINLEY ON RECIPROCITY

For some time there has been going on a controversy about the position of McKinley on reciprocity. Those who favor trade agreements usually quote from the martyred President's last public utterance, his famous Buffalo speech of September 5, 1901, when he said reciprocity was in keeping with the times and that isolation was not. The opponents of real reciprocity, who use the expressions of McKinley to bolster their point of view, frequently quote from his inaugural address of 1897 or some earlier speech. As was pointed out by the gentleman from Virginia [Mr. ROBERTSON], President McKinley was striving to place the United States Government on a more friendly basis with foreign governments and to encourage peaceful commerce. He had negotiated a number of trade treaties, because he had hoped to increase commerce with foreign countries, and the Senate refused to act upon them. He was obviously discouraged in his efforts. In the light of his experience with the Senate, I think we are justified in taking his last public expression in the matter of reciprocity.

Even in the excerpts so frequently quoted by the gentleman from Massachusetts [Mr. TREADWAY], McKinley was in favor of granting concessions to the products of other lands which we needed and could not produce ourselves at a reasonable price. He advocated making concessions which tended to increase the employment of labor. We claim that the present program does that very thing. So we shall stand by McKinley. He was realist enough to know that we would have to give concessions in order to obtain them.

COL. FRANK KNOX ON THE TARIFF

Col. Frank Knox, recent Republican candidate for Vice President, in his speech of January 12, at Pierre, S. Dak., pointed out the necessity for lower tariffs. He also pointed out that the farmer had been promised higher and higher tariffs on his products, and that such promises were mere red herrings drawn across the trail to divert him from an excessively high tariff on domestic manufactures. Colonel Knox suggested that rates of duty be maintained only high enough on domestic manufactures to protect American wage standards and nothing else. That is in keeping with the purpose of the trade-agreements program.

WORKERS AND TRADE AGREEMENTS

I should like to quote from the Journal of Electrical Workers for January 1939, which is an organ of the electrical industry, whose workers are affiliated with the American Federation of Labor, on trade agreements:

> * * * The American home market cannot be fully prosperous so long as the markets for American export products are curtailed. Not only do workers dependent on export markets suffer from loss of foreign trade but all other workers in the country suffer loss to some extent because those dependent on export markets are unable, when deprived of employment, to buy the goods produced by others in the United States.
>
> Finally, it might be pointed out that since American electrical goods are sold in many countries where wages are far below those prevailing in this country, the electrical industry is a good example of how mistaken is the impression current in some quarters that American manufacturers are unable to meet the competition of imports from lower-wage countries and that American wage standards depend upon the maintenance of excessive tariffs. As for the electrical-service industry, where wages are even higher than average for the United States as a whole, an increase in our foreign trade can only serve to increase earnings through the increase in general prosperity which this additional trade will create.
>
> In the main, two questions relative to foreign trade and tariffs will be examined, in order to determine just what is the stake of the electrical workers in trade agreements. In the first place, it will be shown that the value of excessively high tariffs has been much exaggerated and that the great majority of our workers derive no benefit whatever from high tariffs. Even those supposedly protected often work for wages below those prevailing in nonprotected industries, while workers who are engaged in rendering services or in manufacturing goods for export are actually hurt when export markets disappear and general purchasing power declines as a result of high tariffs.

This clear-cut expression of the electrical workers ought to go a long way in offsetting the propaganda frequently circulated in an attempt to divert the attention of workers and consumers from the toll they have to pay industry behind excessively high-tariff walls. These workers realize that exports give employment and understand that foreign trade is a two-way business.

SENATE RATIFICATION

Senate ratification continues to be a point of criticism by those who would like to kill the program. A number of those who have introduced bills for congressional ratification of the agreements have also introduced bills for the repeal of the Trade Agreements Act. Both proposals lead to the same thing.

An excerpt from an editorial from the Washington Post of December 30, 1938, under the title of "Sabotaging Mr. Hull," reveals the real purpose of those advocating Senate ratification of trade agreements:

> * * * Veteran Senators, familiar with the utterly discredited logrolling methods characteristic of congressional tariff making, undoubtedly realize that insistence upon ratification of the trade agreements would be equivalent to sabotaging the Hull program. That, in fact, appears to be the underlying aim, as shown by senatorial concern over unfavorable local reaction to tariff reductions already made and by the exaggerated importance attached to the recapture of discretionary powers bestowed upon the President.

PEACE AND TRADE

The opposition thinks it has scored a bull's-eye by pointing out the unsettled world conditions and scorning the idea that proponents of trade agreements should connect trade and peace. They apparently point with pride that there have been trade wars and that these sometimes give rise to military wars. It apparently does not occur to them that unfair trade practices, trade discriminations, and monopolies are the principal factors which lead to trade wars and worse. The removal of such practices is the very basis of trade agreements, and we are thus justified in saying that this is a peace program.

The relationship of trade and peace were well expressed in the Buffalo News, a Republican paper, November 19, 1938, as follows:

Certain material gains will be forthcoming for the United States, but the greatest benefits will be derived from the increase in goodwill which usually follows trade expansion. There are no political implications, as such, in the treaties signed at Washington; but trade pacts are in themselves instruments of amity. The United States has been placed in a position of practical trade equality with the self-governing dominions of the British Empire. If the benefits received outweigh the disadvantages, Secretary Hull may well regard the negotiations of the treaties as the crowning achievement of his distinguished career.

Lincoln Day Address

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1939

ADDRESS BY HON. FOREST A. HARNESS, OF INDIANA, FEBRUARY 14, 1939

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable FOREST A. HARNESS, of Indiana, at Kokomo, Ind., on February 14, 1939:

Anyone who has undertaken the task of preparing a Lincoln Day address, and who has tortured his vocabulary and driven his imagination in a vain attempt to strike a fitting tribute to the Great Emancipator, will appreciate the humble thanks I felt upon discovering that Lincoln himself had prepared the words for me.

The Springfield Washingtonian Society was celebrating the birthday of Washington in 1842. Lincoln, the commemorative speaker, was still a comparatively young man, just entering the stirring years which were to carry him to immortality. But untempered as he still was by the trials and burdens yet to come, he was already displaying the simplicity of thought and the humility of soul which were such important attributes of his greatness.

Seldom, even in later years, did he reveal that simplicity and humility more clearly than in these words, spoken of Washington on that occasion:

"This is the one hundred and tenth anniversary of the birthday of Washington; we are met to celebrate this day. Washington is the mightiest name of earth—long since mightiest in the cause of civil liberty, still mightiest in moral reformation. On that name no eulogy is expected. It cannot be. To add brightness to the sun or glory to the name of Washington is alike impossible. Let none attempt it. In solemn awe pronounce the name, and in its naked deathless splendor leave it shining on."

Every time I read those words, their forcefulness is redoubled for me in the knowledge that they came from the heart of a man who in such a few short years was to take his place along with Washington as "mightiest in the cause of civil liberty, mightiest in moral reformation." If I may use these identical words of Lincoln, I shall be satisfied that nothing else need be added. For it is as true of Lincoln as it was of Washington that eulogy can add nothing to his stature.

But where we Republicans cannot add to his greatness through lip service, we surely can honor him in action. There is no better time than this to review the lessons of our immortal leader. And certainly there could be no more fitting time to remind all Americans of the democratic principles which he applied so courageously and selflessly to the preservation of the Union.

There has been no time since the Civil War period when we have so gravely needed statesmen motivated by the philosophy of Lincoln. The most classless figure in American history, it was Lincoln's task to guide the Union through the most serious period of class and sectional hatreds which ever threatened our democracy. The infinite capacities which he displayed through that ordeal were only the more sharply illustrated by his tragic and untimely death. For his task was only half done at the end of the war. The proof is apparent in the bitterness and brutalities which so needlessly prolonged the period of reconstruction.

Today, the spirit of unrest and class consciousness is again seriously disturbing the Nation. We know that leadership, based on Lincolnian justice, patience, and courage, is needed to restore internal harmony. But the total net result of American statesmanship in the past 6 years has merely served to aggravate and magnify the disturbances. In fact, the present leadership has proved to be nothing more than selfishness, greed, and short-sighted grasping for power.

Since labor has been engulfed in our present class unrest, we must show every laboring man that the leader who follows Lincoln is the best friend of labor. Lincoln was born in poverty. He paid for every one of his meager advantages with the most drudging kind of toil. This instilled in him the highest respect for the workingman—the utmost faith in his integrity. It led him to this philosophy of labor:

"Inasmuch as most good things are produced by labor * * * to secure to each laborer the whole product of his labor, or as nearly as possible, is a worthy subject of any good government." And, "Capital is only the fruit of labor—could never have existed if labor had not first existed. Labor is the superior of capital, and deserves the much higher consideration." And, finally, "The strongest bond of human fellowship, outside the family relation, should be one uniting all working people."

There is a simple creed which recognizes all the rights of labor, including their right to organize, to receive aid and protection from the Government, and to enjoy a full share of the profits of labor. If we Republicans will practice that creed as Lincoln wrote it and practiced it, labor will gladly and confidently desert the New Deal, which has been so busy giving dramatic lip service that it has found little time to do anything constructive for the workingman.

Born as he was with an unshakable faith in law and justice, even his sincere friendship for the laboring man would never have led Lincoln to injure the rights of property and capital. On this question, Lincoln said:

"Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own will be safe from violence when built."

If, as followers of Lincoln, we can apply the same justice and patience, the unrest and uncertainty which have been hampering recovery can be removed as mere incidents in our national life.

The pell-mell extension of government—the mad drive for concentration of dictatorial power in the Executive—the boot-strap economics—the skyrocketing of Federal debt and taxes which have marked the 6 years of the New Deal are all as exactly opposite to every principle of Lincoln as night and day. That fact is so obvious to every Republican, in fact, to every sound-thinking American that I only want to cite Lincoln briefly to strengthen our determination to stop these destructive trends. First, of spreading Federal activities, he borrowed from Jefferson these words:

"Were we directed from Washington when to sow and when to reap we should soon want bread * * *. When government, in little as well as in great things, shall be drawn to Washington as the center of power, it will become venal and oppressive." And Lincoln added this simple phrase: " * * * The principles of Jefferson are the definitions and axioms of free society."

Of dictatorial power, our founder remarked:

"It is to deny what the history of the world teaches us is true, to suppose that men of ambition and talents will not continue to spring up amongst us. And when they do, they will naturally seek the gratification of their ruling passion as others have done before them * * *. And when such an one does, it will require the people to be united with each other, attached to the Government and laws, and generally intelligent, to frustrate his designs."

Speaking of the violation of arithmetic and common sense which nowadays says that you can spend and borrow your way to prosperity, these remarks of Lincoln, made almost 100 years ago, are even more significant today:

"For several years past the revenues of the Government have been unequal to its expenditures, and consequently loan after loan * * * have been resorted to. * * * The system of loans is but temporary and must soon explode. It is a system not only ruinous while it lasts, but one which must soon fail and leave us destitute."

There, briefly, you will find every important element of a practical working creed and platform for Republicans. You need add little more than the profound, abiding love and respect for justice and equality under the laws and the Constitution; the supreme, unshakable faith in the American people and the American democracy which was Lincoln's. If details of the complete picture are missing, all of you are familiar with pertinent Lincolnisms to complete it.

And that picture cannot fail to strike you forcibly with the fact that everything basic in the creed of Lincoln and his Republican Party is the direct antithesis of the New Deal. So far I have not tried to add my own thoughts, for nothing I could say would so completely debunk and denude the New Deal of its shams, its

fallacies, and its un-Americanisms as completely as Lincoln did it almost 100 years ago.

I should like to intrude the thought here for all Republicans that the effective criticisms of the New Deal are all not only as old as Lincoln, but practically as old as modern history itself. I think we have laid too little stress upon the fact that there is nothing new about the New Deal but the names of the wishful thinkers, the dreamers, and the theorists who attempt to fly in the face of human experience and the laws of nature. The fallacies of the New Deal are the fallacies of the centuries. The encroachments of the New Deal are the encroachments upon free government which men have had to resist since they began to attain liberty almost a thousand years ago.

Two important problems—the matter of Federal Budgets and the question of foreign policy and national defense—have so far been uppermost in this session of Congress. Both will probably stay in the limelight for some months to come. Because they are of such immediate concern, I want to add my own observations made in the past 6 weeks to those of Lincoln.

In the matter of appropriations, I have very little more information than is available to any citizen who cares to study the records. But I still see no earthly reason why current budget proposals should exceed those of a year ago, unless this is Mr. Roosevelt being true to his remarks in his opening address to Congress this year, that any savings which could be made in the normal Budget would be trivial. Despite the famous Presidential grin he gave us when he tossed that scrap of new dealism at the minority, I shall never agree that a saving is trivial, no matter how small.

I shall certainly resist every effort to increase budgets because I cannot agree with the stubborn attempt to continue "pump priming," even in this indirect form. You know, of course, that the President and his fair-haired lads have a new name for it now. They call it "compensatory spending"—either to delude the people, or to delude themselves, into the belief that an old failure under a new title will not fail again. I shall oppose increases also because I want to see a lessening, rather than any further increases, of Federal activities. I don't want to give the President opportunity to add further hordes of New Deal parasites to the Federal pay rolls.

In fact, I'm even going Democratic far enough to insist at every opportunity that Mr. Roosevelt make good on that solemn vow he took in 1932 to cut Federal expenditures at least 25 percent. We have just failed in our first effort to force a reduction in the independent offices appropriation, which was enacted this past Wednesday over the protests of a concerted minority and a mere handful of Democratic dissenters. We insisted that the measure should be trimmed 25 percent below the figure of a year ago, while the original proposal by the administration called for $2,360,479,029, an actual increase of three hundred and twenty-five and one-half millions, or 16 percent above the appropriations for the current year.

No Republican—nor any other sane American—can understand why the normal operating expenses should be mounting at the rate of 16 percent per year—unless, as I say, it is that eternal New Deal grasp for power, or an indirect form of pump priming. Well, we scarcely dented that bill. But we shall continue to protest every administration measure which fails to make an honest effort to cut costs.

In the matter of foreign policy and national defense, I think the President greatly overstressed the immediate dangers of aggressions against us—unless there have been even worse blunders made secretly than those he has made openly in the administration of the neutrality act. We know the embarrassments which have arisen to plague him through that measure. But we can only wonder if there may be even more serious embarrassments about to overtake him as a result of secret diplomacy. Until further evidence appears, we must accept his heated denial that he has not placed the American frontier in France either by inference, statement, or diplomatic act.

But if that denial is the entire truth, then the strong overemphasis in his defense message was merely a clever bit of thimblerigging to support the rapidly slipping New Deal domestic program. Being without defense for the continuing failures of his administration, I think he is merely trying to tie the whole sorry program up with national defense in a manner which will make it seem to be an essential part of national defense.

I decidedly do not agree with him that the New Deal has strengthened us in any particular for national defense. I definitely do not agree with him that our first and most serious danger is from without. Our first and only immediate hazards are every one internal—and every one of them almost entirely the product of the New Deal. Our only weaknesses are the weaknesses which the New Deal has brought upon us.

Listen to Lincoln on this very subject:

"At what point shall we expect the approach of danger? By what means shall we fortify against it? Shall we expect some trans-Atlantic military giant to step the ocean and crush us at a blow? Never! * * * Reason—cold, calculating, unimpassioned reason—must furnish the materials for our future support and defense. Let these materials be molded into general intelligence, sound morality, and, in particular, a reverence for the Constitution and laws."

To determine and stick to a consistent foreign policy will be one of our most difficult problems, because it is a subject so completely involved with patriotic sentiment—even patriotic hysteria. For the same reason, then, the problem of national defense will be equally difficult. We should admit to ourselves that the wisest and most far-sighted leader can ultimately do little more than to follow unified public sentiment in treating any international crisis. We must learn not to delude ourselves by overlooking the fact that American sympathies form rapidly and swing rapidly.

We can see the most graphic proof of that fact in our World War experience. In 1916 we reelected President Wilson largely on the appeal of that campaign slogan, "He kept us out of war." And yet 5 months later we followed him into war—willingly.

Even in this short stretch of 20 years we are passing beyond the generation of men whose experiences in the last war would make them everlastingly oppose another war. Their sons are now the potential American soldiers. Would these boys heed their fathers' urgings for peace? Would America really stay preponderantly for peace as it is now? We like to think so—and certainly we hope so. But let us be realistic enough to remember that propaganda is powerful. Let us see the wisdom which Herbert Hoover spoke a few nights ago in Chicago when he said, "If wholesale attack were made upon women and children by the deliberate destruction of cities from the air, the indignation of the American people could not be restrained from action."

Any man who saw the awful contrast between the glamour of war as sentiment and propaganda painted it over here and the utter futility, misery, and suffering it actually was over there is simply bound to be a realist. Because I saw both sides of that picture I am a realist. As much as I would like to believe that America will never be drawn into another war, I simply cannot convince myself that the same thing which happened 20 years ago can never possibly happen again.

To this extent I commend—and I think Lincoln would commend—the realism and timeliness of Mr. Roosevelt's urge for adequate defense preparedness. I want to see America made and kept so completely impregnable that no nation or group of nations would ever risk attacking us. But at that point I immediately fall out with many of the President's proposals.

The anger which the President has shown since the press revealed what appears to be secret dealings in foreign affairs seems to me to be entirely out of place in this important problem. Foreign policy and national defense are matters of direct and vital concern to every American citizen and are therefore matters to be considered by the people's representatives in Congress. We are still supposed to be operating under the American system of placing war-making powers solely in Congress. That is the way I want to see it remain. I don't want to see such vital authority as secret treaty making or the determination of wars given to President Roosevelt or any other single individual.

I want, first of all, to see these precious rights of the people carefully safeguarded. Second, I want to arrive at the basic principles which are to determine our foreign policy by sounding public sentiment on the matter just as fully and completely as possible. Finally, I want to see a program which is based upon the best expert advice we can command in our Army and Navy, and among our Civil Aeronautics technicians and engineers. Behind all this, I want to see a pattern for close coordination between all branches of service and American industry and transportation insuring that our defense machine will be supported and supplied efficiently. Above everything else, however, I want to be sure that the program is completely and permanently safeguarded against any taint of politics.

Common sense and sound judgment should motivate our armament program. But that these considerations have not prevailed in many of the administration's programs has been apparent to the Committee on Military affairs, in light of the expert evidence which has been given before it. Air defenses were the subject of the most wild-eyed suggestions; but the committee has reported a comparatively modest measure authorizing 5,500 planes. That figure is certainly still generous. In fact, the minority has filed a report asking for a House amendment to limit the addition of new planes to 1,000 per year for the first 3 years—which I feel is entirely ample. Obsolescence takes such a heavy toll of fighting ships that we will be much better off if we will be in less frantic haste to build a huge air fleet than if we encourage American research and engineering to insure that our planes will always be the world's best.

Despite the wailing and gnashing of New Deal teeth, despite the President's insistence that Congress restore the $150,000,000 cut, we feel certain that the present sum is sufficient if W. P. A. is willing to put its house in order and work for efficiency. I hope it will undertake the task graciously. For, willing or unwilling, that organization is inevitably due for the overhauling which the voters ordered.

You doubtless have been interested, also, in the measure proposing to extend the reciprocal authority to the Federal and State Governments to tax employees. The President, always impatient of constitutional restrictions which interfere with any whim, has in this instance, I think, merely repeated his performance at the time of the Guffey Coal Act. Then he directly ordered Congress to disregard the question of the measure's constitutionality. This time he has at least been a little more discreet in finding a precedent purportedly indicating the constitutionality of the measure.

I voted against that measure although I think it is just that any Government employee should assume the same tax burdens as any person in private work. Federal employees now pay Federal income taxes; and State employees pay State income taxes wherever these are levied. The only advantage enjoyed by any Government employee, either Federal or State, is that he is never called upon to pay but one income tax, whereas the person on a private pay roll frequently must meet two such levies.

I opposed this measure solely because I am convinced that it is an invasion of the Constitution; and a clear violation of a prece-

dent established by Chief Justice John Marshall in 1819 which the Supreme Court has followed consistently since. I have studied the important cases which have established and maintained the precedent that such a tax is a clear violation of the organic law. Consequently, I feel that the Court will reject such a measure if enacted. Furthermore, in the unlikely event that the Court might reject this 120-year-old precedent in accepting the law, that would at once open the way to all manner of reciprocal taxes which might conceivably be carried even so far as to destroy State sovereignty. I believe in the principle of equal taxation which this bill provides, but I much prefer to see it embodied in a specific constitutional amendment limited to this purpose only. I prefer to heed the warnings of Marshall and Daniel Webster who said at the time the Supreme Court established this precedent, "The power to tax involves the power to destroy."

Of special interest, also, to you and me alike is the work of the Dies committee, which was overwhelmingly extended another year. Despite the fact that DIES has distressed many a New Deal bunion, and has accordingly been subjected to scorn, ridicule, and wrath from above, the House indicated its desires for more information on un-American activities.

Every day I am in Washington strengthens my confidence that the Republican Party is coming back to power in 1940—and with it is coming a new era of confidence and prosperity. The political philosophies of the Grand Old Party are again prevailing—as they have prevailed—and will prevail as long as the Republican leadership has the honesty and sincerity of purpose to match those philosophies.

But by all means let us try to avoid the cocksureness, the I-know-it-all attitude of the horde of pseudo experts who have engineered this plague which we have suffered for the past 6 years. Don't forget for a minute—we have many years of sweat and toil ahead of us—both in getting back to power and in performing the miracles which will be required of us to undo the terrific damages of this passing administration.

I recommend frequent contemplation of the humility in Lincoln's soul which must have been the source of much of his inspiration and strength. There could be no more certain cure for overconfidence than the mere thought that a man of Lincoln's stature should have said in all frankness and honesty: "I find myself driven to my knees over and over again because I have nowhere else to go."

Conservation Cousins—Grazing and Parks

EXTENSION OF REMARKS

OF

HON. EDWARD T. TAYLOR

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1939

ADDRESS BY HON. HAROLD L. ICKES, THURSDAY, FEBRUARY 16, 1939

Mr. TAYLOR of Colorado. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by Hon. Harold L. Ickes, Secretary of the Interior, delivered today before the American National Livestock Association at San Francisco, Calif. The address is broadcast throughout the country and is exceedingly important and opportune at this time in view of the early consideration by Congress of our national parks and of the conservation of the remainder of our public domain and the grazing and the utilization thereof, under the provisions of the Taylor Grazing Act. The Secretary states his views upon these subjects so that not only the stockmen, but the entire population of the Western 11 States most vitally affected, may definitely know the policy of the administration. The address is as follows:

I have come all the way across the continent in response to your gracious invitation because I wanted the pleasure of attending this meeting of the American National Livestock Association and talking to you face to face on two subjects, both of which are near to my heart—two subjects which, at first glance, may not seem to be related but which really are first cousins because they trace directly to a common ancestor, conservation. I refer to grazing and national parks.

When this administration came into office in 1933 one of the first matters called to my attention as Secretary of the Interior was the pendency of an act to regulate the use of what was left of the public range. You are more familiar than I with the situation that obtained in the public-land States at that time. This bill had already passed the House and was under consideration by the Senate. Confronted as we were with a national emergency resulting from an economic collapse, which had deeply affected the welfare of the whole country, I asked that consideration of the proposed measure be postponed until I had had time to make a personal investigation of it.

It did not take me long to be impressed with the benefits that would flow from a law restricting the number of cattle and sheep to be grazed on the public domain to the reasonable grazing capacity of that range. It required no argument to demonstrate that overgrazing meant deterioration and that deterioration meant smaller profits to your industry. So at the next session of the Congress I gave my hearty support to the bill that later became known as the Taylor Grazing Act. This bill was signed by President Roosevelt.

I have referred to the condition of the range at the time that this important act was passed. The law of the survival of the fittest was practically the only law that had any force and effect in the public-range States. It was a case of "first come, first served." I do not say this critically but factually. We all know that what is everybody's business is nobody's business and it was nobody's business to bring order on the public domain to see to it that more livestock were not put on the range than it was able to support. The man who saw his neighbor turn loose more cattle or sheep than could be supported could not be blamed if he in his turn tried to graze two head where there was only sufficient forage for one.

I have seen pictures showing what great areas of this public range used to look like before deterioration and what it looked like later. The first pictures showed lush grasses knee high or even waist high capable of nourishing and fattening a large number of cattle. Succeeding pictures disclosed a barren land eroded by water and wind into gullies. The topsoil had disappeared leaving in its place almost sterile subsoil which by care in course of time might conceivably again grow grass for forage. In some sections cattle had been succeeded by sheep, sheep had been followed by goats, and the goats had left the land an arid waste.

Long before the Taylor Grazing Act was passed prudent and far-seeing stockmen realized that some authority stronger than the combined power of all the stockmen must be invoked to save the range, and thereby thousands of people dependent upon it for their livelihood. Yet such is human nature that there was some grumbling when Congressman EDWARD T. TAYLOR finally succeeded in getting through Congress an act that will stand as a monument to sane conservation.

The first task of the Department of the Interior was to set up an agency for the administration of the Taylor Grazing Act. We established the Division of Grazing and put in charge of it practical stockmen from the West who, in the school of hard experience, had learned the problems of the public range in its relationship to the livestock industry. Next we organized advisory boards for each grazing district. These were composed of men engaged in the cattle and sheep business; users of the public range. These advisory boards were a voluntary, executive act on the part of the Secretary of the Interior, who was responsible for the administration of the Taylor Grazing Act. I may say that this system has worked well. The advisory boards have helped to bring about understanding and intelligent cooperation between the Government and the users of the range, and it is my earnest hope that nothing will disturb the harmonious relationship between them and the Department of the Interior.

One of the first instructions that I gave to the newly appointed Director of the Division of Grazing was that no favoritism was to be shown. I laid it down as the first principle that the little fellow must be as fully protected in his right as the bigger fellow; that all questions of doubt must be resolved in favor of the little fellow. I did not have a particle of sympathy for huge livestock companies that had been squeezing out the men with small herds; nor for the small operator who assumed that he was the owner, in fee simple, of land that was public property.

In operating under the Taylor Grazing Act we have had two objects in view which in a way contradict each other. On the one hand, we wanted to restore and maintain the range in order to increase its carrying capacity and, on the other hand, we wanted it to be possible for the stockmen to graze as many head as possible. It was here that we needed the cooperation of the stockmen, and to obtain it we set up the grazing advisory boards. In many cases it was hard for the stockmen to realize that their herds would have to be reduced in order to begin rebuilding the range, but, generally speaking, we have met with fine cooperation everywhere.

A large part of the fees that you stockmen pay for the privilege of grazing goes right back into the range itself. Thus, in effect, you are making an investment in your own business, an investment that ought to bring you an ever increasing return. Once let us get these range lands back even to an approximation of what they used to be, and your industry will have an enduring foundation. You and your children will bless the day when that grand old Congressman from western Colorado, with the eye of a statesman, guided the Taylor Grazing Act, first, through the House of Representatives and then through the Senate of the United States. Perhaps one of these days you will be holding public celebrations of the passage of this act.

The income from grazing fees amounts, roughly, to $1,000,000 annually. Twenty-five percent of this sum is returned to the grazing districts for range improvements. Fifty percent of every dollar collected is returnable to the States in which the grazing districts are situated, to be expended as the State legislature may prescribe for the benefit of the county or counties in which the public lands are situated.

In some States the advisory boards expend this money. The advisory boards, however, are not authorized by law to perform executive functions. I sincerely hope that the advisory boards and

the Department of the Interior will continue to work together in the closest possible harmony, and I deprecate the possibility of an issue arising, as it may well arise, if any State seeks to vest a Federal advisory board with executive functions. The better plan would be for the State to return the portion of the fees apportioned to it to the Federal Treasury on the condition that they be used for the maintenance and improvement of the range in that particular State. It was the Federal Government which first conceived and adopted the policy of maintaining and building up the range, and I see no reason why any mistrust of the United States Government should be evidenced by any State.

The advisory boards are bodies set up voluntarily by the Secretary of the Interior and their function is implicit in the word "advisory." If I were asked whether I would favor granting administrative functions to the advisory boards, in all frankness I would have to answer "no." Executive functions cannot successfully be carried out by a board or group. This has been demonstrated time after time, and no one outside of politics ever tries to make such a fool set-up work.

Moreover, the administration of the Taylor Grazing Act relates to Federal lands. To be sure, these lands are used for grazing purposes and stockmen have an interest in that use. However, no owner of land, and this would apply to you stockmen as well as to anyone else, would tolerate the thought of permitting his property to be administered by someone else. Finally, administration by advisory boards would mean control by beneficiaries whose interests, as the past has shown in essence are or may be, antagonistic to those of the owner. I would not think of turning over the administration of the national parks to the concessionaires in the parks. You would not deposit your money in a bank which set up a committee of creditors to manage its affairs.

The public lands lie in many States. To adopt different sets of administrative principles in different States would result in confusion, overlapping of functions, and waste of money. Thousands of steers are herded across State lines, and I think that you would have difficulty educating them to graze under one State's rules in the morning and then change their eating habits to comply with another State's regulations in the afternoon. There must be one standard to which all the grazing districts must conform in order to assure efficient administration and protection equal for all the users of the range.

I now come to the subject of Senate bill 571 introduced in the present session of the Seventy-sixth Congress on January 12 of this year. This bill proposes that the Taylor Grazing Act be amended so as to empower grazing district advisers to adjudicate grazing privileges on the Federal range and perform other administrative functions pertaining to its management. In other words, the bill would give certain prospective beneficial users of the range a more potent voice in the selection of permittees. On its face, the bill is designed to subordinate the authority of the Secretary of the Interior to that of advisory boards by placing upon him the onus of assigning reasons for his disapproval of any recommendations which the boards may see fit to make.

The theories of administration embodied in the proposed measure are contrary to orderly procedure and inconsistent with the spirit and intent of the Taylor Grazing Act. I do not think that any of you stockmen would be happy to find yourselves subject to regulations by your rivals. The public lands of the United States belong to all the people, and the National Government must have power to regulate and protect these lands. In my opinion it would be unwise for such authority to be granted to one special group to the exclusion of all others, especially when that group has a primary interest in the use of the range. To require that the Federal authority be accountable to its subordinate employees for any action taken by him is unthinkable merely as a matter of good government. By the same token, it would be unfair to place responsibility on the stockmen in matters relating to larger national issues.

In the adjudication of grazing privileges on the Federal range, it is well to remember that every applicant is directly affected. Decisions must be impartial, must be based on facts and be fully compatible with the law. I should be shrinking my duty and unfairly burdening busy stockmen with irksome responsibility were I to ask them to perform the duties imposed upon me by the Taylor Grazing Act. For the greatest good of all the interests involved in this splendid conservation measure, it is necessary that the functions of advisory boards remain at all times subordinate to officials of the Department who are required to exercise impartial and independent judgment in all cases.

The very nature of the lands to be administered and the varying conditions of the several localities, scattered as they are between the Canadian and Mexican borders, require a degree of cooperation and flexibility of administration which could not be attained under the terms of the proposed bill.

The district advisory boards have furnished an effective channel connecting the officials in charge of grazing and the users of the range. I would like to avoid any controversy concerning the advisory boards under the proposed law. Why inject a highly controversial question at a time when everything is running smoothly; when there is peace and understanding? The advisory board system is on trial before the Nation. Everybody who has an interest in the West wants it to succeed. The Taylor Grazing Act is also on trial before the Nation. In contributing to its success, the district advisers occupy a unique position. It seems to me that any attempt at this time to antagonize public opinion would be a grave mistake and a serious blow to the stock-grazing industry.

Our exclusive concern is the well-being and prosperity of the stockmen. The record of the new Director of Grazing, Richard H. Rutledge, is additional assurance that, under the Taylor Grazing Act, the range will be administered in the public interest, which means the interest of the users of the range. But the management of Federal lands must remain a Federal function.

I hope that the time will come soon when all of the livestock men of the country will see that the administration of publicly owned grazing lands is primarily a problem of conservation. When this is fully realized, it will do more than save the livestock range; it will bring a new element of harmony into the conservation program in America.

The trend is in that direction. As soon as we succeed in eliminating overgrazing, there will be a slow but steady improvement of the grasslands, which to the stockmen mean steady improvement of their stock. As we rebuild the productive range, the opposition to controlled grazing on public lands will diminish in intensity. This will give a broader outlook, a more sympathetic attitude toward national programs based on a wide variety of human interests.

It is to be regretted that nearly every attempt to round out the national park system, by additions of territory primarily suitable for parks, meets with an opposition which frequently includes some of the organizations of livestock raisers. My belief is that this situation results from misunderstanding rather than from any real clash of interests. It is a part of sound national-park policy not to permit grazing by domestic livestock in areas set aside for preservation and recreation. But this does not mean that in the establishment of a new national park there need be any harsh interference with grazing privileges upon which individual ranchers have based their livelihood.

When Congressman GEARHART, of California, talked to me about his bill to establish the John Muir-Kings Canyon National Park, he asked me whether I would object to a provision that grazing permits already granted by the Forest Service should be renewed during the lifetime of the present owners, so as to provide a slow and natural elimination. I replied that this seemed a fair thing to do, provided that power was retained to protect the land against overgrazing. I think that it is proper in such circumstances to recognize the human element involved, and deal with it so as to impose the least possible hardship.

On the other hand, let me give you an illustration of the kind of grazing that is, and will be, stopped instantly under national park policy.

A number of years ago, in a transfer of public land to the national park system, the new superintendent made a tour of inspection and found 1,600 sheep grazing in what had for a quarter of a century been a wildlife sanctuary. They belonged to a man influential in State politics, and he had a permit for the grazing. The land where they were grazing, for miles around, was eaten down to bare earth and rock, where formerly the grass and flowers grew 12 inches high.

Those sheep, on the expiration of the annual permit, went off that land, and they have never come back. Neither has the grass come back. Years have passed, but that land is still hardly more than bare earth and rock. Such grazing will not be permitted, even for the briefest period of transition, on any lands under the jurisdiction of the National Park Service, and I know that the livestock men of America will offer their moral support of such a policy.

In 1934, the 400,000-acre Mt. Olympus National Monument, which President Theodore Roosevelt had set up as a sanctuary for the Roosevelt elk, was transferred to the National Park Service.

I have never found one instance in which the establishment of a national park failed to contribute to the prosperity and happiness of the neighboring people. Opposition to national parks comes from two sources—from a very few people who want to exploit something that belongs to the public, and from those who have been honestly misled by false arguments.

You hear it said that so much land is being transferred from national forests to national parks that the country will soon be all parks. Let me give you a few figures. If you added all the national parks in the continental United States together, it would make an area only about 48 percent larger than the size of Inyo County, Calif. But the national forests in the continental United States make up an area larger than that of 12 States: Maine, New Hampshire, Vermont, Connecticut, Rhode Island, Massachusetts, New York, New Jersey, Delaware, Maryland, Virginia, and South Carolina.

I do not object to the size or number of the national forests. There ought to be more of them. But I do object to the misleading argument that we ought to establish no more national parks because our 9,473,500 acres of national parks are too large in comparison with our 152,000,000 acres of national forests.

In the second place, there is an erroneous impression as to who owns the public lands. They do not belong to the Government bureau that administers them. They do not belong to the States in which they are located. They belong to the whole Nation. When a member of the California Senate says that the Secretary of the Interior is derogating from the sovereignty of the State of California when he discusses the possible disposition of lands in California belonging to the Nation, he is twisting the doctrine of State rights all out of shape.

The question now before the people of California is the establishment of the proposed John Muir-Kings Canyon National Park. I

ask the people of California not to be misled into thinking that in this matter there is any conflict between their interest and that of the Nation.

I do not like to put this matter before you in a commercial light, but it is the plain truth that national parks are one of the three great drawing cards that California possesses in relation to the rest of the country—your climate, your national parks, and your motion-picture industry. What do easterners talk about when they plan a trip to California? The fair at San Francisco, Hollywood, the national parks, Yosemite, and the big trees. Do you know that in the article on California in the World Almanac there are two subheadings, and only two? One of them is on the big trees, the other on Mount Lassen—features brought to attention because national parks have been set up to preserve and protect and glorify them.

The proposed John Muir-Kings Canyon National Park measures up to the finest of the national parks already established. It includes, as you know, the Kings Canyon wilderness, which John Muir himself put on a par with Yosemite. It takes in the smaller General Grant National Park, and it opens the way to acquire and preserve the wonderful Redwood Mountain sequoia grove, which now faces almost immediate destruction. This grove contains 7,000 sequoia trees, ranging up to 30 feet in diameter. This is a privately owned grove on which taxes are in default, and magnificent sequoias will be cut into fenceposts and grape stakes unless the Government saves them. If all the rest of the Nation ignored this impending tragedy, I should expect the public spirit and fine feeling of the people of California alone to force protective action. But the rest of the Nation is not ignoring it.

Congressman GEARHART'S bill would make Kings Canyon a perpetual wilderness area, open to motor travel in the beautiful canyon of the South Fork, but everywhere else protected by law against the encroachments of civilization—a roadless wilderness, held to its wilderness status by an act of Congress.

Against this proposal what arguments are offered?

Organized opposition comes from a small group of deer hunters, who say that the establishment of a national park would make a wildlife sanctuary out of a country now open to hunting. Have you been told the average kill of deer in the 450,000 acres proposed for a park? 159! If you want to know why this is so, just try to carry a 400-pound buck out of that rugged mountain terrain. Make it a wildlife sanctuary, and it will help to stock adjacent areas that remain open to hunting. The result will be more hunting in areas that are huntable.

Another argument against the park is that it would lock up Kings Canyon and prevent development of its economic resources. The truth is that the economic value of Kings Canyon comes from the use of the water of the Kings River. The proposed Pine Flat Reservoir, which would impound the entire flow of the Kings River for irrigation, is 25 miles outside of the proposed John Muir National Park. The proposed power sites are outside. Inside the park you would have a watershed needed for the protection of vegetation.

What else is there in the Kings Canyon wilderness? Mining? Not a mine. Commercial timber? Not a stick that could be logged at a profit.

Necessary sites for flood-control works? Dams for flood control, as for irrigation, are not built in mountain canyons, but in foothills.

Once again, what about grazing? The 900 head of cattle that graze in the scattered mountain meadows are important to their owners, and this is recognized in the park bill; but as an economic resource, grazing disappeared from Kings Canyon years ago. In 1891, 20,000 sheep grazed in the basin of the Roaring River alone. Today there is no forage for a single burro in a region that once grazed 20,000 sheep. But if you make it a national park, you will get some of the vegetation back again, and to that extent you will restore Nature's system of flood control for the San Joaquin Valley.

You have been told, quite incorrectly, that there has been a conflict between the Forest Service and the National Park Service on this subject. I wonder how many people know that three former chiefs of the Forest Service, Graves, Greeley, and Stuart, when this question has been before Congress in the past, have advocated that Kings Canyon be made a national park. So does the Secretary of Agriculture Henry A. Wallace, and so did his father Henry C. Wallace, when he was Secretary of Agriculture under President Coolidge.

I ask those who live in the State of California to unite with the people of the rest of the country and see to it that this wonderful area, which belongs to all the people of America, be made into a national park for the benefit and the pleasure of all future generations. If you do this and attach to it the magical name of John Muir, it will become one more magnet by which California will draw the American people westward; one more center of enchantment to make them come again.

I want to conclude by assuring you stockmen that the fair use of the range is a matter of deep personal concern to me. I have followed the administration of the Taylor Grazing Act with interest and not without anxiety. Long before I went to Washington I learned how men exercised unlawful sovereignty over lands that were not theirs. Every complaint that has ever come to me I have caused to be investigated and the reports have been sent directly to my desk. If you know of any discrimination, if you know of any improper use of the range, you will confer a great favor upon me by reporting it to me personally. Just write "personal" on the outside of your envelope and your letter will come straight to my desk.

Students and Democracy

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1939

ADDRESS BY JOSEPH P. LASH, DECEMBER 27, 1938

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I wish to insert an address given at the fourth annual convention of the American Student Union in the Hippodrome Theater of New York City on December 27, 1938, by Joseph P. Lash, secretary of the union, on the subject "Students and Democracy."

This convention was addressed by a number of noted figures, including Mayor La Guardia, of New York City, and Mrs. Thomas McAllister, head of the Women's Division of the National Democratic Committee.

The address is as follows:

The American Student Union meets this evening, the acknowledged leader of 100,000 students in high school and college; meets having chapters and active contacts in 300 academic institutions. It meets for this convention, a responsible and stabilized institution within the educational community.

Let no one scoff at these achievements, for the barriers of prejudice and legitimate scepticism that we have had to surmount have been formidable.

In the course of achieving stability on the campus we have not abandoned nor blunted essential aims; we have worked unflaggingly to awaken the student from his thoughtlessness and apathy; we have striven unremittingly for the welfare of our student generations; we have nailed to our mast the banner of a forward-moving democracy; we have been concerned with world peace and world democracy with which our own country's fate is indissolubly bound.

We are assembled at this fourth annual convention, 1,000 strong, to review our work and objectives in the light of the year's developments. We can sum up the latter simply: We are meeting in a post-Munich world. The same vast significance that Sarajevo, Versailles, Locarno had for past generations of youth Munich will have for ours.

Mr. Chamberlain and Mr. Daladier assured the world after Munich that the year 1938 would be crowned with peace and good will, but the year ends bearing within its womb the seeds of great tribulations for humanity in 1939. Munich has ushered in the crisis of democracy. It has uncapped a Pandora's box of racial hatreds, national chauvinisms, and bestial intolerances. It has imperiled free institutions throughout the world. It has galvanized the sinister forces of fascism in our own country, as exemplified by the Dies committee, Father Coughlin, and others. It has accelerated the drive to war. It has driven men of good will into hiding places and delivered nations over to the underworld of cutthroats, gangsters, and the depraved. Freedom is destroyed, reason scorned, might enthroned. Such is the moral climate engendered by Munich.

Democracy is in jeopardy. Peace is in jeopardy. In these circumstances, the entire educational community must be enlisted in a vigorous affirmation of democratic principles.

How shall we help fire the campus with this active concern for the fate of democracy?

EDUCATION'S "PRIMER FOR DEMOCRACY"

First, we have the primary responsibility of helping render our educational system a more sensitive instrument in the service of democracy. A student who would serve democracy must help mold the structure of the educational system in the image of democracy. He must help shape its courses so that they are meaningful and pertinent to a world in which democracy must move forward if it is to survive. He must help the school provide American society with leaders gifted with social vision. He must help assure equality of educational opportunity.

The American Student Union proposes in the coming months to launch a series of student conferences on educational policy to help formulate student viewpoint on what education for American life should be.

Secondly, the time has come for a dramatic restatement of the principles of democracy in every educational institution in this country. We propose that every high school and college initiate a course, "a primer for democracy" in answer to "the Nazi primer" which would assess ideas of racial supremacy, the exaltation of violence, racial truths, thinking with one's blood, in terms of the principles on which our country is founded. In this connection, the American Student Union applauds the decision of the

board of education to hold "tolerance assemblies" in the New York high schools. We welcome the recent action of the Catholic bishops inaugurating an educational program in "true Christian democracy."

Fascism gains a hearing as Government fails to serve human needs. We could view the future of American democracy with equanimity if all the American people were assured of adequate food, clothes, shelter, education, and medical care, but one-third of all of America's families live on incomes of less than $15 a week. Youth's loyalty to democracy would not be open to question if youth could look to the future with hope; but over 4,000,000 young people are out of school and out of work. Fascism could never look to our universities for its storm troops if our college graduates had the prospect of good positions; instead they are confronted with the dismal outlook of joblessness.

EXTEND THE FRONTIERS OF DEMOCRACY

It is therefore most ominous that the forces campaigning in the 1938 elections on a program of Government withdrawal from efforts to meet human needs achieved a certain measure of success. Reaction appealed to youth in those elections telling us that the New Deal was mortgaging our future. But our future will definitely be mortgaged—mortgaged to disease, illiteracy, poverty, and despair—unless the New Deal's program for utilizing the instrumentalities of government for the common welfare is successful. We must unite the campus for the objectives of the New Deal. We must unite the campus to play a decisive part in the 1940 elections.

There must be no ambiguity on this point. The sad plight of one-third of our population inheres not in individual shiftlessness, irresponsibility, or any other Tory shibboleth, but in the lack of social planning, in the lack of social control, in the concentration of wealth. The American Student Union declares that the frontiers of democracy must be extended within our economic institutions. Organization of labor, of consumers, of farmers is one of the best guaranties that no aristocracy of wealth will continue to dominate our instrumentalities of government to its own exclusive advantage.

The American Student Union proposes that every college and high school formulate a legislative program that will help meet human needs. In our opinion, this means Federal aid to education in order to assure equality of educational opportunity. It means continuance and extension of the N. Y. A., whose fate is intimately linked with W. P. A. It means Federal legislation to provide adequate housing and medical care. It means a comprehensive social-security program. It means antilynching legislation. It means the safeguarding of labor's rights as embodied in the Wagner Labor Relations Act and the wage and hour law. Such a program would create professional opportunities for college graduates. It would help block the road to the development of a domestic form of fascism. It would keep democracy moving by having it meet human needs.

STUDENTS WANT PEACE

Finally, any program to strengthen democracy in the United States cannot be divorced from its fate elsewhere. It is with pride that the American Student Union speaks on this subject today. Last year at Vassar predictions of dire catastrophe were made when we dropped the Oxford pledge. A student union split was prophesied. It was said that the American Student Union had come out for war. But today we are more firmly united than ever, while our opposition organizes its mass movement by coming to conferences that other people organize with mimeograph machines and press hand-outs.

Only because we dropped the meaningless Oxford pledge was the American Student Union able to give effective leadership to the campus peace forces during the past year. They say we are organizing the campus for war. Was it organization for war when we organized a 1-hour protest stoppage against the Nazi seizure of Austria? Perhaps if there had been more actions like that, the dismemberment of Czechoslovakia need not have happened. And in the Czechoslovak crisis, who else on the campus had a program to offer? Who took the leadership among students when the Nazis launched upon their night of barbarism? Who has gathered funds for Spain? Who has spoken out for China? In all this, we have been moved by one dominating concern—how to preserve American peace and American democracy. Because we have not been concerned with fighting phantoms and bogeymen, because we have not made a policy out of inaction nor hiding under our bedcovers, they say we are for war. We do not believe for one moment that if the lights go out in Europe, that if the lights go out in the Orient, America will not likewise be engulfed in a twilight of reaction, and, in the end, of war.

We are glad that American foreign policy today is increasingly one that is active in defense of peace and democracy throughout the world. We exult that American democracy has told Hitler off. We exult that American democracy has extended credits to China despite the blustering threats of the Japanese militarists. We applaud the "good neighbor" policy and suspect it is on the right track, for is it not denounced as Yankee imperialism by Germany and Italy? But we must go further. We hope that Congress will unshackle our foreign policy so that America's great influence can be used more actively against aggression. We must lift the embargo on Spain. We must halt our participation in Japanese aggression. We must strengthen the "good neighbor" policy in the interests of democracy. Vigorous American leadership can halt the retreat into war. Vigorous American leadership can unite the peoples of the world against Fascist aggression. For this policy, for these aspirations the American Student Union has no apologies.

STUDENT ASSEMBLY FOR LIBERAL ACTION

Such is the program of the American Student Union. It is a program that we believe can enlist the united support of the educational community. So concerned is the American Student Union that the entire campus enlist in this crusade to make of democracy a fighting faith that our convention wants to see the calling of a national student assembly for liberal action next Christmas. The campus needs and the student body is searching for channels to express their support for the objectives of the New Deal and to be effective in 1940. The American Student Union would like to be that channel. We are for that very reason prepared to cooperate with the mass of individual students, with teachers, with liberal educators, and student leaders in the launching of such an assembly. The time has come when everyone must stand up and be counted for democracy. There are no side lines in the post-Munich world.

I want at this point to clear up some misunderstandings about the American Student Union.

A. S. U. NOT AGAINST PRIVATE PROPERTY

We are not a leftist or anticapitalist organization. At no time have we made any declarations against private property. I am sure that no one in the American Student Union would advocate the socialization of tooth brushes. Neither is there anyone who would propose that the post office be turned over to private enterprise. We are concerned, however, that the amount of social control be determined by the needs and welfare of all the people, not any small privileged group.

NOR AGAINST RELIGION

The American Student Union is not antireligious. We recognize that piety, charity, the needs of spirit, and humility in the face of our vast ignorance, find expression in religious worship and we stand for the freedom of such worship. Some people have accused us of being antireligious because of our ardent devotion to the cause of democracy in Spain. We have no apologies to make for our efforts on behalf of Spanish democracy. But we do not identify Loyalist Spain with opposition to religious freedom, and we point to the decree of December 9 which reestablished normal freedom of worship in the Spanish Republic. It has become increasingly clear that it is fascism and not democracy that spells the destruction of religion.

NOT A FRONT FOR ANY "ISM"

We have been accused by the Dies committee of being Communist and being agents of a foreign principal. At least, that is what we learn from the papers. We categorically deny both these charges. We are not and have never been the agent or representative of any foreign principal. We are not dominated by Communists nor have we ever expressed any belief in or sympathy for communism. We are not a "front" or blind for any person, any organization, or any "ism." Our only concern has been to awaken students from thoughtlessness and apathy to a concern for having democracy serve human needs. We have often stated that there were Communists in our organization, and as long as they adhere to the rules and principles of our organization they will remain. American democracy was founded and has flourished on the principle that everyone was welcome who plays the game according to the rules.

There is real justice, however, in the criticism of those who state that we have an anti-administration attitude. Dr. Leigh, President of Bennington College, has declared that sometimes it seems as if we assume almost a "student class conscious attitude of objection to faculties and administrators." We acknowledge this criticism. We recognize that the educators and administrators of our schools and colleges by and large have a devotion to democracy equal to ours. We believe that among those who see the need for defending democracy, there can be cooperation, and we will strive to establish that cooperation.

Finally, let me make a statement with respect to the R. O. T. C. We believe that the students in the R. O. T. C. and many of its instructors share a concern for peace and democracy as strong as that of the campus as a whole. Our criticism has been directed not at the membership of the R. O. T. C., but at the anti-labor, anti-democratic bias which the R. O. T. C. Manuals, instructors, and exercises have demonstrated at times. In our effort to safeguard democracy, we believe that the members of the R. O. T. C. will accept their responsibility along with that of the whole campus.

ROLL CALL FOR HUMAN RIGHTS

We make these affirmations because we believe that today no irrelevant consideration, no accidental prejudice must stand in the way of the unity of all the campus forces of democracy. The entire educational community must be united to safeguard and strengthen democracy.

We have outlined for you the program of the American Student Union. It is in essence a program of rededication to democracy. It is a program that the student body will endorse. To achieve the widest possible endorsement of the objectives of the American Student Union, to give them the widest possible hearing on the campus, let us launch a Human Rights Roll Call. We know that there are at least 250,000 students and educators who are prepared to stand up and be counted for democracy, because they recognize that there are no sidelines in the post-Munich world.

Fascism has not gained the upper hand. This is not the moment for pessimism. Did anyone imagine that fascism and the

system of enslavement that it represents would give up without a struggle? Its very excesses represent, not youthful vigor, but a last vain effort to survive just as a defeated man will make one more sortie before surrender.

Let us all stand fast—let us remain united, and fascism will shatter itself on the rock of that unity!

Susan B. Anthony Memorial Address

EXTENSION OF REMARKS
OF
HON. ROBERT RAMSPECK
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1939

ADDRESS BY HON. ROBERT RAMSPECK, OF GEORGIA, FEBRUARY 15, 1939

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me last night in connection with memorial services for Susan B. Anthony:

It is fitting and proper that the one hundred and nineteenth anniversary of the birth of Susan B. Anthony is being remembered here tonight under the auspices of a great national organization of women whose purpose is to carry forward the great fight to which she gave her life.

It is difficult for our generation to realize that 70 years ago women had no rights regarding their own children; that a married woman had no legal right to the money she might earn; that married women could not own property; that women could not enter hotels or restaurants unless accompanied by a man; that a married woman could not collect damages for injury to her person or reputation; that only one college admitted women and that women could not vote or hold public office.

For more than 50 years the brains, the energy, and the ability of Susan B. Anthony were devoted to a fight to change these conditions. She sought for her sex the right to equal consideration, the right to vote and hold office, the right to own property, and to retain salaries and wages earned.

When she died at the age of 86 some progress had been made, some laws had been enacted, and it may well be said that as the result of her efforts the mind of the Nation had been changed.

Today others will no doubt go more into detail with reference to the work of Susan B. Anthony. In the few minutes at my disposal I hope to draw a lesson for our generation based upon the life of this great woman.

As one interested in government, at a time when we are faced with many difficult problems, I regret to see so many who take the position that one person can have no effect upon their solution.

Every generation has its own problems. Those of today, although complex and difficult, are perhaps no harder for us to solve than were the problems of any other generation.

The life of Susan B. Anthony should serve as an inspiration for those of our generation. It should prove an effective answer to those who doubt the possibility of the effort of any one person to be useful and effective.

Certainly no person in the history of America ever faced a harder task than that chosen by Miss Anthony. When she began her efforts to change the status of women, she was subjected to ridicule, abuse, and intolerance. She had to persuade men against their will, and, strange as it may seem, she found opposition among those she sought to help.

To this battle she brought patience, intelligence, and ability. She also had courage to carry on in the face of the many difficulties she encountered. By education, by persistence, by persuasion, and by organization she gradually beat down the opposition and created a willingness on the part of the male population to give justice to women.

Of course, she did not do all of this alone. She brought to her support many men and women, because they were persuaded to believe in her cause, but she was the motivating influence in this great change of sentiment.

Every woman of today who participates in the right to govern, every woman who enjoys the right to work and own property should be grateful to Susan B. Anthony and to those who joined in her efforts. We all should honor her because she, through her efforts, created a finer and a more noble civilization.

We can and should build monuments to her. We can and should name schools for her. But, above all things, we should be inspired by her life to work and strive for an even greater and better civilization.

The late Arthur Brisbane once said: "There never was a nobler, more unselfish soldier of the human race. The world might well have wept, had that child been born a boy instead of being Susan B. Anthony."

Coming as I do from the State in which is located the first college for women, Wesleyan College at Macon, Ga., and from which the first woman, Mrs. Rebecca Latimer Felton, was appointed to the United States Senate, I take pleasure in having a part in these exercises honoring a great woman who proved herself to be a greater American.

Every American today might well study the life and accomplishments of this great American and emulate her example. There is need today for patriotic and unselfish efforts on the part of all of us to bring to a solution the many problems with which we are faced. If each of us would devote to the general welfare one-tenth of the effort, the ability, and the courage which Susan B. Anthony used for the betterment of her fellow citizens, there can be no doubt that a more noble and greater Nation would be the result.

While, thanks to the efforts of Susan B. Anthony and her fellow workers, many of the restrictions have been removed from the lives of our women, the battle has not ended. Even now there are those who would restrict the right of women to work. There are those who care nothing for the economic welfare, the health, or the education of the less fortunate.

Fortunately, many women of today are interested in our problems. Many women, and men also, are working for greater opportunity for all classes, for a more equitable adjustment of economic conditions, for better health and living conditions, and for wider educational opportunities for all of our people.

While to those of us now living in this complex age the present situation may seem so difficult as to make ineffective the efforts of any one person, if we but remember the odds which Susan B. Anthony faced, and notice the improvements resulting from the movement she sponsored, we must conclude that no task is so difficult, no problem so complex that it can resist the pressure of public opinion, if that opinion results from the knowledge that the cause is just and fair and the purpose sought is for the good of all. It was on this basis that Susan B. Anthony waged her battle, and she was successful because what she sought to do was fair, just, and in the interest of all.

Susan B. Anthony was a maker of history. We stand here tonight in the presence of a monument erected in her memory. The woman's suffrage amendment to the Constitution is a monument to her work. A postage stamp has been issued in her honor. Many Governors have issued proclamations in memory of her birth. Many laws in the interest of women and of humanity speak more than I could say for the effect her life had upon our Nation.

But to me comes the hope that her greatest monument may prove to be the result of her life as an example to those now living, the hope that others may emulate her interest in the welfare of the great masses of our people; that we may honor her by being active in promoting justice and equal opportunity for all of our people.

"Isn't it strange that princes and kings,
And clowns that caper in sawdust rings,
And common folks, like you and me,
Are builders for eternity?
To each is given a bag of tools,
A shapeless mass, and a book of rules,
And each must make, ere life has flown,
A stumping block or a stepping stone!"

Susan B. Anthony made her life a stepping stone upon which millions have climbed to a happier and better life. May we honor her by doing likewise.

Frances Perkins

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1939

AN ANSWER BY HON. J. PARNELL THOMAS, OF NEW JERSEY, TO THE PUBLIC STATEMENT OF FRANCES PERKINS, SECRETARY OF LABOR

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following answer to the public statement of Frances Perkins, Secretary of Labor:

The public statement of Frances Perkins, Secretary of Labor, made in defense of herself, of James L. Houghteling, Commissioner of Immigration and Naturalization, and Gerard D. Reilly, Solicitor of the Department of Labor, against my charges that they conspired to defraud the Government of the United States by failing to enforce the immigration laws, in my opinion, sustains the charges I made.

The Secretary of the Department of Labor attempts in her defense to excuse her failure to enforce the immigration laws by subordinating them to her personal views concerning the rights of alien Communists under the Constitution of the United States. The defense was a big-sister story, a plea that even aliens who are Communists should have the same rights under the Constitution as native-born citizens have. The Secretary of Labor, in her defense, attempts to secure these new rights for aliens who are Communists through the judicial decree of the United States Supreme Court limiting the power of Congress to deport aliens whose political views are dangerous to the security of our country.

The Secretary of Labor, in her defense, fails to even mention the one thing which she has repeatedly relied upon in her former statements on this subject, to wit, that the Bridges and Strecker cases are almost identical except that the evidence in the Strecker case was stronger than the evidence in the Bridges case. This omission clearly demonstrates that either the Secretary of Labor now concludes that the two cases are not similar or that the Strecker case may be the weaker of the two, a contention which I have made from the beginning. It may even be possible that Miss Perkins has at long last come to realize that the Supreme Court's decision in the Strecker case may not serve as an authority in the Bridges case. As a matter of fact, despite the repeated statements of the Secretary of Labor to the contrary, it has never been necessary for the Department of Labor to prove that Bridges was or is a member of the Communist Party in order to deport him, for two of the four charges in the Bridges warrant of arrest are that he is affiliated with an organization that believes in, advocates, or teaches the destruction of the Government of the United States by force or violence, and these charges are not present in the Strecker case.

The statement of Miss Perkins shows very definitely that in the appeal of the Strecker case to the Supreme Court she is seeking ways and means, or legal grounds, on which to save Communist aliens from deportation: (1) By advising them (to quote from Miss Perkins' statement) "that our American institutions operate without fear or favor and in the spirit of fair play to the stranger within our gates, as well as to the native-born." Aliens who believe in the overthrow of the Government of the United States by force or violence are the only aliens involved in this issue. Therefore, I must infer that Frances Perkins, by the term "stranger within our gates," means the Communist alien who is in the United States; (2) in citing the Herndon case on page 5 of her defense, the Secretary of Labor injects issues and defenses into the Strecker case which even he did not urge; as also when she says on page 8 of her statement, "The immigration laws have peculiar significance to the future of our country, and it is incumbent upon those who administer them to aim at certain important goals; to preserve for this country its institutions, its ideals, and its Government safe from any foreign forces *which present a clear and present danger tc the continuance of our way of living.*" The language which is italicized in Miss Perkins' quotation is taken from the Herndon case, which was not an immigration case but dealt with the rights of a citizen under the fourteenth amendment.

The statement of Frances Perkins is definite proof of her desire that an adverse decision be rendered by the Supreme Court against the Government in the Strecker case.

It is also clear evidence that Frances Perkins is representing Communist aliens and not the Government of the United States in urging an appeal of the Strecker decision, and that she has the interests of these Communist aliens more at heart than she does her sworn duty to enforce the immigration laws of the United States.

As further evidence, indicative of Miss Perkins' violation of the immigration laws of the United States, she hails the decision of Judge Hutcheson, who decided adversely on her warrant of deportation, and lauds Judge Hutcheson as one of the great jurists of the country. In this connection she says, "This opinion by one of the Nation's most distinguished jurists, Judge Hutcheson, was to the effect that an alien who was acknowledged to have been a member of the Communist Party was not on that ground deportable under the immigration laws." Repeatedly in her statement Miss Perkins calls attention to the fact that she is not a lawyer, and yet she does not hesitate to designate the jurist who decided adversely to the Department of Labor's warrant as "one of the Nation's most distinguished jurists." She gives fulsome praise to the judge who decides adversely to the Labor Department and reverses its order of deportation against Strecker. Such praise might be expected from Strecker's attorney, but never from the Secretary of Labor, unless the Secretary of Labor is desirous of evading her manifest duty under the immigration laws.

Miss Perkins further says: "Judge Hutcheson's opinion (taken together with recent rulings of the Supreme Court of the United States in the Herndon and DeJonge cases) led to a serious doubt as to whether the older cases under the immigration law were still a guide and whether they applied to the Communist Party as it now functions." This reference to the Herndon case, which is quoted at length in the brief filed by the Solicitor General in the Strecker case is further proof of the fact that Miss Perkins desires to defeat the immigration laws of the United States through seeking from the Supreme Court an opinion holding that the immigration laws are unconstitutional, violating the first amendment to the Constitution of the United States.

The Solicitor General and his associates, and Mr. Reilly, Solicitor of the Department of Labor, in the brief heretofore filed by them in the Supreme Court of the United States in the Strecker case, devotes several pages to the Herndon case and suggests that aliens have rights under the Constitution of the United States which have never been accorded to them, rights which may limit or invalidate the present immigration laws providing for the deportation of aliens who believe in, advocate, or teach the overthrow by force or violence of the Government of the United States.

The fact that Miss Perkins reverts to this case in her statement is, in my opinion, proof of the existence of a conspiracy to defeat the immigration laws of the United States. Herndon was and is a citizen of the United States. His constitutional rights were and are entirely different from the rights of a Communist alien, and yet Miss Perkins and the legal staffs of the Department of Labor and of the Department of Justice have and are seeking to inject into the Strecker case the constitutional safeguards which are provided only for the citizens of our country.

The statement contained in the brief heretofore filed by Government counsel on behalf of Strecker in the Supreme Court is amazing proof that they seek to defeat the Government's cause of action in the Supreme Court. They say:

"While respondent did not specifically raise in his petition for habeas corpus (R. 1–2), or in his assignment of errors below (R. 67–69), or in his brief in opposition to certiorari, the question of the constitutional right of freedom of speech and of assembly under the first amendment of the Federal Constitution, that question may be deemed by the Court to be pertinent with respect to this question of statutory construction. (*Cf. Herndon* v. *Lowry*, 301 U. S. 242.)"

Miss Perkins' statement seeks to cloud the issues involved in the charges which I have made against her by saying:

"There is some suggestion * * * that Bridges threatened me and others in the Department of Labor with violence and showed us a want of respect which led to our following a procedure out of the ordinary * * *. I say this merely to indicate that neither through fear nor cowardice has any member of the Department of Labor at any time been swayed from his duty in connection with the Bridges matter."

Certainly there was never any allegation in the impeachment resolution that Bridges threatened Miss Perkins or others in the Department of Labor. There was ample evidence, however, from Mr. Arthur J. Phelan, inspector in charge of the Legal Division of the Immigration and Naturalization Service in San Francisco, and also from Mr. R. P. Bonham, District Director of the Immigration and Naturalization Service at Seattle, Wash., that the Communists were preparing to intimidate witnesses who would appear against Bridges in the deportation proceedings; and on March 23, 1938, Frances Perkins advised the Attorney General of the United States that—

"Several persons who have filed affidavits about the case with the Immigration and Naturalization Service have said that they feared for their personal safety if they were compelled to testify fearlessly. In order to assure protection for these people during the pendence of the hearing I would appreciate if you would notify the United States marshals in those cities to assist the local immigration officers to the extent that will seem desirable on days when particular witnesses are to appear."

Thereafter, and on April 1, 1938, Robert H. Jackson, the present Solicitor General of the United States and the then Acting Attorney General, advised Miss Perkins that it "would not be possible to assign United States marshals to be present at the deportation proceedings."

Obviously, Miss Perkins and her immediate associates in the Department of Labor were never threatened by Harry Bridges, for they, in the positions which they now occupy, have been the very best friends that this Communist alien could possibly have had.

On page 8 of Miss Perkins' statement she says: "Also I want to point out to you that there is no hazard to our population or institutions involved in these postponements because of the fact that if Bridges or any other alien at any time takes any action to overthrow the Government of the United States by force or by violence, or if he commits any crime, he can and will be promptly arrested, tried, and punished or deported under the terms and requirements of law." How Frances Perkins could ever make such a statement, in view of the complaints about Bridges given to the Department of Labor as far back as 1934, and the strong incriminating evidence against Harry Bridges given to the Department of Labor since 1937, is inconceivable. Yet Harry Bridges, alien Communist, has never had a hearing before the Department of Labor. In fact, unlike other alien Communists who have been released only on bond, he is allowed to go scot free on his own recognizance. Further, she offers no defense for her conduct in this respect.

The most amazing part of the whole defense is Miss Perkins' statement:

"I also wish to emphasize that I am not in accord with the principles of the Communist Party. I do not share the economic or political views of the Communists. I regard many of their tactics as an impediment to the efficient functioning of the Government, as well as of society at large. I find in their insistence upon party authority and their emphasis on class struggle, their conception of a dictatorship of one class and their oft-repeated contempt for religion the negation of that individual liberty and that development of the human personality for which this country and every democracy must stand."

The significance of the foregoing quotation can only be grasped by an analysis of the words which she uses. She does not say that she is opposed to the Communist Party, but she says that "I am not in accord with the principles of the Communist Party." She does not say that she is opposed to their economic and political views, but she says, "I do not share their economic and political views."

She does not say that she is opposed to their tactics, but she says, "I do not share their economic and political views."

She does not say that she is opposed to their tactics, but she says, "I regard many of their tactics as an impediment to the efficient functioning of the Government, as well as of society at large." And Miss Perkins finds their views on "party authority, class struggle, conception of a dictatorship of one class, and their oft-repeated contempt for religion" not something that is obnoxious to her, but as the "negation of that individual liberty and that development of the human personality for which this country and every democracy must stand."

In other words, Miss Perkins could not have expressed her opposition to communism in more complimentary and kindly phraseology. She doesn't hate it; she doesn't abhor it; she dislikes certain features of it. From this gentle "slap on the wrist" which she gives to communism, she then moves into a consideration of the nature of her duties as Secretary of Labor in charge of the administration of the immigration laws. She reminds us of the "solemn character of the task that has been entrusted" to her, and of the fact that "the power which is vested in the Secretary of Labor under the law is in many respects the most serious and the most drastic administrative power vested in any executive officer in our Government," and that the Secretary of Labor "has the power, in certain specific situations, not even involving a crime, to issue a warrant for the arrest of any alien in the United States; he has the power virtually to imprison that person; and he has the power to order that person to be sent back to the country of his nationality, even though he recognizes that in some circumstances this is tantamount to sending an alien to his death."

The error of the Secretary of Labor in her foregoing analysis lies in the fact, first, that it is the Congress of the United States, and not the Secretary of Labor, which decides the grounds upon which aliens may be admitted to the United States and thereafter apprehended, imprisoned, or deported from the United States; and secondly, that unless the Secretary of Labor is willing and able to enforce the laws enacted by the Congress of the United States she has no right to hold that office nor to allow her personal conception of what is or what is not desirable for the country to interfere with the due enforcement of said laws.

With this closing remark, I beseech the Members of the House of Representatives to look upon the defense of Frances Perkins, which I assume was presented to the Judiciary Committee of the House of Representatives in the same wording and form as it was given to the press, as a document of evasion and deception. I beseech you to not only read between the lines of the statement of the Secretary of Labor but to check her remarks with the files in the Department of Labor. Further, I hope that you will keep in mind two things: (1) That the Secretary of Labor has shown by her own words that she is endeavoring to replace our immigration statutes with some sort of idealistic philosophy peculiar to the Secretary of Labor; and (2) that the people of these United States are looking to the Congress to correct the very shameful condition which has developed in the Department of Labor under the administration of Frances Perkins, Secretary of Labor.

Abraham Lincoln, the Republican

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1939

ADDRESS BY HON. CARL T. CURTIS, OF NEBRASKA, FEBRUARY 13, 1939

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks, I include the following address made by myself at the Lincoln Day dinner at Charles Town, W. Va., on Monday evening, February 13, 1939:

I never grow tired of the life of Abraham Lincoln. Perhaps any facts or incidents that I might tell concerning the life of that great American would be known to most everyone in this audience, yet there is something about it that causes us to want to hear it over and over again. I, for one, thrill at the thought of the rise of Abraham Lincoln from the lowly country boy to the great natural leader that he was. May the time never come in America when we no longer cherish and repeat the story of the humble Abraham Lincoln, born in poverty and obscurity and by combining honest effort with a divine purpose, rising to the position of highest responsibility in all the land. The life of Lincoln is typical of American opportunity. May the time never come when we, in our zest and our desire to make life secure, so interfere with the natural processes and stifle enterprise to such an extent that we make a recurrence of the life of Lincoln impossible. I would remind you that there is not another country in the whole world in which the story of Abraham Lincoln can be recounted. He is distinctly the product of a free country, a country void of title, caste, or class consciousness.

While President, Lincoln himself said: "I happen temporarily to occupy this big White House, I am living witness that any one of your children may look to come here, as my father's child has. It is in order that each one of you may have, through this free Government which we have enjoyed, an open field and a fair chance * * * that the struggle should be maintained, that we may not lose our birthright."

As Nancy Hanks Lincoln went down into the shadow of death, on that bleak day in February 1809, little did she realize that the new life that she gave to the world would forever be America's idol of honesty, hard work, truthfulness, self-denial, and attainment. In God's great outdoors, among the trees, and beneath His starry sky, in what is now Larue County, Ky., Abraham Lincoln was born on February 12, 1809. There he lived until 1816, when the Lincoln family moved westward near to what is now Gentryville, Ind. At the age of 8 years, his mother died, and in 1830 the Lincoln family moved to the State of Illinois. We like to think of Lincoln during this time and to hear again the stories and incidents of his life as a boy. We love to visualize him reading by the fireplace, pouring over the Holy Bible, Æsop's Fables, Robinson Crusoe, Pilgrim's Progress, the History of the United States, and Weem's Life of Washington. We might truthfully say that Lincoln's library was meager, yet we must also realize that they were the finest books and that they were few enough in number that there was time for him to study and meditate upon them.

I love the story of Abraham Lincoln because he did not climb the ladder of success through any pride of pedigree. He was living proof of that great maxim that all men are created equal, and his life will forever stir the ambition of boys and girls throughout the land in their desire to make good. Lincoln's life was not a rosy path. The bitterest of heartaches and experiences were his, and no doubt such a background, was what prompted him to say, when inquiry was made about his boyhood and family, he answered by quoting from Gray's "Elegy": "The short and simple annals of the poor."

Little did the members of the Legislature of the State of Illinois realize who was in their midst when the towering Lincoln, who measured six feet four, moved among them from 1834 to 1842. Perhaps the same things might be said of his colleagues in the Congress of the United States where he sat as a Representative from 1847 to 1849. But all of this constituted a part of the groundwork used by the hand of divine Providence in raising up a man who would be the preserver of our Nation and a great blessing to mankind.

Lincoln has been characterized as a dreamer in incidents where he was applying himself to some book in his idle moments. But it has occurred to me that he was somewhat of a prophet too. The other day I was reading the speech which Congressman Abraham Lincoln made in the House of Representatives on January 12, 1848, speaking of the President of the United States, he said, "His mind is taxed beyond its power, is running hither and thither, like some tortured creature on a burning surface, finding no position on which it can settle down and be at ease." I had to pinch myself twice before I could make myself believe that he was talking about the President back in 1848.

Lincoln believed in a representative form of government. He stated that he would like to preserve the Constitution as it was when the founding fathers created it. Our heritage as a free people is that of a representative form of government. The American contribution to the science of government is its establishment of representative government. A system whereby the people rule themselves through their selected Representatives, and these Representatives are restrained by certain constitutional limitations.

Throughout the ages mankind, in its attempt to rule itself, has gone from one extreme to the other. The pendulum has swung from the rule of the mob to the rule of the king, and from king to mob. The mob, if necessary, would rise and destroy the king and seize his property, and the king in turn would destroy the mob and seize their property. A line of kings would rule until there arose a ruler who was harsh and cruel and unjust. The people would then rise up and destroy such a king, and they would go on ruling themselves until their lack of order and system resulted in mob rule; then there would arise a proclaimed leader, who would say to the people, "Follow me; I am the way out." This leader would again establish a rule of one man. Certain European countries have recently gone through just such experiences. But the American representative form of government is a middle course between mob rule and the rule of one man.

In these modern days I think it is well that we give some attention to our terminology. Various subversive groups have perverted and debased the word "democracy." There came to my desk this last week a publication of the Communist Party. It contained many articles and editorials on current political affairs. Throughout each one of these articles the writer gloated upon the glories of a democracy. They arrogantly refer to the preservation of democracy in the United States and elsewhere throughout the world. Be not deceived; the Communists, agitators, and like radicals do not believe in, nor are they friendly to, the real American democracy, the democracy of representative government. This Nation of ours is a republic.

In section 4 of article IV of the Constitution of the United States we find these words: "The United States shall guarantee to every State in the Union a republican form of government." It was this representative form of government that Lincoln had in mind in his

first inaugural address when he said: "A majority held in restraint by constitutional checks and limitations and always changing easily with deliberate change of public opinion and sentiment is the only true sovereign of a free people." In other words, our American government is a government of laws and not of men.

It was such a republican form of government that Thomas Jefferson and his great body of followers believed in. And today I take my hat off to our Jeffersonian Democrats, and bid them welcome to the savior party of America. The party that once more, with God's help, must save America, this time from complete moral and financial bankruptcy and from foreign philosophies and entanglements.

Thoughtful citizens throughout our land are alarmed over our national debt. Let us refer to the immortal Lincoln, he said: "Coming expenditures must be met, and the present debt must be paid; and money cannot always be borrowed for these objects. The system of loans is but temporary in its nature and must soon explode. It is a system not only ruinous while it lasts, but one that must soon fail and leave us destitute. As an individual who undertakes to live by borrowing, soon finds his original means devoured by interest, and next, no one left to borrow from, so must it be with the Government."

I will concede that the New Deal party has led in spending and in the growth of bureaucracy. But it has been the Republican Party that has progressed in our great social reforms. It was the Republican States which led the way in education, child welfare, mother's pensions, workmen's compensation laws, the promotion of safety for workers, and other humanitarian enterprises.

As we face the future with its challenge for further progress in the solution of our problems, we start from a premise growing out of the great mind and heart of our first Republican President.

On July 1, 1854, Lincoln declared: "The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot do so well for themselves in their separate and individual capacity. In all that the people can individually do as well for themselves, government ought not to interfere."

At the same time, Lincoln was aware of the ever-increasing burden of Government and the growth of bureaucracy when he said: "It has long been a grave question whether any government not too strong for the liberties of its people can be strong enough to maintain its existence in great emergencies." And again he said: "I believe each individual is entitled to do as he pleases with himself and the fruits of his labors, so far as it in nowise interferes with any other man's rights."

True it is that Lincoln lived in a day when our modern cities were yet in their infancy. We were then primarily an agricultural nation. Yet he had a vision of the problems and the needs of labor and a sense of fairness for the man who works in our great industrial centers. Lincoln proclaimed the creed of all Republicans concerning labor. About a year before his death he addressed a group of workingmen in New York, and among other things he said: "The strongest bond of human sympathy outside the family relations should be one uniting all working people of all nations, all tongues, and kindred. Nor should this lead to war upon property or the owners of property. Property is the fruit of labor, property is desirable; it is a positive good in the world. That some should be rich shows that others may become rich, and it is just an encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, and thus, by example, assuring that his own is safe from violence when built." And again he said: "Labor is prior to and independent of capital. Capital is only the fruit of labor and would never have existed if labor had not existed. Labor is the superior of capital and deserves a much higher consideration."

Today we are faced with the imports of many nations, and reciprocal-trade agreements are questioned. We should be mindful of the words of Lincoln when he said: "I was an old Henry Clay tariff Whig. In the old days I made more speeches on that subject than any other. I have not since changed my views. I believe yet if we could have a moderate, carefully adjusted, protective tariff, so far acquiesced in as not to be a perpetual subject of political strife, squabbles, changes, and uncertainties, it would be better for us."

We have ever been faced with socialistic philosophy. There have been those in our midst who would convince us that our economic system is wrong. It was the humble Lincoln, the poor country boy, the debt-ladened businessman, who said, "I do not believe in a law to prevent a man from being rich. It would do more harm than good. So while we do not propose any war upon capital, we do wish to allow the humblest man an equal chance to get rich with everybody else." And again he said, "That men who are industrious, sober, and honest in the pursuit of their own interests, should, after a while, accumulate property, and, after that, should be allowed to enjoy it in peace, is right."

Lincoln had no fear of foreign invasion, but he did fear all doctrines and enemies from within. Lincoln said, "At what point then is danger to be expected? I answer, if it ever reaches us, it must spring up from among us. It cannot come from abroad. If destruction be our lot, we must ourselves be the author of and finisher. As a Nation of free men we must live through all time or die by suicide."

That our country is sick and tired of the failed philosophies of the Old World under the name of the New Deal is self-evident. We have had too much of a one-man government; that has resulted in a one-man depression. Upon the Republican Party falls the responsibility of repelling any threat of a third time. It is a grave responsibility, and again I remind you of the words of Lincoln when he said:

"It is to deny what the history of the world tells us is true to suppose that men of ambition and talents will not continue to spring up amongst us. And when they do, they will as naturally seek the gratification of their ruling passion as others have done before them. The question then is, Can that gratification be found in supporting and maintaining an edifice that has been erected by others? Most certainly it cannot. Many great and good men, sufficiently qualified for any task they should undertake, may ever be found whose ambition would aspire to nothing beyond a seat in Congress, a gubernatorial or a Presidential chair; but such belong not to the family of the lion, or that tribe of the eagle. What! think you these places would satisfy an Alexander, a Caesar, or a Napoleon? Never! Towering genius disdains a beaten path. It seeks regions hitherto unexplored. It sees no distinction, and if possible, it will have it, whether at the expense of emancipating slaves or enslaving free men. Is it unreasonable, then, to expect that some man possessed of the loftiest genius, coupled with ambition sufficient to push it to its utmost stretch, will at some time spring up among us? And when such a one does, it will require the people to be united with each other, attached to the government and laws, and generally intelligent, to successfully frustrate his designs."

Twenty-two years ago the United States entered into the great World War. Thirty-five thousand American boys laid down their lives to make the world safe for democracy and to end all war.

Today the Republican Party must stand firm in the prevention of a recurrence of such a war. We must resist the allurement of such phrases as "The democracies of the world must stand together." It is the same old theory that so pitifully failed in 1917 and 1918.

And what is more, we must obey the mandate of Lincoln with more justice and liberality for our veterans, when he said "Let us care for him who has borne the battle."

May we, on this anniversary of the birthday of Abraham Lincoln, rededicate our lives to the great principles of our first Republican President, to the end that this Nation, under God shall have a new birth of freedom.

I love to go in that house across the street from the Ford Theater in Washington where Lincoln spent the last hours of his life. That little room is almost the exact dimensions of the little cabin in which he was born. That is a hallowed spot and it invites meditation and thanksgiving. It was there, that when the soul of the founder of our party left us and went to the great beyond that Seward uttered those words which we today find to be so truthful, "He now belongs to the ages."

Taxation of State, County, and Municipal Employees

EXTENSION OF REMARKS

OF

HON. WILLIAM W. BLACKNEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1939

Mr. BLACKNEY. Mr. Speaker, when H. R. 3790, a bill relating to the taxation of the compensation of public officers and employees, was before the House, I was opposed to it for the reason that the bill, as presented, was clearly, in my mind, unconstitutional.

This particular bill involved two titles. Under title I it was sought to impose a tax upon the salaries of all State and municipal employees; by inference, therefore, the title implies that the salaries of these persons are not now taxable but would be after the passage of this bill.

On the other hand, title II would relieve from liability the payment of taxes on salaries of the same group of persons for the past 3 years. Therefore, by inference, title II implies that the salaries of these persons are already taxable and have been taxable for years past.

It would seem clear, therefore, that if title I is necessary, if, in order to make the salaries of State employees subject to the income-tax laws, it is necessary to pass any legislation, then title II is not necessary because if there is no such law now on the statute books, then there is no liability to be waived.

Our form of government is dual in nature, the National Government having supreme power over all Federal matters and the State government being supreme within the State on matters not affecting Federal jurisdiction, each separate,

legal entities, yet cooperating with each other to form a more perfect union.

The United States Government has followed a uniform policy with reference to taxing State employees or State agencies which are indispensable to that State. All of the decisions of the Supreme Court have followed the same line of thought. The McCulloch case, Collector against Day, and other decisions of the Supreme Court, have all asserted the same doctrine, namely, that the Federal Government cannot tax an officer or employee of a State when that officer or employee is engaged in a function which is indispensable to the maintenance of the sovereignty and independence of the State.

When there is a reasonable doubt as to the constitutionality of any bill which Congress may endeavor to pass, it is our constitutional duty to uphold the Constitution and to vote against the bill.

I remember when the Guffey coal bill was before the House many of the proponents of that bill voted for it, regardless of their doubt as to its constitutionality, because the word had been passed to them that the bill must be passed, whether they had doubts as to its constitutionality or not. I voted against that bill for the reason that it was clear in my mind that it was unconstitutional, and under the oath of office which I had taken it became my duty to vote against it.

So in H. R. 3790 it seemed to me that this bill was an effort to have Congress perform an act which they had no legal right to do under the decisions of the Supreme Court of the United States and under the general policy which had been established by our Government for 150 years.

For that reason I voted against the bill, as I have repeatedly stated that I shall vote for no bill that, in the judgment of thinking constitutional students, is unconsitutional. I shall not violate my constitutional oath and vote for such legislation as may be tinged with unconstitutionality.

If we are to preserve our dual form of government and preserve the independence of State and Nation, each in their own sphere, then legislation of this kind should not be passed. If the proponents of this bill had desired, they could have proposed a constitutional amendment providing for the taxation of compensation of public officers and employees and, had the people demanded it, the constitutional amendment could have been passed in less time than it will take the Supreme Court to determine the constitutionality of this bill, when and if some litigant contests its constitutionality.

To conform to our Constitution, the orderly way would have been to have proposed a constitutional amendment which, if passed, would have become the supreme law of the land, rather than to assume the present method of congressional usurpation which, if followed, would weaken the Constitution and bring it into disrespect, and thus subvert our American Government which we have been building for 150 years.

Lincoln Day Address

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1939

ADDRESS BY HON. GERALD W. LANDIS, OF INDIANA, FEBRUARY 13, 1939

Mr. LANDIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at a Lincoln Day banquet at Vincennes, Ind., February 13, 1939:

We have met tonight to celebrate the one hundred and thirtieth birthday of Abraham Lincoln. Lincoln truly "belongs to the ages." He is considered the typical American. And he was a Hoosier, for it was here in southern Indiana that his character was formed. Known now as one of the four great men of world history, Lincoln was the product of this area. He knew Knox County. At intervals over a period of 40 years he visited Vincennes. Lincoln's floor manager at the Chicago convention in 1860 was Jesse K. Dubois, who lived just across the Wabash River from Vincennes.

Sitting in a trench during the World War a group of hungry, lonely, homesick British officers started talking about Abraham Lincoln. "Do you know," said one officer, "I've heard Lincoln mentioned ever so many times lately. Something in this war, it seems, appears to have turned attention to Lincoln, although I can't tell why."

A second British officer spoke up. "I'll tell you why. It's because Lincoln was always for the under dog."

Often we hear people wonder, "What would Lincoln do if he were here today?" Perhaps we cannot answer that; but of one thing we are sure—Lincoln could find plenty of "under dogs" if he were in America today.

Before the revolution in Russia there was to be seen in many a peasant's hovel candles burning before the sacred ikon. On those same walls hung pictures of America's Abraham Lincoln.

Who is this Lincoln who interests both British officers and the simple Russian peasants?

Lincoln described himself as belonging to the common people. He said, "God must have loved the common people or He would not have made so many of them." Christ, the Saviour of the world, worked at a carpenter's bench with Joseph. Lincoln, the son of a carpenter, also worked at a carpenter's bench here in Indiana.

When Lincoln came to Indiana at the age of 7, he says an ax was put into his hands at once; and from that time until his twenty-third year he was almost constantly handling that most useful instrument. Lincoln knew the feel of blisters on his hands from hard work.

What did Lincoln have to say about labor? "Labor," said Lincoln, "is prior to and independent of capital. Capital is only the fruit of labor and could never have existed if labor had not first existed. A few men own capital, and that few avoid labor themselves."

Lincoln respected labor and laborers. At one time he declared, "No man living are more worthy to be trusted than those who toil up from poverty—none less inclined to take or touch aught which they have not honestly earned."

At another time Lincoln said, "I hold if God Almighty had ever made a set of men that should do all the eating and none of the work, He would have made them with mouths only and no hands; and if He had ever made another class that He had intended should do all the work and none of the eating, He would have made them without mouths and with all hands."

Lincoln said of himself, "I was born in and have ever remained in the most humble walks of life." He was born in a log cabin. His father hired him out to labor for 25 cents a day. He was not born son of a capitalist in a mansion; he did not own another mansion in the great city of New York and still another in the great State of Georgia. He was not sent to exclusive schools. He did not carry in huge pinewood knots to shed light on the state of the Nation for a series of fireside chats; he used his fireside as he said, to study and get ready for the day when his chance might come.

Yet Abraham Lincoln was not against capital. Lincoln said, "Capital has its rights which are as worthy of protection as any other rights." He explained: "Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich, hence is just encouragement to industry and enterprise." Lincoln went on, "Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

Now, let us examine Lincoln's political beliefs. Lately we have been told that Abraham Lincoln was not a Republican. We have been told that he was a Democrat; that he must have made his cross under the rooster. What are the facts?

In September 1858, Stephen A. Douglas was the Democratic candidate against Abraham Lincoln for the United States Senate. Douglas said, "Abraham Lincoln was the 'first, last, and only choice' of the Republicans for United States Senator. The black Republican Party had nobody else." Judge Douglas knew the facts.

Judge Douglas also knew the facts of some serious trouble at that time within the ranks of his own Democratic Party. This annoyed Douglas. He fretted. He accused Abraham Lincoln of cooking up "an unholy, unnatural alliance between the Republicans and National Democrats." This sounds very much like the division in the Democratic Party of today. You will recall that a few months back, when there was such "an unholy, unnatural alliance between the Republicans and National Democrats" of Nevada, the New Deal candidate was defeated. Immediately the Republicans not only were called "unholy and unnatural" but were also called "immoral." It is to be hoped that they accepted the blame as calmly as did Lincoln, who merely replied to the irate Douglas, "I have no objection to the division in the judge's party."

When Lincoln was nominated for the Presidency in 1860 the Democrats were in control of the Government and had been in control for several years. Lincoln pointed out that "the old question of tariff" and "the question of the management of financial affairs" were worrying the Nation almost as much as the slavery question. Lincoln frankly said that all his life he had been a

follower of Henry Clay, and that like Clay he believed in a "high protective tariff" for the benefit and protection of workingmen, farmers, and manufacturers of America. Lincoln added that tariff is "to the Government what replenishing the meat tub is to the family."

Again we hear men wonder "what Lincoln would do if he were to come back to Vincennes today and find that the present tariff law is such that window glass can be manufactured in Europe and set down in Vincennes for several cents less on the hundred pounds than the workers and manufacturers of Vincennes can produce it?" He would be amazed to learn that the present tariff laws are such that hogs, wheat, and cotton are dumped into America from various other countries cheaper than our own farmers can produce them, and while our poor go hungry American hogs are destroyed and American wheat burned in the fields. While our poor go in rags, American cotton is plowed under. Without doubt he would repeat what he once said about another President: "He is a bewildered, confounded, and miserably perplexed man. God grant he may be able to show there is not something about his conscience more painful than all his mental perplexity."

And what did Abraham Lincoln say about the wounded and disabled war veterans? "Say what you will," declared Lincoln, "after all, the most is due the soldier who takes his life in his hands and goes out to fight the battles of his country." "Care for him who shall have borne the battle, and for his widow and for his orphan."

Would Lincoln ever have thrown wounded and disabled war veterans out of Government hospitals clothed in nothing but their underwear? Would Lincoln have thrown out veterans dying of cancer? No; never. Would Lincoln have thrown out veterans so badly wounded and gassed you could reach into the cavities in their sides and grasp their weakly beating hearts? No; never. Would Lincoln have taken pensions away from sick and hopelessly disabled war veterans? No; because Lincoln was a real friend to the lowly and not a self-styled humanitarian. Abraham Lincoln was a true follower of that other great humanitarian, the Man of Galilee. Lincoln's great heart beat with real sympathy for the old person starving in a hovel; for the disabled war veteran lingering in a hospital; for the small-business man trying desperately to avoid being crushed by powerful corporations. Lincoln believed with Thomas Jefferson that "all men are created equal" and are entitled to "life, liberty, and the pursuit of happiness," depending only upon their ability and willingness to work.

With 11,000,000 men out of work, times now are about as dark as they were just before the Civil War. "The times are dark," said Lincoln, "the spirits of ruin are abroad in all their power, and the mercy of God alone can save us."

His Holiness Pope Pius XI

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1939

EULOGY DELIVERED BY THE RIGHT REVEREND JOSEPH M. CORRIGAN ON FEBRUARY 15, 1939

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following eulogy delivered by the Right Reverend Joseph M. Corrigan, rector of the Catholic University of America at Washington, D. C., on Wednesday, February 15, 1939, in the crypt of the National Shrine of the Immaculate Conception on the university campus on the occasion of the solemn pontifical Mass of requiem for the repose of the soul of His Holiness Pope Pius XI:

When these passing years of our generation take their appointed place in the history of mankind they will be appraised objectively in a truer perspective than we, so close to hurrying events, may now obtain. The student of history in that later day will perhaps see clearly what is even now to us becoming plain, that what we thought was the glorious glow of prosperity, down which sank the setting sun of the nineteenth century, was in reality the angrier glare of a conflagration of greed whose firebed was the hearths of the nation, and whose fuel was the discontent of an unfree people.

When so much that seemed stable and fixed was to hurry to its own destruction in a world war only 14 years after the new century's birth, there was bound to ensue a period of bewilderment, out of which must inevitably come a new searching of values, a new establishment of aims.

The nations had been passing for more than 50 years through one of those periods in the history of the race when large numbers of men, forgetting God, set themselves to the time-old program of substituting humanity for divinity, making man find in his own earthly achievement, his fullest destiny. As this, in effect, is an attempt to have man attain to the plane of the godhead, this latest Tower of Babel was bound to come to that confusion which finally brought civilization to the red ruin of world-wide war.

Just as often in the history of mankind as the willfulness of man brings him to so low a pass, have we seen the unfolding mercifulness of God raising up another of those great figures which shine forth as beacons along the shores of time. Two pontiffs made the oblation of their broken hearts as the horror of universal war deluged the world. Men and nations were mad, and their madness was the work of the demon of hate. That hate became a scourge so universal as to bring deep degradation to human souls, even those with a tradition and background of Christianity. When finally the best blood of the nations was drenching the battlefields of the world, and all that money and power had enabled hate to do, seemed accomplished, hate had yet one last victory to win, and a world peace was declared, and the world peace was counterfeit.

Then came the new figure, a new beacon vouchsafed to a self-ruined civilization. Christ had a new Vicar on earth and his first message to the distracted world was: "The peace of Christ in the kingdom of Christ." His word was heard demanding that, for true peace, a tranquillity of order be preceded by justice. Justice must remove the obstacles to peace and then the tranquillity of order can be born of charity. Human law to which men had been trusting when they turned from God may effect an external conformity; it may enforce observance by reason of fear; but most men can see today the emptiness of human law. We know that laws which have not God for their sanction can never perfect the spirit of men. The greatest need of the world today is the working of the spirit of God in the minds and hearts of men, which will assure us then in the laws of nations that tranquillity of order out of which can come the peace of Christ.

Year by year for 17 years the utterer of this great message has grown in his power over the hearts and minds of men. He finally captured the attention of the whole world. He thoroughly appreciated and fully employed all legitimate agencies to inform, to inform and to organize world opinion.

He has proven himself the fearless flayer of injustice wherever it dared to raise its head. In every walk, in all creeds and in all races, thinking men of good will throughout the world came to hail him as the great man of his time, the true benefactor of humanity, the courageous leader of the century. Yet, all acknowledged him as a simple man of God.

His courage in defending fundamental human rights has been recognized wherever evil power has dared to impinge on freedom of conscience, or to rob the youth of their heritage of the faith of their fathers. He boldly challenged the modern pagan world on marriage, on Christian education, on religious liberty, on the industrial slavery of the working classes, on the political slavery of atheistic communism and state totalitarianism.

He understood how these two—the industrial slavery and the political slavery—robbed the individual of his God-given rights; how they destroy all true patriotism, how they choke the meaning out of loyalty of fellow citizens and to government, how they destroy all religion, undermine everything that is holy and sacred in the family, and do not falter in attacking God Himself. He protested with all his vigor against the intellectual kidnaping of children which the world witnessed in the latter years of his papacy. He feared no human power when duty bade him speak, for the truth and the justice of God were the inspiration of his every utterance.

Pope Pius XI was a man of his time. He proved himself the eager acceptor of every instrument of evangelization which modern science could bring to his aid. He accepted gladly the newest pulpit of the radio and from that pulpit in God's great cathedral of the universe he made heard around the world the living voice of the teaching authority of the church of Christ.

Where a great pope before him had pioneered for the rights of labor and had stated for all time the right of the workman to a living wage as the fruit of his labor, Pope Pius XI, himself from the ranks of the working people, could speak with authority of the actual present-day conditions. More, he could portray the remedy for the evils of our industrial life. As labor's best friend he fought its battles for a family wage under conditions befitting the dignity of human nature. He warned both labor and capital of the flagrant injustice for either of them to seize, either by guile or by violence, more than a reasonable share of its profits, and he warned the laboring man that a revolution of Godless communism would not free him but enslave him all the more.

While he would alter the social order so that ever laborer might have the just wage to enjoy life's frugal comforts, he would also have those who carry the responsibilities of wealth recognize their obligations under God.

His was the only authoritative teaching voice that defended without compromise the morality of Christ in marriage and in the sanctities of home life. His special concern was to strengthen the family, first spiritually and then economically, and only so bring about a lasting reform which will benefit both the state and the church.

He could earn for himself the glorious title of "the Pope of the Missions" because he could sense the need of making true re-

ligion a part of a people's personal and national life. Cultivation of a native priesthood, he made a goal to be sought from the earliest entrance of missionary effort into a new field. Home missions found him using his authority as supreme pontiff to reach back into the Catholic days of nations long Protestant and raising to the altars for the inspiration of the Catholic minority names worthily to be written in the album of the saints, St. Thomas Moore and St. John Fisher, inspiration to the English church. On the other hand, his elevation to the altar of his boyhood neighbors, St. Dom Bosco, from Piedmont, and the blessed Frances Cabrini, from his own Lombardi, proved him conscious and eager to have the world conscious of the vital forces active in the church today.

It was he who instituted the feast of Christ the King, so fitting a feast toward bringing a realization of his glorious motto: "The peace of Christ in the kingdom of Christ."

The long years of his hidden life which had prepared him for the great destiny then before him had passed in those famed libraries, the Ambrosian and the Vatican, where he steeped his mind in the learning and the experiences of those who before him had led the church of Christ through world crises and could be his inspiration in the many dark hours of his brave and patient pontificate. This spiritual preparation was paralleled by the eager Alpine recreations of his younger years which were to insure him that rugged health and domination of pain and undismayed persistence in his exalted tasks, qualities which were obvious factors in our long years of his fearless guidance and unremitting vigilance.

The United States of America has paid to his venerated name in these pall-hung days a tribute of respect and admiration so universal and so articulate as to constitute a response somehow commensurate with the earnest zest with which Pope Pius XI looked to our great democracy as the hope of the world. My halting tribute here today to this great pontiff's memory falters still more as I record, as here must be recorded, how the Holy Father loved this Catholic University of America. There was about him the seeming of a prophet as from his bed of pain 2 years ago he portrayed the part he hoped this university was destined to have in the welfare of our Nation. Twice in the past year did Pope Pius XI write a message to the archbishops and bishops of this country urging the fullest use of our possibilities in the service of the Nation. He pleaded for the most complete development of our school of social science.

The Holy Father frankly declared that the Catholic University of America was destined in his conception to do a task which he did not hesitate to call vital to the best interests and future welfare of our own country; that it should be strengthened to lead the defense of Christian principles, essential for any nation, but so obviously demanded in fullest measure in a nation like our own, where citizens have the right and the duty to take so true a part in the assets of government.

It is to the university the Holy Father held that the millions of Catholics in this country must look for the unifying force which will make them one and solid in their opposition to the soulless teachings which might mean undermining the principles on which a truly democratic nation must continue to stand.

The following words of the Holy Father are addressed to the bishops but they are meant for everyone concerned in the same problem of Catholic triumph over evil and of our Nation's triumph over those within its gates who would bring it to ruin. He said: "It is a source of deep consolation to us, as it must be to you, venerable brethren, that the church in America is so well prepared to meet the challenge of these critical times, and that in the Catholic University we possess such an admirable instrument for the exposing of error and for the dissemination of Christian truth."

Proudly shall the Catholic University of America dedicate itself to so blessed an assignment, and a-down the years, hold as her most cherished commission the task given her by the love and hope of Pope Pius XI, all the dearer in that it consecrates us to the highest service of our beloved America.

When but a lad of 13 years, in the little town of Desio in Lombardy, the boy who later became Pope Pius XI must have heard with great excitement that Rome, the city of the popes, had been taken by force and made the capital of Italy. The news would follow that the Holy Father, whose name was Piux IX, had found it necessary to reject the offers of the new rulers and to retire as a technical prisoner to the seclusion of his Vatican palace. There was no way to foresee the working of divine Providence, nor for anyone in that village to glimpse the glorious truth that this boy, Achille Ratti, would one day throw open again the doors of the Vatican and end the nearly 60 years' tenure of the imprisoned papacy. Universal acclaim was his when, having sought and found a royal way to heal the hurtful division between church and nation in his fatherland, he came forth a sovereign from the prison of the Vatican. All men might read that this was greatness, but greater yet, let the world never forget that when he came through the great portal of St. Peter's, he came bearing aloft, in that hour of triumph, the most Blessed Sacrament.

The Pope who came forth was bearing the sacramental Christ, the fact of that July day just 10 years ago was also a glorious symbol. It totals a great pontificate. Came Pius XI carrying Christ to a world made hateful and mad because it had lost Christ. The voice of Christ's vicar kept calling that the basic evil of all was this divorce of Christ from daily life. He was untiring in his patient insistence all these years that into the home, into business, into play and recreation, into governments, and into the duties of citizenship, must come the kingship of Christ. Justice and charity must meet again and good will be the cement between men and between nations, that out of this rule of Christ might be restored the kingdom of Christ, where might be triumphant that for which, 17 years before, the new pontiff had called to a stricken world, the peace of Christ. In loving memory today, in grateful recognition, in loyal return response let our words be his. To Achille Ratti, great Pius XI, for all eternity "The peace of Christ in the kingdom of Christ."

The Gilbertsville Dam

EXTENSION OF REMARKS

OF

HON. CHARLES I. FADDIS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1939

STATEMENT OF TWO CITIZENS OF PADUCAH, KY.

Mr. FADDIS. Mr. Speaker, in relation to the Gilbertsville Dam, for which the House of Representatives refused further appropriations in the independent offices appropriation bill, I herewith present some facts presented to me by some of the citizens from that locality. The facts paint a local picture of this dam which is worth taking into consideration.

PADUCAH, KY., *February 12, 1939.*

1. The valley of the Tennessee River at this point is wide and very fertile. An 88-foot dam will create a lake from 4 to 8 miles wide and 185 miles long, which will cover up and drown out over a million acres of the finest soil in this part of the United States.

2. Along the 185-mile stretch many creeks and small rivers flow into the Tennessee River. In the valleys of these creeks and rivers it is estimated that another 200,000 acres of fertile land will be destroyed for farming purposes, leaving only the unfertile hills and small branch bottoms for farming purposes.

3. About one-half of this 1,200,000 acres are still in valuable forests of both soft and hard wood, which produce millions of dollars' worth of timber annually. There are probably 20,000 agricultural citizens who will be shifted from their agricultural pursuits in this section.

4. Nature endowed this valley with an annual overflow of high water, such as in the valley of the Nile in Egypt. This overflow comes each January or February and leaves behind a rich sediment which naturally makes this land very fertile. This overflow also kills all harmful insects on this land and assists in insect control throughout this section.

5. This dam will destroy 175 miles of improved highway, 40 miles of railroad, and will necessitate the raising and protection of 125 additional miles of highway. It will also inundate or partly inundate 10 or more towns or villages and 7 railroad or highway bridges. To say the least, it will cause many million dollars' worth of damage.

6. One of the local industries in that section is gathering mussel shells. Thousands of the poorer citizens engage in this industry from early spring until late fall. They can gather about a ton per week each, which enables them to earn about $20 per week. The building of this dam will destroy these beds along this stretch and these people will then be candidates for relief.

7. The T. V. A. is now paying an average of $60 per acre for land which 3 years ago could have been bought for $20. At that price the site alone will cost $72,000,000.

8. The estimated cost of this dam is from $112,000,000 to $200,000,000, and at the least calculation the interest alone on this money will be $3,360,000.

9. This land, once acquired by the T. V. A., will no longer be subject to taxation and the State, county, and municipal taxes of those subdivisions of government concerned will be compelled to make good their loss by an increase in taxation upon the property within their jurisdiction.

10. This valley produces annually about 20,000,000 bushels of corn, $10,000,000 worth of livestock, $12,000,000 of lumber products, and several million dollars' worth of wheat, cotton, rye, beans, tobacco, and various other grain and farm products which need no irrigation or fertilization to grow same, and the growing of these products will cease when the land is covered by the lake.

11. There are hundreds of steamboats, towboats, and river craft of many kinds plying this river, and when this dam is completed and a 185-mile lake is created these craft cannot navigate the lake,

as the waves created, on account of the width of same, will swamp or sink these craft. This is the opinion and complaint of experienced rivermen. Should the dam be completed, millions of dollars invested in these river craft will be a total loss, as it will take larger and more costly boats and barges to navigate this lake.

12. As for the hydroelectric power it might generate (which is not needed) there is enough potential power at Pickwick, Wilson, and Wheeler Dams on this river to supply electricity for a radius of 100 miles to 10 times the present population for 100 years to come.

13. Flood control: Every thinking citizen and practical engineer in this part of the country knows that it is practically nil and will not decrease the annual overflow we have in this valley as much as 1 inch at the crest of the high water—and the excuse that we must build the dam for flood control is a lot of false propaganda. In fact this annual high water is highly beneficial to our land, and no citizen is inconvenienced by same, as they all live out on high land, but an 88-foot dam will cover up these houses and barns for 185 miles on each side of the river.

If Congress has to spend $112,000,000 borrowed money instead of spending it on a dam that will cause so much destruction to our natural resources, why not dig a canal across the watershed above Pickwick Dam to the Tombigbee River in Alabama and let the excess water go to the Gulf? We understand that only a short canal would be necessary and that the lake water backed up by the Pickwick Dam would allow the water to flow into the Tombigbee by gravity.

There are many reasons why you, as a Member of Congress, should not allow this terrible destruction of our natural resources. Last year the vote for the appropriation of nearly $3,000,000 for the beginning of this dam failed in the House once, but later by attaching it to the general appropriation bill and a lot of "log-rolling and horse swapping" it passed by only a majority of seven votes, and no doubt would have failed again if the Members could have known the above facts.

The undersigned are lifelong citizens of this valley, having been born and reared in the area to be destroyed. We are not connected in any way with an electric company and cannot profit 1 cent by the dam not being built, but we are only interested in helping to prevent an awful destruction of our natural resources in this part of the Nation, which will take the means of a livelihood from this and future generations, and leave only poor hill land for them to dig a living from for generations to come.

We feel that the vast majority of citizens even in this part of the United States are opposed to this destruction (except New Deal spending officials and those who would benefit financially by the dam being built), but we have no organization, money, or lobby to appear before Congress to fight against it, and all we can do is present the facts, hoping there will be a majority of conservative Members of Congress who believe in economy to defeat any future appropriation for this destructive project, and we sincerely hope that you will vote against and do all you can to defeat it, and by so doing you will be rendering a real service to humanity in preventing this destruction of our fertile land and valuable forests, and future generations will honor your memory for so doing.

If there is any further information you wish, we would be glad to furnish same.

F. A. JONES, M. D.,
Physician and Farmer.
LOUIS IGERT,
Owner and Manager of Igert's Towboat & Barge Line,
Paducah, Ky.

Now, Mr. Speaker, last year the Gilbertsville Dam was twice rejected by the House and was finally forced over on us in a conference report. This year the House has again rejected it and along with it has rejected initial appropriations which would start similar projects. That is the plan these bureaucrats follow. They obtain a small appropriation for preliminary work. That is the nose of the camel. They then come back with a plea for a hundred times as much to save what has already been spent. I am well aware that in all probability another body will attempt to place back into this bill the money for the Gilbertsville Dam and also money to start other dams and to furnish excuse for still more appropriations to finish them. Let me call to the attention of my colleagues of the House, the fact that the House of Representatives alone has the power, under the Constitution, to initiate appropriation bills. Three times you have spoken on this Gilbertsville Dam and twice you have been overruled by this body, which in reality has no power to appropriate. The power to raise an appropriation bill is equivalent to the power to initiate. Let me beseech you to stand your ground in this matter and to preserve inviolate your constitutional prerogatives in the matter of appropriations.

General Welfare Act—The Townsend Plan

EXTENSION OF REMARKS
OF
HON. MARTIN F. SMITH
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1939

STATEMENT OF HON. MARTIN F. SMITH, OF WASHINGTON, BEFORE THE COMMITTEE ON WAYS AND MEANS

Mr. SMITH of Washington. Mr. Speaker, under permission granted to me by unanimous consent of my colleagues of the House, I am extending my remarks by inserting the remainder of the statement which I made before the Ways and Means Committee, February 15, 1939, in support of H. R. 2, the General Welfare Act, which embodies the principles of the Townsend old-age pension and national-recovery plan. The first part of the statement appeared in the RECORD yesterday, and the concluding part is as follows:

THE NEED OF INCREASING "VELOCITY" OF MONEY

The Director of Research and Statistics of the Federal Reserve Board has stated that the decrease in national business transactions in 1929 from $1,200,000,000,000 to $600,000,000,000 in 1931, was largely due to "decline in velocity."

The Dow-Jones organization says: "In October 1929 a deposit of $1 in a New York bank was being used fast enough to do $132.70 of work in a year. October 1934 the same dollar was being called upon to do annual work of only $22.50." It is estimated that the annual turn-over of the dollar is now $34. In other words, the money is not circulating. There is great need of not only putting money in the hands of the masses, but it must be kept in circulation. Therefore, H. R. 2 provides that the pensions must be spent within 30 days. If, when money was in circulation in more prosperous times, a dollar did $132 worth of work, as against only $34, or approximately one-third of the work when not circulating, it is apparent that money must be made to circulate. The more rapidly it circulates, the greater service—the greater work—it will do for humanity. That is the main objective of the Townsend plan.

ADVANTAGE OF QUICK CASH TURN-OVER

In 1935–36 the Supreme Court ordered the Illinois Bell Telephone Co. to refund to subscribers in Chicago the tidy little sum of $20,700,000 overcharges. This money was immediately spent in the stores of Chicago, the merchants passing it along in payment of various bills, and in the purchase of more merchandise, and in just a few days the money had turned over so rapidly and circulated from person to person so often that it had transacted approximately $100,000,000 worth of new business, and even in the big wealthy city of Chicago, which deals in billions, it attracted attention and surprise.

According to the Dow-Jones Co., of New York, national authority as statisticians and economists, this Chicago money turned over 22½ times during the year which meant that this $20,700,000 created $465,750,000 worth of new business. If the comparatively small sum of $20,700,000 disbursed by a private corporation to a few people created $465,750,000 worth of new business for Chicago merchants alone, then why won't $1,600,000,000 disbursed each month by the Government to 8,000,000 citizens also turn over 22½ times and produce $405,000,000,000 worth of new business for all the merchants of America? In other words, increase the volume of gross business turn-over, now estimated at $800,000,000,000, to approximately what it was in 1929, $1,200,000,000,000, or does the money of a private corporation act any differently than money disbursed by the Government?

EXAMPLE OF $10 TURN-OVER

For example, taking the month of April as a basis, to show possible and reasonable transactions with a Government $10 check from his allowance, we find the pensioner receives a check on April 1 and takes $10 of it the same day to his grocer, who pays 2-percent tax to the Government on sales; the grocer pays same check to his clerk, who also pays 2 percent on salary (all over $100 a month); the clerk pays check to butcher, who also pays the Government 2 percent on sales; on the 2d, butcher pays to wholesaler, who also pays 2 percent on sales; wholesaler pays to his clothier, who also pays to the Government on sales; clothier pays same check to salesman on 6th; salesman pays it to his grocer on 8th; grocer pays to his wholesaler on 10th; wholesaler pays to his salesman on 10th; salesman pays on his auto on 11th; auto dealer pays to his salesman on 13th; salesman pays his landlord on 15th; landlord pays to electric company on 16th; electric company pays to employee on 20th at noon; employee pays to dry goods company

same afternoon; dry goods company pays salesman same check on closing on 20th; salesman pays his grocery bill on 22d; grocery pays on daily account to bakery on 23d; bakery pays daily account to creamery on 24th; creamery pays wholesaler on 25th; wholesaler pays on furniture the 26th; furniture dealer pays his salesman on 27th; salesman pays on his radio the 27th; radio dealer pays to his wholesaler on 29th, saving his 2 percent cash discount for a month; and the wholesaler deposits check in bank on the 30th. Each transaction has paid a 2-percent tax, amounting to 20 cents, either from seller of merchandise or receiver of check for services.

Twenty-five reasonable and not unusual accounts have been paid with this one $10 check, which is accepted by everybody the same as currency, and 25 payments have earned $5 in revenue tax. This shows the possibility of velocity of business.

With this possible with one $10 check, what would happen with 8,000,000 pensioners paying out from $60 to $200 per month on the Townsend plan, and everybody keeping up this velocity of business transactions?

An interesting experiment was made, as related by Frederick J. Haskin, of the Washington (D. C.) Star, in his article entitled "The Velocity of Money Circulation." As a feature of a convention held in Milwaukee, Wis., the Chamber of Commerce put in circulation $400 in money so marked that it could be traced. The tracing could be carried on indefinitely until the money actually wore out or returned to the Treasury or to Federal Reserve banks for redemption and destruction. But in the short time that the chamber traced the money—a matter of a few days only—it was found that the $400 paid bills amounting to $1,425. That much indebtedness was discharged by the original $400.

While a certain amount of cooperation from local people was required to keep track of the use of the money, no collusion was involved and, in all probability, many transactions were missed entirely; that is, probably more debts were paid than could be traced.

WHERE THE MONEY WENT

In detail, the fascinating story is as follows: Three hundred dollars of the money paid salaries to various persons. Meals—dinners, luncheons accounted for $258. Landlords received $136 of the $400, while $109 was expended for groceries. The sum of $78 was spent for general merchandise, while hotel bills to the extent of only $48 were paid. In view of the fact that a convention was in the city at the time the experiment was conducted, it appears that comparatively little of the original $400 got into the hands of the visitors as hotel bills doubtless constituted a major portion of their expenses. Home-town people were getting the chief use of the funds.

Banks received $38 of the identifiable money on deposit, while board bills were paid with $35. Filling station men received a respectable share, for $35 came into their hands in payment for gasoline and oil. Housewives paid $34 of the money for meats, while coal and other fuel bills were paid to the extent of $31. Twenty-nine dollars went into the hands of public utility companies in settlement of electric bills, with another $10 for water and gas bills.

Cigars, cigarettes, and tobacco were purchased with $24 of the money, while candy, ice cream, and similar light refreshments accounted for $20. Transportation fares locally, street cars, busses, and taxicabs absorbed $15. Debts were paid and loans made to the extent of $18, while tips accounted for $17.

Furniture and hardware stores got $17 of the money and $15 of it was paid on medical and dental bills. Insurance premiums were paid to the extent of $15. Movies and other theaters and amusements accounted for $15 of the original money.

Barbers and proprietors of beauty shops received $14 of this money, while $13 was expended for drugs and medicines. Club dues and charitable donations accounted for $10. Nine dollars went for flowers and jewelry.

Bakers took in $9 of the money and $9 of it was spent for shoes. Garage bills were paid to the extent of $8, while tailors, cleaners, and laundries got $8. Telephone bills were paid in the amount of $6, while radio tubes and accessories were purchased with $5.

Shoeshines and shoe repairs were acquired with the payment of $5 of the marked money. Railway and boat tickets accounted for $5 and another $5 turned up as payment of interest on a note. Payment on an automobile in the sum of $4 of this money was made. Livestock was purchased with $1.

Thus the total of $1,425 was reached. Money, to be of any use, must continue to circulate, and theoretically there are no limits to the extent of this circulation, as the Milwaukee test shows.

Starting with the $300 out of the original $400 which was paid in salaries, it can be assumed that some of it was paid in rent. The test showed that $258 of the money was paid in rent, but that did not necessarily all come out of salary money. But to follow through one single line. Assume the landlord used some of the rent money he received to pay his grocery bill. Then assume that the grocer paid his electric-light bill with what he had received. The electric-light company owed a bill for fuel and paid over some of the money to discharge that debt. The coal man paid some to the hardware man for shovels. The hardware man paid a doctor's bill and the doctor bought flowers and had a suit pressed.

Only about 3 days were devoted to the Milwaukee experiment, and yet it was shown that $400 paid $1,425 in bills. Those obligations were definitely and finally discharged; they did not have to be paid again, and yet no more money was used. That is the whole theory of circulation and, in part, the theory of inflation. Practically everyone in the United States is in debt. With more money in circulation and hoarding stopped, the cycle of payments can be speeded up, and in a short time the obligations can be discharged.

A transaction tax of 2 percent on every transaction, sale, barter, or exchange of finance is the most equitable and just form of tax that could possibly be devised, and it would not work a hardship or injury upon anybody. It would amount to $2 on every $100, $20 on every $1,000, $2,000 on every $100,000, etc., and in the case of nearly all manufactured wares, goods, and merchandise would involve directly a tax load of only five times the single 2 percent while passing, first, through the hands of the producer of the raw material; second, the manufacturer of the raw material; third, the jobber-broker-commission man; fourth, the wholesaler; and, fifth, the retailer.

It was estimated at the social-security hearings (p. 1103) that the cost of living would rise by 10 to 12 percent, and even the group of University of Chicago professors who oppose the Townsend plan on other grounds recently stated in the pamphlet issued by them that "an examination of statistics for one or two representative industries (not included in this pamphlet for lack of space) confirms the reasonableness of the estimate that the rise would be on the order of 10 percent." However, if the increase in the price level proved greater, owing to the stimulation of business, trade, industry, and agriculture, which would result, it would be governed by the law of supply and demand, the same as in the past and at the present time. Prices would go up and wages go up in proportion. Hence no damage or injury could be caused to the vendor of any commodity who would, in the very nature of things, be greatly benefited on account of the improved market and demand for everything that is produced on the farms and manufactured in the factories.

WHAT IS WRONG WITH A TRANSACTION (TURN-OVER) TAX?

A retail sales tax has been urged by big business and by many of the most conservative Members of the House and Senate for years as a sound and just form of taxation. Will someone point out why a tax imposed upon all business transactions would be any more unsound, unsafe, or unjust than a retail sales tax or manufacturers' excise tax, and wherein lies the difference which should cause us to adopt the one and reject the other?

I desire to quote from an address delivered by the late Sir John Aird, who was president of the Canadian Bank of Commerce, at the annual meeting of shareholders, held at Toronto, Canada, January 14, 1936, according to the text of his speech which I received from him:

"It is now quite generally agreed that continuous borrowing to cover deficits and to maintain social services on the present scale cannot go on indefinitely, and therefore that the most rigid public economy and higher taxation must be faced. Intensive study should be given to the problem of establishing a broader and more equitable basis of taxation. In this connection I again advocate a Nation-wide turn-over tax as more likely than any other new form of levy to meet the need for a balanced Budget."

When he passed away recently he was eulogized in the Canadian press as the "grand old man of banking."

MORGENTHAU RECOMMENDS TURN-OVER TAX

Three years ago there appeared in the Washington, D. C., press the statement that Secretary of the Treasury Henry Morgenthau had submitted several alternative tax proposals to President Roosevelt, and among them a "1½-percent turn-over tax." I suggest that your committee question Secretary Morgenthau in regard to this type of taxation.

JAMES BRYCE—THE HAWAIIAN TAX SYSTEM

Many years ago when James Bryce was Ambassador from England in Washington, he said: "The American form of government will go on and live long after most of the other forms of government have fallen or been changed, and the reason is this: In other nations of the world when a new problem comes up it must be tested in a national laboratory, and a solution of the problem must be worked out, and when it is worked out that solution must be applied to the nation as a whole. Sometimes it may be the correct solution and other times it may be the wrong solution. But you in the United States have 48 laboratories, and when new problems arise you can work out 48 different solutions to meet the problem. Out of these 48 experimental laboratories, some of the solutions may not prove sound or acceptable, but out of this experimentation history shows you have found at least some remedies which can be made so successful that they will become national in their application."

This thought-provoking statement by James Bryce, who wrote the monumental work, The American Commonwealth, still considered to be one of the finest treatises ever written on our Government, is absolutely correct. We have recent verification and corroboration of that fact in what has transpired in one of our Territories, the Hawaiian Islands, in regard to their successful experiment in taxation.

I quote from an article by M. W. Jorz, financial editor of the Illustrated Daily News, Los Angeles, Calif., published December 24, 1937:

"The United States could wipe out its national debt and be money ahead within 5 years if the Federal Government would adopt the Hawaiian taxation system. * * * The islands have solved their tax problem by instituting a gross-income tax.

"Not only has it saved the Territory from bankruptcy but it has simplified the revenue collection to such an extent that the most ignorant oriental peddler in the street knows how to make out his tax return. * * * The gross-income tax went into effect July 1, 1935, with a levy of 1 percent on all incomes except salaries and wages. The Territorial government was $1,259,000 in debt, had slashed the pay of all teachers and Territorial employees 10 percent, and seemed hopelessly mired. It was estimated that the gross-income tax would raise $5,108,000 in the first year of the new tax. No one believed it possible. At the end of the first year Territory coffers had taken in $6,116,000. * * * In Hawaii they have discovered the weakness in most forms of taxation to be the extreme technicalities and the tiny loopholes that soon grow big enough for trucks to be driven through. When they had an excise tax of 2 percent on profits, the Orientals in Hawaii never made any profits. They could do hundreds of thousands of dollars of business and show that everything was sold at cost. Now they have changed all of that. Everybody is paying a just share of taxes. * * * They have restored the old pay scales for all the teachers and government employees, and they have not had to borrow a penny. * * * The gross-income tax is 12 times as effective as taxes collected once a year. Hawaii gets its revenue every month, and the money is turned over 12 times a year. * * * With only a tiny levy you can get revenue figures that read like a lesson in astronomy. * * * They have made their rate 1¼ percent now and have nothing whatever to worry about. The loophole is gone forever, and nobody seems to care. * * * If you would put a 1-percent gross-income tax in the United States, you could forget all about those thirty-seven billions in debt and have money to spare within 5 years easily. * * * Kick out sales taxes and take 1 percent on gross incomes and you would have 3 times as much cash."

I desire to read into the record the following letter which I received from Hon. William Borthwick, tax commissioner of Hawaii:

TERRITORY OF HAWAII,
BUREAU OF THE TAX COMMISSIONER,
April 21, 1938.

Hon. MARTIN F. SMITH, M. C.,
1034 New House Office Building, Washington, D. C.

DEAR SIR: In reply to your question as to why a gross-income tax, rather than a transactions tax, I will say that there are few human activities that could not be described as a transaction. Many of them would produce no income. A law attempting to define transactions would require so many exemptions, deductions, etc., that it would be impossible to administer it without great trouble. For instance, a man buying postage stamps is a transaction that does not produce any income. A man could swap a hound pup for a gallon of moonshine liquor, which would be a transaction.

The reason we adhere to gross income is to find out the gross take in any line of work without looking at the number of transactions. It was suggested at the time I was fighting to put over the gross-income tax that we make it a transactions tax. This I refused to do. The gross-income tax here is the most equitable tax that we have, and those who bitterly assailed it and declared it would put them out of business are now its most ardent supporters.

Pardon me for the suggestion, but I believe a little study will reveal that I am right when I tell you that if we had a gross-income tax as a Federal measure, carrying a rate of 2 percent, the money to be spent monthly in the United States in some useful and constructive manner, we could forthwith quit borrowing money and the Federal Government would soon balance its Budget and be run on an even keel.

While I recognize that all of our national borrowings have probably been necessary and are truly only capital investments, a business firm that could get its hands on money by collecting what was due rather than borrowing would certainly succeed in a greater measure than a firm who borrowed money continually, involving themselves in interest payments.

Before the gross-income tax law was passed the Territorial legislature appropriated a quarter of a million dollars for each biennium with which to pay interest on its borrowings to finance the Territorial government through lean periods of collection. Since the gross income tax law began operating we have always had money in the till and have never borrowed a thin dime, although the cost of government has increased several million dollars in that time.

Thank you for your inquiry. Assuring you of any help I may be able to render you in the future, I am

Sincerely yours,

WM. BORTHWICK, *Tax Commissioner.*

P. S.—I formerly lived in Olympia and knew many Hoquiam folks, and still retain an interest in western Washington.—W. B.

The Hawaiian gross income tax system has been favored by Dr. Francis E. Townsend since he went to the islands last year, and he has brought Hon. Louis C. Silva, official tax expert in the islands, to this country to make an exhaustive study of the proposed tax for the United States. Mr. Silva has been granted a year's leave of absence from his official duties as chief deputy tax administrator for the Territory of Hawaii in order to conduct this survey and investigation, and he has already arrived here for that purpose.

TRANSACTIONS TAX—GROSS-INCOME TAX

The General Welfare Act (H. R. 2) provides for a 2-percent transactions or gross business turn-over tax, which is a broader tax base than a gross-income tax, which comes the closest to a transactions tax of any form or type of taxation. The transactions tax will raise even more revenue. Instead of being used to defray the expenses of government, as in Hawaii, it will be prorated among the pensioners to the maximum amount of $200 per month to be expended within 30 days, and the surplus to be applied to the reduction of the national debt. It is a pay-as-you-go national recovery plan and far less costly than our present bond-debt-creating system, with its appalling interest burden. It will solve the problems of old-age security, relief, business depression, unemployment, and our annual crime bill.

Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation, has estimated the latter item to be $15,000,000,000 per year. We have expended for relief $12,000,000,000. The Brookings Institution has estimated our total loss in national income since 1929 to amount to over $200,000,000,000. Is it a sound investment to tax ourselves 2 cents on every dollar transaction to meet these social, economic, and financial conditions? Not one cent of the money is to be borrowed by the issuance of tax-exempt interest-bearing bonds. Do you realize that the interest on the bonds we issued during the World War to finance the Allied Powers and our own participation has already amounted to over $12,000,000,000? How much interest will we and our children and our children's children pay on the bonds issued during the depression since 1929 before they are finally paid? The total sum will run into astronomical figures. How much longer are we going to delay the adoption of the tax formula of the General Welfare Act and the Townsend plan, which applies the velocity principle of money turn-over and provides a revolving fund, upon a pay-as-you-go basis, to create active, liquid, working capital, available currently every month in the year, to finance the potential productive capacity of our industrial and agricultural structure? The old-age-assistance phase of the General Welfare Act is merely the means to the more important end sought. The pensions to the aged to be expended currently each month in the purchase of goods and services is merely the modus operandi by which the working capital is made available to the productive enterprise of the Nation. The General Welfare Act, H. R. 2, is the only proposal pending before Congress which will meet the requirements of the price system, the profit motive, and credit capitalism.

Mr. Chairman and gentlemen of the committee, I thank you sincerely for your courtesy and kind attention shown me during my presentation, and I hope that you will give H. R. 2 your favorable consideration.

Thank you very much.

A Multitude of American Farmers Are Not in Accord With the Government's Effort to Curtail Production and to Keep Surplus Farm Produce Off the Market

---

EXTENSION OF REMARKS

OF

HON. CHAUNCEY W. REED

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1939

COMMUNICATION FROM HOMER B. GROMMON, OF PLAINFIELD, ILL.

Mr. REED of Illinois. Mr. Speaker, the agricultural problem is one which naturally is always of great interest to every Member of this House. The present dissatisfaction of a great multitude of the people who gain their livelihood from the bosom of Mother Earth is daily being called to the attention of Members of Congress who have districts embracing agricultural areas. Daily we receive communications advising us that in our districts there are large numbers of farmers who are not in accord with governmental efforts to limit production and restrain the marketing of surplus farm products.

Recently I received a communication from Mr. Homer B. Grommon, of Plainfield, Ill., a former president of the Farmers National Grain Dealers Association, and one who has been a livestock feeder and grain farmer throughout his active and vigorous life. Mr. Grommon is a man of keen intellect, intensely practical in his views, and has been for many years an exhaustive student of farm problems.

Believing his views will interest the Members of this House, I submit herewith his letter in its entirety:

PLAINFIELD, ILL., *February 3, 1939.*

HON. CHAUNCEY REED,
Member of Congress, Eleventh District of Illinois,
Washington, D. C.

MY DEAR CONGRESSMAN: As you know, I have been a grain farmer and livestock feeder in your district all my life, am well past the three score and ten mark, and have held executive positions with a number of farmer organizations, among them the Illinois Farmers Grain Dealers Association and the Farmers National Grain Dealers Association, which have for one of their purposes the gathering of facts and information of interest and benefit to the units comprising them as well as to the farmers who own and control them. I am, in common with you, interested in the welfare of my whole country, so that coming generations may enjoy unlimited religious freedom, may have the right to express their thoughts publicly, and may continue the pursuit of happiness and material comforts and blessings which are the earned reward of private enterprise and effort.

As a nation we are drifting away from government by all the people to government by well-organized minorities, which at times go so far as to use force and intimidation to gain their demands. In some cases this trend is disguised by Government loans to cooperators in plans for helping themselves. Many of these loans are in effect gifts of public money to those who join the plan. When I was young bribery was the word, but the modern name apparently is benefit payments.

A multitude of American farmers are not in accord with the Government effort to curtail production and to keep surplus production off the market.

Records of our Government show the fallacy of it; ancient history emphasizes its unsoundness; and repeated experiences show its disastrous results. Agricultural Department records, printed and distributed by act of Congress, show the annual production and average farm price of wheat, corn, and oats. Starting with 1909 and on through 1934—26 consecutive crop years—the 13 largest crops of these three grains exceeded the 13 smallest crops by over 13,500,000,000 bushels, and that the total farm price for the big crops exceeded the price realized on the small crops by nearly $12,000,000,000. The average price per bushel for the big crops exceeded the average price per bushel for the small crops by 19 cents in the case of wheat, 1 cent in the case of corn, and about one-half cent in the case of oats. If we eliminate the war years from the picture, the farm price of wheat was 29 cents more per bushel for the big crops than for the small ones. Going a step further and leaving out also the years when the ill-advised Farm Board functioned, carrying out the plan of farm leaders, and using $500,000,000 of your and my money in an attempt to raise prices by taking surplus off the market, we find that the farm price for wheat was 39 cents more per bushel for the big than for the small ones. It is a well-known fact that it is the surplus that goes to market, and when the large crop year surplus of 13,500,000,000 bushels of grain went to market, as it did in some form, that surplus furnished additional business and employment for every type of industry, bringing back to the farmer new capital to invest in better educational opportunities for his children and to use in improving and modernizing his home and farm with repairs, paint, electric light and power, electric appliances, automobiles, new machinery, etc.

All this new additional capital, this 13,500,000,000 extra bushels of grain reposed in the hands and in the control of the farmer, who produced and owned it, making the best ever-normal granary known to man, infinitely better than Government ownership or control of any theoretical surplus of grain.

It is gratifying and encouraging to see the manufacturing industry give serious attention to the problem of the farmer. Farm leadership led the farming industry astray when it attempted to follow the manufacturing industry in the matter of production control, with the fallacious argument that because industry was able in a measure to prevent too drastic price declines by reducing production, agriculture should do the same, but overlooked the very obvious fact that such procedure was not a deliberate choice on the part of the manufacturing industry, but rather a drastic and disastrous necessity employed as a last resort and profitable to nobody. The collapse, which brought industry almost to a standstill and farm prices to ruinous levels, was in neither case too much goods for peoples' desires and needs, but was the inability of too many people at home and abroad to buy even such necessities as food and clothing in adequate amounts.

The recovery problem was the same then as now, to provide jobs for as many unemployed as possible and to take care of them until they were able to take care of themselves. In the manufacturing industry the remedy tried was to shorten hours and increase hourly pay, which only has had the effect of increasing costs which already were too high for the greatly curtailed buying power of the Nation, with a consequent depressing effect upon the volume of industrial business. At the insistence of some of our most widely know farm leaders, the remedy tried was to reduce volume of production, or, in other words, to decrease the number of jobs in an effort to raise prices at a time when people already were unable to buy at prevailing prices. If these schemes had solved the problem, it would be unnecessary to continue discussing it.

Production makes jobs. Production is wealth, price is not. When we all have all the things we want and need, then we are really wealthy. Money has been defined as the means of carrying the production of the country to the consumers of the country. Isn't it a possibility that when the production is not getting to the consumers, it is a mistake to raise prices? Could it not be a mistake to cut production when jobs are the greatest necessity?

To illustrate what volume of farm production means in the way of jobs, let me quote from a recent magazine article by Mr. Stuart Chase: "In a desert in Egypt has stood for 6,000 years the most massive structure ever built by man, a house for the dead. In a desert in Washington a new champion arises, a center of energy for the living. The Grand Coulee Dam will weigh 23,000,000 tons, over thrice the heft of the Pyramid of Cheops; Norris Dam is a toy by comparison; Boulder is higher, but only one-third as great." (Atlantic Monthly, November 1938.)

The official figures on the corn, wheat, and oats production for the 26 consecutive crop years from 1909 through 1934, when divided into the large crop years and the small crop years, show that the yearly average tonnage for the 13 large crops exceeded that of the 13 small crops by 26,000,000 tons, 3,000,000 tons more than the weight of the Grand Coulee Dam. The material for the dam was hauled to the site and put in place to stay for perhaps 6,000 years, but the crop tonnage is handled over and over again. Thus, a big crop makes jobs. It is 26,000,000 tons more per year to be handled by harvest machinery and labor; it is 13,000,000 more trips from farm to market with a 2-ton truck; it will load 514,000 freight cars to terminal markets and to processors; and then be reloaded and shipped to retailers and distributors. Production makes jobs.

I am very hopeful that the four research stations which the last Congress ordered to be established may provide information leading to new uses for crops which we now raise and to the raising of new crops for which there now are uses. A market for what we raise, or something to raise for which there is a market, is needed so that farmers can produce with no other restrictions than those which Nature imposes and with which we have always to reckon. If the Nation is to get any great and lasting benefits from these research laboratories, we must have the full and intelligent cooperation both of manufacturers and farmers. I am sure that industry will try to give the American farmer the order for everything they use which can be made from an agricultural product and look to the laboratories to determine where and how to get it in cheap and satisfactory form. Industry will have the job of developing the discoveries of new and useful ways to use farm products, and farmers must learn to produce at levels profitable for both. As you know, we used to raise our own farm power and the "horse fuel" to keep it going; now we buy our power and fuel with the result that acreage formerly used for feed is producing products which must be sold in the market instead of being used on the farm. You and I know that hogs could bring more and pork could sell for less if lard were not selling for less than the live weight of hogs. If our experiment stations can take from the grain some of the fat-producing elements and use them for fuel, the breeders, the farmers and feeders, and the packers can unite on producing a more profitable hog from what is left of the grains. This is only one illustration of what we may find in exploring the road to capacity production. If labor and industry can join forces, forget price fixing, and concentrate on volume production, the farmer can afford to trade with industry in generous measure without artificial attempts to raise prices and boost the cost of living, and all could have a great deal more real wealth at a lower cost in dollars, with jobs for everybody.

Production is wealth. Surplus production makes capital. Invested capital creates jobs and jobs bring prosperity. Any attempt to prevent surplus production is a direct attack on prosperity, because it is an assault on capital.

Early in 1936 Transportation Association of America pioneered the refutation of the false theory that the way to have more is to produce less At that time the association published Grain Production and Its Relationship to Prosperity, edited by the writer. This document contains, and the conclusions thereof were based on, official figures of the United States Department of Agriculture, and disprove, beyond any question of doubt, that economic benefits come by pursuing the doctrine of scarcity in agriculture. Many farm leaders were instrumental in influencing Congress to attempt this experiment—many of these same leaders are now undertaking to dispute its effectiveness, reversing themselves by adopting the theory of plenty.

In view of the fact that you again have the agricultural problem before you for consideration, the question is pertinent as to whether Congress should not now do its own thinking along fundamental lines.

With kind personal regards, I am,
Very truly yours,

HOMER B. GROMMON.

Promotion in the Navy

EXTENSION OF REMARKS

OF

HON. CLARENCE W. TURNER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1939

BILL INTRODUCED BY HON. CLARENCE W. TURNER, OF TENNESSEE, AND EXPLANATION OF PURPOSE

Mr. TURNER. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following bill introduced by me in regard to promotion in the Navy and a short explanation thereof:

A bill to correct injustices resulting from faulty application of the Navy selection law of June 23, 1938

Be it enacted, etc., That so much of the provisions of the act entitled "An act to regulate the distribution, promotion, and retirement of officers of the line of the Navy, and for other purposes," as relates to the retirement or discharge of officers of the grade of lieutenant colonel, major, captain, and first lieutenant in the Marine Corps, as a result of having twice failed of selection under the provisions of that act, as affects those officers who will be retired or discharged on or before June 30, 1939, is hereby suspended.

SEC. 2. The Secretary of the Navy shall appoint a board of five officers, above the rank of commander in the Navy or lieutenant colonel in the Marine Corps, none of whom shall have sat as a member of a selection board for the 2 years prior to July 1, 1939, and shall furnish this board with the records, except health records, of all officers now in the grade of lieutenant colonel, major, captain, and first lieutenant in the Marine Corps, who would be retired or discharged on or befcre June 30, 1939, as the result of the aforementioned act of June 23, 1938.

SEC. 3. The board appointed under the provisions of the preceding section shall meet within 1 month from the passage of this act and shall carefully examine the records of those officers with which it shall have been furnished by the Secretary of the Navy, in accordance with the provisions of the preceding section. Within 15 days from the date of its initial meeting it shall submit to the Secretary of the Navy the names of those officers, from the foregoing list, which it considers best fitted for promotion from the grades in which they may be then serving, to the next higher grade, not to exceed promotions to the number of 4 colonels, 8 lieutenant colonels, 16 majors, and 32 captains, respectively: *Provided*, That the board shall be governed, in selecting the officers for promotion as aforesaid, by an examination of the records of the officers concerned, in their present grades, and shall recommend for promotion only those officers whose records in their present grades contain no matter unfavorable to them, being governed by no other consideration: *And provided further*, That the board shall, in addition, submit to the Secretary of the Navy, at the same time as the list of the officers recommended for promotion a list of those officers not so recommended, with the reasons therefor, which reason or reasons in each case shall be supported by an extract or extracts from the record of the officers concerned, which shall be certified by the president of the board to be a true extract of the record of that officer in his current grade.

SEC. 4. The report of officers not recommended for promotion having been submitted to the Secretary of the Navy, he shall, without delay, notify each officer named therein of this fact, quoting the reasons given in the aforementioned report of the board, and shall permit the officer concerned to present himself in person before the board, to be examined by the board on any matter or matters appearing in his record which may be of a nature unfavorable to him, to be represented by counsel, and to have the right to examine any member of the board, or any other witness, with regard to his record in his current grade, or any part thereof: *Provided*, That the meeting of the board for the hearing of any officer not named on its original list of recommendations for promotion to the next higher grade shall take place only after a reasonable time, sufficient to allow all the officers concerned to present themselves at the place of meeting of the board: *And provided further*, That an officer, not recommended for promotion, who being duly notified by the Secretary of the Navy of his right to appear in person, must, within 5 days after the receipt of such notification, notify the Secretary of the Navy, in writing or by official dispatch of his desire to so appear, otherwise he will be assumed to have automatically forfeited his right to appear: *And provided further*, That no cost shall accrue to the United States, on account of travel of officers desiring to present themselves before the board, nor shall the time absent from their duties by such officers, on account of such appearance, be counted as other than leave of absence.

SEC. 5. The board shall proceed with a separate hearing of any officers who may have stated their desire to appear before it, under the provisions of the preceding section, and shall, within 5 days after the hearing of all such officers shall have been terminated, recommend to the Secretary of the Navy either that the list of recommendations as originally submitted be approved and forwarded to the President for nomination of the officers named therein to be promoted as set forth hereafter, or that the names of any or all officers whose cases the board has considered as a result of personal hearings be added thereto, and that the revised list be then submitted, as above; or that, in case addition of the number of officers recommended as a result of personal hearing to the original list will result in an excess over the number allowed by section 3 above, those officers who may be added as a result of hearings be retained in their current grades on the active list for a period of 1 year, or until such time as their eligibility for promotion shall have been again considered by a selection board convened pursuant to the act approved June 23, 1938, above mentioned: *Provided*, That no retirements or discharges under the provisions of the act of June 23, 1938, above mentioned, shall be carried into effect until the President shall have approved the final action of the board appointed pursuant to section 2 of this act.

SEC. 6. Officers selected for promotion as a result of the action of the board appointed pursuant to section 2, above, shall be promoted as additional numbers in their respective grades. They shall take rank after the officer promoted as a result of the action of a selection board convened in obedience to the provisions of the act of June 23, 1938, whose name appears next above theirs on the lineal list established by publication of the Register of Commissioned and Warrant Officers of the United States Navy and Marine Corps, published by authority of the Navy Department under date of July 1, 1938: *Provided*, That the officers so selected shall be promoted subject to the laws governing physical and professional examination for promotion, and shall then be subject to all other laws governing officers on the active list of the Navy: *And provided further*, That no discrimination, as regards the character of duty to be assigned these officers, shall be made by reason of the fact that they are additional numbers in their respective grades.

SEC. 7. If the total number of officers selected and promoted as additional numbers, as above provided, shall be less than 60, the Secretary of the Navy is authorized to make recommendation to the President for the commissioning of such number of second lieutenants in the Marine Corps, as shall bring the total number of officers promoted as additional numbers, or retained as a result of the recommendation of the board appointed pursuant to the provisions of section 2, above, in accordance with the provisions of section 5, above, and officers newly appointed second lieutenants, to 60 officers: *Provided*, That the appointment of second lieutenants shall be in all respects in accordance with existing laws.

DISCUSSION, TOGETHER WITH CERTAIN REMARKS ON THE OPERATION OF THE PRESENT NAVY SELECTION LAW, AS APPLIED TO THE MARINE CORPS

The present Navy selection system is the result of a makeshift law, hurriedly thrown together by certain members of last year's Congress, who realized that the operation of the selection law of May 29, 1934, was entirely unsatisfactory. The makers of the present law themselves realize, as well, that the present law has many defects, and have frequently so stated. While it may have partially fulfilled its purpose during the 2 years following its enactment, the law of 1934, and its successor, the present measure, have served to separate from the active list an overwhelming majority of officers of excellent attainments, good professional background, and considerable promise.

The officers so separated go to the retired list; they have an expectancy of life of from 15 to 30 years, during which time they will draw retired pay on which the United States gets no return. Their records of service have, for the most part, been above the average. It is believed that a comparison of the two lists of those officers who have been selected and of those who have been retired from having failed of selection will show that the records of one group are no better nor no worse than those of the other. This fact, once established, bears out the assumption that Marine Corps selection boards in the past 3 years have been actuated not by an impartial examination of officers' records, as they are required to do, but by prejudices formed by a casual knowledge of the officers under scrutiny or by that insidious and entirely specious quality known as "service reputation," which may be composed of about one-tenth fact, the remainder being a sort of haphazard digest of rumors and opinions supplied alike by friends and enemies of the officer under consideration. It is, of course, well known that no person can go through a considerable period of his life without making some enemies, unless this person be of extremely negative character.

Moreover, selection boards in the Marine Corps have not been carrying out the wishes of Congress in another respect. According to the act of June 23, 1938, certain officers whose records would justify their promotion, but who, in the opinion of selection boards, did not possess the requisite personal characteristics for higher commands, were to be considered as "fitted," and promoted to the next higher grade, whence, after a given period of service, they were to be retired. Certain selection boards convened since the passage of this act have selected as fitted an extremely small proportion of those officers under consideration. This would indicate either:

That the records of these officers are much worse than would be generally believed;

That individual members of the board are bringing their personal prejudices into play;

That some directive, contrary to both the letter and spirit of the law, has been given selection boards by persons in authority in the headquarters of the corps, or in the Navy Department; or

That a faulty interpretation of the law has emanated from the same source.

That the records of certain officers passed over are, in some cases, better than those of officers selected, is definitely known. There is the case of one officer—his entire record is clear of any unfavorable matter—his reports of fitness have been either very good or excellent during his entire service; he has letters of commendation on his record almost continuously from the World War period until the present. He has occupied many positions of responsibility.

An instance of this is furnished during the period of the withdrawal of the American forces from Haiti in 1934. At this time the colonel commanding the Second Marines, the only infantry regiment then in the island, and the second in command, were detached from duty in Haiti several weeks prior to the actual withdrawal, and the command of the regiment given to this officer, even though he was at that time only a captain. During the period in which he was serving as an instructor at the Marine Corps schools he was allowed to take the advanced course at these schools in addition to carrying on his duties as an instructor, and successfully completed this course, even though he was responsible for the preparation and presentation of more hours of instruction than any other officer in his particular group. He has been serving in his present detail for almost 3 years, although the normal tour of duty therein is only 2 years. A few days before the meeting of the last selection board, which acted on his case, an officer in headquarters informed him that the general officer having charge of his particular activity wished him to continue on his present duty through 1940.

This officer has recently been officially notified that, having failed of selection as best fitted for promotion, his separation from the active list will take place on July 1 next. In contrast to this there is the case of an officer recently selected who is known to have had at least two incidents in his history which do not reflect credit on him. While in command of a detached post in Santo Domingo certain members of his command got out of hand, got drunk, burned down several native houses, and beat a native so severely that he later died.

Again, in 1935, while he was serving on duty with the Organized Reserves, he was relieved for unsatisfactory performance of duty, and given a letter of reprimand and an unsatisfactory report of fitness. Both of these latter were later removed from his record, at the instance of one of his superiors, through invoking a technicality. It is, however, noteworthy that the duty from which this officer was relieved in 1935 is identically the same duty which the officer mentioned in the preceding paragraph—who has been passed over—is now performing, and in which his immediate superiors desire to have him continue. It is also noteworthy that the future of each of these two officers was decided by the same selection board.

There are other instances of officers with apparently excellent records being passed over. Their records, in detail, are not sufficiently well known, but it is significant to note that, among the officers passed over, one has a Navy Cross and a Distinguished Service Cross; two have Navy Crosses alone; and others have decorations or citations of different characters.

The proposed legislation to which this discussion is attached is not submitted with a view of correcting the evils of the selection system, as they have developed up to the present, but in order that the services of the officers who must leave the active list by July 1 will not be lost to the United States without first determining whether or not they have been dealt with arbitrarily and unjustly. There is little question of their worth to the service—that has been proved by the officers themselves, as shown in their records.

Under a scheme initiated during the session of the last Congress, the Major General Commandant of the Marine Corps is asking, or will ask, Congress to appropriate for the commissioning of 60 second lieutenants in addition to the present authorized strength of officers in the Marine Corps. The complete plan, made known to last year's Congress, contemplates taking in this number for this and the succeeding 3 years, so that a total of 240 officers, in addition to the present authorized strength, will have been taken into the corps at the end of the period. All of these second lieutenants will be untried and uneducated. Before they can be of the same value to the Government as the officers who are being forcibly retired, they must serve from 12 to 20 years, during which time they must be paid, hospitalized, transported from place to place, and specially educated; the cost to the Government for their services and education will be something in excess of $100,000—as has been the cost of these officers who are now about to be retired. It is, then, apparent that by retiring an officer of, say, the grade of major, whose services have been satisfactory, if not conspicuous, the Government is relinquishing its interest in an investment of this size, obligating itself to one equally large, and adding thereto a payment of from two thousand to twenty-five hundred dollars a year for the next 20 years in retired pay for each of the trained and efficient officers which it is placing on the shelf. It is normal to expect the officers shelved to live not less than 20 years longer.

Examining the proposed legislation in detail, it will be seen that section 1 thereof provides for the suspension of the retirement provision of the act of June 23, 1938, as regards the officers who must retire at the end of the current fiscal year.

Section 2 provides for the appointment of a board of five officers, either of the Navy or Marine Corps, who shall be of the grade of captain in the Navy or colonel in the Marine Corps, or higher. None of these officers shall have served as a member of a selection board for the past 2 years and can therefore be expected to approach the problem with entirely open minds. The section also provides that the records of the officers due to be separated from the active list shall be furnished the board so appointed. Health records are excepted, as the officers under consideration have all been examined physically for the current year and have been pronounced fit for the performance of their duties.

Section 3 provides that the board shall meet within 1 month from the enactment of the proposed measure, and that it shall carefully examine the records of the officers concerned, and, as a result of the examination of these records, shall recommend the promotion of those officers among the group whose records, in the grades in which they are now serving are clear of any unfavorable matter. This phrase, "unfavorable matter" has a definite meaning in the military or naval service. It embraces evidence of conviction of the individual concerned by a general court-martial; record of proceedings of an investigation or court of inquiry, wherein the individual has been named as a defendant, or wherein evidence has been adduced to show improper conduct of any sort by the individual; a letter of official reprimand; a report of fitness wherein any of the markings are lower than satisfactory; or a report wherein the reporting senior has, by his remarks, indicated that the performance of duty by the individual has not been, in some respect, up to the minimum standards for officers of his grade; or a letter calling the attention of the individual to his negligence in discharging financial obligations, or inattention to other matters which may affect the good name of the service. Any item of unfavorable matter is clearly recognized by anyone examining an officer's record.

This section also specifically provides that the only consideration by which the board shall be guided is the excellence of an officer's record; it contemplates that the board shall not exercise its discretion nor shall it be guided by such nebulous factors as "service reputation," referred to previously. It further provides that in the case of officers not recommended for promotion the board shall substantiate its recommendations with certified extracts from the records of the officers concerned.

The number of officers to be recommended for promotion in the respective grades is the same proportion as to grades for officers in the Marine Corps at present. It will be noted that the total maximum number to be promoted is 60, which is the number of second lieutenants the Major General Commandant contemplates adding to the officer strength of the Marine Corps for the current year.

Section 4 provides for recourse by officers not recommended by the board, and provides final assurance that there shall be no taint of "star chamber" proceedings attached to the process of their selection or nonselection for promotion. This consists, briefly, in permitting the officer to be present at a second hearing of the board, to be personally examined, to be represented by counsel, and to have the privilege of questioning individual members of the board as to his fitness for promotion.

Section 5 continues the provisions for a hearing, allowed officers not favorably reported on in the original meeting of the board, and provides that, on final approval by the President, those officers not recommended by the board for promotion or retention, shall be retired or discharged pursuant to the provisions of the act of June 23, 1938.

Section 6 provides that the officers selected for promotion as a result of the action of the board mentioned in section 2 shall be promoted as additional numbers in grade. By this provision the officers who may have benefited by the action of previous selection boards will not be placed at a disadvantage, and the services of those worthy officers who have heretofore suffered by selection board action will be saved to the United States.

Section 7 provides for the commissioning as second lieutenants of a sufficient number to bring the total number of officers promoted as extra numbers or otherwise retained under the provisions of the proposed legislation, plus newly commissioned second lieutenants, to 60 officers.

American Federation of Labor

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1939

EXCERPTS FROM PROCEEDINGS OF AMERICAN FEDERATION OF LABOR CONVENTIONS RELATIVE TO CHAIN-STORE LEGISLATION

Mr. PATMAN. Mr. Speaker, much has been said about the American Federation of Labor during its convention at Houston, Tex., in the fall of 1938, adopting a resolution against the so-called Patman anti-chain-store tax bill, which is H. R. 1 in the Seventy-sixth Congress and was H. R. 9464 in the last Congress. I do not know whether or not our side of the question was presented before the convention.

It occurs to me that it is in the interest of labor for the farmers to receive a fair price, as the farmers' purchasing power represents the greatest market for the products of labor. This resolution states, "Chain-store operation results in lower prices of the necessities of life." It is well known that most of these low prices are due to the destruction of the farmers' buying power. It is not in the interest of this country to have low wages and low prices.

Without discussing the Houston resolution at this time, I desire to insert in the RECORD resolutions heretofore passed by the American Federation of Labor on this question.

1937 REPORT AGAINST CHAIN STORES

The report of the proceedings of the American Federation of Labor at Denver, Colo., October 4 to 15, inclusive, 1937, contains the following proceedings:

CHAIN-STORE INVESTIGATION REQUESTED—SHOE INDUSTRY—EXISTENCE OF COMMUNITIES AT STAKE

Secretary FREY. There came into the convention proceedings a telegram from Michael F. Lynch, supervisor of the Boot and Shoe Workers' Union in the Haverhill district, directed to John J. Mara, of that organization. It was referred to your committee. The telegram is as follows:

HAVERHILL, MASS., *October 6, 1937.*

JOHN J. MARA,
General President, Boot and Shoe Workers' Union,
Care of Executive Committee, American Federation
of Labor, Cosmopolitan Hotel, Denver, Colo.:

Ten thousand members of the Boot and Shoe Workers of the Haverhill district petition the American Federation of Labor, now assembled in convention in Denver, Colo., to go on record as favoring a Senate investigation of the chain-store system as it affects the shoe industry, and we ask the convention to instruct the officers and committees of the American Federation of Labor to take all necessary and proper steps to persuade the Senate of the United States to launch such an investigation at the earliest possible moment. Chain-store buyers, using cheap, foreign-made shoes as an excuse, dictate low prices to manufacturers. The manufacturers who sell to this trade use these price demands as an excuse to lower wages. It is an intolerable situation when highly organized chain systems can hammer down prices all over the Nation and then force manufacturers to make shoes at these prices or go out of business. This condition leads to steady demands upon the workers for wage cuts, and, with living costs steadily rising, wage cuts are impossible. Wage earner and manufacturer alike are dictated to by highly organized selling groups who deliberately fix prices for the whole country. The Boot and Shoe Workers' Union appeals to the organized trade-union movement for support. The very existence of entire communities is at stake, and the shoe industry is rapidly becoming a mere appendage to a few small groups who control prices throughout the United States and who manipulate these prices for their own profit and with absolute disregard for human welfare or social justice.

MICHAEL F. LYNCH,
Supervisor, Haverhill District.

In connection with the question of chain-store methods in the shoe industry, the driving down of manufacture prices to the point where boot and shoe workers cannot be paid a living wage, your committee is advised by the Boot and Shoe Workers' Union that there now exists in the United States on the part of the chain shoe stores a monopolistic and detrimental control and domination of wages paid to workers in the shoe industry in that these chain shoe stores, through their volume control of and distribution of shoes, both foreign and American made, are able to force employers of American shoe workers to accept a price for their product which price precludes and prevents the employers of America's organized shoe workers from paying decent wages to their employees for their labor.

In view of this presentation, your committee recommends that the president and members of the executive council use every possible effort to have the United States Senate conduct a thorough investigation of the evil influences now exerted by chain shoe stores as above referred to.

Your committee also recommends that the president and the executive council be directed to endeavor to secure the enactment of national legislation which will eliminate the continuance of this detrimental chain shoe-store influence on the wages paid to America's organized shoe workers.

(A motion was made and seconded to adopt the committee's report.)

Delegate MARA, Boot and Shoe Workers' Union. Mr. President, that telegram was sent down to me from our Haverhill office. We have in Haverhill some 10,000 shoe workers who are now being paid a low rate of wages, due to the drive by the chain-store high-powered buyers to enforce the workers to buy their product. These chain-store buyers shop around from one town to another, and on many occasions they buy the entire output of factories, and they dictate low prices to the manufacturers. These organized chain-store outfits can force down prices all over the Nation and then force manufacturers to make shoes at these prices or go out of business.

There are a number of chain stores having stores in all towns of any size throughout the United States. Some of the chain stores use three or four different names. They are all run by the same custom, and since the resolutions committee has recommended that the president and members of the executive council use every possible effort to have the United States Senate conduct an investigation I know that our workers in the Haverhill district will be satisfied.

Delegate DONNELLY, Ohio State Federation of Labor. Mr. President and delegates, I desire to speak very briefly upon this question and for the sole purpose of calling the attention of the members of the executive council of the American Federation of Labor and of the delegates to this convention to the very wide scope that an investigation of this sort should cover. When we discuss this question, or when we have a resolution introduced on this subject of the cutting of prices of manufactured articles by chain or other stores which results in reduction of wages and a very bad situation with respect to the manufacturers of those articles, we are confronted with what has been discussed from a governmental standpoint and by many students of this great question of sales prices.

The question that naturally arises is as to who should make the price on the article. In a number of the great department stores of this country advertising largely in the daily newspapers you will find from time to time standard articles, cosmetics, drugs, various things that are made upon which there is a standard price, but these stores will have a flier and they will sell this one thing at perhaps cost price until they ruin the business of every other merchant in the city who attempts to sell the article at a price that will give him a legitimate profit. In turn these stores demand of the manufacturers that they shall reduce their prices to them because they cannot compete with the chain or departmental-store prices caused by these fliers used in their advertising schemes.

If this is going to be carried out to a logical conclusion, it means that the makers of clothing, shoes, hats, and every other article that goes into commerce will ultimately have to cut their prices to chain stores and departmental stores who advertise and sell that one thing for the purpose of bringing the people into their stores and then getting them to buy other things when they come in out of which they can make a profit.

So it would seem to me when we consider this question, dealing with only the chain stores, we raise the large question as to whether the person that makes the article should determine the price at which it is sold or whether the person that places the articles in the stores should fix that price. There is a very dangerous situation here in relation to wage conditions, in relation to the standards which have been established by trade organizations because of this practice, and I sincerely trust when this subject is being considered by the executive council we will have some comprehensive report upon the subject of the selling price in stores, whether those prices shall be made by those who make the article—the manufacturers—or whether they shall be made by the chain or departmental stores.

(The motion to adopt the report of the committee was carried by unanimous vote.)

1932 REPORT AGAINST CHAIN STORES

The report of the proceedings of the Fifty-second Annual Convention of the American Federation of Labor, held at Cincinnati, Ohio, November 21 to December 2, inclusive, 1932, contains the following:

CHAIN STORES

Resolution No. 65, by Delegate Patrick E. Gorman, of the Amalgamated Meat Cutters and Butcher Workmen of North America, and the delegation from the International Hod Carriers', Building, and Common Laborers' Union:

"Whereas both national and local chain stores have for the past several years been monopolizing in all territories from the Atlantic to the Pacific and from Canada to the Gulf of Mexico; and

"Whereas investigation has disclosed that lack of organization within the ranks of clerks of some chain-store companies has in all sections worked hardship on unionized workers, particularly in the meat cutting and fresh fruit and vegetable line, local unions having been disorganized and discriminated against; and

"Whereas the growth of these chain-store companies, both financially and in number of units operated, have shown remarkable growth at the expense of the people of the United States; and

DEPRESSION CAUSED BY CHAINS

"Whereas it is our thought that the present economic depression is due in part to consolidations, amalgamations, and the creation of some mammoth organizations of chain-store companies, now operating in this country; and

"Whereas the laboring classes of the United States derive no benefit whatsoever from some mammoth combinations: Therefore be it

"*Resolved*, That the American Federation of Labor, at its annual convention in Cincinnati, Ohio, direct the executive officers and its organizers to foster and assist the organization of those managers, clerical help, warehouse help, and truck operators, motortruck operators, and all other types of labor in the employ of such national, regional, and local chain-store organizations; and be it further

"*Resolved*, That the American Federation of Labor interest itself vitally in the problems with a view of improving the future of the employees of these chain organizations."

Your committee concurs in this resolution.

A motion was made and seconded to adopt the report of the committee.

Delegate FURUSETH, Seamen. While I am somewhat in sympathy with that resolution, Mr. Chairman, I am satisfied that instead of helping to build up, it will really in fact help to destroy the pur-

pose for which it is intended. Chain stores come distinctly within the interstate commerce law of the United States. Their organization and their operation are subject to the interstate commerce law, and there seems to me to be much more effective and much better methods to be used to minimize or destroy the whole system of chain stores if Congress would take control over that situation under the interstate commerce law and regulate their stock issues, their capitalization, and make use of the taxing power. If they do that, they could not only minimize but, in my opinion, completely destroy a system which inevitably leads to much worse conditions than we have now.

I cannot agree that the organization of the men working in the chain stores will do very much to minimize the evils. My fear is that the organization of the men in the chain stores, without being accompanied by the other things of which I speak, will simply make the chain stores more secure, because it is a method through which they will have the sympathy of labor behind them, if they are wise enough to comply with the resolution.

The report of the committee was unanimously adopted.

The report of the American Federation of Labor proceedings at its annual convention held at Vancouver, British Columbia, Canada, October 5 to 15, inclusive, 1931, contains the following:

LABOR MAY CONSISTENTLY OPPOSE SALES TAX AND YET FAVOR TAX ON CHAIN STORES

Delegate MARTEL, International Typographical Union. I don't desire to discuss the committee's report or to disagree with it, but I would like to ask a question. Several States have undertaken the enforcement of a sales tax on chain stores as a means of equalizing the opportunities between chain stores and individual stores. If we pass a resolution opposing the sales tax, will that commit the American Federation of Labor on that matter? I know that independent merchants are fighting chain grocery and chain drug stores, and they are asking legislatures to impose a tax on the volume of trade of the store. Will this commit us to being opposed to that kind of legislation?

President GREEN. The chair is of the opinion that it would not, because there is a difference, as we see it, between a tax imposed on chain stores, upon the property owned by chain stores, and the tax imposed on the contents of those stores, which would, of course, be a tax on a pound of coffee, a pound of bacon, or a package of sugar.

Delegate GAINOR. May I ask if the American Federation of Labor has ever taken action in opposition to chain stores?

President GREEN. We have never taken any position on the subject, so far as I can recall.

The motion to amend was carried, and the report of the committee, as amended, was adopted.

The report of the American Federation of Labor proceedings at its annual convention held at Boston, Mass., October 6 to 17, inclusive, 1930, contains the following:

PROTESTING LABOR POLICY OF CHAIN STORES

Resolution No. 5, by Delegate Arthur J. Beauregard, of the Providence Central Federated Union:

"Whereas the country is being overrun by the chain-store system, and their employees do not belong to any labor unions in most cases; and

"Whereas we of the building-trades department are confronted with a serious menace by these concerns where they are employing so-called maintenance men to do our work, and now they are negotiating with some manufacturer direct to buy their material and having same installed by their maintenance men, who work longer hours and receive considerably less wages than the men to whom this work rightfully belongs receive, who are affiliated with labor unions; therefore be it

"*Resolved*, That this American Federation of Labor in convention assembled at Boston, Mass., October 6, 1930, shall go on record as opposed to these methods of certain chain stores; and be it further

"*Resolved*, That a committee of the executive council be instructed to wait on the officials of these firms and see if this evil can be corrected."

Your committee recommends that this resolution be adopted.

The report of the committee was unanimously adopted.

Federal Tax on Retail Stores—Why the Campaign of the Atlantic & Pacific Tea Co.?

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1939

Mr. PATMAN. Mr. Speaker, the question of chain-store monopoly and the absentee ownership of retail business in this Nation is a question that affects every one of us in America, because it affects our children and the opportunities that will or will not be open to them as they reach manhood and womanhood. Shall we strive to keep open the broad highway of opportunity to our sons and daughters in America? There are many questions you should ask yourself before you decide that it is in the interest of community life in America, that a few giant chains owned in New York or Chicago should control the retail business of our Nation. Did you ever hear of any absentee-owned chain voluntarily contributing to any local charity, church, or school until State legislatures and the National Congress began making efforts to check their growing monopoly?

Did you ever hear of A. & P. stores, the largest corporate chain in America, taking out a fire-insurance policy on any Texas store through a local insurance agent in the town where the store was located?

Did you ever hear of A. & P. stores having any printing done in a union printing plant until I introduced a chain-store tax bill in the National Congress?

Did you know that in the banking crisis of 1932 and 1933 that in nearly every town the first firms to withdraw their local deposits and rush the money by registered mail to New York were the corporate chains.

Do you think it helps America for some girl or boy to inherit a vast chain-store fortune in New York and then spend that money earned from American wage-earners in running over Europe hunting counts and countesses to marry, and even renouncing their American citizenship to escape American taxes?

The greatest chain-store concern in the world, the Great Atlantic & Pacific Tea Co., has seen fit recently to attack me in paid newspaper advertisements in more than 1,300 newspapers throughout the Nation. They boasted of the fact that they would spend a tremendous fortune to continue these attacks on me. It has been estimated that their first attack alone cost them considerably more than a quarter of a million dollars for this paid chain-store propaganda.

I believe the public generally should know just what prompted this attack on me by the A. & P. stores of 420 Lexington Avenue, New York City.

In May 1935 I was appointed chairman of a special committee in Congress to investigate the activities of large-scale buying and selling concerns in America, and since A. & P. stores were the largest in America, they naturally fell within the scope of our investigation. The results of our investigation were astounding and can best be described here by remarks made by me on July 29, 1935, in the House of Representatives, and which are here reproduced:

Mr. PATMAN. Mr. Speaker, it will be interesting to the people of this Nation to know that one chain-store concern in this country received in 1934 from manufacturing concerns more than $3,000,000 in secret and confidential rebates, discounts, advertising allowances, and brokerage. The two concerns granting them the greatest amount of money, over $700,000, were both Wall Street controlled corporations. One of these two concerns, Standard Brands, Inc., of New York City, was organized by and is controlled by J. P. Morgan & Co. The other, General Foods Corporation, of New York City, has as its chairman of the board E. F. Hutton, of E. F. Hutton & Co., a Wall Street brokerage concern in New York.

DISCOUNTS NOT APPEARING ON INVOICES

To the average person of this Nation it will seem amazing but it is none the less true, that over half of the net profits of the Great Atlantic & Pacific Tea Co. in 1934 were realized from these secret and confidential rebates. Mr. Charles W. Parr, assistant to the vice president in charge of purchases, of the Great Atlantic & Pacific Tea Co., on July 9 furnished our special committee with a list of the manufacturers granting the Great Atlantic & Pacific Tea Co. confidential discounts, advertising allowances, and brokerages. None of these items appeared on the invoices, but were all payable by check direct to Atlantic & Pacific's headquarters in New York or to one of their buying agents, who in turn remitted it direct to their headquarters at 420 Lexington Avenue, New York City. It should be borne in mind that Atlantic & Pacific make all their purchases as jobbers receiving full jobbing discounts. The list is as follows:

Airy Fairy Foods, cake flour, 5-percent advertising allowance.

Alabama-Georgia Syrup, sirup, 15-cent case flat and quantity percent included.

Alaska Packing Co., salmon, 5-percent advertising allowance.

Alexander & Baldwin, pineapple, 5-percent advertising allowance.

American Ammone, ammo, 10-percent advertising allowance.

American Chicle, gum, 20-percent advertising allowance.

American Diamalt, malt sirup, 35 cents case on quantity scale.
American Molasses Co., molasses, quantity scale 1–5 percent.
American Pop Corn, pop corn, 5-percent advertising allowance.
Andrea Process, onion salt, 10-percent advertising allowance.
Angelus-Campfire, marshmallows, quantity scale 3–5 percent.

INDEPENDENTS ENTITLED TO SAME RIGHTS AS CORPORATE CHAINS

The Great Atlantic & Pacific Tea Co., whose headquarters are at 420 Lexington Avenue, New York City, is a corporation with about 2,000,000 shares of common stock, which are practically all owned by the Hartford family in trust. They spend annually about $6,000,000 on advertising, which, of course, gives them a tremendous leverage on the editorial opinion of many newspapers throughout the Nation. I believe that the independent merchant has a right to expect to be placed on an equal basis with these corporate chains and receive the same privileges which the manufacturers grant to these enormous corporations. If he does not receive fair treatment at the hands of the manufacturers, it merely means the elimination of the independent retailer and the eventual concentration of the retail business of this Nation in the hands of a few concerns, which means the absentee ownership of retail business in most all of the cities and towns throughout the country.

LARGE BANKING HOUSES CONNECTED WITH CHAINS

It will be interesting to many people who are not familiar with the facts to know that one New York banking house has a very active voice in the management of many of the large corporate chain-store organizations and department stores of this country.

TESTIMONY OF ATLANTIC & PACIFIC OFFICIAL

Mr. Charles W. Parr, an official of the Great Atlantic & Pacific Tea Co., July 9, 1935, testified as follows: That the company owns retail grocery stores—about 15,200 stores, with principal offices at 420 Lexington Avenue, New York City; that Mr. John A. Hartford is president of the concern and that it is incorporated; that it has about 2,000,000 shares of common stock which is practically all owned by the Hartford family, either individually or in trust; that the Hartford family controls about 75 percent; that he has been with the company 17 years and his duties are in looking after "field buying offices," which they have established in the last 12 years near the sources of supply; that the company spends approximately $6,000,000 a year for advertising. In 1934 it collected slightly less than that amount; in 1933 it was a little more; that the company spends approximately what it collects for advertising; that General Foods pays the company $30,000 a month or $360,000 a year for advertising; that the arrangement has been in effect since May 1934. It expired in May this year and was renewed; that the allowance is supposed to represent about 5 percent of the total purchases; that they were not compelled to spend this certain amount of money a month for advertising; that there was no definite contract; that if their purchases exceeded the amount annually that the $360,000 covered 5 percent of that they, the A. & P., received the difference in a rebate; that the A. & P. had receved an extra rebate of 7½ cents a case on Diamond Crystal Salt in 1933 because of the fact that their purchases totaled more than 200,000 cases; that Standard Brands, Inc., had paid the Atlantic & Pacific Tea Co. in 1934 in advertising allowances and rebates more than $350,000. That on Fleischmann's Yeast alone, A. & P.'s contract with Standard Brands called for a $12,000 per month advertising allowance and 10 percent quantity discount rebate; that Standard Brands paid A. & P. $8,097 a month advertising allowance on Chase & Sanborn's coffee.

Mr. Parr's testimony further disclosed that some manufacturers in their anxiety to secure an added volume of business from the Atlantic & Pacific Tea Co. offered to pay them allowances which were in violation of the code of the particular industry represented by these manufacturers. As an example, the F. E. Booth Co. offered to restore the 5-percent brokerage to A. & P. on California sardines, which offer was accepted by A. & P. In writing their buying agent at San Francisco, Mr. J. V. Beckmann, they say:

"Answering yours of the 7th, we are very glad to note that the F. E. Booth Co. has restored the regular 5-percent brokerage on sardines, and note you ask how this information should be passed along to the purchasing directors. It all depends on just how confidential it is. We know that ordinarily, since this is prohibited in the Sardine Code, it would have to be handled very confidentially, but with the apparent general break-down of this feature in all other codes will leave it entirely to you and F. E. Booth Co."

Mr. Parr further testified that A. & P. received 5 percent quantity discount from California Packing Corporation on Del Monte products, which was in the form of a cash rebate. This covers all Del Monte brands; that the Diamond Match Co. has given A. & P. a contract of 75.11 cents per gross on matches as compared to the 82 cents per gross price which the jobber is charged; that Beechnut Tobacco Co. allow them $7,000 a month advertising allowance on Beechnut gum and candy alone, with other advertising allowances on the rest of the line, and 7 percent quantity discount.

Mr. Parr further revealed to the committee that the net sales of the Great Atlantic & Pacific Tea Co. were $840,000,000, which was estimated to be about 8 percent of the total grocery business done in the Nation.

The committee appreciated Mr. Parr's evident desire to be helpful to the committee and the frank and open way in which he testified, which was quite different from the attitude of some of the previous witnesses.

COMMITTEE OPPOSED

In my remarks in the CONGRESSIONAL RECORD of July 22, 1935, I have shown the tactics the food and grocery chain stores of America used in order to try and prevent our committee from receiving additional funds to complete the hearing. Quite naturally they do not enjoy the facts the committee are bringing out.

The Administration's Foreign Policy

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Friday, February 17, 1939

RADIO ADDRESS BY HON. JOSH LEE, OF OKLAHOMA, FEBRUARY 12, 1939

Mr. LEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD remarks delivered by me over the radio on the foreign policy of the United States, February 12, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the air, so long as some nations insist on remaining armed to the teeth, we must maintain an adequate national defense.

There may be those who believe that no nations are involved in war except those who by their own deeds bring war upon themselves. In other words, they pretend to believe that if a nation attends to its own business, no other nation will molest it.

But that is not true. For example, was it Ethiopia's trade policy that brought war down upon her? Certainly not. Did peaceful China meddle in the affairs of any other nation? Of course not. What had little Czechoslovakia done to cause the German Army to invade her country?

I ask the question, Was it the foreign policy of any of these nations that caused them to be invaded? It was not. It was because they were unable to defend themselves.

Therefore we are forced to the conclusion that America must maintain adequate national defense, adequate in the light of the armament of other nations.

When we take into account the number of fighting planes in Germany and Italy, the amount of increase recommended by our War Department is very modest, indeed. But it is not the intention of this administration to try to match plane for plane with other nations.

It is our intention to make due allowance for all of our natural advantages and to add to those natural advantages just enough up-to-date defense equipment to command the respect of other nations and give us security from military attack.

The War Department has recommended the barest increase possible to carry out this policy.

Such a scant program constitutes adequate national defense only when our factories are on a mass-production basis.

In other words, we can maintain adequate national defense with fewer planes actually in the air, provided we can get more in a hurry when we need them.

We learned at terrible cost in the World War that you cannot manufacture war planes overnight. General Pershing attests the record that not one American-made plane ever reached the front. The reason, of course, was that it took so long to put our factories on a mass-production basis.

We should profit by that mistake. Obviously, then, one necessary requirement for adequate national defense is that we be able to produce a sufficient number of war planes when we need them.

Therefore, if our manufacturers are allowed to sell planes to France and England now, they will be able to put the American factories on a mass-production basis.

Then, if and when we need planes, we can get them. That very fact will have a restraining psychological effect upon any potential foe and make the actual need for the planes less likely.

To sell or not to sell to a nation which is not engaged in war constitutes a trade policy, but it is not a violation of neutrality. Therefore, since France is not at war, the sale of airplanes to France is not a violation of our policy of neutrality.

It was this important subject the President wished to discuss with the Military Affairs Committee when we were asked to meet with him at the White House.

Perhaps no President in the history of the Nation has ever taken the people into his confidence more than President Roosevelt.

It is quite customary for officials of our Government to have executive meetings where important questions can be discussed freely, not with the idea of keeping anything from the American people but with the idea of keeping such information for the American people instead of giving it to the entire world; and no one ever thinks of inciting the imagination of the people or raising the ugly specter of suspicion by inferring or suggesting that the people's rights are being betrayed by secret and underhanded methods.

Therefore I have been surprised at the different hints which certain members of that committee have made regarding that executive meeting, such as was attributed to Senator BRIDGES in a press dispatch from Boston, which read as follows: "Our people have a right to know whether they are being dragged down the road to war."

I can say frankly that I feel that the obligation that I owe the people is greater than any obligation of secrecy. If I thought for a moment that anything that happened in that meeting was dragging us down the road to war I would immediately announce it to the world.

I thought it was a fine thing when the President called before him the Military Affairs Committee, a committee made up of the representatives of three different political parties, for free discussion of the sale of war planes to France.

The President expressed the idea that he would like to place the meeting on a high patriotic basis and lift it above partisan politics.

There was no protest then to the request for secrecy. But those who are now so outraged at the request for secrecy are implying that certain things happened in that meeting that violated the confidence of the people—and but for their honor in respecting the request for silence, they would tell the people how a number of Senators and the President of the United States are secretly scheming to "drag them down the road to war."

I can speak only for myself; but if I had believed that anything that transpired in that meeting was dragging the people down the road to war, I would have protested it then, and I would have protested it to the group of newspapermen who met us at the door as we came out, and I would be protesting it now. No request for secrecy would cause me to betray the confidence of the people who sent me here.

Furthermore, has the record of President Roosevelt with regard to peace been such as to give any person reason to believe that he would join in a secret scheme to drag the people down the road to war? What has been his record?

In his inaugural address, realizing that the only permanent peace is based upon justice, he announced to the world the "good neighbor" policy, and for 6 years this administration has adhered to that policy both in utterances and in practice.

First, there was the munitions hearing that flung open the door of the Bluebeard of war and exposed the skeleton of unconscionable war profits. And this was made possible by an administration that is determined to make war so ugly that the world will never again embrace it.

Then that committee exhausted its funds, and Senator NYE, the able chairman, appeared before the Senate and asked for more money to complete their work.

The Senate did not grant that request, and it appeared that the work of the committee must stop. But President Roosevelt stepped in and made it possible for the committee to finish its findings, thus throwing the weight of his great office against war.

Then again nonintervention into the affairs of other countries is a part of the "good neighbor" policy. Consequently, when President Roosevelt took office he promptly called home all United States troops stationed in Haiti, and thus proved his words by his deeds.

Then again there was the revolution in Cuba. The sugar interests, who for years have made millions in the sugar business in Cuba, began to clamor for military protection. The air was full of it. Send a battleship to Cuba. Send the marines to Cuba. Put down the revolution in Cuba.

But once again the President steered a straight course toward peace. There was no intervention in Cuba and Cuba settled her own affairs without our staining our hands with the blood of our fellow men.

Then, again, there was the war in South America between Bolivia and Paraguay. American manufacturers were supplying both nations with the materials of war. But President Roosevelt, by proclamation, announced an embargo upon the shipment of the implements of war to those nations; and, encouraged by America's leadership, 17 nations declared similar embargoes, and that war soon ended. Thus another great step toward world peace had been taken.

Then, again, there was the war in Ethiopia. The Standard Oil Co. had a contract for a trade concession with Ethiopia. But the Department of State feared that that might be the means of involving the United States in that controversy, and the Standard Oil Co. was compelled to cancel that contract. Thus once more President Roosevelt placed peace above profits, and on September 4, 1935, made the following announcement to the world: "This is another proof that since March 1933 'dollar diplomacy' is no longer recognized by the American Government."

Then in rapid succession there came a series of world events propelling the world toward war.

First, there was the violation of the armaments limitation by Germany.

Next came the torpedoing of neutral vessels in the Mediterranean.

Then came the invasion of Abyssinia and the brutal massacre of the peaceful Ethiopians.

Then came the cold-blooded persecution of the Jews and their cruel expulsion from Germany.

Then came the invasion of China and the slaughter of her defenseless people.

Finally, there was the Czechoslovakian crisis.

The arrogant Hitler had announced his ultimatum that on a certain hour he would start the war machine thundering toward Czechoslovakia.

On the morning of September 26, President Roosevelt sent a message to the four governments concerned, urging the use of peaceful methods for the settlement of the dispute.

At 3 o'clock on the afternoon of September 27, through the Secretary of State, he requested the various American missions to get in touch with the Minister of Foreign Affairs and bring all possible diplomatic pressure upon the Chancelor of the German Reich to dissuade him from his hostile purpose.

The whole world was tense with expectation. Business stopped in its tracks. German soldiers stood by with full equipment ready to march. Czechoslovakian soldiers kissed their babies goodbye and stationed themselves at the border of their country as the legion of death, fully believing that within the next few hours their mangled bodies would mark the boundary line of their nation.

In Paris and London every railway station was crowded—every road leading out of those cities was jammed—fear was upon every face.

One word was on everybody's lips. War. Hope of peaceful settlement was almost abandoned. There was but one man who stood between the world and war and that was Franklin D. Roosevelt. All eyes and all ears were turned toward him. On that day he seemed taller than all other men. The hope of world peace hung upon his words.

Then in the early hours of the morning of September 28 he sent a message directly to Adolf Hitler, placing squarely upon him responsibility for the peace of the world.

Lights burned all night in almost every home. Every radio was tuned in on this terrible drama.

Then as the arrogant Chancellor of the German Reich realized that the full weight of every moral force in the world had been thrown against him by the message from President Roosevelt, he grudgingly and reluctantly but certainly backed away from his ultimatum—and the world breathed again.

Who, then, would dare infer that that same President Roosevelt would secretly drag the people down the road to war, when for 6 years he has steered a straight course toward peace? For 6 years he has steered the old ship of state through the turbulent waters of international strife without crashing on the ragged rocks of war, on

the one hand, or floundering upon the flat beach of dishonor, on the other. And as long as his strong hand is at the helm there is a feeling of security in the hearts of the people of America.

Mr. Justice Frankfurter

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, February 17, 1939

ARTICLE BY HARRY H. SCHLACHT

Mr. MEAD. Mr. President, I submit for printing in the RECORD an article by Harry H. Schlacht on Mr. Justice Frankfurter.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the East Side News of January 7, 1939]

FELIX FRANKFURTER—AN IMMIGRANT BOY BECOMES JUSTICE OF UNITED STATES SUPREME COURT

(By Harry H. Schlacht)

The East Side cherishes with just pride the selection of Prof. Felix Frankfurter—truly a logical successor to the immortal Cardozo—to the United States Supreme Court. President Roosevelt's tribute to this former East Side immigrant—to the highest judicial tribunal of the Nation, has swept like rolling billows across our pulsating hearts.

Public fame has made it needless for me to add one laurel to his crown. Likewise, our people today will read and reread his rise from the tenements of the lower East Side to world renown. This writer as a boy cultivated his friendship in the Henry Street Settlement and the Educational Alliance. It was here in clear and lucid language he laid bare the very nerve of his thoughts of slum conditions which led to his writing the first city tenement law.

Immigrants will read with streaming eyes but with glad hearts the story of his life. It can happen here. Early he exhibited a splendid and blazing intellect, fed and enriched by the constant study of the best thoughts of the great names of America; his brilliant and sportive fancy, illuminating the most arid subjects with the glow of sunrise, his prodigious and never-failing memory, his playful wit, ever bursting forth with irresistible impulse coupled with the fascination and magical charm of his personality. Yes; this East Side immigrant lad at the tender age of 21 was graduated from Harvard University with scholastic honors. He became a typical Harvard man who drank in with a divine thirst the knowledge, benefits, and honors which the great college bestowed upon him and who in glad and grateful recognition of the nurture he received within her walls, reveled in her success.

It was Professor Frankfurter who contributed to the Wilson and Roosevelt administrations the gift of a high social-service order, great wisdom, purity of character, a refined and delicate intelligence, unselfish devotion, and loyal support which attracted universal acclaim. To all alike his dignified simplicity and tolerant humanity equally appealed to all.

He is a man "toward whom the love and affection of people flow; one to whose benevolent face and bland and dignified manner and the firm administration of the whole learning of the law we became accustomed; whom our eyes anxiously explore when we enter the temples of justice; toward whom our attachment and trust grow even with the growth of his own eminent reputation."

Whether we regard him as an immigrant, citizen, teacher, lawyer, statesman, and now Justice of the United States Supreme Court, Felix Frankfurter epitomizes America at its best.

Lincoln Day Address

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Friday, February 17, 1939

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE, AT AKRON, OHIO, SATURDAY, FEBRUARY 11, 1939

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD the address on Abraham Lincoln delivered by the distinguished Senator from New Hampshire [Mr. BRIDGES] before a meeting of the Summit County Republican Executive and Central Committee at the Mayflower Hotel, Akron, Ohio, on February 11, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today all over these United States men, women, and children of every race, creed, and religion are celebrating the birth of one of America's most illustrious sons, one of her greatest Presidents, a Republican—Abraham Lincoln. In view of the external and internal turbulence that is wrecking our beloved country in this year 1939 it is fitting that we should for a moment turn back to that period in the life of Abraham Lincoln which most nearly corresponds to our own time. Let us then project ourselves, in retrospect, to the year 1859—80 years ago.

Eighty years ago our country was faced with internal dissension and foreign dangers much the same as it is today. The home problems were not unemployment, relief in politics, confiscatory taxes, labor troubles, political purges, foolish farm programs, or backyard socialism. Instead of problems of relatively less importance, Lincoln and the Americans of 1859 saw their country torn by sectionalism. The North was against the South; freedom against slavery. The northern manufacturers were opposed to the southern agriculturalists whose economy of the field depended on cheap labor. The ever stronger westward movement presented the spectacle of State after State being admitted to the Union only after free and slave forces had almost come to blows over the status of those States in the Union.

In the North at that time there was a militant group of people. These people called themselves abolitionists. They aimed to abolish slavery regardless of cost, regardless even of the possibility that the Nation might be thrown into a bloody civil war as a result of their activities. Eighty years ago, in 1859, John Brown, the abolitionist, whose home, I am told, still stands in Akron, and a small group openly defied the authority of the United States and nearly started the Civil War.

Yes, my friends, the internal troubles of today are a "cinch," as the saying goes, compared to those that existed in 1859, 2 years before Abraham Lincoln became the sixteenth President of the United States.

The field of foreign affairs of the United States in 1859 was no bed of roses. The wolves of Europe, when not scrapping among themselves, were casting lascivious eyes at the Americas. Britain was not above promoting conflict here in order to better her trade relations with the cotton South. France, Germany, and Russia were openly disdainful of a democratic form of government, and their imperial rulers would have relished to see a prostrate nation on this continent so that they might gobble up more territory. Saber rattling was as popular a sport with most European nations of 80 years ago as it is today.

The feeling of security for the Americans of 1859, both at home and abroad, was at an all-time low. The faith that was to come with Abraham Lincoln had not yet begun to influence national affairs. Still the beliefs, hopes, and desires of our grandparents and great-grandparents were much the same as our own. Freedom, peace, and national unity were the great issues 80 years ago. Freedom, peace, and national unity are the great issues today. Our grandparents' desire was, and our desire is, to preserve that same freedom—the American freedom guaranteed by their Constitution and our Constitution, the freedom that exists only under that form of government by which the people acknowledge no earthly sovereign other than themselves. As our forebears fought on bloody fields of battle to preserve their freedom, so would we Americans of 1939 fight all enemies, both internal and external, who would dare challenge our devotion to free institutions, or threaten the permanency of those institutions for remotest posterity. So far we are the most independent Nation on the face of the earth—therein lies our strength.

Peace—the generations which came immediately before us were not able to keep peace. Although Lincoln was a man of peace, matters had gone too far before he assumed the Presidency for him to prevent bloodshed, although he strove mightily to that end. The United States of 80 years ago was unprepared—as unprepared for the bloodfest which was soon to ensue as many would have us believe we today are unprepared. We can draw a great lesson from that picture. We must maintain peace. Peace, kept in justice and honor, is an American principle and an American interest.

National unity in years immediately preceding the Civil War was, of course, at low ebb. Sectional hate, loyalty to State before Nation, precluded the possibility of national unity. Basically there is a tendency for the same situation to exist today. The constant heaping of coal on the fire of class hate and jealousy, the indefensible baiting of labor and capital, the boring-from-within tactics permitted the followers of various foreign ideologies, the contempt for thrift, the splitting of the Nation into economic thirds are present-day threats to national unity, which is so all important in the fight to preserve our liberties, our democracy, and our very existence. Abraham Lincoln, the leader of our great Republican Party, with his wisdom, his high ideals, and his common sense, was at hand in 1860 to preserve our freedom, to fight for peace and the equality of man, and to make America into one vast unified Nation, stretching from the Atlantic to the Pacific.

We have projected ourselves back to Lincoln; now let us turn to the present and apply, if we can, the common sense and wisdom of Lincoln to the problems facing America in our own time. I have

said the greatest task of our generation is to preserve our liberties—our freedom and independence as Americans. I say to you, without reservations, that the most dangerous internal enemy to the continued freedom of 130,000,000 Americans is the present administration sitting in power in Washington. I say this is true because that administration has been, and still is, determined to impose its will, its idea of government, its ideology, if you please, upon the American people, whether they like it or not. Its purpose is to perpetuate itself in power, and from its actions I have great fear that if it does not succeed it is willing that the American Nation be wrecked by its attempt. This administration has not kept a single promise that it made to the people who put it in power. I should like to review for a moment some of these promises and performances.

The Roosevelt administration, having determined that the vote was the source of all power, decided to corner the market on votes, and in so doing promises all things to all people. It has promised the moon and delivered a marked ballot for the next election. Every crossroads election in the Nation has felt the influence of the administration at Washington in its attempts to control local affairs. The recent, most wicked attempt along this line took place last summer when the high command of the inner circle held court in Washington and through the use of relief funds, swept across the country and attempted to purge, to read from the Democratic Party, if you wish, those men within its own ranks who had intestinal fortitude enough to show their independence and to vote their convictions. In most cases the purges were a failure, not because the New Deal did not expend effort enough, but because the basic sense of fair play and the moral fiber of the American people had not yet been sufficiently undermined to tolerate such tactics. You, in Ohio, one of the greatest States in our Union, did not witness at first hand these purges, but you did vent your wrath upon the Roosevelt administration last November when you elected a son of one of our great Presidents to represent you in the United States Senate. Senator ROBERT A. TAFT is representing and will represent Ohio with wisdom and foresight and will never assume the rubber-stamp tactics mandatory on New Deal puppets.

The Roosevelt administration promised economy, and to this end, believe it or not, the President said he would cut down the number of boards, commissions, and administrations of the Federal Government by 25 percent. Instead of that we have had yoked to the necks of the American people the greatest bureaucracy in the history of the world. A new administration or board is set up at the slightest excuse. Economy is the forgotten word of the New Deal.

Instead of cutting the expenses of the National Government, the Roosevelt administration has built up the national debt to the inconceivable sum of almost $40,000,000,000. The American people have a constant feeling of unrest and insecurity as a result of the unfulfilled promise on the part of those in power to take definite steps toward sane economy. The New Deal has tried every crackpot scheme, every will-o'-the-wisp idea that its socialistic experimenters could devise, in an endeavor to pull itself from the mire of debt and political disgrace in which it finds itself. In its panic, it has squandered the finances of a mighty Nation in hopes of creating economic miracles.

For the past 6 years the administration has been busily at work attempting to solve the unemployment problem. Instead of achieving that result it has made politics, rather than work, the first requirement for the unfortunate ones who could not get a job in private industry which the New Deal has so belabored and beaten that it is a wonder any jobs are available. The unemployment situation of the United States cannot be solved by making political slaves out of 10,000,000 men and women who have no jobs.

Attempting to obtain a monopoly on the lofty ideals of social security, the Roosevelt administration, shortly before the national election of 1936, convinced the people that the Social Security Act would provide for them in times of unemployment and during old age. When Republicans criticized certain features of the act they were accused of being against the whole idea, which was an infamous lie. The Republican Party stood foursquare on the question of social security, but it did not subscribe to the creation of a $47,000,000,000 fund financed by the taxpayers, taken from the pay envelopes of all the Nation's employees and employers. It was not to be held in trust for their old age; not to be held in trust for times of sickness or unemployment, but was for the purpose of paying the current running expenses of the most spendthrift administration the country has ever seen.

The New Deal has told labor that it is best qualified to settle the differences between labor and capital, it then imposed upon both labor and capital an administrative board and a Department of Labor that has caused more trouble between capital and labor, and between the branches of organized labor, than Roman gladiators caused the Christians in the pagan circuses of the ancients.

The administration has set itself up as a great authority on American foreign relations, and yet by its fawning attitude in this field it has ruined the domestic markets of our farmers and our manufacturers. It has stolen from the legislative branch of our Government the treaty-making powers conferred upon that branch by the Constitution of the United States. A United States Senator has less to say today about foreign trade treaties than most representatives of foreign nations in Washington. Recently, some of the Members of the Congress of the United States had to go to the Brazilian consulate to get information concerning the Brazilian trade treaty because they could not get that information from our own State Department. Under this muddle-headed policy undertaken by the present administration, the American farmer and the American workingman is denied the opportunity to produce the goods consumed in the home market. Far from being the wise men in the field of foreign affairs, the New Deal, under the so-called favored-nation clauses of the reciprocal-trade agreements, has made every foreign nation except the United States the most favored. The dairymen of New England, the shoe manufacturer of my own State of New Hampshire, the cotton growers of the great South, the rubber and machinery manufacturers of your own State of Ohio, are all feeling the bad effects of this ill-advised foreign policy.

The Republican Party does not cling to the past. We believe in change. We believe in new methods. We believe in progress. But we do not hold ourselves up as the fountain of all knowledge and all wisdom. I consider that there is no better statement of the philosophy of our party than that laid down by Abraham Lincoln during a talk at Cooper Union in the winter of 1860. He said, when referring to the principles of our party: "I do not mean to say that we are bound to follow implicitly in whatever our fathers did. To do so would be to discard all the light of current experience, to reject all progress, all improvements. What I do mean is that before we should supplant the opinions and policy of our fathers in any case, we should do so upon evidence so conclusive and arguments so clear that even their great authority fairly considered and weighted, cannot stand." This is not the philosophy of reactionaries. This is not the philosophy of Tories. This is the philosophy of common sense. This is the philosophy of correcting errors when it is shown errors exist. This is the philosophy of adopting new views only as they appear to be true views. As a New Englander, it has been ingrained in me that thrift is a virtue. To be sure, the men and women of America who have been unfortunate, who are unemployed, whose economic future is insecure, must be taken care of, but the primary objective should be their safeguard, their eventual absorption into the channels of trade and industry by private capital, and not the wasteful and ignorant perpetuation of a scheme which in 6 years has spent $9,000,000,000 on relief alone with not a single fundamental improvement to show for it except greater dissatisfaction than when the spending began. That is why recovery in the United States has been slower than that of any other major nation on the face of the earth. A proper plan and a determination to stick to it, was the answer 80 years ago, and is the answer to our dilemma today. I can conceive of no better description of the economics of the Roosevelt administration than that used by Abraham Lincoln when, as he addressed the destructionist radicals of his own day, he said: "You are united in your determination to break with the past but you are utterly divided among yourselves as to where you are going. You remind me of the little steamboat on the Sangamon River which had a boiler 3 feet long and a whistle 5 feet high and every time it whistled it stopped. It exhausted its power in noise."

Before I close I should like to speak for a moment on perhaps the greatest issue before the American people today, the issue of peace or war. In the President's message to Congress last month he concentrated on the issue of preparedness. In a subsequent message to Congress he advised the expenditure of over a half billion dollars for armaments and military training. As a Republican I am stanchly behind a policy of adequate national defense. I believe that our democracy, our form of government, is worth the price whatever it may be. I quite realize the dangers existing abroad. None but the most conscientious objectors will disagree with a policy or preparedness for defense. I believe the keystone of our democratic thought, yes, the paramount desire of all the people of the United States is for peace. But, in order to maintain that peace we must have sufficient weapons at hand to repel any or all of the wolf nations of the world who might attack us. I believe that the American people will refuse to send a single mother's son to foreign shores on a crusade to uphold any movement or to break down any movement which may exist abroad. If American blood must be spilt, then let it be spilt in defense of American soil. Too many American lives have already been lost, uselessly sacrificed, to uphold what foreign statesmen have told us should be our world ideals. Never again must the flower of American youth be made the pawns on the council tables of Europe.

The dangers of propaganda must be evident to all of you. It is those dangers that we must curb now, because the beating of the war drums, the blaring of bugles, plus the propaganda speeches of warmongers, cannot be controlled in times of crisis. I say, therefore, let us prepare, but let us not be driven to use our new weapons, when we have them, for any purpose other than the actual defense of our own soil. As I look on the history of the present administration, as I read the President's message with care, as I read in that message his statement that the social reforms of the New Deal administration have been basically to prepare the country for defense, a great fear arises within me. The expression of one of our early American statesmen, "Millions for defense but not one cent for tribute," suggests itself.

We today, as a political party, will support the appropriation of billions of dollars for defense if need be, but not one cent for political tribute. The money for defense must be held in trust and expended for the purposes of defense. It must not be a donation to a broken-down new-deal party and a bewildered President who are seeking to repair their political fences by beating the drums of war and sounding the cymbals of internationalism. To refuse to prepare would be to express a dismal disregard for the national welfare. In going into this thing we must do so with the wisdom and common sense of an Abraham Lincoln. We must be sure that the New Deal, in a panic over its failure, is not seeking to bolster its

fortunes by sheer, unadulterated flag waving. One of the oldest political tricks of the heads of government is to unite the people against an external foe when the internal fortunes of the administration are tottering. War throughout the ages has been a sure-cure palliative for a restless and dissatisfied constituency. Martial music and uniforms have always caught the eye and ear of the wavering plainsmen and swung them back into line. But I stand, and I am sure that all true Americans stand in the foremost ranks of those who insist upon—yes; who demand—an adequate national defense, but refuse to be part or party to any shrewdly planned hysteria for the purpose of reviving the flagging fortunes of any disorganized political party that finds itself in a panic over the results of the most recent elections.

Our Nation is made up of myriads of people of all creeds, all religions, all races, all tongues. Our form of government is the last hope of humanity. Our democracy must survive. It has survived. It does not have to be made to work because it has worked. We have taken from Europe some of the best, and also some of the poorest, the most ignorant, the most turbulent of her people and have made them into good citizens. They have added to our wealth and they are ready to die in defense of a country and of institutions which they know to be worth dying for.

We will not let democracy go by default. We realize that the peace of this Nation cannot be assured by a policy of hope and faith alone. What is worth saving is worth fighting for. Let us then be sure that our preparedness is only for the grim purposes of national defense. Let us prepare as a united nation not for political purposes, not to pull European chestnuts out of the fire, not to save the democracy of nations, who, by their actions have displayed that they know not the meaning of the word. The Republican Party stands first and foremost as the advocate of national defense—both internal and external. And furthermore, we will always remain unalterably dedicated to the causes of national unity and cohesion. Until we are prepared, let us put an end to the teasing and baiting of the dictator nations. Let us show our disapproval of those in the present administration who, every time they take the air, threaten the war-mad leaders with acts of violence and reprisal. In short, let us stop showing our teeth until we are ready to bite.

America wants peace and the security of freedom, the preservation of which the birthday of the great man we honor here today is an everlasting and perpetual symbol. Let us then prepare for peace and for peace only. Let us prepare with the wisdom and common sense of Abraham Lincoln, who, in spirit, is with us in this time when his common sense and wisdom are a great national need.

Preservation of the Character of the Republic

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, February 17, 1939

ADDRESS BY HON. JOSIAH W. BAILEY, OF NORTH CAROLINA, DECEMBER 10, 1930

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD an address delivered by my colleague from North Carolina the distinguished senior Senator from that State [Mr. BAILEY] on December 10, 1930, at the annual dinner of the Southern Society of New York City.

This very able address is especially noteworthy because of the clear vision with which he prophesied the happenings that have since occurred.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, ladies, and gentlemen, I am happy to be with you and grateful for the opportunity of speaking on this occasion. To be invited to bring to you a message as from the land of your hearts is an honor that you must know I sincerely appreciate, and of which I wish I were less unworthy.

I will not affect to bring you news of the South. Your contact doubtless is as good as mine. You know all that I know of what is going on. Distance no longer lies between New York and New Orleans. In our homes we hear the strains of your orchestras; into yours the old songs and hymns of the plantation float from Nashville and Atlanta, Jacksonville and Raleigh—with new songs, alas, not of the plantation. We read your papers the day of their publication and you read ours. News from everywhere is in a moment universal. And we all travel incessantly, under our own power, at will and at a great rate. There are more visitors from the South in New York City in any 7 days than the entire population of my city. And New York day by day is represented in person in every city in our land. Between man and man there is no news.

Moreover, what is going on here is going on also in the South. If you talk of panic and prohibition, so do we. If you wonder what a day may bring forth, if you struggle and hope, if you desperately seek to resist the fateful tide and find the bottom on which to plant your feet, if you are stubbornly refusing to surrender the easier standards of a joyful yesterday, if you are reluctant to recognize that the depression may have a moral and spiritual meaning which some of us cannot afford to miss, so are we. We even vote the same way—only your majorities are enviably greater. If you have riots, alarms, bandits, and gunmen, you have nothing on us. If you have recently discovered that you are not bulls, as you freely imagined, but lambs, and if you are watching the market and preparing for another plunge, so are we—ready to be shorn, if ever we grow more wool.

There is a North, an East, a South, and a West, but America is, after all, now but one vast community to which geographical and historical distinctions are surely yielding. The West is now East. The border, the battle line of civilization, is no longer in Wyoming and Arizona, it is in Chicago and New York. The South is now North. The demand for States' rights comes once again from Boston and Providence. The cavalier has vanished from the valleys of the James and the Shenandoah—only the fabled shade of him haunts the dim vistas. Virginia and South Carolina are the dwelling places of modern Pilgrim and Puritan. And, if there is a pioneer, he is hidden to Washington, perhaps deep in some university cloister or laboratory. We have quite turned about within the space of two generations.

As a matter of fact, North and South were not so different when they contended the one with the other. Fierce was the controversy, bitter the hate, and bloody the fighting; but, even so, they were for the most part sons of the same fatherland, brothers speaking the same dear mother tongue, carrying in their breasts the same unique and priceless heritage of experience and aspiration—offspring of Britain, with all in common that the British have had these 10 centuries—the British individualism and self-reliance, the British aspiration for liberty and well-being, the British capacity for war, and the British competency for government and all things else, no less.

Behold the new unity, not only of experience and interest but of understanding and fellow feeling. If the men of the South drenched the earth with their blood for States' rights, with the view to a more immediate inducement, advocates in the North of States' rights now at length suspect the reason why. It was not because we were of the South no more than is their present course determined because they are of the North; not because we were cavalier, nor because they were Pilgrim and Puritan. The motives in the ancient differences were neither geographical nor typical. They arose in the will, not in the blood, in immediate self-interest, not in devotion to theories. They were more superficial than profound, more ephemeral than permanent. Time swiftly turns them all about. Under other circumstances we might demand once again an exaltation of States' rights, and the men of the North and the East might resist it. So after a season we understand each the other as only they may understand to whom experience has brought mutual exchange of points of view. It is a beautiful process in education in nationalism—this in which experience unawares discloses to us our national community.

I might as well have included the West in all I have said. The great migrations to the Mississippi Valley and beyond the Rocky Mountains carried with them the same dominant British blood and heritage, and either leaving behind them the prejudices of the great conflict and its disastrous aftermath or forgetting them in the engagement of subduing the wilderness, have built upon that noble heritage a virile Americanism, less stable perhaps than ours of the older settlements, but more dynamic. Nor is the West more remote than the South.

There will never again be a serious sectional cleavage in our land. We have done for the most part with political geography. It passed as distance was swallowed up. Political parties in order to succeed must seek a national unity in national mission.

Our menace of division and conflict now lies in class and condition, in group and occupation. The present word in America, still inarticulate, but taking form and force day by day, is equality; and one wonders if it will at length eclipse its companion, the watchword of the Nation's birth—liberty—strangely now in need of understanding in this its chosen land.

We are informed that the present unusual situation here, and in great measure throughout the world, is about to present the first grave test of the new age and order, the age of the machine and mass production and of 122,000,000 souls in the Republic, of the age also of international independence.

If so, manifestly the line of division will be neither geographical nor racial. The struggle will be pitched around equality and liberty, and it will be determined by the unity of those of the British heritage who 70 years ago were so ardently opposed the one to the other. In the new conflict, not we trust of arms, but of ideas, it will be for us all to unite in order that we may preserve the time-approved and true form and character of our Government. We will not resist equality; we will exalt it; and we will preserve liberty in order that there may be equality. It will be for us in the controversies of our time to maintain the accepted standards of our Republic, to hold inviolate the true principles of its life, to exalt and preserve its character as now established. We will not resist progress; we will move toward progress within the ancient landmarks; we will achieve it by means of measures consistent

with our past and with our character as a Nation and a people. And such progress as we may not so achieve we will not seek. It was a great American and the greatest progressive, a master of history and a master of the science of government, Woodrow Wilson, who declared:

"I believe, for one, that you cannot tear up ancient rootages and safely plant the tree of liberty in soil which is not native to it. I believe that the ancient traditions of a people are its ballast; you cannot make a tabula rasa upon which to write a political program. You cannot take a new sheet of paper and determine what your life shall be tomorrow. You must knit the new into the old. You cannot put a new patch on an old garment without ruining it; it must not be a patch, but something woven into the old fabric, of practically the same pattern, of the same texture and intention. If I did not believe that to be progressive was to preserve the essentials of our institutions, I for one could not be a progressive."

To these clear words from America's foremost modern statesman I would add the statement of the eminent philosophic historian, W. E. H. Lecky, of England: "All real progress," he declares, "all sound national development, must grow out of a stable, persistent, national character, deeply influenced by custom and precedent and old traditional reverence, habitually aiming at the removal of practical evils and the attainment of practical advantages, rather than speculative change. Institutions, like trees, can never attain their proper maturity or produce their proper fruits if their roots are perpetually tampered with." He was writing at the end of the nineteenth century, and it is at least interesting to remark that he concluded his paragraph with a sentence that has taken new significance by reason of subsequent events: "In no single point," he adds, "is the American Constitution more incontestably superior to our own—i. e., the English—than in the provisions by which it has so effectually barred the path of organic change that the appetite for such change has almost passed away." Little did Lecky dream 30 years ago of the sixteenth, seventeenth, eighteenth, and nineteenth amendments, with twentieth, twenty-first, and we know not how many more in the way of submission. Little did he suspect that within 30 years constitutional amendments would threaten to become the political fashion in America.

And what, it may be asked, is the character of our Republic, what are the "essentials of our institutions"?

After 150 years there is at last no room for doubt. This is a commonwealth of commonwealths, a republic of republics in technical terms, a constitutional representative democracy. Its objectives are a more perfect union, order, justice, the common defense, the preservation of the blessings of liberty to ourselves and our posterity, and the general welfare. Its Constitution and laws are the supreme law of the land, binding alike upon States and persons within the limitations of these objectives. Operating under a strict grant of powers from the people, it is established that the powers implied are commensurate with its functions as designated, and no more.

The liberties, to preserve the blessings of which it was created, are the ancient liberties that we have received as a heritage from the fathers of old, that came in their breasts from beyond the sea—the right of personal liberty, the right of personal security, the right of personal property—with two other liberties which they at length wrought out on these shores, the liberty of local self-government and of equal voice in the General Government, and the liberty of the soul, spiritual self-sovereignty, whereby we have release to civilization of man's infinite capacity for spiritual and moral ascent, the most precious liberty of them all, the liberty without which the other liberties could not thrive, to preserve which we must maintain with jealous zeal the absolute separation of church and state.

The justice that it contemplates is more than righteousness, more than equality before the law; it is civil and political equity, equality of opportunity, equality in responsibility for the Government, equality in the benefits and the burdens of government, equality of rights, not of capacity or goods, but, regardless of capacity or goods, and equality in an utter negation of favor, advantage, or privilege at its hands. We do not compensate favor with favor. We yield no favor. We extirpate advantage and privilege and give liberty and equality to every man as he works out his destiny. To this end we uphold the ideal that this must be a government of laws and not of men.

In order that there shall be both liberty and equality, the Republic seeks to provide the broadest opportunity for individual initiative consonant with the general welfare. If our constitutional representative democracy is social in its concern for the general good, it is individual in its understanding that that end shall be accomplished by means of individual initiative with order, liberty, and justice. Its concern is not to impede but to aid and stimulate individual exertion and development. It would call forth the activities and powers of individuals and bodies rather than substitute its own activity for theirs. Its function is to free men, not to fetter them; to interfere with none, not especially to aid any; to preserve order, execute justice, maintain equality, and not otherwise to interfere; to induce them to labor and thrive, not to do their work for them, to the end that every man shall have the broadest opportunity for self-expansion and self-reliance and the inducement that the fruits of his toil shall be his own.

It will do nothing that its citizens may do as well in the knowledge that it is better that every door of opportunity shall stand open to them; that the Government cannot go forward in civilization of itself, but only by means of the prudence and industry of the people. It regulates industry only when the exercise of the power of eminent domain creates a public use and thereby predicates a public trust. It lays a hand upon internal commerce only to preserve fair trade practice and prevent monopoly.

This philosophy of individual and organized private initiative is the distinguishing characteristic of our country, and to it we may attribute our dominant position in world economic affairs and our leadership in world progress. Over against it comes now the contest with democracy interpreted as socialism in Europe and as communism in Russia. The present generation will see these vast experiments through. The advantage clearly lies with us now. Let us see to it that it shall lie with us in the end. We will not compromise; we will have no half dealings. We will maintain our course in confidence of the outcome.

Historically the Republic derives not from the Athenian or from the Roman experience but from the English. Underlying it are the great charters and muniments of progress in individual rights that mark the rise of the English-speaking man from feudal estates and serfdom to his present status, we having here changed the form of the governmental instrument from monarchy to republic and having added to Magna Carta and the Petition of Rights our Declaration of Independence and the Bills of Rights not only in the Federal Constitution but in the State constitutions. These Bills of Rights are of primary importance. They affirm the rights reserved to the people, and to each of them among these the human rights which the great Declaration holds to be inalienable. They underlie and limit the constitutions.

Much may be said of the virtue of the mechanical balance of the Government—the three branches, each independent—executive, legislative, and judicial. But there is a profounder and more valuable moral and spiritual balance here; it is the balance of powers and rights; in the powers granted to the Republic, the powers limited to the States, the powers and rights reserved in the people as a whole, and, above all, the powers and rights vested in the individual. It is this balance that accounts in large measure for our welfare and progress, for our individualism, our virility, and for our solidarity; nay, this balance is of the essence of our civilization and gives us our unique place and precedence in all the history of government.

This balance of powers and rights looks not only to local self-government but to individual initiative and self-determination. It gives to the State domestic supremacy within its borders, to the locality local autonomy, and to the individual personal liberty, personal responsibility, and the direction of his own affairs, all under a supreme power that operates to protect and preserve rather than to interfere with or impair these exercises of liberty and sovereignty. It is in this sense, as well as in the sense that the powers of government are here held to be derived from the people, and public officials are representative and directly responsible, that the American citizen, notwithstanding the inspector, the police, and the tax collector, realizes yet within himself the attributes of sovereignty.

I would pause here for a moment to offer an humble tribute to the wisdom of the fathers in creating an independent judiciary to keep watch and ward over the indispensable distribution of powers and rights which constitute the genius and the spirit of the Republic and in doing obeisance to the great Court that, true to its mission, has preserved this moral and spiritual balance. Justice and wisdom have guided it in deciding rights between man and man, but in its fidelity to the Republic's true character in the preservation of the balance of powers as between the Republic and the States, and not less as between both these and the people and individuals, it has risen to heights beyond which are no reaches in the story of mankind's progress. It has kept pure the springs of America's political, moral, and spiritual ascent. It has won for itself just title to sanctity and commanded the tribute of honor from all civilized peoples.

Such then is the character of our Republic. Such is its structure and spirit—no static thing, but organic, vital with great principles and ideals in the hearts of aspiring men and women stimulated by the impulses of order, of justice, and liberty. It is this character that we must maintain in all events. It is of our fathers and ourselves. We received it as a goodly heritage. Greatly has it served. We know its value, and all the world knows. We shall hand it down to our children as our best gift to them, in the assurance that it will serve them as it has served our fathers and us, not as perfection, but as approaching perfection, as the groundwork and the pattern of perfection, the best form and character of government that human experience has evolved, and capable of perfection in the hands of more perfect men.

The poise, stability, and comparative serenity of our Republic during the last two decades and at the present moment presents a remarkable contrast with other governments throughout the world. We have seen the strongest monarchies go down and their dynasties extinguished or exiled. We have seen republics in revolution severe and overwhelming. On every hand the dictator has arisen. We hear the master of Italy declaring in the present moment that there will shortly be a rally or the end of all things; and Lloyd George, his faith faltering, declares that we are passing into a crisis, not through one. But America is unshaken. We propose to go through and come out triumphant. We owe much, to be sure, to our more favorable situation, much to the fact that we all but escaped the greater shock of that invasion by hell that is called the World War. But we owe our poise, our serenity, our sense of security, more to the character of the Republic, to the underlying confidence in it, to the general sense that after all it is

the best form of government the mind of man has so far framed, that essential human rights here are secure, that the governmental instrument is neither too strong nor too weak, that it at once preserves the liberties of the people and individuals in the spirit of equality, and provides the means of realizing their personal aspirations and the general welfare. Here is one land upon the globe in which the overwhelming popular opinion is that nothing may be gained by revolution, nothing won by radicalism; in which general confidence in the orderly processes of our progress is unimpaired.

I have spoken of the present testing and of possible division and attack. Our danger does not lie in overt acts but in gradual, almost unintentional, alteration of the national character—in the framing of political policy, in too great anxiety to win elections, in the propaganda of groups, in the insidious movement, in the unsuspected tendency, in momentarily popular nostrums and remedies, in the unsound precedent and procedure, in the special plea for a special need, and in the disregard of law, which is nothing less than disrespect for the Government, rather than in riots or armed force. The nature of this danger warns us of the necessity for eternal vigilance.

We can repel the invader, we can repress the rebel; but what may we do with the agitator in a land of freedom where millions are but ill-informed, are discontented, and none too deeply convinced of the value of the Republic in its historical form and character? And what may we do with the politician and his accommodating and ambitious nostrums, with the self-styled progressive who seems to conceive of government as a cure-all; who interprets progress in terms of negation and radicalism, rather than in terms of affirmation of approved principles and orderly development; who reckons naught of the perspective and process of history but hesitates not to experiment with a people's destiny; who presents to the electorate, without thought of the past or regard to the consequences, a complete pharmacopoeia of remedies and reliefs that predicate an exaggeration of the functions of the Government and even negative its character as established, promising the voters anything from the millenium to roasting ears for Christmas, if only they shall appear to meet a demand or tickle the ears of discontent?

And what may be done with the self-styled liberal who interprets liberalism in terms of force and interference rather than of freedom and simplicity of government, voluntariness, and initiative? Such so-called liberals are in truth the real reactionaries, and their activities under that appellation are a libel upon liberalism. Advocates of the omniscient and omnipotent state, with a finger in in every pie, whose remedy for every evil, fancied or real, is to pass a law, who invoke the interference of the Government at every turn, are not liberals in any sense of the word, for all that they loudly profess to serve in humanity's name and cause. They have but clothed the tyrant in democracy's cloak. And they have done more to discredit liberalism than all the standpatters. The true liberalism, as the word implies, makes ever for freedom—individual freedom. It is the antithesis of socialism, the antidote to communism.

The answer to our questions is, we must preach a crusade throughout our land in behalf of the wisdom of the ages, the value of experience, the virtue of orderly development, and the meaning of the ancient landmarks of our Republic's progress, not a gospel of discontent, but a gospel of the meaning and value of the Government. We must press forward with an evangel of the Republic as revealed in 150 years of increasing prestige and world compelling human progress. We will not denounce; we will expose the fallacies and expound the truth. We will not protest. We will overcome evil with good. We will negative their claims and pretensions with the great affirmation of the Republic as it is and must ever be. We will prove its character in equality and liberty.

And none there are so qualified to this cause and calling as the sons of the fathers, North, East, West, and South, in whose very blood dwells the heritage of the Republic. United to begin with, divided for a season, united again by community of interest and experience, by understanding and sympathy, we have now a yet greater bond of unity, the bond of high mission—the mission of preserving inviolate the true character of the Republic.

I bid you be of good cheer. We are in a situation very difficult. Dark does the depression lower; grave are our perplexities. But our ship of state is sufficient. There is a light—the light that led the way across the Atlantic, whose beams rode out the storms and penetrated the long night in the wilderness, lifted up the heart of Washington and led him on, that was the lamp of Marshall's mind, inspired the soul of Webster in the great controversy with the vision of liberty and union now and forever, piloted Lincoln out of the depths, and comforted Lee and his men in defeat and gave them mission and hope in the dread aftermath. It is the light of faith. It is for us to maintain our faith in our Republic—in the American people, in their diligence, their courage, their common sense, their instinct for the right and for order, in the intelligence of their sense of self-interest, in their competency to carry on, proved in 150 years of onward struggle and in six armed conflicts, three of them of the first magnitude; our faith in our Government, in its form, its structure, its Constitution, its character, its capacity to heal itself, to go forward and to meet every just demand, and to serve us and our posterity; our faith in the destiny that we deeply feel within ourselves, and in the God who is its author.

There is a shrine at Plymouth on the hill overlooking the bay where the *Mayflower* was moored. It is the monument on the corners of which stand four figures representing liberty, law, morality, and education—the pillars of the new civilization. Above, these, high upon the top of the shaft, is another figure with the Book of humanity's hope in one hand and the other pointing upward. It is the figure of Faith—the spiritual element without which law, morality, liberty, and education would be invoked in vain. It is not faith theological, nor is it faith ecclesiastical. It is the faith of the ages, the dynamic of mankind's upward course, the faith by which saint, scientist, and statesman, peoples and prophets, in all the long struggle have "subdued kingdoms, wrought righteousness, obtained promises, stopped the mouths of lions, quenched the power of fire, escaped the edge of the sword, from weakness were made strong, waxed mighty in war, turned to fight armies of aliens." It is the faith which is the soul of our Republic.

The shrine at Plymouth is a shrine for every American—in every age.

Edison Day

EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1939

RADIO INTERVIEW WITH GEORGE E. STRINGFELLOW, FEBRUARY 11, 1939

Mr. VREELAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interview had by Mr. George E. Stringfellow, vice president of Thomas A. Edison, Inc., over the radio network of the National Broadcasting Co. on February 11, 1939:

The ANNOUNCER. Today we remember the ninety-second birthday of the late Thomas Alva Edison, world-famous inventor and scientist. The National Broadcasting Co. is proud to join with the world of science and industry in paying tribute to a great mind and a great humanitarian. We are fortunate in having with us today Mr. George E. Stringfellow, vice president and division manager of Thomas A. Edison, Inc. Mr. Stringfellow was for many years in daily contact with Mr. Edison as the directing head of the storage-battery division of the Edison industries. During these years Mr. Stringfellow came to know Thomas Alva Edison intimately and is therefore well qualified to speak of him. Mr. Stringfellow, how long were you personally associated with Mr. Edison?

Mr. STRINGFELLOW. Nine years. I joined the Edison industries in 1918, and from 1922 until the time of Mr. Edison's death in 1931 I saw him almost every day.

The ANNOUNCER. I imagine it was very interesting to work with him.

Mr. STRINGFELLOW. Indeed it was. He was a human dynamo, and every day brought new ideas and new developments of old ideas. During a span of years covering well over half his life Thomas Alva Edison was one man who consistently made news. In newspaper language, anything he did or said was "good copy." Public interest is fickle, and most headliners in the news enjoy only a brief period of public popularity, but Edison remained one of the world's most interesting personalities throughout his long and productive life. It isn't very strange that Edison's popularity was so great and so much a part of everyone's life. All classes of people found something in him to admire, and few were inclined to find fault. This was because his achievements benefited everyone and injured no one.

The ANNOUNCER. These inventions of Mr. Edison—can you tell us something about them, Mr. Stringfellow?

Mr. STRINGFELLOW. Well, 2 years ago the number of patents issued by the United States Patent Office reached 2,000,000, and of this number 1,150 were the product of Thomas Edison's fertile mind. He is perhaps best known as the inventor of the electric light, but there are many others of his inventions that play a large and useful part in our everyday lives. He invented the first practical generator, electric motor, and power distribution system, which, taken with his development of the headlight, make for the mechanical perfection of the modern automobile. Some of his other inventions are the quadruplex telegraph, the motion-picture camera, the phonograph, the alkaline storage battery, the microphone transmitter, which played an important part in the development of the telephone and the art of radio broadcasting, and the Edison-effect lamp, which was the first thermionic or radio tube. But these are a mere fraction of the complete list of Edison inventions, and one wonders how any one man could possibly have accomplished so much.

The ANNOUNCER. Mr. Stringfellow, can you give us an idea of what part the genius of Edison plays in our modern life?

Mr. STRINGFELLOW. We can safely say that all the mechanical wonders of our age depend largely upon Mr. Edison's inventions for their existence. The electric refrigerator, radio, airplanes and automobiles, telephones, subways, motion pictures, phonographic reproduction, mining apparatus, oil burners, mimeograph machines, and hundreds of other mechanical, transportation, and

communication industries all owe their existence either directly or indirectly to the genius of Edison. The list is staggering and the figures are overwhelming. The industries arising directly from the inventions and discoveries of Thomas Alva Edison represented a total of over $25,000,000,000 when he passed on in 1931. But there is really no way to measure fully the enrichment Thomas Edison has brought to our lives. So basic are his inventions and so interrelated are the divisions of modern industries that his true influence is literally beyond calculation. Henry Ford once remarked that the combination of high wages and low prices in modern industry may be traced directly or indirectly to the aid of the electric motor—the electric motor, just one of the many phases

The ANNOUNCER. I've heard it said, Mr. Stringfellow, that a great many of Edison's inventions were just, well, lucky accidents. Is this true?

Mr. STRINGFELLOW. No; it is not. Edison rarely discovered anything by accident. It did sometimes happen that one of his ideas would suggest another, but usually his inventions were the result of careful research and study. It was his procedure, beginning with a commercial need that he was able to foresee, to work systematically toward a practical means to meet the need. He spent much less time in the realms of pure science than in the application of known scientific fact to useful ends. A good example of Edison's intensely practical nature is the way he came to invent the mimeograph. He found one of his employees spending a great deal of time laboriously making copies of certain reports when Edison wanted him to do something else. Upon learning that there was no other way of making copies quickly, Edison decided to invent one—and did. In the course of making the mimeograph, Edison invented the waxed paper so familiar to all of us today. Later he adapted the duplicating process to use with a typewriter, which, by the way, is another thing Edison had a hand in developing.

The ANNOUNCER. What, in your opinion, Mr. Stringfellow, is Thomas Edison's greatest contribution to mankind?

Mr. STRINGFELLOW. That is a rather difficult question to answer. So much has been said about the relative worth of Edison's inventions. There is one thing, however, which I believe to be a great contribution from Edison to mankind, and, strangely enough, it is not directly concerned with his inventive genius. While it is true that Edison produced many epoch-making inventions and a seemingly endless list of lesser ones, I believe time will prove that in the organized methods by which he did so he has left society something far more valuable than the inventions themselves.

In the files of the Edison library at West Orange is to be found an interesting page in Edison's early history of organized research. It is a scrap of paper on which Edison sketched a machine he thought would record and reproduce the human voice. Below it Edison wrote a memo addressed to his assistant, John Kreusi, a mechanic on his laboratory staff. The memo reads: "Kreusi, make this," and it's signed "Edison."

I cite this historical paper not because Kreusi made the device and thus produced the first working phonograph but because it serves to illustrate the fact that Edison, instead of serving as his own mechanic, was already applying organization and management to research.

One needs only to compare Edison's staff of research workers in Menlo Park 60 years ago with the large and numerous research organizations maintained by industry today to realize how extensive has been the adoption of the methods he pioneered.

Today American industry maintains more than 2,000 research laboratories, most of which have been established since the year 1900. Such research organizations represent a living force for continued progress in the arts and sciences that are serving mankind today.

Thus, what Edison did to stimulate organized research seems to me the most lasting and valuable of all his contributions to society. Thank you.

The ANNOUNCER. Thank you, sir. Ladies and gentlemen, you have just heard an interview with Mr. George E. Stringfellow, vice president of Thomas A. Edison, Inc., whose analysis of Edison's permanent place in our everyday life springs from 9 years of daily association with the electrical genius. This interview was brought to you as part of the National Broadcasting Co.'s tribute to the memory of Thomas A. Edison upon the occasion of his ninety-second birthday.

National Highways

EXTENSION OF REMARKS
OF
HON. J. BUELL SNYDER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1939

LETTER FROM AUTOMOBILE CLUB OF MICHIGAN

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the Automobile Club of Michigan:

AUTOMOBILE CLUB OF MICHIGAN,
Detroit, January 20, 1939.

Hon. J. BUELL SNYDER,
House Office Building, Washington, D. C.

MY DEAR REPRESENTATIVE SNYDER: Your project as indicated by the enclosed newspaper clipping is of very definite interest to me, as I have for years approved such road construction, not entirely from a military viewpoint but also from the viewpoint of peacetime progress.

Also within the last 60 days the Automobile Club of Michigan has been taking an active part in the work of the Super Dixie Highway Association—a group with headquarters in Lexington, Ky., and which is advocating a highway from the Straits of Mackinac to Miami, Fla. This highway would seem to be so located that it would naturally be one of the north and south highways which you propose.

At a meeting last November at Lexington, Ky., both Congressman MAY and Senator BARKLEY took an active part and gave a definite approval to this work. Perhaps a coordination of effort with your project would be helpful mutually.

I feel that you are very definitely correct in your assumption that as a matter of military defense this series of highways is an absolute necessity. I think most of us fail to realize that, in addition to a military value, such a group of highways possess just as great a peacetime value.

This is not true of most of the rest of our military preparedness. Battleships, destroyers, tanks, planes, field pieces, and all the rest grow outmoded in a very few short years. They are also a matter of liability in peacetime, due to maintenance costs.

The value of these highways, however, in peacetime is so great to the Nation that it cannot be definitely computed in dollars and cents. They are in fact one of the very greatest of the capital assets of the Nation.

I say this advisedly because experience shows definitely that human progress, civilized progress, has always been proportionate to the improvement in comfort and speed of transportation. I mean transportation of individuals and material.

So I hope you will not permit this ideal of yours to fall by the wayside. The United States of America needs these roads from both military and peacetime viewpoints.

Very sincerely yours,

W. A. BRUSH, *President.*

More Veterans' Hospital Facilities Needed

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1939

Mr. BROOKS. Mr. Speaker, the problem of hospitalizing our veterans has not entirely been solved. The facilities are not adequate yet to handle the increasing load of disabled veterans from year to year and it has been evident for some time that more veterans' hospital facilities are needed. There is very little doubt but what some portion of the South must be used for an extension of the veterans' hospital facilities, and it is interesting to gain an insight into the present conditions prevailing in this respect.

The percentage of veterans in all communities of any size bears a direct ratio to the population of these communities. The same is true of each State, as a percentage of veterans under draft conditions in the World War would be found to be about equal throughout the entire country. Since this is the case, it is interesting to know the populations of key States in the South and Southwest and their relationship to veterans' hospital facilities existent in these States at the present time. For instance:

	Population 1930 census	Veterans' hospital and domiciliary beds
Louisiana	2,101,593	599
Arkansas	1,854,482	1,610
Mississippi	2,009,821	1,787
Alabama	2,646,248	2,137
Georgia	2,908,506	1,378
Florida	1,468,211	1,672
Tennessee	2,616,556	2,956

The Louisiana department of the American Legion, in a brief drafted recently and submitted to the Veterans' Bureau,

explains the situation existing very forcefully, and I quote therefrom:

LOUISIANA'S VETERANS' FACILITY BEDS COMPARED TO OTHER SOUTHERN STATES

The above shows Louisiana with a total of only 599 beds, or only 34 percent of the number in Mississippi; 28 percent of the number in Alabama; 38 percent of the number in Arkansas; 46 percent of the number in Georgia; 36 percent of the number in Florida; and only 20 percent of the number in Tennessee.

LOUISIANA HAS MORE VETERANS IN HOSPITALS

Your attention is next invited to the following information taken from the Director's report of June 30, 1937, which shows the total number of veterans in the hospital from their respective States:

Total Louisiana veterans hospitalized	971
Total Mississippi veterans hospitalized	659
Total Arkansas veterans hospitalized	873
Total Alabama veterans hospitalized	1,204
Total Georgia veterans hospitalized	1,264

This shows Louisiana with more veterans being hospitalized than Mississippi and Arkansas, and very few less than Alabama and Georgia.

NUMBER OF VETERANS HOSPITALIZED IN SOUTHERN STATES

The following from the same report shows the number of veterans in the hospitals in these States irrespective of where they reside:

Total number veterans hospitalized in—

Louisiana	387
Mississippi	1,231
Arkansas	1,204
Alabama	1,648
Georgia	1,295

I myself am a veteran of the World War and have worked for many years among the disabled and needy veterans of the State of Louisiana. I have seen the pressure for hospital facilities for our veterans gradually result in providing facilities and hospitals for them. I have seen sick veterans of the World War taken from asylums, State and local hospitals, from homes, and even from jails and put into hospitals built by the Veterans' Bureau for them.

It was my privilege to visit base hospital No. 27, located at Pineville, La., about 5 miles north of Alexandria, La., at a time almost 10 years after the World War, when veterans were still housed in temporary wooden shacks. I have seen these veterans at a time when they were huddled around the stove in these temporary buildings for the purpose of keeping warm and have seen them suffer from exposure and lack of proper provision for them.

Out of this need and suffering in the State of Louisiana came what is now base hospital No. 27, with a limited capacity of 599 beds. This institution serves admirably to the extent of its limited capacity and many of the boys who served in the World War, some of them suffering from disabilities incurred at that time, owe their lives to the generous but limited facilities provided at this place by the Veterans' Bureau, and I commend the work of the Bureau in its building and operation of that magnificent institution dedicated to the alleviation of suffering and disease and maintained upon the basis of restoring health and happiness to our disabled veterans.

This hospital is located near the geographical center of the State of Louisiana. It is approximately 100 miles from Monroe (located in the northeast corner of the State). It is approximately 130 miles from Shreveport (the second city of the State) in the northwest corner of the State of Louisiana. It is 95 miles from the city of Lake Charles, with its new and growing port, located in the southwest corner of our State. It is approximately 110 miles from Baton Rouge, the capital city of the State, and 200 miles from the city of New Orleans, the largest city in the South.

It is interesting to know that in spite of the fact that New Orleans possesses a marine hospital, only 50 beds are available in this hospital for veterans' use. These beds constitute a receiving station and are merely for emergency use. Because of this, Louisiana veterans are forced to the hospitals in Mississippi, Alabama, Tennessee, Arkansas, and Texas.

Men who have served the United States in its hour of trial are entitled to more consideration. Except in the unusual case, a veteran should be entitled to hospitalization in his native State from which he came to serve his country in the great National Army of the World War. He should be entitled to hospitalization near his home and close to his relatives. They should have an opportunity, because of local proximity, to visit him at intervals and to cheer him during the dark and gloomy hours of his illness. He should not be denied the benefit of his friends and his relatives and the value of these associations to bring about a restoration of his health and physical recovery.

As things are now, often do I receive the cry of distress from the Louisiana veteran hospitalized at a distant point. Often do I receive the cry of anguish of the wife, the mother, the father, or the child of a disabled veteran being hospitalized far from them and from their local associations. This situation should be remedied, and additional facilities for veterans should be builded at once in the State of Louisiana.

Walter S. Steele, a Witness Before the Dies Committee

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1939

LETTER FROM WALTER S. STEELE AND REPLY THERETO

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter received from Mr. Walter S. Steele, general manager of the National Republic, a magazine, and my reply thereto, as follows:

NATIONAL REPUBLIC,
Washington, D. C., February 6, 1939.

The Honorable ADOLPH J. SABATH,
Chairman, Rules Committee, House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I understand that on February 2, 1939, Congressman VITO MARCANTONIO charged before your committee that I was, or am, a member of the Silver Shirts, and he implied, at least, that I am a Nazi or Fascist engaged in anti-Semitic activities in this country. I wish to emphatically deny Congressman MARCANTONIO's charges and to advise you that they are unmitigated lies.

These charges against me were first made, as far as I can determine through research, by the Communists. I denied before the Dies committee, under oath, that I had ever had any connection with the Silver Shirts. I later filed an affidavit disproving the truth of the claims originally made by the Communists. On the other hand, I have never carried on anti-Semitic propaganda activities.

If everyone were to believe all that the Communists and the like have said about me I would have said and done many things of which I have no knowledge. They have even reported that I was present at meetings in cities in which I have never set foot. I feel, therefore, that such damnable lies should not go unchallenged, and I desire to correct the false impression these charges may have made on you and the members of your committee, to whom I am forwarding a copy of this letter.

Congressman KENT KELLER also made charges similar to those made by Congressman MARCANTONIO against me. All that I can say is that anyone making these charges is merely echoing Communist lies.

Respectfully yours,

WALTER S. STEELE.

FEBRUARY 13, 1939.

Mr. WALTER S. STEELE,
National Republic, Washington, D. C.

DEAR SIR: In your letter of February 6, 1939, you state that Congressman MARCANTONIO charged you before the Rules Committee with membership in the Silver Shirts; and, further, implied that you are a "Nazi or Fascist engaged in ant.-Semitic activities in this country." In your denial of these alleged charges you claim that they are Communist-inspired and that anyone making them is "echoing Communist lies."

Congressman MARCANTONIO, when he appeared before the Rules Committee on February 2, quoted from your testimony before the Dies committee to the effect that you "had never been connected with any such organization" as the Silver Shirts; and, further, that you "have absolutely no respect for the Silver Shirts or any other such movement" (vol. 1, p. 309 of the hearings).

It was Congressman MARCANTONIO's contention before the committee that in making the above statements under oath you perjured yourself. The Congressman based his contention on a num-

ber of facts which he related to the Rules Committee, and which he repeated thereafter in a speech which appeared in the CONGRESSIONAL RECORD of February 3, 1939.

In reference to your denial of Silver Shirt connections, Congressman MARCANTONIO produced a series of newspaper articles from the Cleveland Press, running from July 30 to August 12, 1937, which related to the activities of the Silver Shirts in the city of Cleveland. In particular the articles expose the activities of one Elsie Theuer, alias Susan Sterling, who is named as head of the master council of Silver Shirts in Cleveland.

The first article, dated July 30, states that the Press reporter's first interview with Susan Sterling took place in the presence of one Charles A. Kennedy, who is identified as the Cleveland representative and associate editor of the National Republic. The article reports that Mr. Kennedy constantly answered questions for Miss Sterling when the latter appeared hesitant for an answer, and thus proved himself to be intimately conversant with the subject under discussion, namely, the Silver Shirt activities of Susan Sterling.

Further articles in the same series discuss the role of one Dr. Doron, who, according to Miss Sterling, was president of the Cleveland Silver Shirts, and reveal the presence in Dr. Doron's offices of a complete file of the National Republic. Your magazine apparently met with their unstinted approval, for Mrs. Doron praised it in these terms: "This is a magazine you ought to read. It prints the truth. I wouldn't swap it for all the Cleveland Presses in the world." The Silver Shirt leader's wife spoke highly also of Associate Editor Kennedy for the "wonderful work he was doing in the Cleveland schools."

In connection with this latter phase of activity, Congressman MARCANTONIO pointed out that the National Republic is sent free and unsolicited to school teachers throughout the country in what is apparently an attempt to propagandize and influence the educators of our American children.

The articles in the Cleveland Press which link up your Cleveland representative and your magazine with the Silver Shirts are borne out by a letter produced by William Miller, the Press reporter, and addressed to you by Susan Sterling. The letter is as follows: "Am having an interview with the officials of Republic Steel tomorrow. If you are interested, I can furnish data to you." (Arnold Gingrich's testimony before the Dies committee showed conclusively that Susan Sterling and other Silver Shirt leaders were constantly in touch with officials of Republic Steel, including Tom Girdler.)

Proof of complicity between the officials of a great steel company and the leaders of so notoriously un-American and subversive an organization as the Silver Shirts is something not likely to be revealed to an unsympathetic bystander, particularly when the latter is an editor who could spread such proof far and wide if he so chose. The existence of this letter, addressed to you by a leader of the Silver Shirts, certainly points to sympathy on your part with the aims and activities of this pro-Nazi and anti-Semitic organization.

Further substantiation of your having maintained connections with the Silver Shirts is contained in a telegram which was read into the record by Congressman MARCANTONIO when he appeared before the Rules Committee. The telegram was dated February 2 and signed by William Miller, the Cleveland Press reporter whose articles were mentioned above. Mr. Miller's telegram states, in part: "The National Republic, * * * a publication which no Silver Shirt I interviewed had been without; it was, next to their violent animosity toward the Jews, perhaps the most identifying characteristic of them all. * * * The Cleveland correspondent of this magazine, Mr. Charles A. Kennedy, was one of the closest associates of Susan Sterling, and Miss Sterling also enjoyed the most cordial relationship with Walter Steele, of Washington, the managing editor of this magazine. * * * Had Mr. DIES actually wanted to investigate the activities of Susan Sterling, he could have found no better source than the files of his own witness, Walter Steele, to whom she wrote constantly, confiding to him everything that she was doing to help him in 'sending out vibrations of true Americanism to all those eager for authentic information.'"

In further corroboration of the cordial relations obtaining between the Silver Shirts and the National Republic is the unchallenged affidavit of Miss Barbara Baker, the witness whose willing testimony the Dies committee refused, in effect, to hear. Miss Baker, who served Susan Sterling for 10 months as personal secretary, swore in her affidavit that the National Republic is "the Bible of the Cleveland Silver Shirts, along with Mrs. Elizabeth Dilling's Red Network. Miss Baker relates that your Cleveland representative, Mr. Kennedy, was among the guests at a banquet arranged by Susan Sterling in honor of Mrs. Dilling, and that among the other guests was Spencer Warwick, Ohio commander of the Silver Shirts. At the dinner, Mrs. Dilling, in customary vein, attacked what she termed the "Roosevelt 'red' government" and praised Hitler and Mussolini as "great men" and "saviors of their countries."

All of these facts, which surely cannot be dismissed as "Communist lies," were offered by Congressman MARCANTONIO in proof of your connections with the Silver Shirts and in refutation of your statement under oath that you had "never been connected with any such organization."

In your appearance before the Dies committee you stated (vol. 1, p. 310, of the hearings): "I have absolutely no respect for the Silver Shirts or any other such movement, and I want that understood here today." In your letter of February 6, 1939, addressed to me as chairman of the Rules Committee, you deny that you have ever been "engaged in anti-Semitic activities in this country."

As the self-proclaimed spokesman for the American Coalition, which you publicly represented before the Dies committee, it is certainly true that you are engaged in and have "respect" for the activities and program of the organization and its affiliates.

One need look no further than the president of the American Coalition, John B. Trevor, for an example of pro-Nazi and anti-Semitic activities with which you are publicly connected. Mr. Trevor serves the cause of nazi-ism and anti-Semitism through his position as head of the American section of the so-called International Committee to Combat the World Menace of Communism, an organization which conceals behind its typical Nazi-camouflaged title its real function as a Berlin-inspired and foreign-dominated Nazi International, operating as a "front" for Hitler's subversive machinations within the world's democracies.

Again, in one of the American coalition's founders one finds a notorious leader among Nazi propagandists in the United States—George Sylvester Viereck, revealed by the McCormack committee as a paid Nazi agitator, an "admirer of Hitler," and a "friend of the New Germany."

In your role of spokesman for the American coalition you publicly represented, in addition to Mr. Trevor and Mr. Viereck, one of the most sinister of anti-Semitic and subversive organizations in the United States, the American Vigilant Intelligence Federation. Before the Rules Committee, Congressman MARCANTONIO quoted as follows from the McCormack committee report: "Harry A. Jung and the A. V. I. F. had published and circulated great masses of literature tending to incite racial and religious intolerance." He listed, furthermore, a number of pamphlets of an avowed anti-Semitic character which Jung wrote or distributed, among them the thoroughly discredited forgery, the Protocols of the Elders of Zion. In addition, he quoted a letter to the Honorable Henry T. Rainey, late Speaker of the House of Representatives, which establishes Jung as a labor spy and strikebreaker "who does the slimy, stool-pigeon work necessary for the purpose of destroying organized labor."

The American Vigilant Intelligence Federation was among the organizations you claimed to represent in the list you presented to the Dies committee. Its record and the record of its president, as established by a congressional committee and by an honored Speaker of the House of Representatives, are undeniably subversive, un-American, and anti-Semitic. Such evidence requires more refutation than your letter offers with its charge of "Communist lies."

Another organization which you represented before the Dies committee was the Associated Farmers, Inc., an organization now under investigation by another congressional committee. Financed by big railroad and utility interests, according to its own published report, the Associated Farmers is an avowed antilabor and antidemocratic organization. In the words of Congressman GEYER of California, in a speech on the floor of the House, "strikebreaking and vigilante terrorism have been its un-American weapons." Testimony before the National Labor Relations Board confirms the charge of their using violence during strikes on the west coast, conducting "ax handle" raids against striking workers and pickets.

Still another organization with which you were linked by Congressman MARCANTONIO is the Paul Reveres, which formerly appeared among the affiliates of the American coalition, but which has since been dropped. Congressman MARCANTONIO, in the speech which is contained in the RECORD of February 3, 1939, pointed out that your magazine, the National Republic, in its issue of June 1933, was the first to welcome the founding of this organization in an article entitled "Paul Revere Rides Again." The article was quoted as saying: "The National Republic has welcomed this dynamic society into the field of constructive education."

Let us see what the National Republic means by "constructive education." The author of that article, Col. Edwin Marshall Hadley, is also the author, under the pseudonym of Earnest Sincere, of two anti-Semitic pamphlets called Facing the Facts and The Plan in Action. Under his own name Colonel Hadley wrote another widely distributed pamphlet called "Rape of the Republic," which is a scurrilous attack on the Roosevelt administration. It appears, then, that anti-Semitism is synonymous with "constructive education" in the vocabulary of the National Republic.

The National Republic's approval of the Paul Reveres is carried further by your presence on the advisory board of the organization, where you join one of the Nation's most notorious anti-Semites, Col. E. N. Sanctuary. Colonel Sanctuary, besides heading his own pro-Nazi and anti-Semitic group, the American Christian Defenders, is also eastern representative of Harry A. Jung and the American Vigilant Intelligence Federation. You are probably aware that your coboard member, Sanctuary, is an associate of the most vicious and criminal anti-Semites in America—such men as Robert Edward Edmundson and James True. And behind all these is the high priestess of the native Nazi movement in America, Mrs. Elizabeth Dilling, who founded the Paul Reveres. Surely it is undeniable that the Paul Reveres are of the same stripe as the Silver Shirts and the American Vigilant Intelligence Federation.

The assembled facts show that you are indeed, as Congressman MARCANTONIO charged and as Congressman KELLER agreed, closely identified with "the most dangerous, undemocratic, un-American, and subversive groups in the United States."

Your proven intimacy with Silver Shirt leaders, your public role as spokesman for and, in one case at least, as adviser to subversive and anti-Semitic organizations combine to uphold Congressman MARCANTONIO's contention that your sworn statements before the Dies committee, as previously quoted, are open to more than considerable doubt. On the other hand, you have chosen to answer his facts with a blanket denial, which consists of nothing more than an attempt to brand them as "Communist lies."

I call to your attention that the law specifically provides that a letter is the exclusive property of the sender. I give you permission to print this letter, with the distinct understanding that, if printed, it be printed in full.

Very truly yours,

A. J. SABATH.

The Foreign Policy of the United States

EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1939

RADIO ADDRESS BY HON. THOMAS C. HENNINGS, JR., OF MISSOURI, FRIDAY, FEBRUARY 3, 1939

Mr. ALLEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio speech recently delivered by Hon. THOMAS C. HENNINGS, Jr., Representative from Missouri.

Mr. HENNINGS discussed the President on American foreign policy and spoke from the studios of WABC over the Columbia Broadcasting System the evening following the White House press conference of that day.

The full text of his address follows:

As a member of the Committee on Foreign Affairs of the House of Representatives and as a Member of Congress from a State in the center of the country, my own Missouri and my city of St. Louis, I was greatly interested in the press conference which the President held this morning.

I was particularly gratified by the fact that the President definitely nailed as untrue the many statements, implications, comments, and innuendoes which during the past few days have been handed out indiscriminately to the American people.

It is only natural for the people in every part of the country, whether they live on the seaboard or 1,000 miles back from the coast, to feel concerned if they are told that the United States in the near future or at any other time is going to become involved in a European war.

The President spoke of newspaper headlines, newspaper editorials. Here are some samples which I will quote:

"Roosevelt secret plans hit—Senators view United States alliance as road to war."

"Roosevelt pledge to aid allies in war revealed—war policy flayed by Hoover."

I myself would be worried if I did not know that statements of that kind as the President has so well said are "pure, unadulterated bunk."

Let us examine a few simple facts. First, the President has in four crisp sentences again stated the foreign policy of the United States.

1. "We are against any entangling alliances, obiously."
2. "We are in favor of the maintenance of the world trade for everybody—all nations—including ourselves."
3. "We are in complete sympathy with any and every effort made to reduce or limit armaments."
4. "As a Nation—as American people—we are sympathetic with the peaceful maintenance of political, economic, and social independence of all nations in the world."

That in my judgment and the judgment of very responsible persons is a sound foreign policy and it is also clear that it is not a change in any conceivable manner of our established foreign policy.

We are at peace with the Republic of France. France can come here to buy wheat, cotton, and those things which we produce without restriction. France can also legally and morally come here to buy steel or copper or airplanes. France is buying airplanes today. France is paying for those airplanes in cash. There is no question of any loan by us involved.

The fact that France and several other nations are buying airplanes and airplane material from us fits in with our Government's program to increase our air defense. We need more planes as a matter of reality in defense. We must see whether our airplane factories can operate on a mass-production basis. That ability to operate on a wholesale basis is essential to our own defense if we were attacked. The French order and several other foreign orders, plus our own Government orders which we hope will be appropriated for by this session of the Congress, will strengthen our own production ability and teach us the lesson that we should learn in time of peace rather than in time of war.

May I emphasize what the President has said on several occasions about bartering military secrets. In building modern aircraft there are few secrets. The plane must be able to climb fast, to maneuver quickly, to have a long radius of action, and to carry an adequate load. You have read about a secret bombing device. I am told that such a device exists in this country, but the President has given assurance that neither this device nor any other secret device of our own is being sold to any foreign nation. So much for that argument.

It was stated in the newspapers in this country and abroad that the President had remarked to Senators that the American frontier was on the Rhine or in France. Everybody who knows the President knows that such a statement is false, and the President in his press conference today remarked with a smile that any such statement is "a deliberate lie."

I want to say a few words about the fourth item in the President's summary of our foreign policy. He said, "As a nation—as American people—we are sympathetic with the peaceful maintenance of political, economic, and social independence of all nations in the world." That, to my mind, means that the people of the United States are sympathetic to the fact that Finland should remain wholly independent; that Lithuania and Latvia and Estonia should remain wholly independent; that Sweden, Norway, and Denmark should remain wholly independent; that Holland and Belgium should remain, and continue to remain, independent; that the nations of central Europe should remain wholly independent—though, at this point, I question whether the political, social, and economic independence of Czechoslovakia hasn't already been circumscribed, limited, or partially destroyed. I raise a question mark about the complete independence in all these ways of Hungary, Yugoslavia, Rumania, and Bulgaria. Frankly, I am not sure today but that they are not dominated by fear of military aggression on the part of one or two of their more powerful neighbors.

Independence relates to Greece, Turkey, Persia, and Egypt. Independence relates to the 20 American republics to the south of us.

We of the United States want these nations to retain and maintain their political, economic, and social independence. We in the United States sympathize with them in their fears that their complete independence may in the near future be threatened by superior military force. Most of them are comparatively limited in wealth and armaments; most of them are in desperate conflict mentally as to what they will do in the future if a gun should be held against their heads with the demand that they surrender their independence either politically or socially.

There is no question in my mind as to where sympathy in the United States lies. We believe that if these nations retain their independence the democratic form of government will survive.

We also believe that if the nations of the world gradually lose their independence or have their independence greatly limited by superior military force the processes of democratic government throughout the world may be frustrated.

We believe that if that takes place it will seriously affect and injure the prosperity and the freedom of the people within the United States.

Every man, woman, and child in our country would be affected in their way of life if the bulk of the world were to fall under the domination of those governments which are established wholly upon different concepts of freedom than our own.

American Cotton in World Commerce

EXTENSION OF REMARKS

OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1939

Mr. NORRELL. Mr. Speaker, as a Member from a district which is predominantly agricultural, and which still depends on cotton production for its chief money crop, I am deeply concerned—and what thoughtful person interested in the agrarian economy of the Nation is not concerned?—in the loss of foreign cotton markets, which is believed to be due in large part to competition of foreign governments, fostered by our own self-imposed laws of crop control. Whatever may be said for the economy of scarcity when applied to production for domestic consumption, it is self-evident that if the present program is continued in its entirety, American-grown cotton, which formerly held a position of dominance in world markets, will continue to lose ground to foreign competitors, and our own cotton farmers will have to bear the brunt of the loss. This loss will in turn be reflected in the entire economic structure of this country, and it is difficult to exaggerate its dire and far-reaching consequences.

In this connection I wish to call your attention to an editorial printed in the Arkansas Gazette, February 13, 1939, a daily newspaper which consistently reflects enlightened

thought on public issues, published by Hon. J. N. Heiskel, a former member of the United States Senate from Arkansas:

[From Arkansas Gazette of February 13, 1939]

RESTORING COTTON IN WORLD COMMERCE

A resolution adopted by the Arkansas Legislature asks Congress for legislation to "restore cotton (that is, American cotton) to its former economic importance in world commerce."

The Gazette, for practical business reasons, is as much concerned as anybody for the welfare of Arkansas' economic mainstay. But the present economic place of American cotton in world commerce was stated at the conference of the American Farm Bureau Federation at New Orleans: "American farmers no longer produce a major portion of the world's supply of cotton; therefore, American cotton no longer controls the price of that commodity."

The changes in the source of the world supply are shown by the following figures on average annual world production for the 5-year period before 1933 and the 5 years following 1933, in bales:

	To 1933	After 1933
American	14,667,000	12,934,000
Foreign	10,887,000	15,826,000

American production decreased about 12 percent. But foreign production increased nearly 44 percent.

Similar changes have taken place in world consumption, the annual average for the two 5-year periods being as follows, in bales:

	To 1933	After 1933
American	14,385,000	10,930,000
Foreign	10,266,000	15,509,000
Total	24,651,000	26,430,000

While American cotton has been slipping back in world commerce, foreign cotton has gained, roughly speaking, 5,000,000 bales a year in both production and consumption, and is now the source of about two-thirds of all the cotton the world uses, while this country supplies only one-third where it used to supply two-thirds. In addition, rayon and other synthetic cotton substitutes almost quadrupled in world production between 1929 and 1937, when their weight was equivalent to 3,783,975 bales of cotton.

Congress may make cotton growing more profitable and make conditions better generally by various measures in the way of aid and benefits. But cotton's place in world commerce is a world matter and not merely a matter for the United States. Within limits, measures taken by our Government affecting international trade conditions may favor or hinder American cotton in competition with foreign growths. But to get back its old world place, American cotton must be produced in adequate quantity to meet world demands, and sold at prices competitive with the price of the foreign cottons that are now supplying two-thirds of world consumption. Otherwise, foreign growers will get the sales.

Mr. Speaker, it is hardly necessary to underline for emphasis any part of this succinct and significant editorial, but by way of summarization I do want to repeat the concluding sentences:

* * * to get back its old world place, American cotton must be produced in adequate quantity to meet world demands, and sold at prices competitive with the price of the foreign cottons that are now supplying two-thirds of world consumption. Otherwise, foreign growers will get the sales.
